SCHEDULE I.
COTTON MANUFACTURES.

SCHEDULE I.—COTTON MANUFACTURES.

COMMITTEE ON WAYS AND MEANS,
HOUSE OF REPRESENTATIVES,
January 22 and 23, 1913.

The committee met at 10 o'clock a. m., Hon. Oscar W. Underwood in the chair.

Present with the chairman: Messrs. Harrison, Shackelford, Kitchin, James, Rainey, Dixon, Hull, Peters, Palmer, Payne, Hill, Needham, and Longworth.

The CHAIRMAN. Gentlemen, the committee will come to order.

STATEMENT BY MR. HILL.

Mr. HILL. Mr. Chairman, there was a statement made yesterday by a member of the committee which seems to have gone all through the papers of the country. I quote from the Washington Post:

Free meat, proposed by the House Democrats at the last session of Congress, but blocked by a presidential veto, was indicated as part of the tariff revision program at hearing before the House Committee on Ways and Means yesterday.

I find that also in the New York Tribune.

I think in justice to the President, it should be stated frankly that when the bill went to the President it did not contain that provision, but that that had been stricken out on motion of Senator Kern, of Indiana, from the free list. It was in the House bill and passed the House, but it was not vetoed by the President, and I think in justice to him that correction should be made.

The CHAIRMAN. I think that is right, Mr. Hill. There was a modified revision.

Mr. HILL. I think the bill passed with modifications, and I think in justice to the Executive that correction should be made by the Associated Press.

STATEMENT BY MR. RAINEY.

Mr. RAINEY. On yesterday a statement was made by a member of the committee, Mr. Fordney, I believe, to the effect that he had been informed that Marshall Field & Co., of Chicago, were interested in certain factories in Japan making cotton goods, and that he addressed a letter to Marshall Field & Co., asking for information, and Marshall Field & Co had never denied it. I sent a telegram to Marshall Field & Co. yesterday afternoon for the facts, and have received from them this answer:

CHICAGO, ILL., *January 22, 1913.*

HENRY T. RAINEY, M. C.,
Ways and Means Committee, Washington, D. C.:

Your telegram concerning statement that we are interested in factories in Japan is first time matter has come to our attention. The statement is absurdly untrue. Marshall Field & Co. have not now nor have they had at any time interest or ownership in any mill or factory in Japan or elsewhere outside of United States

MARSHALL FIELD & Co.,
By JOHN G. SHEDD, *President.*

PARAGRAPH 313—YARN.

I ask permission to print this telegram in the record.

Mr. FORDNEY. Mr. Chairman, I will briefly but fully explain that.

Ex-Congressman McKinlay, of California, while in Congress stated to me in this city that while traveling in the Orient, and while in Japan, he called upon the American consul—I have forgotten just where—and that the American consul had pointed out to him four different cotton factories in Japan in which Marshall Field & Co. were interested, either in the factory or in sending the raw material, cotton, to Japan and having it manufactured into the finished product for them, and that product brought back to this country. I made that statement publicly in the State of Michigan. Later on I received from Marshall Field & Co. a letter, with a clipping from a paper published in Grand Rapids, Mich., which stated that I had made a statement along that line, and they asked me whether or not I had made the statement, and if so, where I got my information. I stated that I had stated in substance what was in the article, and then related to them what I had said and where I got my information and asked whether or not that was true. I never received any reply to that. So when that gentleman states in his telegram that that matter has never been brought to their attention before so far as the man sending the telegram is concerned that may be right, but my statement to you is absolutely correct, that they did write me and that I wrote back to them and never got any reply.

Mr. RAINEY. They deny it now.

Mr. FORDNEY. Then it is a question of veracity between the man who sends the telegram and myself.

STATEMENT BY MR. FORDNEY.

[Hearing of Jan. 27.]

Mr. FORDNEY. Before you proceed with the next witness, I desire to state, as a matter of personal privilege, that the other day I made a statement here about receiving a letter from Marshall Field & Co., and in return writing them about a certain matter of importations, or their interest in knit goods being produced in Japan.

The gentlemen from Illinois, Mr. Rainey, evidently telegraphed Marshall Field & Co., and in return received a reply from them that they had never heard of such a thing, thus practically in effect raising a question of my veracity.

I have here the letters I received from Marshall Field & Co., together with my reply. I received a letter from them April 21, 1909, and replied to it May 21, 1909. Those are the letters I spoke of, in exactly the same substance and the same words that I stated at that time. I do not care to have them go in the record, unless some one desires it. The letter from Marshall Field & Co., was signed by a man by the name of Barnhart.

Mr. RAINEY. Will you read that?

Mr. FORDNEY. I will let the clerk read it, or I will read it if you desire.

Mr. PAYNE. Mr. Barnhart appeared before the committee then.

Mr. FORDNEY. The telegram came, to the effect that they never had any such correspondence.

PARAGRAPH 313—YARN.

Mr. PAYNE. He appeared before the committee for Marshall Field & Co. then.

Mr. FORDNEY. Mr. Chairman, did not Mr. Barnhart sign that telegram?

Mr. RAINEY. No; Mr. Shedd signed it, and he said it was the first time it had been brought to his attention.

The CHAIRMAN. The clerk will read the letter referred to by the gentlemen from Michigan.

The clerk read as follows:

MARSHALL FIELD & Co.,
EXECUTIVE OFFICES,
Chicago, April 21, 1909.

DEAR SIR: A copy of the Grand Rapids Herald of April 17 has come to our hands, in which you are quoted as saying: "I know as a definite fact that the estate of Marshall Field & Co., and Sears, Roebuck & Co., of Chicago, own factories in Japan, where they ship quantities of American cotton to be made into hosiery and sold to the American trade."

We should be glad to learn if this interview correctly quoted you; and if so, we beg to say that you have been seriously misinformed.

Denial of our ownership of foreign factories was presented to the House by our Representative, Mr. Madden, and it was published in the Congressional Record of April 8, page 1080; and, supplementing this statement, would say that we have not one dollar invested in the manufacture of hosiery in Japan, nor have we ever imported hosiery from that country. Further, we have no knowledge nor can we find in the Government statistical reports record of hosiery being imported into the United States from Japan by anyone.

Yours, very truly,

MARSHALL FIELD & Co.,
By KENNETH BARNHART, *Secretary.*

Hon. J. W. FORDNEY,
House of Representatives, Washington, D. C.

Mr. RAINEY. I will say I did not want to raise any question as to Mr. Fordney's veracity; I did not intend that at all. But the statement made by Mr. Fordney the other day was that he had heard these facts with reference to Marshall Field & Co.'s operations in Japan, and that they had written to him asking him for his authority; that he had written back to them giving it, asking them whether or not it was true, and that they had never replied to him as to whether or not it was true.

It appears from this letter that as to this report Marshall Field & Co. denied it in the first instance, and at that time Mr. Fordney had that letter.

I do not want, as I say, to raise any question of veracity at all in the matter. All I wanted to do was to spoil the campaign speech that Mr. Fordney has been making all through the country by getting the facts directly from the manager of Marshall Field & Co., and I got them in this telegram, from which it appears that Mr. Fordney already had them when he made the statement before that Marshall Field & Co. did not deny it.

Mr. FORDNEY. My statement was not as to hosiery. They say nothing about any other knit goods except hosiery. I never made a statement of that kind. I gave the information that I had, and in my letter, which is attached to that, I refer to knit goods. It is a long letter, but if necessary it can also be read.

The information given me was by ex-Congressman, then Congressman, Duncan McKinlay, of California. I gave the information only

PARAGRAPH 313—YARN.

as it came to me. I did not make campaign speeches throughout the country using that.

I want further to say, for it is a matter of justice, I stated I had no reply. I telegraphed to my home and got the records, and in the records comes a letter from Marshall Field & Co. to me of May 25, a reply to my letter to them. I never saw this until yesterday. It got into the files without my ever seeing it.

They again restate that they have not imported hosiery, and say nothing about other knit goods. That is all there is to it.

Mr. RAINEY. All of the testimony on the point shows they have no interest of any kind in a factory abroad, and never did have. So I hope the gentleman from Michigan will not make that campaign speech any more.

Mr. FORDNEY. But I will make a speech according to the information given me, my friend, always; I did then and I will do it again, and am not making any different statement now.

Mr. RAINEY. Then you will not make this speech any more?

Mr. FORDNEY. I will make the same speech I did before. That information came to me that they were receiving the greater portion of the product of those knit factories—

Mr. RAINEY (interposing). If you do, it will be a typical Republican speech, because the facts show otherwise.

Mr. FORDNEY. The facts do not show anything of the kind.

The CHAIRMAN. I hope my friends will let the hearing proceed.

Mr. FORDNEY. The letter refers only to hosiery and to nothing else. They have not made answer as to anything other than that.

STATEMENT BY THE CHAIRMAN.

The CHAIRMAN. Gentlemen, the committee has adopted a rule to allow each witness 10 minutes. Of course that does not include the time the members of the committee take for cross-examination of the witness. I want the witnesses present to understand this. The committee itself is privileged to extend that time if it wants to get further information. The purpose is not to cut the witness off, and we are desirous of giving each witness coming to this hearing an opportunity to be heard to some extent. The time occupied in examination of the witness by members of the committee might run the time occupied by the witness somewhat over 10 minutes, but that is for the committee to determine. I would like to ask the members of the committee, if possible, to allow the witnesses to complete their statements and occupy their full 10 minutes before cross-examination begins, because it is so much easier for the Chair to keep a record of the time.

PARAGRAPH 313.

Cotton thread and carded yarn, warps or warp yarn, in singles, whether on beams or in bundles, skeins, or cops, or in any other form, except spool thread of cotton, crochet, darning, and embroidery cottons, hereinafter provided for, not colored, bleached, dyed, or advanced beyond the condition of singles by grouping or twisting two or more single yarns together, two and one-half cents per pound on all numbers up to and including number fifteen, one-sixth of a cent per number per pound on all numbers exceeding number fifteen and up to and including number thirty, and one-fifth of

PARAGRAPH 313—YARN.

a cent per number per pound on all numbers exceeding number thirty: *Provided*, That none of the foregoing shall pay a less rate of duty than fifteen per centum ad valorem; colored, bleached, dyed, combed, or advanced beyond the condition of singles by grouping or twisting two or more single yarns together, whether on beams, or in bundles, skeins, or cops, or in any other form, except spool thread of cotton, crochet, darning, and embroidery cottons, hereinafter provided for, six cents per pound on all numbers up to and including number twenty-four, and on all numbers exceeding number twenty-four and up to number eighty, one-fourth of one cent per number per pound; on number eighty and up to number two hundred, three-tenths of one cent per number per pound; on number two hundred and above, sixty cents per pound, and one-tenth of one cent per number per pound additional for every number in excess of number two hundred; cable-laid yarns or threads, made by grouping or twisting two or more grouped or twisted yarns or threads together, not colored, bleached, or dyed, four-tenths of one cent per number per pound; colored, bleached, or dyed, nine-twentieths of one cent per number per pound: *Provided further*, That said threads and yarns, colored, bleached, dyed, combed, advanced beyond the condition of singles, and cable-laid yarns or threads, as hereinbefore provided, except those (other than cable-laid threads and yarns) finer than number one hundred and forty shall not pay a less rate of duty than twenty per centum ad valorem: *And provided further*, That all the foregoing threads and yarns as hereinbefore provided, when mercerized or subjected to any similar process, shall pay, in addition to the foregoing specific rates of duty, one-fortieth of one cent per number per pound; cotton card laps, roping, sliver, or roving, thirty-five per centum ad valorem. Cotton waste and flocks, manufactured or otherwise advanced in value, twenty per centum ad valorem.

YARN.

BRIEF SUBMITTED BY THE NEW ENGLAND COTTON YARN CO.

[Mills in New Bedford, Fall River, and Taunton, Mass.]

To the honorable Committee of Ways and Means of the House of Representatives:

Yarn.—The New England Cotton Yarn Co. operates 540,000 spindles solely on the production of cotton yarns.

It is submitted that the schedules as now framed under the Underwood bill of 1912 do not take into consideration the different kinds and varieties of yarns; that bill is applicable solely to weaving yarns.

This corporation practically manufactures no weaving yarns. Its yarns are used for knitting work, electrical work, narrow goods fabrics—sometimes called elastics—upholstery, tapestry, and a great variety of other special uses.

The per cent of weaving yarns to the whole product is not in excess of 10 per cent.

These special yarns require a higher degree of perfection in manufacture than weaving yarns, and consequently a larger labor cost.

It is respectfully submitted, therefore, that the committee should take into consideration the difference between these costs and the costs of weaving ordinary yarns in the South.

Under the bill of 1912 as drawn, this corporation feels that it would be impossible for it to remain in existence and employ its help.

It has been extremely difficult to get comparative English figures on which reliance could be placed.

Certain figures, however, have been obtained from two or more independent sources in England which check, and consequently prove their correctness as to certain numbers and qualities of yarns.

PARAGRAPH 313—YARN.

The schedules based on these figures are herewith submitted:

Description.	First week, December, 1912 (English price).	Under-wood duty.	English total.	Our cost.	Difference between English total and our cost (our loss).	Labor in our cost.
American:						
30's fill cops.....	\$20.20	\$2.02	\$22.22	\$24.59	\$2.37	\$4.98
40's fill cops.....	21.21	2.12	23.33	27.18	3.85	6.13
50's fill cops.....	23.99	2.40	26.39	32.71	6.32	8.07
60's fill cops.....	29.16	4.37	33.53	37.52	3.99	9.86
Egyptian:						
30's fill cops.....	27.27	2.73	30.00	32.86	2.86	4.98
40's fill cops.....	28.28	2.83	31.11	35.45	4.34	6.13
50's fill cops.....	30.80	3.08	33.88	38.69	4.81	8.07
60's fill cops.....	32.82	4.92	37.74	41.71	3.97	9.86
70's fill cops.....	35.85	5.38	41.23	45.58	4.35	11.41
80's fill cops.....	37.87	5.68	43.55	48.88	5.33	12.90
100's fill cops.....	47.47	7.12	54.59	63.75	9.16	17.05
120's fill cops.....	55.04	11.01	66.05	71.04	4.99	20.66

Description	First week, December, 1912, English price.	Under-wood duty.	English total.	Our cost frame bobbins.	Difference between English total and our cost (our loss).	Labor in our cost.
American:						
20's warp cops.....	\$19.19	\$1.92	\$21.11	\$22.08	\$0.97	\$3.10
30's warp cops.....	20.96	2.10	23.06	24.48	1.42	4.25
40's warp cops.....	24.75	2.48	27.23	28.00	.77	5.39
50's warp cops.....	28.79	2.88	31.67	31.76	.09	6.53
60's warp cops.....	31.44	4.72	36.16	36.80	.64	8.02
Egyptian:						
40's warp cops.....	30.30	3.03	33.33	34.19	.86	5.39
70's warp cops.....	37.88	5.68	43.56	47.00	3.44	9.70

It is to be noticed that we are here putting frame spun bobbins against warp cops, a cheaper operation against a more expensive one. The American manufacturer rarely, if ever, uses mule-spun yarn for warp.

Description.	First week, December, 1912, English price.	Under-wood duty.	English total.	Our cost frame bobbins.	Difference between English total and our cost (our loss).	Labor in our cost.
American:						
20/2 warp bobbins.....	\$21.72	\$2.17	\$23.89	\$24.26	\$0.37	\$5.00
40/2 warp bobbins.....	27.02	2.70	29.72	32.07	2.35	9.08
50/2 warp bobbins.....	31.31	3.13	34.44	36.38	1.94	10.70
Egyptian:						
30/2 warp bobbins.....	29.80	2.98	32.78	34.76	1.98	6.85
40/2 warp bobbins.....	30.81	3.08	33.89	38.34	4.45	9.08
50/2 warp bobbins.....	32.83	3.28	36.11	41.42	5.31	10.70
60/2 warp bobbins.....	35.60	5.34	40.94	45.37	4.43	12.85
70/2 warp bobbins.....	40.40	6.06	46.46	53.68	7.22	15.73
80/2 warp bobbins.....	44.44	6.67	51.11	62.23	11.12	19.79
100/2 warp bobbins.....	55.05	8.25	63.30	74.30	11.00	24.75
40/2 English ball warps.....	35.35	3.53	38.88	40.74	1.86	11.04
50/2 English ball warps.....	36.36	3.63	39.99	44.09	4.10	12.88
60/2 English ball warps.....	39.39	5.91	45.30	48.34	3.04	15.28
80/2 English ball warps.....	49.49	7.42	56.91	62.83	5.92	22.13

PARAGRAPH 313—YARN.

AD VALOREM DUTY.

Although your petitioner realizes that the bills heretofore passed have been on the basis of ad valorem duty, it feels that its duty is to protest against such duty being the basis or the entire basis of the duty and submits herewith a table showing extreme fluctuations of cotton for each year of the last 12 years, the average fluctuation, and the difference or variation in the duty.

Table showing effect of fluctuation in market price of cotton on an ad valorem duty.

	Extreme fluctuation.	With 15 per cent waste.	Variation in duty, 1's to 50's.	Variation in duty, 51's to 100's.	Variation in duty, 101's up.
			<i>Cents per pound.</i>	<i>Cents per pound.</i>	<i>Cents per pound.</i>
1901.....	\$4.25	\$5.00	0.50	0.75	1.00
1902.....	1.50	1.76	.176	.264	.352
1903.....	4.50	5.30	.53	.79	1.06
1904.....	10.25	12.06	1.21	1.81	2.42
1905.....	5.25	6.18	.62	.63	1.24
1906.....	2.75	3.24	.32	.49	.65
1907.....	2.85	3.40	.34	.51	.68
1908.....	3.25	3.80	.38	.57	.78
1909.....	7.20	8.47	.85	1.27	1.69
1910.....	5.85	6.88	.69	1.03	1.38
1911.....	7.20	8.47	.85	1.27	1.69
1912.....	3.95	4.64	.46	.70	.93
Average, 12 years.....	4.90	5.76	.576	.864	1.152

Practically no figures have been obtained for English yarns above 80, and your petitioner submits that it is of comparative little importance in view of the fact that the customhouse reports at 78 2-ply (and the same thing is applicable to 78 single) under the present duty, large importations are made, showing that we are already on a competitive basis.

HOSIERY YARNS.

These yarns, carded and combed, are made in the North, mule spun, of high grade and quality.

They are made from good middling and strict good middling cotton, which commands a premium in the market.

They bear a twist which differentiates them from weaving yarns.

It is submitted that under the bill of 1912, the production of these yarns from this country would have to stop, and for this reason the English spinning is practically entirely mule spinning.

The American spinning is practically, so far as coarse numbers are concerned, up to 60, frame spun. Fine hosiery or knitting yarns demand to be mule spun.

Mule spinning is a much more expensive operation than frame spinning.

The tariff as drawn, makes no provision for this, and as English yarns are, as above stated, mule spun, they will come in to the entire exclusion of American yarns.

The numbers for hosiery or knit goods are up to 20's.

These goods are sold in the condition in which they come from the knitting machine. They are not washed, they are not bleached, and only a very small portion of them dyed.

The schedule showing the comparison of English and American cost of these yarns is here submitted, based on strict good middling cotton:

Description.	First week December, 1912 (English price).	Underwood duty.	English total.	Our cost.	Difference between English total and our cost (our loss).	Labor in our cost.
American:						
10's fill cops.....	\$18.18	\$1.82	\$20.00	\$20.91	\$0.91	\$2.66
20's fill cops.....	18.43	1.84	20.27	23.25	2.98	3.53

PARAGRAPH 313—YARN.

ADVANCED YARNS.

It is submitted this corporation does, as do most of the yarn companies in the North, a large business in advanced yarns; that is, yarns which are bleached, dyed, mercerized, or gassed. The advance in duty of 5 per cent does not care for these yarns.

In many cases it cares for one process, but in most cases yarns are submitted to two and sometimes three of these processes. For instance, many yarns are gassed, mercerized, and dyed.

The Englishman makes no difference above 40's between gassed yarns and plain yarns.

The American mills in competition have been obliged to recognize this difference in their cost.

Respectfully submitted.

NEW ENGLAND COTTON YARN Co.,
By FRANK BULKELEY SMITH,
Treasurer.

BRIEF ON YARNS SUBMITTED BY THE NYANZA MILLS AND HOLMES MANUFACTURING CO.

BOSTON, January 30, 1913.

HON. OSCAR W. UNDERWOOD,

Chairman Committee on Ways and Means, House of Representatives.

SIR: We, the undersigned, representing the Nyanza Mills (25,000 spindles), of Woonsocket, R. I., and the Holmes Manufacturing Co. (63,000 spindles), of New Bedford, believe that it will be impossible for us to compete with foreign-made ply or processed yarns if the present duty is materially reduced.

The Nyanza Mills manufactures (from the raw cotton) combed yarns of slack twist, by far the greater proportion of which are subsequently twisted into ply yarns in that mill, and are mercerized or bleached or dyed and put up for the hosiery, underwear, and embroidery trade, the numbers varying from No. 1 to No. 40.

The Holmes Manufacturing Co. makes the same class of yarns, the numbers varying from No. 30 to No. 120.

Both these mills are of modern construction and are equipped with machinery to make and process these yarns in the most economical manner.

We respectfully call to your attention that no difference is made in H. R. 25034 between single yarn and ply yarn, or mercerized, dyed, or bleached yarn, although the costs of these various processes are very largely the labor employed in them, and are not, therefore, adequately protected by the increase of ad valorem duty as outlined in the above bill.

We would call your attention to the fifth paragraph on page 426 in the Report of the Tariff Board on Schedule I of the Tariff Law. (Copy attached.)

And in this connection we would ask you to distinguish that the criticism relating to duty on mercerized cloth, as compared to the cost of mercerizing on page 503 of this report, applies to cloth alone. On page 35 the Tariff Board discussed the duty on mercerized yarns, and finds that the duty on the higher numbers is out of proportion to the cost of mercerization, but this we believe is due to the method of levying this duty at one-fortieth of a cent per number, whereas the cost of mercerization does not so increase. No deduction can be drawn from this report that no duty should be levied for mercerization, and the imports cited below show that some of such yarns are now imported in considerable quantities. The report of the Tariff Board may be taken to mean that the method of fixing such duty is wrong or excessive.

Present imports of mercerized yarns.—From the report on imported merchandise entered for consumption in the United States and duties collected thereon for the year ending June 30, 1912, of the Bureau of Foreign and Domestic Commerce (hereafter called the "Report on Imports"), page 11, it appears that no single mercerized yarn was imported, all such imports being of ply or processed yarns.

Of such ply and processed yarns the competition in the lower numbers consists in the imports of embroidery yarn which we estimate to be fully 50 per cent of such yarns used in the United States. We have no method of determining the exact imports of such yarns, as they are classed with spool thread in the Reports on Imports, page 12. We believe, however, from our experience that 50 per cent of the amount used in this country is a conservative estimate of such imports; the importation of embroidery yarns having increased largely in the last year in the form of small balls or spools, in

PARAGRAPH 313—YARN.

which form the putting-up labor is the large element of cost. If this estimate is correct the present duty would appear not to be prohibitory, and a lowering of such duty would deprive the Government of part of the revenue now received by it from this class of merchandise, amounting in the year ending June 30, 1912, to over \$350,000. (See page above referred to.)

Apart from the above the imports of processed yarn up to No. 40 are not considerable, and it may be that a reduction of the duty should be made to make the imported yarns plus the duties competitive with American yarns.

From No. 41 to No. 80 we estimate that about 15 to 20 per cent of the processed yarns used are imported. The imports between these numbers for the year ending June 30, 1912, as shown on page 11 of the above report, were 910,028 pounds. From No. 80 to No. 100 about 25 to 30 per cent of the mercerized yarn used in the country is imported, and, as a matter of fact, the Holmes Manufacturing Co. has been compelled to cease manufacturing No. 80 yarn and finer because of the low price caused by competition with imported yarn. Above No. 100 about 75 per cent of the processed yarn used is imported, although the volume is not large.

By examining the table of imports above referred to, it will be readily seen that under the present tariff little single yarn is imported, either plain or processed in contrast to the large imports of ply or processed yarn, in spite of the extra duty now levied on the latter by the present tariff. Fixing the duty to apply on yarn, without regard to condition, to make the entry of single yarn competitive, will work a hardship on the manufacturers of ply and processed yarns which it will be impossible for them to bear. The present increase of duty does not keep out the ply or processed yarns, as shown by the imports now made (p. 11, Reports on Imports), amounting to over 6,500,000 pounds in the year ending June 30, 1912, valued at over \$3,900,000 and paying duties of \$1,230,000 and the ad valorem increase under H. R. 25034, due to increased value because of twisting or processing, will make far less difference in the duties assessed on single and ply or processed yarns than under the present law.

This difference in the imports between single and ply yarns is as apparent in the yarns imported unmercerized as in those mercerized. (See p. 11 of the above report.)

To summarize our argument, it is shown by the imports during the last year that even with an increased duty under the present tariff, due to mercerizing, dyeing, bleaching, or twisting, such yarns are imported in large quantities, whereas single yarns have not come in except in small quantities whether mercerized or not. Fixing the rate of duty upon all yarns by the duty to be laid on single yarns is therefore unfair, and the added labor cost will not be covered alone by the increase of duty due to increased value.

This distinction between single and processed, or ply, yarns is noted in the brief as submitted by Mr. Lewis W. Parker under date of January 22, 1913, and, while we feel that the rate of duty as suggested by him is somewhat lower than is adequate to protect American manufacturers, we feel that this distinction between different kinds of yarns is a sound and fair one, but that the difference in duty should be somewhat higher than the 5 per cent suggested by him.

NYANZA MILLS,
By NATHANIEL F. AYER, *Treasurer*.
HOLMES MANUFACTURING CO.,
By CHAS. M. HOLMES, *Treasurer*.

[Extract from Report of the Tariff Board, page 426.]

On yarn in the gray from 50s to 80s the duty ranges from 44 per cent to 71 per cent of the total conversion or manufacturing cost, and in practically all such cases it is greater than the labor cost in the United States. Comparing these figures with the figures showing the general ratio of manufacturing cost in England to that in this country it appears that on such yarns the duty is regularly in excess of the difference in cost of production.

A somewhat different situation appears in the case of yarns requiring the additional processes of twisting (two-ply yarns) and finishing (bleached, mercerized, and dyed yarns). For such yarns the ratio of the duty to the American conversion cost is decidedly less, ranging from 30 to 50 per cent. A duty which is 30 per cent of the American conversion cost would offset the difference in cost when the English conversion cost is 70 per cent of the American. A duty of 50 per cent is in excess of the difference in cost unless applied to yarn on which the English cost of manufacture is only 50 per cent of the American. On single-ply mercerized yarns, 60s to 80s, the duty is about 31 per cent of the American manufacturing cost, while on two-ply mercerized yarns it ranges from 35 to 50 per cent of the American cost.

PARAGRAPH 314—THREAD.

BRIEF OF JEWEL COTTON MILLS, THOMASVILLE, N. C.

THOMASVILLE, N. C., *February 19, 1913.*

DEAR SIR: At the annual meeting of the Hard Yarn Spinners' Association held in Gastonia, N. C., February 11, 1913, the following preamble and resolutions were unanimously adopted, the same being presented by a committee composed of the following gentlemen: A. C. Phelps, Draper, N. C.; J. H. Separk Gastonia, N. C.; C. E. Hutchinson, Mount Holly, N. C.; and John C. Rankin, Lowell, N. C.:

We, the Hard Yarn Spinners' Association of North Carolina, South Carolina, Georgia, and Alabama, in annual meeting assembled, being conscious of the serious results that would follow the operation of various textile plants of the country should the next Congress pass a cotton tariff after the plan now under consideration, for the reason that under its operations it would be impossible for the spinners of this country to compete with the mills of England, France, and Germany; and being equally aware of the fact that should a low tariff be fixed for the towel, lace-curtain, carpet, hosiery, and upholstery industries equal hardship would result to the mills of this association now making the major part of yarn consumed by these industries, by reason of the competition of foreign yarn manufactured by cheap labor: therefore, be it resolved,

First. That we are opposed to any material reduction in the present tariff that would place us in competition with the mills of Europe employing pauper labor.

Second. That we believe it to be impossible to operate our mills under a low tariff except through a drastic reduction of labor cost.

Third. We entertain the conviction that the only class of our population that would materially benefit through a low tariff would be the importers of the East and foreign manufacturers, who have nothing in sympathy with the southern manufacturers, and not the masses or laboring people of the country.

This association represents over half a million spindles. We respectfully request that you give this matter your serious consideration.

Very respectfully,

T. J. LILLARD,
Secretary and Treasurer.

PARAGRAPH 314.

Spool thread or cotton, crochet, darning, and embroidery cottons, on spools, reels, or balls, containing on each spool, reel, or ball, not exceeding one hundred yards of thread, six cents per dozen; exceeding one hundred yards on each spool, reel, or ball, for every additional hundred yards or fractional part thereof in excess of one hundred, six cents per dozen spools, reels, or balls; if in skeins, cones, or tubes, containing less than six hundred yards each, one-half of one cent for each one hundred yards or fractional part thereof: Provided, That in no case shall the duty be assessed upon a less number of yards than is marked on the spools, reels, cones, tubes, skeins, or balls: And provided further, That none of the foregoing shall pay a less rate of duty than twenty per centum ad valorem.

THREAD.

BRIEF OF COTTON-THREAD MANUFACTURERS.

NEW YORK, *January 17, 1913.*

The COMMITTEE ON WAYS AND MEANS,

The House of Representatives, Washington, D. C.

HONORED SIR: At a general meeting of the cotton-thread manufacturers of the United States, at which 22 were present, the undersigned were unanimously appointed a committee to lay the views on the tariff of the said cotton-thread manufacturers before your honored body.

COTTON THREADS—SCHEDULE I, PARAGRAPH 314.

Although of the belief that conditions justify and require the continuance of the present tariff rate on cotton thread for the protection of the industry, nevertheless, recognizing the fact that a general reduction of the tariff has been decided upon, this committee begs to submit, after careful study and consideration of the subject, that this end could best be accomplished by a reduction of 25 per cent on the present rate. This would make the new rate $4\frac{1}{2}$ cents per dozen spools of 100 yards, in place of the present rate of 6 cents, in paragraph 314 of the tariff law approved August 5, 1909.

PARAGRAPH 314—THREAD.

The phraseology we recommend is given in Schedule A attached. We have not suggested a change in the final phrase of paragraph 314, because even the present rate allows us very little chance for competition in the threads to which this rate applies, the imports of same being four times as much in the year ending June, 1912, as they were in the year ending June, 1910, as shown from the United States official reports. (See Schedule E.)

Our only hope in view of the demands for a lower tariff is to retain enough protection to enable us to run our mills sufficiently so as to avoid the necessity of disbanding large bodies of trained operatives. As previously stated, even with the present rate, a rapidly increasing volume of trade is going to foreign manufacturers, and the reduction of 25 per cent now suggested will necessarily be a strong additional factor further to increase the importation of foreign-made threads. The extent to which they will be increased it is impossible to estimate with any degree of reliability, but we do not hesitate to state the belief that the increase will be very material. In fact, letters have already been mailed to thread concerns by importers and agents of foreign manufacturers asking for samples of the goods used in this country so that they may be matched without loss of time.

Schedules B, C, and D give comparisons of rates of wages and costs of buildings, machinery, and supplies, in the United States, as compared with Great Britain and the Continent of Europe. As an approximate average, the wages are from 100 per cent to 200 per cent higher in the United States than in England and Scotland, and 100 per cent to 400 per cent higher than on the continent.

Supplementing the foregoing, we beg to submit the following additional information:

MANUFACTURE OF COTTON THREADS.

The four principal factors entering into the cost of manufacture are:

(1) *Labor*.—Schedule B, attached hereto, shows a comparison of the wages paid in this country with those of the principal thread producing countries of Europe, as per reports from the Department of Commerce and Labor, Daily Consular and Trade Reports, etc. This proves that American wages are from 100 per cent to 200 per cent higher than the wages of England and Scotland and from 100 per cent to 400 per cent higher than those of Germany, France, Belgium, etc.

(2) *Cotton*.—The American manufacturer has no practical advantage in the cost of American grown cottons, as the ocean freight to Europe is very low, having at times been lower than the cost of freight to New England points, while the freight on Egyptian cotton is higher to this country than to Europe.

(3) *Mill supplies other than cotton*.—The cost of these is from 23 per cent to 64 per cent in excess of the European costs; the only notable exceptions being lubricating oils, which are cheaper in this country than in Europe, and papers which cost about the same. Practically all other articles cost from 23 per cent to 64 per cent more than in Europe. (See Schedule C.)

(4) *Fixed charges*.—The cost of buildings and machinery being materially higher in America than in Europe, the American manufacturer is burdened with much greater charges for interest, depreciation, etc. (See Schedule D for particulars.) Buildings average 30 per cent to 50 per cent more in this country than in England and spinning machinery 60 per cent to 70 per cent more.

CONDITION OF COTTON-THREAD TRADE.

Competition among American manufacturers is very keen and the margins of profit on many lines are reduced accordingly; in fact, in some cases goods are sold at net cost. The number of thread manufacturers in the United States is constantly increasing and any duty which does not fairly equalize foreign costs and the costs of the thread of these new makers, whose business is not yet protected by reputation or trade-marks to the same extent as that of the older manufacturers, would be a particular hardship. (We attach Schedule F covering the cotton-thread manufacturers of the United States). American cotton-thread mills are in a high state of efficiency generally, and well able to cope with foreign competition, but they can not, of course, pay from two to four times the wages of their foreign competitors and compete with them, unless the tariff gives protection to offset this difference, as well as the difference in the cost of mill supplies, fixed charges, etc., above referred to. Radically reducing the tariff would necessitate corresponding reductions in the wages of the mill operatives and eventually the closing of the mills. In addition to the list of manufacturers as per Schedule F, there are approximately 100 other concerns interested in the sale of thread. (See Schedules F, Nos. 2, 3, 4, and 5.)

PARAGRAPH 314—THREAD.

EXPORT TRADE.

For the reasons explained in the paragraph headed "Manufacture of cotton threads," it is impossible for American manufacturers to compete in foreign markets. The export business done from the United States is insignificant, and whatever is exported is sold at the full United States market prices f. o. b. American ports.

The facts and conditions as set forth in the foregoing memorial we trust will fully explain the status of the cotton-thread industry in this country and its great need for tariff protection, and we earnestly pray that your honored committee will not reduce the tariff below the schedule offered.

We are, with the greatest respect,

FLOYD CRANSKA.
WM. H. HALL.
F. E. KALEY.

SCHEDULE A.

314. Spool thread of cotton, crochet, darning, and embroidery cottons, on spools, reels, or balls, containing on each spool, reel, or ball not exceeding 100 yards of thread, $4\frac{1}{2}$ cents per dozen; exceeding 100 yards on each spool, reel, or ball, for every additional 100 yards or fractional part thereof in excess of 100, $4\frac{1}{2}$ cents per dozen spools, reels, or balls; if in skeins, cones, or tubes, containing less than 600 yards each, three-eighths of 1 cent for each 100 yards or fractional part thereof: *Provided*, That in no case shall the duty be assessed upon a less number of yards than is marked on the spools, reels, cones, tubes, skeins, or balls: *And provided further*, That none of the foregoing shall pay a less rate of duty than 20 per cent ad valorem.

SCHEDULE B.

Wages per week.

[Comparing the United States and European countries.]

THE AMERICAN THREAD CO.,
New York, February 17, 1913.

OSCAR W. UNDERWOOD, Esq.,

Chairman Ways and Means Committee, Washington, D. C.

DEAR SIR: Inclosed please find an amendment to the brief previously submitted by the committee appointed by 22 American cotton thread manufacturers. The present recommendation is on an ad valorem basis in order to meet your views in the matter.

As stated to you at the interview which you were good enough to grant me on Saturday last, the thread business is done in small units with an immense amount of detail connected with it, which makes labor a very much more important factor than it is in the yarn or cloth business. Under the circumstances it seems essential for the preservation of the industry that there should be an additional rate of at least 10 per cent over the schedule for twisted yarn which forms the raw material for thread.

We believe that the yarn schedule suggested by Mr. Stuart W. Cramer, on behalf of the American Cotton Manufacturers Association, of North Carolina, will give the yarn mills an opportunity to retain a reasonable part of their business as against foreign spindles, and our suggestion would be to grant the thread makers an additional 10

PARAGRAPH 314—THREAD.

per cent over the rates recommended by Mr. Cramer for twisted yarns. This, we believe, would put the thread makers in approximately the same relative position as the yarn manufacturers will be in under Mr. Cramer's proposed schedule.

The importations of thread are rapidly increasing even under the present tariff schedule. Last year they amounted to about \$1,500,000, this being a 100 per cent increase over the preceding year. Under the circumstances there can be no doubt that the importations will increase even more freely under the proposed ad valorem rate which is on a considerably lower basis than the present tariff.

I shall be at the Hotel Raleigh in Washington until noon on Wednesday, February 13, and will be very glad to wait on you at your convenience should you desire to question me further in connection with the matter.

Thanking you for the courtesy shown me at the interview on Saturday last, I beg to remain, very respectfully, yours,

E. MARTIN PHILIPPI.

NEW YORK, *February 17, 1913.*

The COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

HONORED SIR: Referring to our brief of January 17, 1913, addressed to your honorable committee, we beg leave to amend same, having been advised in the interim that the proposed revision of the cotton schedule is to be on an ad valorem basis.

Twisted cotton yarn being the raw material for the thread maker, we would suggest, as the basis for thread, the adoption of the yarn schedule recommended by Stuart W. Cramer on behalf of the American Cotton Manufacturers' Association, North Carolina, as follows:

	Yarns Nos.—					
	1-9	10-19	20-39	40-59	60-99	100 and over.
	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>
Singles, in the gray.....	10	12½	17½	25	30	35
Combed, twisted, dyed, or colored or advanced in manufacture beyond singled in the gray.....	15	17½	22½	30	35	40

With an additional 10 per cent duty thereon for thread.

The thread business differs radically from the yarn business, in that it is done in very small units, involving an enormous amount of detail, thereby making labor a much more important factor than it is with the spinner. The additional 10 per cent above recommended would offset this to an extent and place the thread manufacturers approximately in the same relative position vis-à-vis foreign competition as the cotton spinners would be in if the schedule recommended by Mr. Cramer were adopted.

We are, very respectfully, yours,

COMMITTEE OF COTTON THREAD MANUFACTURERS,
By F. E. KALEY.

BRIEF FILED BY JOHN L. M. ALLEN, OF NEW YORK CITY.

JOHN L. M. ALLEN, CERTIFIED PUBLIC ACCOUNTANT,
400 West One hundred and fiftieth Street, New York, January 20, 1913.

HON. OSCAR W. UNDERWOOD,
Chairman Committee on Ways and Means, Washington, D. C.

DEAR SIR: Your letter of the 16th instant, permitting me to submit a brief, with data, upon the cotton schedule, to be printed as a part of the testimony taken and for consideration by the committee, is received.

In accordance therewith, the following brief, with supporting exhibits, in connection with Schedule I, as to the duties on cotton thread, are respectfully submitted:

The accompanying exhibits furnish evidence that there are two important points wherein the tariff laws require revision, namely:

First. That Congress has not made provision for the collection of the tariff duties on all foreign goods, but only on such articles or materials as are imported.

PARAGRAPH 314—THREAD.

Second. That Congress has not provided for the registration of foreign interests engaged in manufacturing or producing in America articles or materials upon which duties are imposed when imported. (See copies of letters from the Secretary of the Treasury, dated Oct. 3 and Dec. 11, 1911.)

In the exhibits there is convincing evidence that English capital has taken advantage of these conditions and has obtained such control of the cotton-thread industry that practically all the cotton thread that is used in America is made in America in British factories, and to a large extent by British operatives.

The English control is known to but few persons, and although the fact was established before a congressional committee in 1901, neither Congress nor the public press appear to have realized that such foreign control works injury to American interests in the following manner, namely:

First. Under such foreign control the output of their American factories is restricted to the requirements of the American market, so that the American output will not be exported and thereby enter into competition in the larger markets of the world with the products of the factories which, under the same control, are located in foreign countries.

This is an important gain to the foreigner and a distinct loss to American capital and labor.

Second. Such foreign control also restricts the importation of cotton thread, thereby rendering the tariff rates unproductive of revenue to the American Government, while at the same time the English owners of the American Thread Co. and of other corporations and firms which form such foreign control are collecting the tariff duty from the American people, and are paying a portion of such duties to the British Government under the British income-tax act.

It is important to compare the conditions of to-day with the conditions of the period of about from 1754 to 1776, when the American people opposed with all their might the right of the British Government to tax them while they were not represented in the taxing body, whereas to-day, as my exhibits prove, the American users of cotton thread, an article which is used in every home, are required under American laws to pay taxes to the British Government without knowing it.

It is doubtful if American Congressmen realize the truth of this situation. One is loth to believe that a majority of the members of that law-making body understand the full extent of the influence of foreign capital when engaged in developing American industries.

The unpreparedness of the Congressmen and of the public to realize the presence of foreign influence in the making of their laws is clearly due to the lack of information. It is safe to assume that if the American Thread Co., as a beneficiary under the tariff laws, had been prohibited by the laws of Congress from misrepresenting its business as American and had been compelled to advertise its enterprise under its true name, viz, "The English Sewing Cotton Co., American Branch," that provision would have been made to place customs officers in all of its factories and that the tariff duty would have been collected upon its output by the American Government and not by its English owners.

The foreign nationality of the American Thread Co. has been concealed under its American designation.

It is to the danger which threatens American interests from such secrecy that the attention of your committee is called in this manner, trusting that the evidence submitted will convince the committee that the secret of the nationality of each foreign interest must be disclosed to the American people by congressional action.

Appeal is now made to the American people through their Congress to reenact in this year of 1913 the patriotic deeds of the fathers of the Republic, and to oppose with all their strength the assumption of those foreign interests which are operating in America as American business organizations and are appealing to Congress to maintain the protective tariff laws for their benefit.

It is undeniable that to the extent that those laws express the demands of the secret foreign interests the American people, as consumers, have not been represented. The widest publicity should be given to these facts in order that the people may be prepared to exercise their sovereign right of self-government.

Foreign secrecy and misrepresentation must be combated by American publicity and truth.

With my brief and exhibits I also submit a comparative table of imports and manufactures for the year 1905, which I have compiled from the thirty-third number of the Statistical Abstract of the United States. From this table it appears that the manufactures of dutiable articles amount to 25 times as much as the imports.

PARAGRAPH 314—THREAD.

While every item of importation is made a matter of record, and the amount of duty paid to the Government is entered, and the totals are periodically published, Congress has not yet provided that the manufacturers who collect tariff taxes directly from the people shall periodically report the amounts which the tariff has enabled them to add to the selling price of their output.

The amount of duty collected annually by the Government is about \$350,000,000. If protection has enabled the manufacturer to add to his cost the rate of duty as the importer adds it to his, it is evident that the manufacturers have been enabled by the tariff to add 25 times \$350,000,000, or about \$9,000,000,000, a year to the cost of living, and the people who pay that benefit are entitled to know how it is distributed.

In submitting the above for the consideration of the Committee on Ways and Means it is my desire to have action taken by which the duty will be collected on all dutiable goods made in foreign-owned factories, wherever located, by a slight modification in the wording of the enacting clause of the tariff law. An additional section may be inserted in the tariff law by which the beneficiaries shall be required to report periodically to Congress the amount of the benefits received.

Another additional section may be inserted requiring that in all cases where foreign interests are benefiting by the tariff that the nationality of such interests shall be registered by an officer of the Treasury Department.

While these suggested changes in the tariff law appear to be urgently called for in the case of the American Thread Co., it is highly probable that further investigation by Congress will reveal the fact that nine-tenths of the foreign goods sold in America do not pay duty to the American Government.

Respectfully,

JOHN L. M. ALLEN,
Certified Public Accountant.

EXHIBITS ACCOMPANYING BRIEF OF JOHN L. M. ALLEN, CERTIFIED PUBLIC ACCOUNTANT, 400 WEST ONE HUNDRED AND FIFTIETH STREET, NEW YORK CITY, IN CONNECTION WITH SCHEDULE I—COTTON THREAD.

•

Petition to President Taft as to English ownership of the American Thread Co., supported by three exhibits, viz:

Exhibit A: Testimony of the president of the American Thread Co.

Exhibit B: Publication in the daily press of the decision of the High Court of Justice in London, England, as to the owners of the American Thread Co.

Exhibit C: The first American tariff law, July 4, 1789, providing tariff discrimination in favor of American citizens.

Reproduction of two letters from the Secretary of the Treasury in reply to the petition, viz:

Dated October 3, 1911: "Duties are imposed upon materials or articles imported and not upon articles or materials manufactured or produced in the United States."

Dated December 11, 1911: "It does not appear that any statute of the United States has been violated by the adoption of the name 'American Thread Co.' by the said corporation."

A petition to the President of the United States in the interest of American industrial independence.

SIR: In my own interest as an American citizen, I beg to call your attention to certain facts in connection with the tariff, which are working injustice to all Americans—capitalists, laborers, and consumers alike—and respectfully submit this petition that you will use your official power to put a stop to certain discriminations in favor of foreigners, which have existed for many years.

Exhibits A, B, and C accompany and form part of this petition, and to them I refer for details concerning the following:

First. To the testimony of Mr. Lyman R. Hopkins, president of the American Thread Co., given in Washington on April 9, 1901, before the United States Commission on Trusts and Industrial Combinations, and which is printed in the report of that commission, volume 13, pages 343 to 353, excerpts from which are herewith submitted in Exhibit A; and

Second. The publication in the daily press of the decision of the King's Bench Division of the High Court of Justice, in London, England, February 15, 1911, in which it was held that the fact of British ownership brought the American Thread Co. within the provisions of the British income tax act, in support of which a clipping from the New York Herald of February 16, 1911, is submitted, in Exhibit B; and

PARAGRAPH 314—THREAD.

Third. That in the first American tariff law, dated July 4, 1789, the principle was laid down and reiterated that tariff discrimination applied only where the interests to be protected were wholly the property of American citizens—in support of which quotations from that act are submitted in Exhibit C.

From the facts submitted in Exhibits A, B, and C, it is evident that practically all the cotton thread used in America is made in America, in factories owned by British subjects and operated largely by laborers who are British subjects, and that, therefore, the duty of about 40 per cent paid by American consumers does not reach the United States Treasury, but forms a portion of the income of the British owners, which is taxed by the British Government under the decision of February 15, 1911.

Thus the administration of the tariff laws, instead of effecting a protection to Americans, has operated as an attraction to foreign capital to set up its branch factories in America, and to the extent that the foreigners have taken advantage of the opportunity, the purpose of protecting American interests has been defeated and the policy has become that of the "Protection of foreign industries located in America."

The application of tariff discrimination on lines of nationality of the owner of the interest to be protected, having been fixed in the first American tariff act in 1789, and the application by the British high court of the provisions of the British income tax act, also on national lines, ignoring geographical boundaries, would seem to show that the only way by which the American Government can do justice to all American interests is by taking official action against the American Thread Co., which is now officially recognized as a British corporation, incorporated under the laws of the State of New Jersey, and that said American Thread Co. be proceeded against by the American Government, and charged with the following two offenses against American laws:

First. The selling of British goods in the American market without paying to the American Government the duty levied by the American tariff laws upon such goods.

Second. The infringement of a valuable title to which as a British corporation it had no right, and whereby it has misled the American people and has profited greatly thereby.

Should it be needful, your petitioner can furnish many additional names to this petition, but prefers to offer it at first simply upon its merits, trusting that it will be received and considered in the spirit of patriotism in which it is submitted.

Trusting that my petition will meet with a favorable reception, I am, with great respect,

Yours truly,

JOHN L. M. ALLEN,

400 West One hundred and fiftieth Street, New York City.

To the PRESIDENT,

Washington, D. C., February 21, 1911.

EXHIBIT A.

[Excerpts from the report of the United States Industrial Commission on trusts and industrial combinations.]

Appendix to Allen's "European Influence" circular No. 1.

[Excerpts from volume 13 of report of United States Industrial Commission on trusts and industrial combinations.]

WASHINGTON, D. C., April 9, 1901.

Testimony of Mr. Lyman R. Hopkins, president American Thread Co., New York: Operations of the company began April 1, 1899. Authorized stock is \$6,000,000 preferred and \$6,000,000 common.

[Page 343.]

The American Thread Co. was organized under the laws of the State of New Jersey on March 10, 1898, to unite the businesses of the following manufacturers of spools, crochet, knitting, mending, and other cottons, including in some cases the allied businesses of cotton spinning, doubling, twisting, dyeing, bleaching, polishing—spool making, etc.:

1866. Barstow Thread Co., Providence, R. I., including good will and trade-mark, of Alex. King & Co., in cotton thread business, incorporated in Rhode Island.

1881. The Glasco Yarn Mills Co., near Norwich, Conn., incorporated in Connecticut,

1883. The Glasco Thread Co., Worcester, Mass., incorporated in Massachusetts.

1863. Hadley Co., Holyoke, Mass., incorporated in Massachusetts.

1881. The Kerr Thread Co., Fall River, Mass., incorporated in New Jersey.

PARAGRAPH 314—THREAD.

1866. J. O. King & Co., New York City, private firm.
 1865. Merrick Thread Co., Holyoke, Mass., incorporated in Massachusetts.
 1873. National Thread Co., Mansfield, Conn., incorporated in Connecticut.
 1882. Morse & Kaley Manufacturing Co., Milford, N. H., incorporated in New Hampshire.
 1834. E. J. W. Morse & Co., Boston, Mass., including rights and good will of Morse Machine, incorporated in Maine.
 1891. Ruddy Thread Co., Worcester, Mass., incorporated in Massachusetts.
 1865. Warren Thread Co., Ashland, Mass., incorporated in Massachusetts.
 1891. William Clark Co., Westerly, R. I., incorporated in New Jersey.
 1854. Willimantic Linen Co., Willimantic, Conn., incorporated in Connecticut.

[Page 348.]

Q. Who are your chief competitors?—A. Well, there is the immense Coats concern, a foreign company; there is what we call Gardener Hall, and the Wachusetts company, and a man by the name of Isaac Einhorn.

Q. And yet you say you think you have a little less than one-third of the output. Do you mean a little less than one-third of the amount manufactured in this country?—A. Yes; the foreign corporation manufactures its thread in this country.

Q. The Coats's establishment, then, has a concern here and manufactures here?—A. Yes; it is all made here, and the Clarke's, which is now the Coats's.

Q. Do the Coats people manufacture any of the thread here that is sold abroad?—A. Not that I know of.

Q. You think they manufacture simply for the American market?—A. Yes.

[Page 349.]

Q. Do you know how the wages in your establishments or in the American establishments compare with the wages in England and Scotland?—A. Yes; they are just about one-half less there than they are here.

Q. You pay just about twice as much as is paid there?—A. Yes.

Q. How does it happen that the Coats people manufacture their thread here instead of manufacturing it in England and sending it here?—A. Because there is a duty on it. That is what brought them here in the first place.

[Page 350.]

Q. About what percentage of your laborers are French Canadians?—A. I suppose one-third, probably one-quarter to one-third now.

Q. Did the Coats Co. formerly send their thread over here before they built their American factory?—A. Yes.

Q. Do you remember about what time they built their American factories?—A. They commenced about 1868, I think.

Q. Are those establishments of the Coats in this country controlled entirely by the English firm, or have they also taken in American capital with them and made a separate company here?—A. They are controlled by foreign capital.

[Page 351.]

Q. In your judgment, what would be the effect of removing the tariff on thread?—A. Well, I think the thread would be made in England and sent here.

Q. Did you mean to say that if the tariff on thread were removed, in your judgment, it would practically drive the thread-manufacturing business out of this country?—A. Yes.

[Page 353.]

Q. Do you know what proportion of the capital that was necessary to buy in these American plants was furnished by the English company?—A. The money necessary was furnished by the English Sewing Cotton Co. Some of the sellers took bonds instead of cash.

Q. Do I understand that the present American Thread Co.'s stock is held largely by this English Sewing Cotton Co.?—A. The common stock is.

Q. Then, according to that, the English own the majority of this company's stock?—A. Yes.

Q. The majority of the dividends would go to England and not to this country?—A. They would to-day; yes. The stock is on the market for sale all the time.

PARAGRAPH 314—THREAD.

Q. But at the present time the majority of both stocks, common and preferred, is owned and held by the English Sewing Cotton Co.?—A. The English Sewing Cotton Co. does not own all the preferred stock.

Q. They own all the common stock?—A. Nearly all of it.

Q. Do you know of any large owners of the preferred besides the English Cotton Co., for example, J. & P. Coats?—A. I think J. & P. Coats took \$500,000 of the preferred stock. The preferred stock does not vote in the company. The voting is all done by the common stock.

Q. And that puts the absolute control in England, not in this country?—A. Yes.

EXHIBIT B.

[Clipping from the New York Herald of February 16, 1911.]

AMERICAN COMPANY LOSES LONDON SUIT—THREAD MANUFACTURERS, INCORPORATED IN STATE OF NEW JERSEY, MUST PAY BRITISH INCOME TAX.

LONDON, *Wednesday*.—Justice Hamilton, sitting in the King's Bench division of the High Court of Justice, to-day gave a decision that the American Thread Co., incorporated under the laws of the State of New Jersey, was liable to an income-tax assessment in this country on profits amounting to \$900,000.

The justice held that although the mills and business of the company were in America, the fact that most of the common stock was held here and that the directors in England were highly concerned with the direction of its affairs, brought the concern within the provisions of the British income tax act.

BOSTON IS INTERESTED.

BOSTON, MASS., *Wednesday*.—The decision of the King's Bench against the American Thread Co. in income-tax litigation is of considerable interest in New England. The company has an office in Boston and mills in Fall River and Holyoke, Mass., Westerly, R. I., and Willimantic and Glasgow, Conn.

EXHIBIT C.

[Quotations from the first tariff act, of July 4, 1789.]

SEC. 1. "On all teas imported from China or India, in ships built in the United States and belonging to a citizen or citizens thereof, or in ships or vessels built in foreign countries, and on the 16th day of May last wholly the property of a citizen or citizens of the United States, and so continuing until the time of importation, as follows: On Bohea tea, per pound, 6 cents; on all Souchong, or other black teas, per pound, 10 cents; on all Hyson teas, per pound, 20 cents; on all other green teas, per pound, 12 cents.

"On all teas imported from Europe in ships or vessels built in the United States and belonging wholly to a citizen or citizens thereof, or in ships or vessels built in foreign countries and on the 16th day of May last wholly the property of a citizen or citizens of the United States, and so continuing until the time of importation, as follows: On all Bohea tea, per pound, 8 cents; on all Souchong and other black teas, per pound, 13 cents; on all Hyson teas, per pound, 26 cents; on all other green teas, per pound, 16 cents.

"On all teas imported in any other manner than as above mentioned, as follows: On Bohea tea, per pound, 15 cents; on all Souchong, or other black teas, per pound, 22 cents; on all Hyson teas, per pound, 45 cents; on all other green teas, per pound, 27 cents.

"On all goods, wares, and merchandise, other than teas, imported from China or India, in ships not built in the United States and not wholly the property of a citizen or citizens thereof, nor in vessels built in foreign countries and on the 16th day of May last wholly the property of a citizen or citizens of the United States, and so continuing until the time of importation, 12½ per cent ad valorem."

The effect of these discriminations is better shown in the form of a comparative table:

PARAGRAPH 314—THREAD.

Discrimination in favor of American ships, as provided in rates of duty on tea as fixed in the first tariff act, dated July 4, 1789.

Quality of tea.	Rate of duty per pound.		
	In American ships.		In any other manner.
	From China or India.	From Europe.	
Bohea.....	0.06	0.08	0.15
Souchong.....	.10	.13	.22
Hyson.....	.20	.26	.45
Other green.....	.12	.16	.27

Continuing its discriminations in favor of American citizens, that tariff further provided:

"SEC. 5. A discount of 10 per cent on all the duties imposed by this act shall be allowed on such goods, wares, and merchandises as shall be imported in vessels built in the United States and which shall be wholly the property of a citizen or citizens thereof, or in vessels built in foreign countries, and on the 16th day of May last wholly the property of a citizen or citizens of the United States and so continuing until the time of importation."

This provision was amended in the tariff act of August 10, 1790, by imposing an additional duty of 10 per cent on articles imported in ships or vessels not of the United States, instead of allowing a discount of 10 per cent on articles imported in American ships.

These or similar discriminations in favor of ships owned wholly by American citizens were continued for 26 years and resulted in such an increase in American shipping that in the year 1810, just 100 years ago, more than 90 per cent of our foreign commerce was carried in American-owned ships, and the tonnage of wooden sailing vessels carrying our flag all over the world was much greater than the tonnage of American steamships engaged in foreign commerce is to-day.

TREASURY DEPARTMENT,
Washington, October 3, 1911.

Mr. JOHN L. M. ALLEN,
400 West One hundred and fiftieth Street, New York, N. Y.

SIR: The department is in receipt of your letter of the 14th ultimo relative to your communication of February 21, 1911, in which you directed attention to certain facts existing relative to the tariff by reason of which the American Thread Co., claimed to be largely controlled by foreign capital, is enabled to manufacture and sell their products in this country without the payment of duty.

The American Thread Co. is incorporated under the laws of the State of New Jersey and, presumably, complied with such laws in obtaining its incorporation. It is engaged in the manufacture of thread in the United States and the product thus manufactured is, like all other articles manufactured in this country, not subject to duty. Duties are imposed upon materials or articles imported and not upon articles or materials manufactured or produced in the United States. If the thread in question is manufactured from imported material duty was paid by this company upon such imported material, if it is properly dutiable. The fact that an article is manufactured in the United States by a corporation controlled by foreign capital does not subject such article to duty, as its status is not changed from that of an article manufactured by a corporation controlled entirely by American capital.

There is, therefore, nothing in the papers submitted by you which would show any violation of custom laws, and there is no action that this department can take.

Respectfully,

J. F. CURTIS, *Assistant Secretary.*

PARAGRAPH 314—THREAD.

TREASURY DEPARTMENT,
Washington, December 11, 1911.

JOHN L. M. ALLEN,
400 West One hundred and fiftieth Street, New York, N. Y.

SIR: Your letter dated the 4th instant, addressed to the President, further in relation to your petition of February 21, 1911, in regard to the American Thread Co., has been referred to this department for reply.

You invite attention to the second charge of your petition, which reads as follows:

"The infringement of a valuable title to which, as a British corporation it had no right, and whereby it has misled the American people and has profited thereby."

This department knows of no Federal statute of which the facts stated by you would constitute a violation.

This department, as well as the other executive departments of the Government, is charged by statute with the enforcement of the various laws enacted by Congress, and, as it does not appear that any statute of the United States has been violated by the adoption of the name "American Thread Company" by the said corporation, this department knows of no action that can be taken in such regard by this or any of the other executive departments of the Government.

Respectfully,

J. F. CURTIS,
Assistant Secretary.

ADDITIONAL DATA FURNISHED BY JOHN L. M. ALLEN, NEW YORK, N. Y.

NEW YORK, February 14, 1913.

HON. OSCAR W. UNDERWOOD,
Chairman Committee on Ways and Means, Washington, D. C.

DEAR SIR: Referring to my letters of January 20 and 21 and February 5, in connection with the revision of the tariff rates in Schedule I, as to cotton thread, I add another contribution to the case of the American Thread Co. and ask you to note, in the attached clipping, the fact distinctly stated that an English corporation controlling an American corporation is required by English law to pay taxes to the British Government upon the earnings of the American corporation, which, as I have shown in my letter of January 20, derives its profits solely through the operations of our tariff laws.

Thus are the American people compelled to pay taxes to the British Government in time of peace, and I for one protest against it.

Yours, truly,

JOHN L. M. ALLEN.

[Inclosure—Extract from New York Times, Feb. 7, 1913.]

MUST PAY ENGLISH TAX—AMERICAN THREAD CO. LOSES APPEAL FROM INCOME-TAX IMPOSITION.

LONDON, February 6.—The House of Lords to-day upheld the judgment of the court of appeals dismissing the appeal of the American Thread Co. against the decision of the commissioners of inland revenue, assessing the company for an income tax on the \$900,000 profits made by the company in the United Kingdom and elsewhere in the year ending April 5, 1905.

The lord chancellor, in giving judgment, said that they had arrived at the conclusion that the control of the affairs of the company was intended to rest and did rest with the directors resident in England, with an office in Manchester. These directors constituted a majority of the board and were also directors of the English Sewing Cotton Co. (Ltd.), which owned the entire ordinary stock of the company.

There was an executive committee in America, who were agents of the directors and ordinary directors, who took an active part in the weekly meetings, but it was clear that the directors in Manchester were the paramount authority.

[Extract from the New York Sun.]

THREAD TRUST FIRM'S BIG DIVIDEND, 1912—J. & P. COATS (LTD.) DECLARE ONE OF 36 PER CENT.

GLASGOW, December 12.—At the annual meeting of J. & P. Coats (Ltd.), cotton-thread manufacturers, to-day, a dividend of 35 per cent was declared. The net profit for the year was \$13,970,360, which is a decrease of \$1,500,000 from last year.

PARAGRAPHS 315-320—COTTON CLOTH.

One stockholder at the meeting complained that too much money was put in the reserve fund, which now amounts to \$35,000,000 on a capitalization of \$50,000,000.

PARAGRAPH 315.

Cotton cloth, valued at not over seven cents per square yard, not bleached, dyed, colored, stained, painted, or printed, and not exceeding fifty threads to the square inch, counting the warp and filling, one cent per square yard; if bleached, and valued at not over nine cents per square yard, one and one-fourth cents per square yard; if dyed, colored, stained, painted, or printed, and valued at not over twelve cents per square yard, two cents per square yard; cotton cloth, not bleached, dyed, colored, stained, painted, or printed, exceeding fifty and not exceeding one hundred threads to the square inch, counting the warp and filling, and valued at not over seven cents per square yard, not exceeding six square yards to the pound, one and one-fourth cents per square yard; exceeding six and not exceeding nine square yards to the pound, one and one-half cents per square yard; exceeding nine square yards to the pound, one and three-fourths cents per square yard; cotton cloth, not bleached, dyed, colored, stained, painted, or printed, not exceeding one hundred threads to the square inch, counting the warp and filling, and valued at over seven and not over nine cents per square yard, two and one-fourth cents per square yard; valued at over nine and not over ten cents per square yard, two and three-fourths cents per square yard; valued at over ten and not over twelve and one-half cents per square yard, four cents per square yard; valued at over twelve and one-half and not over fourteen cents per square yard, five cents per square yard; valued at over fourteen cents per square yard, six cents per square yard, but not less than twenty-five per centum ad valorem; cotton cloth, exceeding fifty and not exceeding one hundred threads to the square inch, counting the warp and filling, if bleached, and valued at not over nine cents per square yard, not exceeding six square yards to the pound, one and one-half cents per square yard; exceeding six and not exceeding nine square yards to the pound, one and three-fourths cents per square yard; exceeding nine square yards to the pound, two and one-fourth cents per square yard; cotton cloth, not exceeding one hundred threads to the square inch, counting the warp and filling, if bleached, and valued at over nine and not over eleven cents per square yard, two and three-fourths cents per square yard; valued at over eleven and not over twelve cents per square yard, four cents per square yard; valued at over twelve and not over fifteen cents per square yard, five cents per square yard; valued at over fifteen and not over sixteen cents per square yard, six cents per square yard; valued at over sixteen cents per square yard, seven cents per square yard, but not less than twenty-five per centum ad valorem; cotton cloth, exceeding fifty and not exceeding one hundred threads to the square inch, counting the warp and filling, if dyed, colored, stained, painted, or printed, and valued at not over twelve cents per square yard, not exceeding six square yards to the pound, two and three-fourths cents per square yard; exceeding six and not exceeding nine square yards to the pound, three and one-fourth cents per square yard; exceeding nine square yards to the pound, three and one-half cents per square yard; cotton cloth, not exceeding one hundred threads to the square inch, counting the warp and filling, if dyed, colored, stained, painted, or printed, and valued at over twelve and not over twelve and one-half cents per square yard, three and three-fourths cents per square yard; valued at over twelve and one-half and not over fifteen cents per square yard, five cents per square yard; valued at over fifteen and not over seventeen and one-half cents per square yard, six and one-half cents per square yard; valued at over seventeen and one-half and not over twenty cents per square yard, seven and one-half cents per square yard; valued at over twenty cents per square yard, nine cents per square yard, but not less than thirty per centum ad valorem.

PARAGRAPH 316.

Cotton cloth, not bleached, dyed, colored, stained, painted, or printed, exceeding one hundred and not exceeding one hundred and fifty threads to the square inch, counting the warp and filling, and not exceeding four square yards to the pound, one and one-half cents per square yard; exceeding four and not exceeding six square yards to the pound, two cents per square yard; exceeding six and not exceeding eight square yards to the pound, two and

colored, stained, painted, or printed, and not exceeding three and one-half square yards to the pound, four and one-fourth cents per square yard; exceeding three and one-half and not exceeding four and one-half square yards to the pound, four and one-half cents per square yard; exceeding four and one-half and not exceeding six square yards to the pound, four and three-fourths cents per square yard; exceeding six square yards to the pound, five cents per square yard; any of the foregoing, dyed, colored, stained, painted, or printed, and valued at over twelve and one-half and not over fifteen cents per square yard, six cents per square yard; valued at over fifteen and not over seventeen and one-half cents per square yard, seven cents per square yard; valued at over seventeen and one-half and not over twenty cents per square yard, eight cents per square yard; valued at over twenty cents per square yard, ten cents per square yard, but not less than forty per centum ad valorem.

PARAGRAPH 318.

Cotton cloth, not bleached, dyed, colored, stained, painted, or printed, exceeding two hundred and not exceeding three hundred threads to the square inch, counting the warp and filling, and not exceeding two and one-half square yards to the pound, three and one-half cents per square yard; exceeding two and one-half and not exceeding three and one-half square yards to the pound, four cents per square yard; exceeding three and one-half and not exceeding five square yards to the pound, four and one-half cents per square yard; exceeding five square yards to the pound, five cents per square yard; any of the foregoing valued at over twelve and one-half and not over fourteen cents per square yard, five and one-half cents per square yard; valued at over fourteen and not over sixteen cents per square yard, six and one-half cents per square yard; valued at over sixteen and not over twenty cents per square yard, eight cents per square yard; valued at over twenty cents per square yard, ten cents per square yard, but not less than forty per centum ad valorem; if bleached, and not exceeding two and one-half square yards to the pound, four and one-half cents per square yard; exceeding two and one-half and not exceeding three and one-half square yards to the pound, five cents per square yard; exceeding three and one-half and not exceeding five square yards to the pound, five and one-half cents per square yard; exceeding five square yards to the pound, six cents per square yard; any of the foregoing, bleached, and valued at over fifteen and not over sixteen cents per square yard, six and one-half cents per square yard; valued at over sixteen and not over twenty cents per square yard, eight cents per square yard; valued at over twenty and not over twenty-five cents per square yard, eleven and one-fourth cents per square yard; valued at over twenty-five cents per square yard, twelve and one-half cents per square yard, but not less than forty per centum ad valorem; if dyed, colored, stained, painted, or printed, and not exceeding three and one-half square yards to the pound, six and one-fourth cents per square yard; exceeding three and one-half square yards to the pound, seven cents per square yard; any of the foregoing, dyed, colored, stained, painted, or printed, and valued at over seventeen and one-half and not over twenty cents per square yard, eight cents per square yard; valued at over twenty and not over twenty-five cents per square yard, eleven and one-fourth cents per square yard; valued at over twenty-five cents per square yard, twelve and one-half cents per square yard, but not less than forty per centum ad valorem.

PARAGRAPH 319.

Cotton cloth not bleached, dyed, colored, stained, painted, or printed, exceeding three hundred threads to the square inch, counting the warp and filling, and not exceeding two square yards to the pound, four cents per square yard; exceeding two and not exceeding three square yards to the pound, four and one-half cents per square yard; exceeding three and not exceeding four square yards to the pound, five cents per square yard; exceeding four square yards to the pound, five and one-half cents per square yard; any of the foregoing valued at over fourteen and not over sixteen cents per square yard, six and one-half cents per square yard; valued at over sixteen and not over twenty cents per square yard, eight cents per square yard; valued at over twenty and not over twenty-five cents per square yard, eleven and one-fourth cents per

PARAGRAPHS 315-320—COTTON CLOTH.

square yard; valued at over twenty-five cents per square yard, twelve and one-half cents per square yard, but not less than forty per centum ad valorem; if bleached and not exceeding two square yards to the pound, five cents per square yard; exceeding two and not exceeding three square yards to the pound, five and one-half cents per square yard; exceeding three and not exceeding four square yards to the pound, six cents per square yard; exceeding four square yards to the pound, six and one-half cents per square yard; any of the foregoing, bleached, and valued at over sixteen and not over twenty cents per square yard, eight cents per square yard; valued at over twenty and not over twenty-five cents per square yard, eleven and one-fourth cents per square yard; valued at over twenty-five cents per square yard, twelve and one-half cents per square yard, but not less than forty per centum ad valorem; if dyed, colored, stained, painted, or printed, and not exceeding three square yards to the pound, six and one-half cents per square yard; exceeding three square yards to the pound, eight cents per square yard; any of the foregoing, dyed, colored, stained, painted, or printed, and valued at over twenty and not over twenty-five cents per square yard, eleven and one-fourth cents per square yard; valued at over twenty-five cents per square yard, twelve and one-half cents per square yard, but not less than forty per centum ad valorem.

PARAGRAPH 320.

The term cotton cloth, or cloth, wherever used in the paragraphs of this schedule, unless otherwise specially provided for, shall be held to include all woven fabrics of cotton in the piece or cut in lengths, whether figured, fancy, or plain, the warp and filling threads of which can be counted by unraveling or other practicable means, and shall not include any article, finished or unfinished, made from cotton cloth. In determining the count of threads to the square inch in cotton cloth, all the warp and filling threads, whether ordinary or other than ordinary, and whether clipped or unclipped, shall be counted. In the ascertainment of the weight and value, upon which the duties, cumulative or other, imposed upon cotton cloth are made to depend, the entire fabric and all parts thereof, and all the threads of which it is composed, shall be included. The terms bleached, dyed, colored, stained, mercerized, painted, or printed, wherever applied to cotton cloth in this schedule, shall be taken to mean, respectively, all cotton cloth which either wholly or in part has been subjected to any of these processes, or which has any bleached, dyed, colored, stained, mercerized, painted, or printed threads in or upon any part of the fabric.

COTTON CLOTH.

TESTIMONY OF R. M. MILLER, JR.

The witness was duly sworn by the chairman.

The CHAIRMAN. The next witness on the list is R. M. Miller, jr. Is Mr. Miller present?

Mr. MILLER. Yes, sir.

The CHAIRMAN. You may proceed, Mr. Miller.

Mr. MILLER. Mr. Chairman and gentlemen, the American Cotton Manufacturers' Association begs to submit, through me, the chairman of its tariff and legislative committee, a brief statement upon the proposed revision of Schedule I, cotton manufactures.

At the annual convention of the American Cotton Manufacturers' Association in this city on April 4, 1912, the following resolutions were unanimously adopted:

Resolved, First, this association, at its May, 1909, meeting recorded itself as favoring the establishment of a tariff commission and now reaffirms that action.

Second, it now appearing from the preliminary synopsis of the report of the Tariff Board and from other investigations that in some instances duties on cotton goods are now excessive, owing to changed conditions of manufacturing.

PARAGRAPHS 315-320—COTTON CLOTH.

Resolved, That this association records itself as favoring such reasonable revision of the cotton schedule, based upon differences in cost of production and other conditions at home and abroad, as shall be consistent with the raising of revenue and the conservation of our home markets.

Acting in conformity with these resolutions, our committee prepared "tariff bulletin No. 5," a copy of which I present to the committee at this time and request that it be printed and made a part of my remarks. I do not at this time desire to consume your time by reading that presentation of certain matters we consider vitally important in the consideration of tariff rates on cotton manufactures, but I do earnestly invite your careful examination of the contents of this bulletin in connection with the various data which you are now collecting for your use in preparing the new cotton schedule.

We wish especially, however, to emphasize the final statement of our committee's position on the subject of revision, and I therefore quote from that bulletin as follows:

We favor a reasonable revision of the cotton schedule, based upon the figures at which importations are actually being made and can be made as shown by comparative manufacturers' selling prices at home and abroad, as shall be consistent with the raising of revenue and the conservation of our home market.

Up to the present time our committee has studiously avoided suggesting rates for revision for lack of satisfactory data upon which to base recommendations. The information before us is not yet as complete as is desirable in assuming that responsibility. But we realize at this time that something definite and positive is expected from us if we are to meet your committee in the same spirit in which we believe we have been invited to this hearing.

We thoroughly appreciate that you are committed to a tariff revision upon a revenue basis. We realize that you expect from us suggestions as to the lowest possible rates which we believe the cotton industry can stand without certain and definite injury.

In the preparation of our suggested rates we have borne these things in mind, feeling that it would be useless for us to appear before you upon any other basis. Therefore, in submitting our recommendations as to proposed rates, we most earnestly urge that these facts be taken into account and that we have erred, if anything, in going too far.

The very radical reduction in the duties that we suggest on practically all fabrics in common use appear rather startling to some of us, but we are willing to try it cheerfully and in good faith. On the finer fabrics, luxuries, we can not figure a corresponding reduction in all cases, although our proposed rates do seem to be very near the danger line.

We may also have erred in the extent to which we are advocating simplification of the schedule, but that likewise is on account of our disposition to meet what we understand to be the policy of your committee.

We frankly favor specific rates, but have no argument to make on that score whatsoever, as we understand the decided preference of your committee is for ad valorem rates; hence our suggested duties are ad valorem rates.

As is well known to your committee, the cotton manufacturing industry in the United States has been passing through a period of

PARAGRAPHS 315-320—COTTON CLOTH.

unprecedented depression during the past two or three years, while the English cotton manufacturing industry appears to be very prosperous. Therefore, comparisons at this time are decidedly unfavorable to the American industry.

Believing that your committee is fully acquainted with this condition of affairs, I beg to submit a schedule which we have prepared, designated as "Exhibits A and B," and ask that they be made a part of my remarks.

For such explanation as you may desire concerning our suggested rates, I wish to ask Mr. Stuart W. Cramer, of Charlotte, N. C., to discuss for us the rates on yarns, and Mr. Lewis W. Parker, of Greenville, S. C., to discuss the rates on cloth. If, by consent, if my time will allow it, I would like to have Mr. Cramer follow me and if possible Mr. Parker's time moved up so he may follow Mr. Cramer.

The CHAIRMAN. We would like to do that, but the difficulty is we have gentlemen coming here from all over the United States, and in order to play fair with them we had to put their names on the list as they applied for time. We hesitate to take one gentleman's time away from him to give it to another.

Mr. MILLER. I thought, as acting chairman for a whole organization, it might, by unanimous consent, be that these discussions could follow each other in succession.

Mr. KITCHIN. Who is the gentleman you wish to follow you?

Mr. MILLER. Mr. Parker is one or two, possibly, below me. Mr. Cramer is to discuss the yarn value.

The CHAIRMAN. Is Mr. Cramer's name on the list?

Mr. MILLER. I assumed he would possibly come within my time, and he will only consume a very few minutes.

The CHAIRMAN. I want to try to be fair about this. I will first ask the committee if there is any objection to the request? [No response.]

Does any gentleman who appears upon the list object to this arrangement? [No response.]

The Chair hears no objection; we will adopt your suggestion and hear from Mr. Cramer at this time.

The schedules, Exhibits A and B, presented by Mr. Miller are as follows:

EXHIBIT A.

YARNS.

	Yarn numbers.					
	1 to 9.	10 to 19.	20 to 39.	40 to 59.	60 to 99.	100 and over.
	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>
Singles, in the gray.....	10	12½	17½	25	30	35
Combed, twisted, dyed or colored, or advanced in manufacture beyond singles, in the gray.....	15	17½	22½	30	35	40

PARAGRAPHS 315-320—COTTON CLOTH.

COTTON CLOTH.

Containing yarns.	1 to 9	10 to 19	20 to 39	40 to 59	60 to 99	100 and over.
<i>Class 1.</i>						
Cotton cloth, including calico, sheeting, and plain weaves, not including cords, stripes, checks, plaids, or figures, made entirely of single yarns, except selvages—						
In the gray.....	<i>Per cent.</i> 10	<i>Per cent.</i> 12½	<i>Per cent.</i> 15	<i>Per cent.</i> 20	<i>Per cent.</i> 30	<i>Per cent.</i> 30
If advanced in any way beyond the gray condition, by any one or more processes, similar to and including bleaching, napping, dyeing, printing, mercerizing, coloring, or other processes not specially otherwise provided for.....	15	17½	20	25	35	40
<i>Class 2.</i>						
Cotton cloth of fancy or figured weaves of any description, cords, stripes, checks, plaids, figures, drills, twills and kindred weaves, crêpes, terry pile weaves, gauze and leno weaves, and cloth composed wholly or in part of any of the foregoing—						
In the gray; cotton cloth composed of two-ply or more yarns, either wholly or in part, except if in selvages only in the gray.....	15	17½	25	30	35	40
If advanced in any way beyond the gray condition by any one or more processes similar to and including bleaching, napping, dyeing, printing, mercerizing, coloring, or other processes not specially otherwise provided for.....	20	22½	30	35	40	45
<i>Class 3.</i>						
Cotton cloth of jacquard weave—						
In the gray.....	25	27½	30	35	40	45
If advanced in any way beyond the gray condition by any one or more processes similar to and including bleaching, napping, dyeing, printing, mercerizing, coloring, or other processes not specially otherwise provided for.....	30	32½	35	37½	45	50
<i>Class 4.</i>						
Cotton cloth composed wholly or in part of bleached, colored, dyed, or mercerized yarns, selvages excepted, shall pay the same rates of duty according to construction as provided for cotton cloth of classes 1, 2, and 3 when advanced beyond gray condition, namely:						
Class 1.....	15	17½	20	25	35	40
Class 2.....	20	22½	30	35	40	45
Class 3.....	30	32½	35	37½	45	50

Further necessary provision: Cotton cloth of classes 1, 2, 3, and 4 containing two or more numbers of yarn, excepting selvages, shall be dutiable at the rate provided for cotton cloth composed of the higher or highest number of yarns in such cloth; where any yarn content in cloth, except selvages, is composed of two-ply or more twisted yarn, the higher or highest number of yarn in such resulting thread shall designate the class as above herein provided.

TARIFF BULLETIN No. 5.

[April 30, 1912, Charlotte, N. C.]

LETTER OF SUBMITTAL.

CHARLOTTE, N. C., *April 30, 1912.*

SIR: This Bulletin No. 5 records the action taken by the American Cotton Manufacturers Association at its Washington meeting, April 2-4, 1912, on tariff legislation, and the resolution passed relating thereto.

For the information of members it seems desirable to submit in connection therewith some observations upon the report of the Tariff Board which has just been issued.

The attention of the administration, Senators, and Representatives in Congress is earnestly requested to certain features of omission in the data upon which the Tariff Board bases comparisons of foreign and domestic costs.

Respectfully submitted.

STUART W. CRAMER.

To R. M. MILLER, Jr., *Chairman,*
Charlotte, N. C.

REPORT OF CHAIRMAN MILLER TO THE AMERICAN COTTON MANUFACTURERS' ASSOCIATION, IN CONVENTION IN WASHINGTON, D. C., APRIL 4, 1912.

(Mr. Miller moved the adoption of the report, Mr. Lewis W. Parker seconded it, and the motion was unanimously carried.)

APRIL 4, 1912.

MR. PRESIDENT AND MEMBERS OF THE ASSOCIATION:

On behalf of your committee on tariff and legislation I beg to submit as our report Bulletins Nos. 1, 2, 3, and 4, copies of which we present and ask that they be accepted, approved, and made a part of the records of this meeting.

The committee assumes that the members are familiar with these bulletins, as a copy of each was mailed to every member of the association, and also to every textile manufacturing establishment in the United States. Copies were also sent to the President and officials of the Government, to all Senators and Representatives in Congress, to the press, and to many individuals applying for copies as records.

The committee recommends the adoption of the following resolutions:

"*Resolved*, First, this association at its May, 1909, meeting recorded itself as favoring the establishment of a tariff commission and now reaffirms that action.

"Second, it now appearing from the preliminary synopsis of the report of the Tariff Board and from other investigations that in some instances duties on cotton goods are now excessive, owing to changed conditions in manufacturing.

"*Resolved*, That this association records itself as favoring such reasonable revision of the cotton schedule, based upon differences in cost of production and other conditions at home and abroad, as shall be consistent with the raising of revenue and the conservation of our home market."

Personally, and on behalf of the committee, I desire to acknowledge our obligations to Mr. Cramer, a member of the committee, for his special interest in the work of the committee. His services were invaluable to me, as chairman, and his time was always at the disposal of the committee. This acknowledgment the committee feels is due him and requests that the same be embraced as a part of this report.

Respectfully submitted.

R. M. MILLER, Jr., *Chairman,*
North Carolina.
A. H. BAHNSON, Virginia.
D. Y. COOPER, North Carolina.
STUART W. CRAMER, North Carolina.
JAS. D. HAMMETT, South Carolina.
J. H. MORGAN, South Carolina.
ROBERT CHAPMAN, South Carolina.

T. I. HICKMAN, Georgia.
SCOTT MAXWELL, Alabama.

J. C. SAUNDERS, Texas.
L. D. TYSON, Tennessee.
PAUL J. MARRS, Kentucky.

PARAGRAPHS 315-320—COTTON CLOTH.

THE ASSOCIATION ON REVISION OF THE COTTON TARIFF.

As finally summed up, therefore, the official position of the American Cotton Manufacturers' Association on the tariff may be stated as follows:

(1) "A reasonable revision of the cotton schedule * * * as shall be consistent with the raising of revenue and the conservation of our home market."

As interpreting the above we herewith quote from our Tariff Bulletin No. 3, pages 11 and 12:

"(1) We are opposed to any revision that will increase the percentage of importations to total United States cotton manufactures that now exist.

"We believe that any way it may be considered the present importations are sufficient to protect the consumer by regulating prices, for there is no monopoly or restraint of trade, but, on the contrary, the keenest competition among cotton manufacturers of the United States.

"We do not believe that anything more regulative of prices can be secured, however much importations may be increased, for American manufacturers are already down to cost, and without radical cutting of wages, which is not believed could or should be affected, the chief result of legislating more foreign goods into this country would be only to transfer that work to foreigners, for the importers do not usually undersell a local market except enough to bring in their goods.

"We believe that the cotton schedule bears its share of the customs revenue for the support of the Government and that there is no call for increasing the amount collected under it."

So far as Mr. Underwood's explanation of his bill for revising the cotton schedule is concerned, it is interesting to note that in this respect there is practically no difference of opinion between us. Mr. Underwood stated that—

"The cotton imports under the Payne tariff bill in the year 1912 were, in round figures, \$28,417,000. The estimated imports under the proposed bill that I hold in my hand are \$39,163,000. In other words, the increase of imports brought by this bill, as figured by the statistician, amounts to something in excess of \$10,745,000." (See Congressional Record, p. 3565, Aug. 2, 1911.)

"I know there is a great reduction in the cotton goods to-day, due to panic conditions, but when we return to nominal times you can not use the enormous tariff tax that you have to-day to exact unjust enormous profits from American people as you have been doing for years. * * * The place it will affect goods will not be where the prices are very low, due to panic conditions of to-day." (See Congressional Record, p. 3575, Aug. 2, 1911.)

The amount of increased importations that Mr. Underwood proposes compared to the total cotton manufactures of the United States is not enough to constitute difference of opinion; nor is there apparently any difference in that neither reductions in the tariff nor importations should reduce the prices of goods below the low level of the past three years.

As to the "enormous profit in good times" referred to we think we can show that the average earnings of cotton mills during a period of years is not excessive and that there should be no real difference of opinion there.

(II) "A reasonable revision of the cotton schedule based upon differences in cost of production and other conditions at home and abroad * * *."

"(4) We are in favor of such revision as will protect all classifications under the schedule primarily in proportion to their labor costs, and are especially in favor of simplification of the schedule.

"(5) We are opposed to any revision that does not take into account differences in other conditions as well as labor costs, particularly on account of southern mill conditions." (See Tariff Bulletin No. 3, p. 12.)

Coupled with the other and foregoing clause (I) this condition is one upon which there should be no apparent difference of political opinion; but it is just the point where such difficulties are encountered in the way of securing adequate data, that the results arrived at by different investigations are likely to so differ in themselves as to constitute actual and very great differences of opinion as to what reductions in duties may be made in accordance therewith.

THE TARIFF BOARD'S REPORT AS AFFECTING REVISION.

During the past year we have endeavored to secure through foreign representatives comparative data relating to costs upon which to recommend a basis for tariff revision; the results were disappointing, although the efforts made were conscientious and were conducted at considerable expense and covered quite a period of time.

PARAGRAPHS 315-320—COTTON CLOTH.

The report of the Tariff Board on Schedule I—Cotton manufactures, that has just been issued by Congress (H. Doc. No. 643), complete in two very exhaustive volumes, emphasizes in a most striking manner that same difficulty. The report contains a vast amount of statistical data, both interesting and instructive; the opportunities for collecting information in the United States were excellent, and the data relating to domestic costs and conditions seem to be accurate and trustworthy in most respects, as far as it goes. That part of it devoted to foreign data and a comparison of them to domestic conditions is frankly also disappointing. Without our own experience we might have been hypercritical of the Tariff Board's work in that respect; as it is, we simply accept it as a natural condition that in our opinion can not be overcome. There is no reason why English or other foreign manufacturers should disclose in great detail the private costs and secrets of their business in a manner that would lessen their chances at the United States markets. We flatter ourselves that we are very clever people and it might be assumed that our representatives abroad could get complete and reliable information surreptitiously or by misrepresentations; but we are far from being that clever, for the foreigner has shown that he is rather clever himself by the way in which he has built up and organized cotton manufacturing during the past hundred years in his own country and in going after the world's trade.

Generalities, then, are all that can reasonably be expected from the work of the Tariff Board so far as reliable foreign data and useful comparisons are concerned.

Those generalities, it appears, are embraced under the following headings:

- (a) Foreign trade quotations on different kinds of yarns and cloths.
- (b) Extent of manufacture and importations of such yarns and cloths.
- (c) Foreign wage scales and regulations relating thereto.
- (d) The equipment of foreign mills; their costs, capitalization, interest rates, etc.
- (e) Relative but very general data as to costs of spinning, weaving, and finishing.
- (f) Methods of marketing, selling, and distribution.
- (g) Prices paid by consumers.

And a variety of other and lesser important general information.

From all of which we are forced to the conclusion that tariff rates can not be based upon theoretically comparative conditions, but must be based upon something more practical, more definite, and more easily ascertained. Reduced to its lowest terms and strictly in accordance with the policies expressed at our Washington convention a more rational plan may be crystallized into the following statement:

We favor a reasonable revision of the cotton schedule, based upon the figures at which importations are actually being made and can be made as shown by comparative manufacturers' selling prices at home and abroad, as shall be consistent with the raising of revenue and the conservation of our home market.

In connection with the above, we wish to comment upon and supplement the comparisons made in the Tariff Board's report as follows:

(1) As previously mentioned in our tariff bulletins, a majority of mills in the United States, and practically all in the South, have had to establish villages, complete with all the requirements of the American standard of civilization that their financial resources would permit; which item, although a tremendous handicap, has not been taken into account by the Tariff Board in its endeavor to get at strictly comparative manufacturing costs. Yet, it should hardly require proof to show that the proper basis of comparison should be the total producing cost under American conditions rather than a theoretical manufacturing cost.

Mill villages cost probably \$2 per spindle, as much as the entire paid-in capital of millions of spindles in English mills.

(2) The Tariff Board also states that it has not taken into consideration the interest item; this we also regard as of the greatest importance. The average American mill has not only cost a great deal more than a like English mill, but the methods of financing are so different in the two countries that even this advantage is very greatly magnified. There are millions of spindles in England to-day capitalized at an approximate cost of \$5 per spindle, and only one or two dollars a spindle has ever been paid in, the remainder having been borrowed at low rates of interest of from 3 to 5 per cent. It is true that nearly as low rates of interest can at times be obtained by the strongest American mills, but they must be entirely free from debt on their plants, and their quick assets must exceed their borrowed money. An American mill owing from 40 to 80 per cent of its entire capitalization representing its approximate cost not only could not borrow money at a reasonable rate of interest but could not live at all. Any mill in the South that owes anything at all upon its plant is unable to borrow money at less than 6 per cent and is then required to maintain a 20 per cent balance on deposit so that its money nets it at least 7½ per cent, and in many cases more; even then personal indorsements are generally required.

PARAGRAPHS 315-320—COTTON CLOTH.

(3) The comparison of costs of English mule-spun yarns and American ring-spun yarns has been made by the Tariff Board without sufficiently emphasizing the fact that, as a general rule, yarns spun on mules from the same grade of cotton receive the buyer's preference over ring-spun yarns; and, conversely, if both mule and ring spun yarns are to be of like quality and selling value the mule yarns can be spun from a lower and cheaper grade of cotton. In other words, on that basis of comparison there is a distinct advantage to the English mule spinner either in a decided preference from the buyer over his American competitor's ring-spun yarn, or in a corresponding saving in the cost of his cotton.

It might be argued that American mills should adopt mule spinning, but the argument does not hold good, for the comparison of costs between mule-spun yarns and ring-spun yarns has been arbitrarily chosen by the Tariff Board. With its manufacturing skill of generations of workers and low building and equipment costs a mule-spinning mill is the natural unit for English conditions; they require and possess an abundant supply of mule spinners who are generally men and undoubtedly the most skilled operatives in the cotton-spinning industry; whereas, for exactly opposite reasons, in America the ring-spinning mill is best adapted, also a matter of natural selection.

(4) The selling expense to an English mill is very much less, its sales are quicker realized upon and converted into cash, and its opportunities for marketing its product are immeasurably better than in America; in England the entire industry is thoroughly standardized and concentrated within a small radius of relatively a few miles; whereas in America it is scattered over many hundreds, and even thousands, of miles, with all the differences in conditions that would be naturally expected in widely separated and, in many cases, isolated localities.

The greatest spot-cotton market in the world is at Liverpool, within 20 miles of Manchester, the center of England's cotton manufacturing industry. At the Manchester Royal Exchange practically all of the yarns and cloths are bought and sold that are produced in the whole district. No counterpart exists in America, or ever can exist, in the very nature of the case.

Again, in England mills of 80,000 to 120,000 spindles are the rule, with all the economies that can be effected in the standardization of a great industry in such large units; and where wages themselves, because of the industry being confined to one small area, are so standardized that all mills are on practically an equal footing. In America there are many mills of 5,000 to 10,000 spindles, and the average in the whole South will probably not exceed 12,000 to 15,000 spindles; they are scattered all over the territory and there is no agreement among the mills, nor could there reasonably be any, for a uniform wage scale; each is compelled to pay what the opportunities for other employment dictate in its own locality. Freight rates are widely different; taxes, interest, and many other items differ in the same proportion.

The Tariff Board's comparisons are naturally enough, in one sense, based upon like conditions in like mills in England and America, yet we doubt exceedingly that any political party would care to go before the country upon a platform inexorably demanding that the large majority of smaller mills working under disadvantageous circumstances should be compelled to produce under the same conditions as their larger and more favorably situated competitors, or be ruthlessly stamped out of existence. The fact that the larger and more favored mills would and do profit more than the smaller and less favorably situated ones is but obeying the general law of nature in which the stronger, intellectually and otherwise, have an advantage over the weaker; yet we have hardly reached the point where our weaker element shall be given no opportunity to grow and become strong.

In this respect we are frankly arguing in favor of living conditions for the large majority of the comparative small southern mills. Less than 20 years ago there were only a few, in fact practically no cotton mills in the South; money was scarce and hard to obtain; the country was poor. We have built it up and developed our industries largely upon borrowed money, and we have not outgrown that state yet by any means. Some of our older competitors in the North actually prospered by war conditions, the very conditions that put the South so far backward in industrial development. Our foreign competitors have had no setback for a hundred years and have likewise profited by those same conditions that have been such a great handicap to us in the South. When our smaller mills have grown to the size and strength of their competitors and have paid off their debts, is time enough to reduce competition in this country, at least from abroad, to the dead level of a survival of the fittest—a competition of only the largest and most efficient units.

PARAGRAPHS 315-320—COTTON CLOTH.

(5) The advantage of the English merchant marine, splendid banking facilities in foreign commercial centers, and many other items could be elaborated upon, but no doubt the foregoing are sufficient for the purpose in hand.

The above suggestion as a basis for rates and the difference in conditions touched upon are respectfully and earnestly submitted for examination and consideration by all concerned.

The only reasonable objection that can be advanced against this proposed method of establishing rates is that the American market price may at some time become artificial rather than competitive, because of some form of restraint of trade by monopoly, trusts, or otherwise. The Tariff Board, the Ways and Means Committee, or any other responsible governmental body could, however, easily investigate from time to time and ascertain whether such conditions existed; and, if found, could make due allowance therefor. At the present time, it is admitted by everybody that the cotton industry is singularly free from restraint of trade, monopoly, trusts, or otherwise, and the prices for its product are governed by the keenest kind of competition.

Furthermore, the comparative manufacturer's selling prices should obviously not be chosen from times of depression, but should represent the average conditions of a term of years.

The comparisons of the Tariff Board have, unfortunately, been made during a year of extreme depression in the cotton industry of the United States.

As to the prices consumers pay in the two countries, that is something over which cotton manufacturers have no control; that the cost of distribution is greater in this country than abroad is not a matter chargeable to the manufacturing industry.

Special attention is called to a fact that is by no means as paradoxical as it seems:

If, as alleged in the Tariff Board's report, weaving the plainer goods is as cheaply done in this country as abroad, and if the cost of spinning yarns abroad is considerably less than what it is in this country, we are confronted with the very startling possibility that tariff rates which may be competitive with, or entirely prohibitory to foreign importations on cloth, might actually permit the importation of the yarns of which the cloths themselves are manufactured.

To illustrate: The Underwood bill adds 5 per cent to the yarn duties for its cloth duties. For the plainer weaves constituting the vast majority of manufactures, the plan adopted in the Underwood bill of basing the duty on cloth only upon the counts of yarn that enter into the cloth seems both sound in principle and simple in application. On fancy weaves additional allowance must of necessity be made, in proportion that foreign weaving costs on such goods are lower than in America. It is only on plain weaving that we are able to keep our costs down to an equality, because our weavers tend more looms than foreign labor union regulations permit foreign weavers to tend. Over there are more operatives than positions; hence, any system that would speed up or lessen the opportunity for employment will not be tolerated. In this country there are more positions than weavers, and consequently our weavers gladly welcome the opportunity to tend more looms and be paid proportionately more than if they tended the regulation number of two to four, as is customary abroad.

So, if weaving the plainer constructions in America is practically as cheap as in England, should not the yarns of which the cloth is manufactured carry with it the same ad valorem duty as upon the cloth itself, for the difference in the cost of conversion is in the cost of spinning and not in the cost of weaving?

Again, while the proposed rates in the Underwood bill on coarse yarns are adequate where the finer counts are actually being imported into the United States in noticeable amounts, is it not *prima facie* evidence that the present rates on such counts are not excessive? And, for a like reason, will not a comparison of the foreign and domestic manufacturer's prices of medium yarns show the basis upon which they may be imported? The demand for lower rates can still be fully met by the very substantial reduction that can be effected in the many staple fabrics that come under the head of necessities of life.

The practice of "dumping" is one of the features of modern industrialism that must be reckoned with. If, in any country, particularly one in which large and well-organized industrial plants are the rule, conditions become abnormal or unsatisfactory in the market (whether a foreign or a home market, or both), curtailing production and shutting down plants is only resorted to at the last moment; relief is sought by "dumping" the surplus product into some other market, often at or below cost. Any well organized manufacturing company will submit to an actual loss for an indefinite period rather than lose its organization; it is cheaper to pocket a loss and hold it together than it is to build up a new one. Naturally, the best dumping ground for

PARAGRAPHS 315-320—COTTON CLOTH.

English and continental textile manufactures is that which is the best quick cash buyer—obviously the United States if its tariff rates are on a competitive basis.

From a protectionist standpoint regular tariff rates should be adequate to protect against dumping.

From the standpoint of tariff for revenue only, the rates should be competitive to the extent of admitting importations to a predetermined extent. For example, Mr. Underwood, introducing his bill for revising the cotton schedule, explained it by saying that the estimated imports under the proposed bill are \$39,163,000; he also stated that his bill was a revenue measure only. It therefore follows that should the rates established in that bill be insufficient at any time to hold importations down to the figure he named on which the amount of revenue contemplated was based, that some means of checking importations is distinctly in order because it is apparently neither his purpose to transfer an undue part of the cotton manufacturing industry of this country to foreign manufacturers nor to collect an excessive and undue amount of revenue from this one particular industry.

Germany has in its tariff system a lever by which imports are regulated in the shape of tariff rates that are raised and lowered according to requirements from time to time.

So, if it is proposed to establish in the United States tariff rates that are competitive on a predetermined revenue basis in normal times, we earnestly urge the incorporation in the tariff act of a provision whereby an additional and regulative duty would automatically be applied when the importations were exceeding the amount contemplated by the framers of the bill. For example, at any time, suppose that the importations during the preceding three months were at a greater rate than contemplated in the tariff bill, the customs officers would be instructed by proper authority (made mandatory in the act) to add to the regular tariff rates of, say, an extra 5 per cent duty, and when the importations for a preceding three months fell back to or below the amount contemplated, the increase of 5 per cent in rates would be automatically withdrawn. Such a method would maintain a continuous trade and revenue balance strictly according to the intent of the framers of the bill, and would remove the fear and apprehension that many manufacturers feel toward a tariff for revenue measure, lest the rates adopted and honestly intended by its makers be not adequate and sufficient to regulate importations and revenue derived therefrom as pretended.

As to whether such a regulative duty, to be used as required and additional to the regular rates, would fit all lines of industry is something for Congress and others interested to decide. It certainly would apply to manufactures of cotton, and this particular schedule would be a simple one to try it out on.

It is true that importers might claim that it would keep them "up in the air" and they would never know where they stood; it is respectfully submitted, however, that it would not entail as much hardship to the country at large as would the seriously interfering with the cotton manufacturing industry of our own country and the many concerned in it—stockholders, employees, local merchants, farmers, and other producers dependent upon the prosperity of the mills, etc.

The appended exhibits are intended not only for the information of our own members, but are for the avowed purpose of emphasizing to our Representatives in Congress the condition named.

Many members of this association have opened their books to the inspection of the Tariff Board, and are ready to offer them to the inspection of any duly authorized persons representing either the administration or the Ways and Means Committee of the House of Representatives, in consideration of all of which it is felt that our well-meant criticisms will be accepted in a spirit of helpfulness and due consideration given thereto by those who undertake the revision of the cotton schedule.

COMMITTEE.

EXHIBIT A.—CAPITALIZATION OF RECENT ENGLISH SPINNING MILLS.

COTTON-MILL BUILDING IN LANCASHIRE (FEB. 13, 1907).

[One pound or sovereign (£1)=approximately \$5; one shilling (1s.)=approximately 25 cents; one penny (1d.)=approximately 2 cents.]

The accompanying table shows the number, date, and size of the new cotton-spinning mills in the district of which Manchester is the commercial center. No mill registered or built before 1901 is shown in the table.

PARAGRAPHS 315-320—COTTON CLOTH.

A number of extensions and additions to existing mills are not included in the foregoing list. These extensions are estimated at about 400,000 spindles. The number of spindles on our new list of mills is about 9,700,000, so that the total addition to the cotton spindles of the Lancashire district since 1900 will exceed 10,000,000. This increase in seven years exceeds the total number of existing cotton spindles in Germany, France, Russia, India, or any other country in the world except the United States of America. It is greater than the total number of spindles in the Southern States and equal to about 60 per cent of the spindles in the Northern States.—Manchester Guardian.

EXTRACT FROM "ENGLAND'S COTTON INDUSTRY, 1907."

"The cost of constructing and equipping both spinning and weaving plants in England has largely increased during the present mill-building boom. Where a few years ago \$87 to \$97 per loom would complete a weaving shed, it now costs \$121 to \$145, including the preparatory processes of spooling, warping, slashing, etc. Similarly a mule spinning mill, on, say 50s carded, which formerly cost \$5.20 per spindle, now costs \$7.30. There is a good deal of complaint heard about the way in which many of the new mills are being promoted. Take a typical instance: The capital stock of a 100,000 spindle mill was fixed at \$500,000, in shares of a par value of \$5 each, payable

PARAGRAPHS 315-320—COTTON CLOTH.

at the rate of 50 cents a share at intervals. The mill is nearly in full operation at the present time and only \$1.50 a share has been called in. It is proposed to call on the stockholders for not more than \$2.50 a share, the remainder of the money needed being secured partly from banks, but mostly from small depositors, who loan their savings to the mills at 4½ per cent per annum. Virtually the manufacturing company conducts a banking business. Later the second \$2.50 a share will be called in, when another mill will be built. The strongest complaint arises, however, from the habit of requiring everybody who desires to secure contracts for either machinery, equipment, construction, or building materials to take a number of shares in the enterprise as a condition precedent to awarding the work. That the industry is at least temporarily very prosperous is shown by the average earning of 35 per cent on the share capital during the first quarter of the current year (1907) by such companies as publish balance sheets. Most mills are preparing against a future rainy day by increasing their reserve funds and writing off more than the usual percentage for depreciation."—Department of Commerce and Labor.

Such a system of promotion seems incredible to an American manufacturer, but it is true, nevertheless. By looking over the accompanying tables, it will be noticed that since 1900 the average new English spinning mill is capitalized at only £1. or \$5, per spindle, and further than that, that only one-fifth to one-half of that small capitalization has ever been paid in.

A quick calculation will show that with both mills working on a gross profit of 10 per cent on sales and charging off 4 per cent of the cost of the plant for depreciation, if the interest item be not included and tariff rates take into account everything but the interest item, that such an English mill could make 20 to 40 per cent on its paid-in capital while an American mill was making only 6 per cent, and, conversely, that it could reduce prices enough to put the American mill out of business.

AN ENGLISH BANKER ON THE SUBJECT.

A leading English banking firm answers (May, 1912) an inquiry relating to the methods of promoting many English spinning mills since 1900, as follows:

"There is no doubt the practice of calling up a small part of the capital, and borrowing large sums of loan money is freely adopted by the newer companies, and they find no difficulty in obtaining considerable amounts on open loan at 4 to 4½ per cent without any security."

¹ Previous returns.

NOTE.—England has twice as many spindles as America, yet only about the same number of looms; her surplus spinning capacity for export trade is as great as the whole American spinning industry.

PARAGRAPHS 315-320—COTTON CLOTH.

EXHIBIT D.—EXTRACTS FROM WILLIAM TATTERSALL'S COTTON TRADE CIRCULAR
(ENGLAND), FEB. 14, 1912.

NEW SPINNING MILLS.

The following new mills using Egyptian cotton have partly commenced:

THE MANCHESTER (ENGLAND) MARKET REPORT.

ROYAL EXCHANGE, *April 26.*

No particular development of business has transpired during the past week, and the tone of the market has continued quiet. The raw-cotton situation at the moment is dominating all other matters, and the fluctuations in price have somewhat disturbed trade. Buyers are not in the mood to place orders, and on the other hand producers are not at all in need of fresh business. A waiting policy has been adopted in numerous directions, and we are undoubtedly passing through a period of distribution of goods bought some time ago. Machinery throughout Lancashire is running at full stretch, and encouraging results of trading continue to be reported.

American yarns for home use have been very firmly held, and the stiff attitude presented by spinners to buyers has been greater than expected. Few opportunities have occurred of orders being placed at anything less than quotations. The activity in ring spinnings is well maintained.

In shipping bundles a fair amount of business has been under consideration, but producers are deeply sold, and their independent attitude appears to be checking fresh business. There has not been much inquiry for the Continent, but some bids which are not very far out have been mentioned for India.

Yarns made from Egyptian and sea-island cotton in Bolton and South Lancashire have been well held, and in an irregular way a fair business has been done. Order lists in this section seem to vary a good deal. Special marks are busier than common spinnings. Most of the buying has been in small lots to meet urgent wants.

The following is a list of nominal yarn quotations:

	Per lb.
16's cop twist.....	8 $\frac{3}{4}$ d. to 9 $\frac{1}{2}$ d.
32's cop twist.....	9 $\frac{1}{2}$ d. to 10 $\frac{1}{2}$ d.

EXHIBIT F.—ENGLAND'S LEAD IN THE COTTON TRADE.

The commercial supremacy of English cotton piecegoods throughout the world is one of the accepted facts of international trade. In the open markets—those unprotected by a tariff—Lancashire goods enjoy something approaching a monopoly, especially in all cases (and they are the vast majority) where cost production is the decisive factor in the competition for sales. In the protected markets they are of course placed at what is calculated to be an overwhelming disadvantage in competition with the products of the local protected industry, but they still retain their advantage over similar goods imported from any other country. Thus Great Britain enjoys the lion's share of the export trade in cottons not only with her own colonies and dependencies (where in some cases they have now a fiscal preference) and with neutral markets in which there is no obstacle to importation, but also (and this is a very important fact not sufficiently appreciated) with the markets which are protected by high tariffs. The British home market is of course open to all free of duty, yet it is a remarkable fact that Great Britain sells more cotton goods in the protected markets of her principal rivals in this industry than those rivals are able to sell in her open market. The United States and Germany both buy more cotton goods from Great Britain than Great Britain buys from them, and there is, in fact, no cotton manufacturing country in the world which sells more cotton goods to England than it buys from England. The reasons for the remarkable and enviable position of Great Britain in this particular industry are worthy of close investigation.

Historically the manufacture of cotton cloth in Great Britain dates from the year 1600 or thereabouts. A petition of London merchants in 1621, preserved amongst the State Papers, sets forth that "about 20 years past divers people in this Kingdom, but chiefly in the county of Lancaster, have found out the trade of making of other fustians made of a kind of bombast or down, being a fruit of the earth, growing upon little shrubs or bushes, brought into this Kingdom by the Turkey merchants from Smyrna, Cyprus, Area (Acre), and Sydon, but commonly called cotton wool." This is the first unmistakable reference in history to the weaving of cotton fabrics in England, and only 20 years later there is a historical reference to an export trade in these cotton goods. A book called "The Treasure of Traffic," Lewes Roberts, published in 1641, speaking of the textile industries of the town of Manchester, says: "They buy cotton wool in London that comes first from Cyprus and Smyrna and at home work the same and perfect it into fustians, vermilions, dimitics, and other such stuffs and then return it to London, where the same is vended and sold, and not seldom sent into foreign parts." Thus were Manchester cottons first introduced—nearly 300 years ago—into foreign markets.

For the next 200 years the cotton industry continued to be carried on in a small but gradually increasing way in Lancashire, side by side with the older textile crafts of woolen, linen, and silk weaving. For most of this time cotton was used only for the

PARAGRAPHS 315-320—COTTON CLOTH.

weft or "filling" of cotton cloths, the warps being of linen or wool, for it was not until the water frame was introduced toward the end of the eighteenth century that cotton, a comparatively short fiber, could be spun into yarns fine enough and strong enough for warps. The inventions of Arkwright, Kay, Crompton, Hargreaves, Cartwright, and others, during the period 1775-1825 and the application first of water power and then of steam power to the driving of the new machines, led to an enormous expansion of the cotton industry in Lancashire and the gradual driving out of the woolen industry to the east (Yorkshire), the linen industry to the west (Ireland), and the silk industry to the south (Cheshire), where they remain to this day. The cotton industry offered better profits and wages, and so attracted capital and labor in Lancashire from these other branches of the textile industry. It also attracted and stimulated the cooperation of the most ingenious mechanics in still further perfecting the machines by means of which the cost of production had been so much diminished.

A very important reason for the permanent establishment of the cotton industry in Lancashire rather than elsewhere in England is to be found in the physical geography of the country. Prof. Chapman, of Manchester University, to whose writings on the history and economics of the cotton industry an acknowledgment is due, says of the peculiarly suitable combination of conditions to be found there:

"There is, firstly, the climate, which for the purpose of cotton spinning is unsurpassed elsewhere and which became of the first order of importance when fine spinning was developed. In the Lancashire atmosphere in certain districts just about the right degree of humidity is contained on a great number of days for spinning to be done with the least difficulty. Some dampness is essential to make the fibers cling, but excessive moisture is a disadvantage. Over the county of Lancashire the prevailing west wind carries comparatively continuous currents of humidified air. These currents vary in temperature according to their elevation. Hot and cold layers mix when they reach the hills, and the mixture of the two is nearer to the saturation point than either of its components. The degree of moisture is regulated by the ratio of the actual amount of moisture to the moisture of the saturation point for that particular temperature. Owing to the sudden elevation the air is rarefied, its temperature being thereby lowered, and in consequence condensation tends to be produced. In several places in England and abroad where there is a scarcity of moisture artificial humidifiers have been tried, but no cheap and satisfactory one has hitherto been discovered. To the advantages of the Lancashire climate for cotton spinning must be added, especially as regards the early days of the cotton industry, its disadvantages for other callings. The unpleasantness of the weather renders an indoor occupation desirable, and the scanty sunshine, combined with the unfruitful nature of much of the soil, prevents the absorption of the population in agricultural pursuits. In later years the port of Liverpool and the presence of coal supplemented the attractions which were holding the cotton industry in Lancashire. All the raw material must come from abroad, and an enormous proportion of English cotton products figure as exports. The proximity of Liverpool has aided materially in making the cotton industry a great exporting industry."

But what has been said so far goes only a very little way to account for the present unique position of the Lancashire cotton industry. It had the advantages of an early start amid propitious natural conditions, but equal advantages have not prevented other industries elsewhere from going down before foreign competition, or at best surviving only as one of a number of equal rivals. It is therefore necessary to look for other causes which have helped Lancashire to keep the start originally gained. Amongst these the comparatively early and complete development in England of the commercial and financial machinery of foreign trade has been one of the most potent. This is a matter of economic history and need not be enlarged upon here; it is enough to point out that whereas the cotton manufacturers of American and Germany have commonly to send out traveling representatives to foreign markets to push the sale of their goods, the buyers in many of these markets have long ago come to Manchester and have established there their own houses for the purpose of buying and exporting Manchester textiles. There are whole streets in Manchester in which the names of the office and warehouse doors are preponderatingly foreign. German, French, Greek, Italian, Portuguese, Spanish, Scandinavian, American, Turkish, Moorish, Persian, South American—firms of all these nationalities and others are buying not only for their own national markets, but for foreign colonies, and in fact for any part of the world in which they can obtain orders. The largest shippers of Manchester goods to India happen, for instance, to be a Greek firm, Messrs. Ralli Bros. In this extraordinarily complete and cosmopolitan equipment of commercial connections, to which must be added the great number of British merchant firms who have their own houses with resident partners in India, China, Africa, the South American Republics, and

PARAGRAPHS 315-320—COTTON CLOTH.

the British colonies, the Lancashire industry has for half a century or more enjoyed a solid advantage over every foreign competitor.

Another point is that whereas for the cotton industry in America, Germany, and all other protected countries the home market is the principal outlet, and the export trade more or less a side line, in Lancashire the conditions are reversed. The English mills are devoted mainly to the export trade, which is especially catered for, and employs at least 80 per cent of the looms; the home trade is a comparatively small thing. Lancashire, therefore, gives the foreign buyer not what it suits Lancashire's convenience to sell at any particular moment, but what from long experience and intimate study of the tastes of individual foreign markets, the Manchester export merchants know to be suited to their needs. The business of catering for the varying preferences of the foreign consumer in every quarter of the globe is nowhere so diligently and intelligently pursued as it is in Manchester. Add to this the fact that the cotton industry in Lancashire, owing partly to its long history, partly to its concentration in a comparatively small area intersected with railways, canals, and roads, has developed technical specialization to a degree as yet unapproached in any other country. Spinning, weaving, bleaching, dyeing, printing, finishing, are all separate and distinct businesses, carried on by specialists who concern themselves with nothing else, and who by continual competition with one another in an absolutely open field are driven to keep efficiency up and cost of production down, or else go out of business. In each of these processes the capitalist has the opportunity of securing the economic advantages of production on the largest possible scale with the narrowest limits of variety, and for all the processes the buyer at successive stages has the widest field of choice amongst competitive specialists. In this again, the organization of the British cotton industry is unique.—The Indian Textile Trade Journal.

EXHIBIT G.—EXTRACTS FROM THE TARIFF BOARD'S REPORT.

INTRODUCTION.

[Previously circulated as a preliminary synopsis.]

THE TARIFF BOARD, TREASURY BUILDING,
Washington, March 22, 1912.

The PRESIDENT:

Pursuant to your instructions, that as soon as possible after completing our report on Schedule K of the tariff law we should report on Schedule I, cotton manufactures, we have the honor to submit the following:

The report consists of two parts:

Part I. Analysis and glossary of Schedule I of the present tariff law, together with a statistical survey of the cotton industry in leading countries.

Part II. Relative costs of production, prices, and wages with special reference to the existing rates of duty.

FINDINGS OF THE INVESTIGATION.

The method of determining costs adopted by the board does not include the item of interest, so that the cost figures as given show nothing regarding the original investment necessary to carry on the process of manufacture except the item of depreciation. This item is slight so far as cost per yard of cloth is concerned. Obviously, however, the relative advantage or disadvantage of the foreign and domestic manufacturer in competition is affected by the amount of original capital on which interest must be earned. Consequently figures are presented showing the relative costs of completing and equipping a spinning plant and a weaving plant in England and this country, designed to carry on the same line of production. From these figures it appears that the cost of erecting a building is about 40 per cent greater in this country than in England, the cost of equipment for a spinning mill about 70 per cent higher, and the cost of equipment for a weaving plant (with plain looms in both countries) about 50 per cent higher. These figures are for the equipment considered adequate for a given production in the two countries. It varies somewhat according to different methods prevailing in the two countries, and the figures do not necessarily establish the relative prices of identical machines here and abroad. Where a mill is equipped with automatic looms the cost of looms is at least two and a half times the cost for a mill equipped with plain looms.

PARAGRAPHS 315-320—COTTON CLOTH.

COST OF YARNS.

In comparing the cost of making yarns in England and the United States it has seemed essential, in view of the fact that 80 per cent of English spindles are on mules and 80 per cent of American spindles on ring frames, to compare the cost of mule spinning in England with the cost of ring spinning in this country. As a rule, mule spinning is a more expensive process, and the production from mule spinning is of somewhat finer quality, even with yarns of the same nominal count. These facts should be kept in mind; but it is evident that the really significant comparison is that between the actual results obtained under the prevailing methods of each country.

In the cost of raw material there is practically no advantage possessed by either country. Any general difference in the price between England and the United States is less than occurs from mill to mill or month to month in either country.

The actual book figures for English mills and American mills show that in comparing the most efficient mill for which we have figures in England with the most efficient mill for which we have figures in this country—and these mills are typical in both cases—the per cent of the total English labor cost to the total American labor cost per pound of yarn varies from 78 to 95 per cent. Comparing all of the yarns selected, the English labor cost is found on the average to be practically seven-eighths of the American in the case of these two mills.

In the matter of general expense the difference between the two countries is decidedly greater, thereby increasing the difference in the total conversion cost of yarn. Again, by comparing the two most efficient mills, as referred to above, it is found that the total conversion cost of yarn in England varied from 65 to 79 per cent of the American conversion cost. The average on all counts taken shows the English conversion cost to be about 73 per cent of the American.

It should be noted that these comparisons are based upon taking that mill in each country which showed in general the low cost on the whole range of yarns. On certain particular counts a lower cost was shown in other mills, so that the figures may be taken as typical for mills of high efficiency. They cover warp and filling yarns not higher than 50s for warp and 70s for filling.

Taking all the mills covered by the investigation in each country, there were wider variations in the American costs secured than in the English costs due partly to the fact that the English mills were all in the Lancashire district, where wages and other conditions are well standardized, while the American costs were taken from mills covering a much wider area with much greater differences in labor and other conditions. Another reason for the wider variations in American costs is that the English mills for which figures were secured are all of a modern and efficient type, while some of the American mills included were old and of low efficiency.

In the case of most yarns for which figures are given for the United States the highest conversion cost is 50 per cent higher than the lowest conversion cost. In a few cases it is nearly double. Consequently the difference in conversion cost would appear much greater in a comparison drawn between mills of lowest cost in England and mills of highest cost in the United States.

In this connection care should be taken not to confuse conversion cost with the value of the finished yarn. In saying that the cost of manufacturing yarn in an English mill is 72 per cent of the cost in an American mill, it is not meant that the total cost of English yarn, including the value of the cotton in it, is 72 per cent of the total cost of the American yarn. As a matter of fact, the difference in conversion cost between the two countries varies from 3.8 per cent to 11.9 per cent of the total cost of production in England, including raw material.

It should also be noted that these relative costs do not include yarns of the highest counts or other yarns used largely for special purposes, since the board was not able to secure sufficiently detailed figures on the higher counts abroad. They do include, however, the great mass commonly manufactured in the United States. It is entirely possible that a comparison of costs on these special counts or qualities would show a different ratio between the two countries than is here presented.

COST OF WEAVING.

In the matter of turning yarn into woven fabrics the board was unable to secure such detailed foreign-cost figures as in the case of spinning, and the relative cost of this process of manufacture here and abroad can not be stated in the same way. For tariff purposes, however, valuable conclusions may be drawn from a comparison of relative prices under competitive conditions in this and other countries and from a comparison of duties with domestic production costs. These are considered below.

PARAGRAPHS 315-320—COTTON CLOTH.

It is necessary, however, to recognize an important difference in the methods employed in the United States and England in this branch of the industry. There seems to be no wide difference between the two countries in the amount of machinery tended or in the output per operative in the spinning of yarn. In the case of weaving the situation is quite different. English looms run somewhat faster than the looms in this country, but the number of looms tended per weaver is usually much less than here. This is in marked contrast to the woolen industry, where the number of looms tended is about the same in the two countries. In the case of plain looms (not automatic) the English weaver seldom tends more than 4 looms, while in this country a weaver rarely tends less than 6, and more frequently 8, or even 12, if equipped with "warp-stop motions." Furthermore, English manufacturers make little use of automatic looms, of which there were less than 6,000 in May, 1911, in the whole of England, while in the United States there are well over 200,000. It is estimated that there are now about 10,000 of these looms in use in England and about 15,000 on the Continent. Where automatic looms can be used a single weaver commonly tends 20 looms, and sometimes as many as 28. The result is that whereas the output per spinner per hour in England is probably as great or greater than in this country, the output per weaver per hour is upon a large class of plain goods, less, and in the case where automatic looms are used in this country and plain looms in England it is very much less.

The foregoing statements apply to a comparison of plain looms in the two countries or of plain looms in England with automatic looms here. In the case of other methods of weaving, such as dobby, jacquard, box dobby, box jacquard, lappet, etc., the difference in output is by no means so great. In the case of dobby looms (without automatic attachment) on some classes of fabric, the American weaver will tend 8 or more looms as against 4 in England; but with the more complicated weaves the ratio seems to be nearer that of 6 to 4, and in the case of certain fancy fabrics, where the number of looms tended is necessarily 4 or less, the output per weaver is about the same in both countries.

As is well known, wages or earnings are not necessarily an index of the labor cost of any particular process of manufacture. The labor cost per yard depends on the relation between wages and output. An extreme illustration can be shown by figures secured by the board in Japan. It is true that the wages of spinners and weavers per day in that country are very low, but the number of operatives employed to secure a given output so much greater than in this country. In the case of spinning, the lower wages paid are not offset by the larger number of persons employed, and consequently the amount paid to spinners per pound of yarn is materially less than in this country. On the other hand, Japanese weavers tend only one or two looms, and the lower output per weaver under existing conditions makes the amount paid the weaver per yard of cloth about 80 per cent of the amount paid in this country where plain looms are used in this country, while compared with the use of automatic looms, the amount paid the weaver per yard of cloth is greater than in this country.

It must further be noted, however, that the cost of weaving is not merely a question of what the weaver receives per yard. The ratio of other labor to weaver's labor varies greatly from mill to mill and no general statement can be made regarding it. The cost of this other labor, such as foremen, slashers, warpers, drawers-in, loom fixers, is not reduced by the fact that the weaver tends a large number of looms. Consequently the total labor cost of weaving is not reduced in proportion to the reduction of the actual weaver's rate per yard by the fact that a larger number of looms is tended by one operative.

Keeping the above facts in mind it may be stated that, in the case of a large variety of plain goods, the labor cost of turning yarn into cloth in the United States is not greater, and in some cases is lower, than in England. For cloths woven on automatic looms this is especially the case, but on certain classes of fabrics the same holds true for plain looms due to the greater number of looms per weaver in this country. This does not necessarily indicate any individual superiority on the part of the American weaver. It is a matter of difference in industrial policy, whether determined by the manufacturer or the laborer, and it explains the difference in the methods of production which prevail at the present time. Where the automatic loom is now used in England a weaver frequently tends 20 looms, as is commonly done in the United States.

In the case of finer goods, however, especially figured goods with complicated weaves, the cost of weaving is higher here than in England. This is due largely to the fact that the difference in the number of looms tended per weaver is less than in the case of plain goods. On a large part of these fancy goods (those requiring more than one kind of filling) the automatic loom can not be used. Even disregarding the question of automatic looms, the difference in the number of looms tended per weaver on

PARAGRAPHS 315-320—COTTON CLOTH.

such fabrics is less than in the case of plain cloths. Consequently the comparatively small difference in output per weaver does not offset the higher wages paid in this country.

Figures are presented in the report showing that although labor costs in the cotton industry are in many cases lower in the United States than in England, yet the actual hourly earnings in this country are, in most of the principal occupations, much greater.

The conclusion that under present methods of production on many plain fabrics the cost of production is not greater in this country is also borne out by a comparison of English and American mill prices. A comparison of such prices on a large variety of these fabrics in England and the United States for the date of July 1, 1911, shows that in the case of plain goods the American price at the mill was in no case much above the English mill price, while in the majority of cases it was lower. It should be noted, however, that American prices of this date, relative to the price of cotton, were somewhat lower than normal. The English prices are the regular quotations for the home market, and are not necessarily the prices for export and for neutral markets. In the case of fancy goods, however, where the looms tended are necessarily less, the American mill prices were in most cases higher than the English.

The subject of prices is referred to below, but the fact that in the case of a number of leading fabrics the American manufacturer is selling at less than is the English manufacturer is corroborative of the statement that plain goods can be manufactured as cheaply in this country as in England. The report also gives information as to the ability of the American manufacturer to compete in neutral markets on goods of this kind.

COST OF FINISHING.

Finishing includes the process of bleaching, printing, dyeing, mercerizing, etc. It is the general rule in England that the finishing of cotton fabrics is carried on in establishments separate and distinct from the weaving mills. This is also true in large measure in the United States. Since the converter or the weaving manufacturer must pay the actual commission charges, a comparison of these finishing charges in England and the United States is adequate to show the relative cost of finishing in the two countries.

A comparison of 60 specific samples for which finishing data were obtained shows that in most cases the differences between the charges in the two countries were slight, but that the American charges were slightly lower on most of the samples.

PRICES.

As already stated, many standard fabrics of simple construction are sold by American manufacturers at a price as low or lower than that of the English manufacturer. On the other hand, the English mill price of finer fabrics is in most cases lower than in this country; but it is only in the case of very few fancy specials that the American mill price is greater than the English mill price by anything like the full amount of the present duty. It does not follow, however, that the American consumer gets his goods at the same price as the English consumer. One of the most interesting results of the investigation is to be found in the facts included in the report regarding the different methods of distribution in the two countries and the greater margin which exists between the price at which the manufacturer sells his goods and the price at which the consumer buys them in this country as compared with similar prices in England. The relation of the tariff to the prices paid by consumers can only be understood by fully comprehending the significance in American trade of the principle of "set prices." This principle is fully explained in the report, and many figures are given to show mill price, converter's price, jobber's price, and retail price.

The most common retail prices for different kinds of cotton cloth are 5, 7½, 8½, 10, 12½, 15, 19, 25, 29, 35, and 50 cents a yard. These prices in turn fix the prices which the jobber can charge the retail merchant in order to bring the price of the fabric inside a given "set price" to the consumer, and these in their turn determine the prices which the jobber can afford to pay the manufacturer. The result is that under the existing system of distribution the effect of any change in cost of production or in mill price can not be determined except in relation to the "set price" of the retail trade. In some cases a reduction of 1 cent a yard in the mill price might be just enough to enable the jobber to sell at a price which would bring the goods within a lower retail class, thereby possibly saving as much as 6 cents a yard to the consumer. In another case a reduction in price of 3 or 4 cents a yard might not be sufficient to bring the cloth into the lower class, and in this case the whole reduction in mill price would go to the jobber or retailer, or both, while the consumer would pay the same price as before.

PARAGRAPHS 315-320—COTTON CLOTH.

It may be said in general that goods which are sold at the mill at from 8 to 9 cents reach the consumer commonly at 15 cents per yard.

When the mill price is 10 cents per yard the fabric is thrown into a different classification and will reach the consumer at 19 cents. An increase of the mill price from 10 to 11½ cents would probably not affect the price to the consumer. When, however, the mill price goes to 12 cents, the consumer will pay 25 cents. A further increase in the mill price of 2 cents in this case would not change the price to the consumer.

With a mill price of 14 cents the consumer would still pay 25 cents retail. Where the mill price is, however, 15 cents, the cloth enters another classification and probably reaches the consumer at 29 or 35 cents. It will be seen, then, that an increase of 2 cents, from 12 cents to 14 cents, does not affect the 25-cent retail price, while an increase of 1 per cent from 14½ to 15½ cents may increase the price to the consumer by 10 cents.

The same facts are brought out clearly by a study of the course of mill prices, jobbers' prices, and retail prices of the same fabric over a period of years. A good many examples of this are shown in the report. To illustrate by a certain sample quilt: This was sold by the mill in 1908 for 62½ cents and reached the consumer at \$1. In 1910 the mill price went up to 75 cents, an increase of 12½ cents, which increased the retail price paid by the consumer to \$1.50.

Another quilt of a little lower grade sold in the earlier period at the mill for 58½ cents; jobber's price, 70 cents; retail price, \$1. In 1910 the same quilt was selling for 67½ cents at the mill; jobber's price, 75 cents; retail price, \$1. In the case of the first quilt an increase in the mill price of 12½ cents increased the price to the consumer by 50 cents; while in the case of the other quilt an increase of 9 cents at the mill in the same year did not increase the retail price at all. The reason, of course, was that the second quilt, being of a little lower value, the increase did not quite bring it out of the \$1 class.

These facts, besides being of interest as showing the relation of the consumer to the producer in this country, are of importance in considering the effect of tariff changes. Assuming that the method of distribution remains the same, it would appear that the same rule would hold, whether the jobber should buy his goods of the domestic or the foreign manufacturer. We have seen that a slight reduction in the price the jobber pays to the producer might mean a large reduction in the price to the consumer. Conversely, a considerable reduction in the mill price might have no effect on what the consumer must pay, for exactly the same reason, on the one hand, a slight reduction in duty might mean a much more than proportional reduction in price to the consumer, whereas, on the other hand, a very material reduction in the duty might have no effect at all in decreasing the retail price.

This method of distribution is much more firmly fixed in the United States than in other countries. This fact, combined with the lower margin abroad between the mill price and the jobber's price and the lower margin between the jobber's price and the retailer's price, as compared with this country, brings about the result that goods which are manufactured at the same cost in England and the United States and sold at the same price in both countries at the mill nevertheless reaches the consumer in the two countries at quite different prices.

A few comparisons may be given here to show the wider margin between manufacturers' prices and retailers' prices in this country as compared with England. Thus one fabric which sells at the mill in the United States at 8½ cents a yard will be jobbed at 11 cents and sold at retail at 15 cents. The identical fabric in England would sell at the mill for the same price—8½ cents—be jobbed at 9.75 cents, and retail at 13½ cents.

A fabric selling at the mill in the United States at 10½ cents would be jobbed at 12½ cents and sold to the consumer at 19 cents, or possibly 25 cents. The same fabric, selling at the mill in England at a price identical with that paid at the American mill, would be jobbed at 11½ cents, and would reach the consumer at 15 cents.

A fabric selling at the mill in the United States at 12 cents would be jobbed at 16½ cents, and reach the consumer at 25 cents. The same fabric with the same mill price in England would be jobbed at 14 cents and reach the consumer at 19 cents. In the case of these particular samples it will be seen that the price received by the manufacturer is the same in both countries, but that the American consumer pays a decidedly higher price than the British consumer.

In conclusion it may be stated that the foreign cost of spinning is less than in the United States, as shown by the figures above. The same holds true for weaving fancy fabrics, on which the number of looms to the weaver in this country is not much greater than the number of looms to the weaver abroad. On account of the different mill methods in this country, the domestic labor cost of weaving on a large variety of

PARAGRAPHS 315-320—COTTON CLOTH.

plain fabrics of wide consumption is below the foreign cost. Except in the case of a few special fabrics, and in the case of various manufactured articles, some of which are produced in this country to a very slight extent, the American industry practically supplies the whole consumption. The imports of yarn in 1910 were less than one-half of 1 per cent of the home production in pounds. The imports of cotton cloth were less than 2 per cent of the home production in value. Mill prices are in many cases as low in this country as in the world's markets.

Where higher, as in the case of the finer classes of products, they are rarely higher by anything like the whole amount of the duty. The effect of the present tariff, then, in most cases is not so much to add the duty to the domestic manufacturer's price as to secure him the American market; and, in the case of most articles of widest consumption, to prevent the competition of the foreign manufacturer, either in normal or abnormal times. On account of more costly methods of distribution in this country from producer to consumer, the latter pays a decidedly higher retail price than the European consumer, even in the case of fabrics on which the cost of production and the mill price are as low here as there.

Respectfully submitted.

 TARIFF BOARD ON COTTON-YARN COSTS IN THE UNITED STATES AND ENGLAND.

The cost of manufacturing cotton yarn varies somewhat from mill to mill in any country; but in the United States, where a wide geographical distribution of the industry through different wage belts, as North and South, prevails, and where there is little standardization either of wages, methods, or systems, the variation in costs is much greater than in England, where in wages and in the methods generally much more standardization exists. Elsewhere in this report will be found comparisons based upon the costs as found in all the mills for which comparable data were obtained in each country.

In this section is presented a study of comparative costs based on the most efficient mill for which actual records were secured in each country, taking the lowest conversion cost, from cotton to yarn, as the measure of highest efficiency. This means the lowest cost in general on the whole range of yarns. In the case of particular counts a slightly lower cost was found in a few cases. The yarns compared include 13 warp yarns ranging from 28's to 60's count and 24 filling yarns of numbers ranging from 28's to 70's.

In the case of the English mill, mule spinning is the system used, while the American mill is operated on the ring-spinning system. It might seem that not only should the yarns used for comparison be of the same count, but the method of spinning should be identical. But this is not necessarily true. What is wanted is a comparison of identical yarns by the system most generally employed in their production in each country. By comparison of the two mills selected this condition is fully met, since over 80 per cent of the cotton yarn produced in England is made on mules, while over 80 per cent of the cotton yarns made in this country are ring-spun yarns. That English mule-spun yarns are here compared with American-ring-spun yarns means, therefore, that the board has compared conditions and methods in the industry in each country as it found them.

Data covering a complete year were secured from the books of each mill, and from these data conversion costs per pound of specific yarns have been worked out. In presenting these data slight changes have been made in number of spindles in each case in order to prevent identification of establishments furnishing information; corresponding changes have of course been necessary in such items as would affect cost, but the relation of each item to all others and of the mills to each other as found in the original data has not been disturbed, and the actual costs per pound are as worked out from the original basic data. With the indicated modifications a transcript of the basic statements as copied from the books of these two establishments is made below.

These two mills show interesting comparisons. The range of yarns spun is almost identical. The English mill is about the average size spinning mill customary in that country, while the American mill, being smaller, is in accordance with a correct contrast. This also holds true regarding the average number spun, since in general English mills spin to higher counts than do American.

The English mill was built about 1903, while part of the American mill was built about 1896 and part about 1904. The total first cost of the English mill was just about two-thirds of the value given for the American mill.

In both England and America mill owners figure on spinning about 85 pounds of uncombed yarn from 100 pounds of cotton, and the 15 pounds of waste would be made up of some 12 pounds of saleable waste and some 3 pounds of invisible waste and sand. In this case the American mill shows only 1 per cent invisible waste (which is less than usual in this country), and, therefore, the yarn and waste sold are 99 per cent of the cotton used. In the English mill the yarn and waste sold are 100.65 per cent of the cotton used, but this is due to the fact that the English mill conditions its yarn by allowing it to absorb moisture after spinning and before selling. This system is almost universal in England and very rare in the United States. The American mill sells 85.05 pounds of yarn as spun from 100 pounds of cotton used, while the English mill sells 89.21 pounds, the larger amount sold in the latter case being due to conditioning and not to greater efficiency in spinning. The actual average value

PARAGRAPHS 315-320—COTTON CLOTH.

of the cotton used in the American mill was 15.568 cents per pound. The average value in the English mill was so slightly different that we have taken the American cotton price for both mills to get a more uniform basis. In both cases due allowance has been made on the books for the difference of cotton stock in process at the beginning and end of the year. Starting with the same purchase price of raw cotton, the value of the cotton in the yarn is different for the two mills because in the latter case we have to subtract from the amount paid for the cotton the amount received for waste and then divide the figure so obtained by the pounds sold, which in the English instance has been increased by conditioning. We find in this case that the cotton in the yarn has a value that for the American mill is 111.235 per cent of the purchase price, and for the English mill is 108.849 per cent of the purchase price. For different numbers of yarns the figures for the two countries are as follows:

	Purchase price per pound of cotton.	Value of cotton per pound of yarn.	
		English mill.	American mill.
1 $\frac{1}{2}$ -inch cotton for 30s.....	\$0.1739	\$0.1893	\$0.1934
1 $\frac{1}{2}$ -inch cotton for 40s and 50s.....	.2188	.2382	.2434
1 $\frac{1}{2}$ -inch cotton for 60s and 70s.....	.2266	.2467	.2521

It is seen that, starting with the same purchase price of cotton, the cost of the cotton in the yarn is more to the American mill, due to the conditions above stated.

It is reasonable to suppose that the price of English-made yarn is established in view of this fact, since in the weaving of the yarn any temporary gain in weight caused by the conditioning of the yarn would not affect the weight of the finished cloth.

The following table (No. 125) has been prepared showing in somewhat more detail the itemized and total conversion costs as found in these lowest cost mills on specified yarns and then showing by percentages the relation of these costs to each other. In figuring percentages the cost in the American mill is taken as 100, and the table shows the relation the English cost bears to the American cost, expressed in percentages. For instance, take No. 30 warp yarn: The labor cost in the American mill is 1.671 cents per pound; in the English mill it is 1.3628 cents per pound, and this is 81.56 per cent of the American labor cost, while in the total conversion cost the English is 68.11 per cent of the American. That is, the difference in total conversion cost is considerably more than the difference in labor costs alone. In labor, the percentage of English cost ranges from 78.42 per cent of the American labor cost on No. 50 warp yarn, to 95.38 per cent on No. 30 filling yarn. Or, stated in another way, the English labor cost on No. 50 warp yarn as shown in these two mills is 21.58 per cent lower than the American labor cost, while the total conversion cost is 34.51 per cent lower. Comparing all of the yarns selected, the English labor cost is found to be practically seven-eighths of the American, though on the higher counts—that is, on finer yarns—the English labor advantage is somewhat greater than on the coarser yarns.

Salaries formed a larger percentage of costs in the American mill than in the English. In but two cases is the English salary cost per pound of yarn more than one-half of the American salary cost, while in no case is the labor cost per pound of yarn in the English mill less than 78.4 per cent of the American labor cost. The English salary cost ranges from 43.33 per cent of the American salary cost on warp No. 50 to 52.69 per cent on filling yarn No. 30, the general average being less than 50 per cent of the American.

Insurance and taxes are likewise higher in proportion to the total conversion cost in the English mill. The range is from 82.71 per cent on 50s warp to 100.53 per cent on 30s filling, the general average being about 82.5 per cent.

English supplies ranged from 81.24 per cent to 98.85 per cent of the American, the general average on the yarns selected being about 90 per cent.

For both mills the gross depreciation has been figured at 2 $\frac{1}{2}$ per cent on buildings and 5 per cent on machinery. The net depreciation has been taken as the gross depreciation less the cost of repairs, as shown on the books for the year taken.

PARAGRAPHS 315-320—COTTON CLOTH.

The costs per pound given under the head of fuel and power can not be directly compared, for the reason that the English mill is steam driven and the item in this case covers cost of coal alone, while in the case of the American mill one section is steam driven and one section driven by electric power purchased from outside and the figure for fuel and power includes both coal and electric power. The English mill gives its cost of coal per annum per mule spindle as 8.24 cents. For the section of the American mill steam driven the coal cost per annum is 28.8 cents per ring spindle, but this includes power for spooling. The other section of the American mill was driven by electric power bought from outside. This mill figured that its steam power cost only \$13.62, as against \$12.07 paid for electric power, but both of these figures are remarkably low.

"All other" costs include in the case of the English mill miscellaneous office expenses, gas and water, and employers' levies; in the case of the American mill miscellaneous office expenses, hauling and stable, and cotton manufacturers' association dues. In both cases this item is mainly for office expenses, such as office supplies, telegrams, postage, and such sundries, the English cost per pound averaging only about one-sixth of the American, which would seem to show that the American office is more elaborate and costly in its management.

TABLE 125.—Comparison of yarns conversion costs in England and United States.

[Showing itemized and total conversion costs of specified yarns in the two most efficient mills found in England and the United States and the per centage that the English cost is of the American cost, by items of cost. Costs for yarns as spun, excluding spooling or other processes beyond spinning.]

¹ Including electric power bought in case of American mill.

"Total conversion cost" in this table means the manufacturing cost from raw cotton to the yarn as it comes from the spindle and, of course, does not include cotton or waste items.

The English total conversion cost ranges from 65.49 per cent of the American total cost on No. 50 warp yarn to 79.65 per cent on 30's filling yarn. The average for the selected yarns is about 73 per cent of the American cost, the percentage being higher on the finer yarns.

The essential interest in this table centers in the fact that the difference in labor cost is not so great as is the difference in total conversion cost. In other words, taking the two mills which have the lowest production cost, the advantages which the English mill has over the American mill in production costs are not all due to difference in labor. In fact, the difference in labor costs is not so great as is the difference in salary costs, repair costs, and general expense costs.

COMPARISON OF CONVERSION COSTS OF WARP-FILLING YARNS AS FOUND IN VARIOUS MILLS IN ENGLAND AND THE UNITED STATES.

In the preceding pages there has been shown in detail a comparison of the manufacturing or conversion costs of cotton yarns in the most efficient mill of those taken in England and in the United States. In the following pages we contrast the costs as found in a range of mills in each country, taking all mills for which we have data on the specific yarns selected.

For this comparison we have selected warp yarns Nos. 28, 30, 36, 40, and 50 and filling yarns Nos. 26, 36, 38, 40, 50, 60, and 70. The costs on each count of yarn is given as found in 4 or more of 7 English mule-spinning mills and in 2 or more of 28 American mills for which comparable data were secured.

It should be noted in comparing costs of spinning of different counts of yarn in the various mills in England and the United States that these figures were secured in the same way as the figures already discussed for the two lowest mills. That is, it is, first, a comparison of mule spinning in England with ring spinning in the United States; second, the costs are for "yarn as spun," not including spooling, reeling, or packing; third, the English yarns are all conditioned while the American are not.

PARAGRAPHS 315-320—COTTON CLOTH.

As we are here comparing the costs in only 7 English mills with the costs in 28 American mills, the American costs are based on a wider range; but, irrespective of this, it is natural to expect that there will be found more variation in costs in American than in English mills. The English mills taken vary from 80,000 to 120,000 mule spindles each; the American mills vary from 25,000 up to over half a million spindles each. The English mills are more uniform in size, are all in Lancashire, and therefore only a short distance apart; they pay wages that are more or less standardized, and they are subject to the same general conditions as to proximity to fuel, to raw materials, to selling markets, etc. The American mills are scattered over a wide territory, from Maine to Alabama, have no standard of wages, and work under very diverse conditions. They vary widely in character and in age. The seven English are all modern and well equipped, ranging in age from 11 months to 15 years. The list of American mills includes many modern establishments, but also some of low efficiency and considerable antiquity. The newest American mill is 8 years old. The oldest equipment covered by the investigation in the United States included some spinning and weaving machinery 60 years old. English mills worked 55½ hours a week, while the American mills worked from 56 to 66 hours a week.

Table 122¹ shows that the higher the count the greater the labor cost as well as the conversion cost per pound of yarn. At the same time a wide variation in costs is found to exist for each number of yarn. This is shown in Tables 126 and 127, which give the cost of production of various yarns in each mill for which data were obtained for the respective yarns. Thus, taking up the lowest number, 28's (Table 126),¹ the labor cost is seen to range from 1.51 to 3.19 cents per pound, while the total conversion cost ranges from 2.94 to 5.44 cents per pound. The labor cost of the least efficient mill is thus seen to be more than twice that of the most efficient mill, while the conversion cost, as should be expected for the reasons previously explained, shows a somewhat smaller range, being 66 per cent higher in the least efficient mill as compared with the most efficient. The same is true of all the other yarn numbers; that is to say, the range in conversion costs is not quite as great as the range in labor cost, but in every instance the range is quite wide. The range in labor cost varies from 63 per cent for No. 50 yarn to 111 per cent for No. 28 yarn, while the range in conversion cost varies from 26 per cent for No. 40 yarn to 66 per cent for No. 28 yarn.

Table 126 shows the cost of production in the United States of ring-spun warp yarns ranging in size from 28's to 50's. For each size yarn the cost is given for the entire range of mills in which the particular yarn was spun. The cost is given in detail for the following items: Labor, salaries, insurance and taxes, depreciation, repairs, supplies, fuel, "all other," and the total conversion cost.

TARIFF BOARD ON COST OF PRODUCTION OF CLOTHS.

"The following three tables present the main facts regarding the 100 samples of American cloths used by the board as to cost of production, prices, and duties which would be imposed upon such goods if imported from abroad. Since the board was not able to secure such detailed figures for weaving costs as for the spinning and finishing processes, it is not possible to show the relation of duties to differences in the total conversion cost of cotton cloths in the same way as was done above for yarns. In Table 137 full details are given as to the relation of duties to domestic costs and foreign prices. Table 136 is a preliminary table, showing the relation of domestic costs to foreign and domestic mill prices. The samples are the same in each table and the sample numbers correspond, so that the detailed description of the sample given in Table 137 is not included in Table 136.

"The figures given in this table should be used with due caution, since the costs and prices are not of exactly the same date; nor is the 'producer's price' given necessarily identical with the price received by the mill for which the cost is given. Therefore, no conclusions can be drawn as to the margin of profit or loss on actual sales. The domestic prices are the trade prices prevailing during the spring of 1911 for delivery during that year. The English prices are quotations of English manufacturers for July 1, 1911. The costs were taken in the summer and fall of 1911."

¹ Table not shown.

¹ French selling price.² See Table 138 for explanation of these prices.

The Tariff Board cautions against placing much reliance upon these comparative figures, as they do not represent prices prevailing at the same time. (See p. 41.)

Likewise your committee wishes it borne in mind that the American prices represent almost panic conditions and should not be accepted as either reasonable or fair prices for tariff purposes.

The details of construction of the above samples, referred to as in Table 137, are appended in the back of this bulletin with some other data as a special insert page.

The third table referred to, 138, is not published for lack of space and that it is not essential, the other two tables, it is believed, being ample for the purpose in hand.

We know of no American mills costing as little as the figures given above; manufacturers generally will no doubt be surprised at what it is estimated their mills should cost.

Table 144 is a comparison of the total cost of complete spinning and weaving mills¹ in the United States and England. This table gives not only the total amount for each general item of cost, but also the cost per spindle for these several items, since this is a more convenient means for comparison. It will be seen that the cost of the building for the spinning mill is \$3.27 per spindle in the United States, as compared with \$2.46 per spindle in England. The textile machinery for the spinning mills amounts to \$4.84 per spindle in this country and \$2.80 per spindle in England. The total cost of the spinning mill complete in the United States is \$543,401.04, against \$396,367.77 in England, or per spindle the cost is \$10.83 in this country and \$7.92 in England, the latter being about 73 per cent of the total cost in the United States. Comparing the weaving mills, the cost of the building is shown to be \$2.88 per spindle in the United States and \$1.58 per spindle in England. The textile machinery for the weaving mill amounts to \$1.70 per spindle in this country and \$1.16 per spindle in England. The total cost of weaving mill complete in the United States is \$331,178, as compared with \$240,284.70 in England, or, on a spindle basis, this is \$6.60 in the United States and \$4.80 in England, the latter being about 73 per cent of the total cost of the weaving mill in the United States.

Referring to the grand total cost of spinning mills, it will be seen that in the United States the cost is \$17.43 per spindle, as compared with \$12.72 per spindle in England, the cost in England being 73 per cent of the cost in the United States.

¹ Comparative weaving figures are based on plain looms in both England and the United States. Figures for automatic looms in the American mill are given in Table 144.

TESTIMONY OF STUART W. CRAMER, OF CHARLOTTE, N. C.

The witness was duly sworn by the chairman.

Mr. CRAMER. The figures which I am about to present are designated Exhibit A in Mr. Miller's exhibits which he has just presented to the committee. Our suggested yarn schedule is embraced in the following table:

	Yarn numbers.					
	1 to 9.	10 to 19.	20 to 39.	40 to 59.	60 to 99.	100 and over.
	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>
Singles, in the gray.....	10	12½	17½	25	30	35
Combed, twisted, dyed, or colored or advanced in manufacture beyond singles, in the gray.....	15	17½	22½	30	35	40

In explanation of our method of arriving at the basis for these rates, I beg to say that a careful examination of printed House Report No. 65, Sixty-second Congress, submitted by your committee, discloses the fact that, broadly speaking, yarns from No. 40 and upward are fairly competitive at the present rates, as shown by actual importations. Of those yarns, No. 78/2 combed is the most conspicuous example of a competitive rate. The present specific duty of one-fourth cent per number per pound amounts to 19½ cents per pound. In 1910, 637,109 pounds were imported, on which a duty of \$124,236 was collected. The average foreign invoice value was 54.6 cents per pound, and the ad valorem rate of duty figured at 35.71 per cent.

To this must be added an additional importation of the same number of yarn mercerized in amount, 270,279 pounds, upon which a further duty of \$57,974 was collected, the ad valorem rate of duty amounting to 35.60 per cent.

PARAGRAPHS 315-320—COTTON CLOTH.

In short, over 900,000 pounds of that one particular number was imported in 1910, yielding a revenue of over \$180,000.

Commencing with a classification embracing single yarns in the gray, from Nos. 1 to 9, inclusive, our committee arbitrarily assumed a rate of 10 per cent. That rate was chosen as the minimum rate that in our opinion should be levied upon any manufacture of cotton, as we felt it to be as low in proportion, if not lower, than practically any other schedule. Also we felt that rate to be reasonable, because the present rate on those yarns is 50 per cent higher than this rate which we have chosen.

Our committee then drew an average between these two rates of 10 and 35 per cent ad valorem, respectively, placing the duties at intermediate points in proportion thereto.

The classification that we adopted by numbers was not only one that we thought would be convenient of administration, but was primarily based upon the organization or equipment of mills adapted to make them.

It will be observed that to the suggested rates of yarns in the gray we simply added 5 per cent for any process of manufacture that advanced them in value, with no duplication whatsoever.

I will not consume your time by arguments or exhibits in support of our recommendations; for, with this explanation, the data for which was taken from your own report, you will no doubt be in position to place the proper value upon our proposed rates.

Mr. FORDNEY. Are you a manufacturer of yarn?

Mr. CRAMER. I am.

Mr. FORDNEY. Do you recommend lower rates of duty than the rate now in the existing law?

Mr. CRAMER. They are very much lower.

Mr. FORDNEY. And still you are a manufacturer of yarn?

Mr. CRAMER. Yes, sir.

Mr. FORDNEY. Why do you recommend it?

Mr. CRAMER. Simply because we understand we are expected to suggest rates that will be competitive rates, and for that reason we are offering rates that we believe will be competitive.

Mr. FORDNEY. Did you not say in your statement that they are fairly competitive now?

Mr. CRAMER. Exactly; and there is one rate that we took and stood upon as a basis, and we maintain that rate, because that one number was strictly competitive, but from there down we could make a reduction because it was not competitive.

Mr. FORDNEY. Then you think the rates in the existing law are too high?

Mr. CRAMER. That depends on your point of view, whether you are a protectionist or a "tariff for revenue" man.

Mr. FORDNEY. I am asking you.

Mr. CRAMER. I would simply say that, as stated in my remarks to the committee, on a revenue basis they are too high.

Mr. FORDNEY. No; not as stated in your remarks as representing the association, but you personally. Do you believe the present rates in the existing law are too high and therefore you recommend a lower rate?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. CRAMER. I believe that it will not increase importations unduly to do that, although I believe it will increase importations.

Mr. FORDNEY. If it were to increase importations, would it in any way increase your industry?

Mr. CRAMER. I take it for granted if it increases them unduly, you would stop it at the right time, and that is why we have made this recommendation.

Mr. FORDNEY. You should address that remark to the other side of the house.

Mr. CRAMER. I do not know which side you belong to.

Mr. LONGWORTH. Mr. Fordney believes no duty can be too high.

Mr. HILL. What mill do you represent?

Mr. CRAMER. In yarns, I represent the Mayes Manufacturing Co.

Mr. HILL. Where is it located?

Mr. CRAMER. Mayesworth, N. C., about 15 miles from Charlotte.

Mr. HILL. Was that one of the mills examined by the Tariff Board?

Mr. CRAMER. No, sir.

Mr. HILL. You accepted their examination?

Mr. CRAMER. They did not examine it.

Mr. HILL. You accept their verdict?

Mr. CRAMER. They did not examine us, simply because they examined other mills in preference to ours.

Mr. HILL. Why did they examine other mills in preference to yours?

Mr. CRAMER. That is really a matter I can not tell.

Mr. HILL. Did they offer to examine yours?

Mr. CRAMER. No; but we offered them an opportunity to examine ours.

Mr. HILL. And they did not offer to do it?

Mr. CRAMER. They did not, but our Loray Mills——

Mr. HILL. Do you accept the findings of the Tariff Board?

Mr. CRAMER. As final, no, sir; I do not.

Mr. HILL. Did not your organization here, after this report was made, pass a resolution indorsing the Tariff Board and accepting their findings?

Mr. CRAMER. We did not.

Mr. HILL. Does not the resolution, which has just been read this morning, or the statement just read by Mr. Miller this morning, declare in favor of a tariff commission?

Mr. CRAMER. It does.

Mr. HILL. Do you recognize any particular difference between a tariff board, as it was constituted when it examined these mills, and the tariff commission as it would be constituted?

Mr. CRAMER. We do.

Mr. HILL. What is that difference?

Mr. CRAMER. It is, in the first place, to be a continuous sitting board that will not be forced to make a hurried report.

Mr. HILL. You do not doubt, however, the accuracy of the report as far as they went?

Mr. CRAMER. As far as they went on American costs we have no criticism to offer.

Mr. HILL. You accept these costs, then, as to the cost of the conversion of yarn from cotton, and of cloth from yarn, as made by the

PARAGRAPHS 315-320—COTTON CLOTH.

nonpartisan tariff board, taking a year or more to make the examination?

Mr. CRAMER. For American costs of last year, or rather for the year at the time at which they examined them.

Mr. HILL. Do you recognize the report of the Tariff Board in which they show the comparative differences between the cost of making yarn in the United States and the cost of making it in England, as found on page 423 of their report, where they give a series of comparative costs between the two countries?

Mr. CRAMER. We do not.

Mr. HILL. You do not recognize it?

Mr. CRAMER. We do not recognize their English costs; no, sir, we do not.

Mr. HILL. Have you any reason to believe a tariff commission, such as you recommend for the future, would be any more reliable than the nonpartisan Tariff Board that made this report? And if so, what would be the difference? Why should it be more reliable?

Mr. CRAMER. The difference is best explained by our subsequent position, in which we receded from the "cost of production" and based our final resolution, which Mr. Miller read, on the "manufacturers' selling prices at home and abroad."

Mr. HILL. This tariff bulletin No. 5, which was submitted by Mr. Miller this morning, was sent to Congress after the cotton bill of our friends was introduced in the extra session, was it not?

Mr. CRAMER. I would not like to answer that; I do not know.

Mr. HILL. I think you will find it was.

Mr. CRAMER. I will admit it, if you say so.

Mr. HILL. I think you will find it was sent, and a great protest made against the bill which these gentlemen drew, which you still continue to make against that bill, and yourselves recommended higher rates on yarn?

Mr. CRAMER. We do.

Mr. HILL. And I presume Mr. Parker will do likewise on cloth?

Mr. CRAMER. That is for Mr. Parker to say.

Mr. HILL. Your rates are higher than those reported by the tariff board?

Mr. CRAMER. They are, because we take into account things which they did not.

Mr. HILL. Let us settle that question. They examined 81 mills of yarn and cloth and various fabrics, leaving out gloves.

Mr. CRAMER. In the United States or abroad?

Mr. HILL. In the United States. In every single solitary case, after the costs were made up, they were signed by one or two representatives of the mills which they examined.

Do those gentlemen now come forward and declare that these reports of costs certified to by them are incorrect?

Mr. CRAMER. We have never questioned the accuracy of their work as far as it went in the American mills.

Mr. HILL. Do the cotton mills of this country want more than the difference in cost of production at home and abroad, as determined by a nonpartisan board?

Mr. CRAMER. That is a matter I can not say.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. HILL. Do you want it with reference to yarn?

Mr. CRAMER. I want it with whatever is not included in their cost of production—not necessarily what they include, but what should be included.

Mr. HILL. But the costs, after they were made up and were reported and tabulated and printed here, were signed by the representatives of the mills before they were made public.

Mr. CRAMER. Were they signed by the English mills?

Mr. HILL. I am talking about American mills.

Mr. CRAMER. I am talking about American mills, too, but you made the comparison and asked me to subscribe to the comparison on the basis that the American men signed these reports. We accept them as far as they go.

Mr. HILL. Do you accept the American costs that were signed by the officers of these companies?

Mr. CRAMER. We do.

Mr. HILL. Both on cloth and on yarn?

Mr. CRAMER. Mr. Parker will speak for cloth. I am speaking for yarn.

Mr. HILL. But you ask for a higher duty?

Mr. CRAMER. We do.

Mr. HILL. You stated one reason for a higher duty, that this board recognizes that you have a difference of rates of 5 per cent for the different processes for finishing. Are you aware of the fact that the Tariff Board reports that the costs of dyeing, bleaching, finishing, mercerizing, etc., average less in the United States than they do in Europe, and publishes the figures at which it can be done in the open markets in Europe?

Mr. CRAMER. That is a matter on which I will simply refer you to the market quotations of this country and abroad. You can see whether we have had undue profits under them. I think they are—

Mr. HILL (interrupting). I will ask you if you accept the figures of the Tariff Board as to the American costs of finishing yarns and cloths?

Mr. CRAMER. In America we do; yes, sir. That is to say, we do not question it. We do not accept it, but we do not question it. We know nothing about it.

Mr. HILL. Do you dispute the published price list, advertised and published publicly in Europe, as to the mercantile price of doing these same things?

Mr. CRAMER. I could not pass on that, for I do not know what they were.

Mr. HILL. You do not think they have deliberately forged the circulars of prices, do you?

Mr. CRAMER. Of course not. But, as I explained, in that fifth tariff bulletin there are a great many considerations that were not taken into account by the Tariff Board.

Mr. HILL. But the board reports that their costs were in all cases signed by the officers of the mill after they were made up.

Mr. CRAMER. Of the English mills?

Mr. HILL. Oh, no; of the American mills.

Mr. CRAMER. Well, we return to the comparison—

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. HILL (interrupting). The reason I ask you in regard to this 5 per cent is because our friends here have done the very same thing which they criticized the Payne tariff bill for doing—increased the duty for mercerizing. But the bill which the Republicans voted for in the last Congress made no distinction in ad valorem rates between the finished and the unfinished goods.

Mr. CRAMER. What bill do you refer to?

Mr. HILL. I refer to the bill that was supported by the Republicans in the House; it was drawn by myself in conjunction with a member of the Tariff Board, and no distinction was made. I notice that you come in and ask for 5 per cent more for dyeing.

The CHAIRMAN. I do not want the record to be misunderstood. There is nothing in the bill that we offered in the House to protect mercerizing.

Mr. HILL. Mercerizing is included in the dyeing, bleaching, finishing, and so forth, for which 5 per cent additional duty is charged in the Underwood bill.

The CHAIRMAN. Here is the distinction—

Mr. HILL (interrupting). Mercerizing is not separate, but it is included in it.

The CHAIRMAN. The Payne bill puts mercerized goods above dyed, bleached, and so on.

Mr. HILL. Yes, sir.

The CHAIRMAN. We put the mercerized goods on the same basis as the dyed and bleached, and did not make the raise that was made unwarrantedly in the Payne bill.

Mr. HILL. That is correct; but the Tariff Board says, or practically says, that no additional duty shall be allowed for those goods, because the United States mills are doing it for about 80 per cent of what the foreign mills are doing it for.

You request 5 per cent additional duty, and you disagree with the Tariff Board in that respect?

Mr. CRAMER. I do.

Mr. HILL. Notwithstanding the fact that these 81 mills and mill officers have agreed to the correctness of those figures in the United States?

Mr. CRAMER. May I state a case?

Mr. HILL. Yes, sir.

Mr. CRAMER. There is one thing we have not put in the recommendation, Mr. Chairman, which gives us concern, and that is with reference to gasing. That will merely show the difference between conditions existing abroad and in this country. When it comes to gasing the yarns, that is a business that we do in this country on a very limited scale. We know relatively very little about it and very few people attempt it. One of our manufacturers—in fact, I will mention his name, Mr. Miller—was telling me recently that in the process of gasing some of his yarns by people who did it outside of his mill, they had to pay him—I think the figure was \$8,000. May I ask Mr. Miller if that is correct? Mr. Miller, was \$8,000 correct?

Mr. MILLER. I did not understand you, Mr. Cramer.

Mr. CRAMER. The amount that the man who spoiled your yarn in gasing had to pay you for the damage done in gasing them?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. MILLER. That was in the process of gasing.

Mr. CRAMER. \$8,000, was it not?

Mr. MILLER. It was quite a loss. I do not recall the amount of it, but it was quite a loss.

Mr. CRAMER. It was quite a large loss occasioned to this man from simply gassing, which is a process involving the most skilled labor, and in this country labor available for that work is not as plentiful or as good as it is abroad. When it comes to the simpler processes, we are inclined to think in a great many things that we are as good as anybody; but on these things we have not people who have been in it for generations—that is, not necessarily the one thing—but who have been in the textile manufacturing business for generations. That is simply one explanation we want to give of our willingness to add that 5 per cent. Now, the item of interest on plant: The Tariff Board distinctly states that they take no account of that at all. Without unduly taking up this committee's time I beg to call your attention to this point in order to show the effect of ignoring the interest item. Every American knows that the cost of manufacturing has an interest account. For instance, if you refer to a recent Senate document—I may have it with me; if not I can produce it later, if you desire—giving the corporation returns, you will see that the capital stock was something like four hundred odd million dollars, and additional to that \$268,000,000 was borrowed capital, or loaned capital—borrowed money any way you look at it. That represents a very large item of cost. We paid a good deal for that money. Abroad they pay very little. We have to furnish good paper, often indorsed; abroad they furnish unsecured paper and they get the money at low rates. That interest account is a big one.

Mr. HILL. I am familiar with those details and I presume every member of the committee is so far as a business proposition is concerned. The point I want to establish, or have contradicted right now before we start on the cotton or go into the cotton or woolen schedules, is whether the findings of the Tariff Board on these schedules are disputed; whether they are denied as to their correctness; and if so, on what ground? I will read to you from page 502 a comment on table 156, giving a comparison of charges for finishing 100 samples in the United States and England.

Mr. CRAMER. I beg to suggest again that that is cloth.

Mr. HILL. What is that?

Mr. CRAMER. That is cloth—Mr. Parker's subject.

Mr. HILL. I understand. I asked you whether you denied the correctness of it as to yarns. I admit that this table itself relates to cloth.

Mr. CRAMER. I can see no way of arriving at an answer that I could conscientiously give you on that point, because the cloths are not segregated.

Mr. HILL. I am willing to admit that there possibly may be a difference between the cost, the final comparative cost of the finished fabric and the comparative cost of the finished yarn; but so far as this is concerned you are a manufacturer of cloth as well as yarns are you not?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. CRAMER. Yes, sir; in the Loray mills.

Mr. HILL. It will be seen from the table in the case on which data was obtained in the two countries that American charges were lower in a few instances; that the American rates are only about one-half of the English rate. Do you dispute that?

Mr. CRAMER. I am not prepared to discuss that, sir. I beg to be excused from discussing anything but the yarn schedule.

Mr. LONGWORTH. Are you speaking for the Massachusetts mills as well as the southern mills?

Mr. CRAMER. For the American Cotton Manufacturing Association.

Mr. LONGWORTH. Of what is that composed?

Mr. CRAMER. It is composed of manufacturers all over the country. I think it is fair to state that the largest proportion, perhaps three-fifths, are southern mills.

Mr. LONGWORTH. But there are some in Massachusetts?

Mr. CRAMER. Yes; there are some in Massachusetts.

Mr. LONGWORTH. You are speaking for all of them in your association?

Mr. CRAMER. Yes, sir.

The CHAIRMAN. If you have this in your brief you need not repeat it, but have you given in your brief the amount of the American consumption and production of the yarns made in this country?

Mr. CRAMER. We did not attempt that, because, to be frank with you, we know of no way of arriving at it. There is no system of records. The cloth is not so difficult to check up, but in the yarn proposition I know of no way to state it.

The CHAIRMAN. I would like to say to you, Mr. Cramer, that the committee, in ascertaining what is a reasonable competitive rate, are to some extent governed by the comparison of imports with American consumption.

Mr. CRAMER. May I modify my answer?

The CHAIRMAN. One moment. Although we ascertained that in the aggregate from the census report to a certain extent, we would be very glad if the gentlemen coming before us would furnish us information on that question, because there may be mistakes made sometimes in the census reports. That is a sort of barometer that aids us in reaching a conclusion. We would like to have data on that particular question as accurate as possible, and I will say to you that we would be very glad to have you supplement the statements in your brief as far as possible.

Mr. CRAMER. We will see if we can not get the information. In the meantime, may I modify my remark slightly?

The CHAIRMAN. Yes.

Mr. CRAMER. I recall a table in your report in which they gave the importations of coarse yarns as practically nothing, and the importations of fine yarns—I might say from 40's to 100's as only about 4 plus per cent. In connection with that, however, I would like to state that this particular rate on 78's happens to be by virtue of the specific rate dropping from about, 24 cents to 19½ cents. That is a critical point; it is a contact point, where stuff is coming in very freely. To give you an idea, I will translate it into spindles. It would take at least 50,000 spindles to produce the yarns that are being exported of that number, that one single number. If it had not been for the

PARAGRAPHS 315-320—COTTON CLOTH.

depression of business in this country during the past two or three years—in short, if we had been able to make a profit on these yarns, there would probably have been a larger importation, but, as everybody knows that has looked into the subject of cotton manufacturing, the business has been done on a close margin, in many cases below cost. In one of my own mills, for instance, last year we lost money—it was the year before last.

The CHAIRMAN. Of course, so far as the importations are concerned this table is as correct as it can be made, because it is kept absolutely by the Treasury Department, and the only question is as to whether they segregate properly, because they keep an accurate record. On the question of consumption and production in America, we have to depend on the census reports, unless the manufacturing interests of the country furnish us with the correct data. In order to get a tariff that will maintain a reasonably competitive condition, and which will produce reasonable revenue all along the line, those reports are the most important guide we have. Therefore, we are very anxious to get the correct data.

Mr. CRAMER. With your permission we will endeavor to get that information, although it will take some little time. We will submit it in a brief. May I ask you how much time we can have?

The CHAIRMAN. The committee will not start to write this bill until the end of the month.

Mr. CRAMER. In other words, a couple of weeks?

The CHAIRMAN. By the 1st of February. I do not know that we will reach the schedule at that time, but the sooner we get it the better. But we will not need it before the 1st of the month.

Mr. CRAMER. There is another matter, Mr. Underwood, and that is that it varies so much. I will explain it to you in a very few words. Take our little Mayes mill, with only 20,000 spindles. We are making there all the time yarns from 40 to 100. It varies with the demand. Our average may be 60, it may be 55, it may be 50, or it may be 80, at different periods. I think I could get you the average in each of the schedules that they are prepared to make.

The CHAIRMAN. That would not answer, because the preparation at the mill does not show the real contact point of competition.

Mr. CRAMER. We know what that is.

The CHAIRMAN. I know, but we want the figures. When you get the American consumption and the American production it gives an *ex parte* statement of the contact point of competition.

Mr. CRAMER. I will simply say this, that we will do the best we can. I want it understood that we are simply doing the best we can.

The CHAIRMAN. I understand that.

Are there any further questions? [No response.]

Mr. Cramer at a later date filed the following:

WASHINGTON, D. C., February 15, 1913.

HON. O. W. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

SIR: Since my brief of the 8th instant, it occurs to me that we have not emphasized to you a most vital matter that should be taken into account in making yarn rates.

Your committee has evidently considered yarns in the nature of a material for conversion into fabrics, a step in the process of their manufacture, rather than as a finished product for distribution and sale to the yarn trade. The domestic yarns which come

PARAGRAPHS 315-320—COTTON CLOTH.

into competition with imported yarns are those made and sold to the yarn trade and are not those spun by manufacturers to be woven or knitted in their own plants. At first thought it may seem strange that this should cut so much figure in the matter of rates, but that it does so most emphatically can easily be shown.

(1) Abroad, particularly in England, spinning and weaving plants are separate industries; a weaver or manufacturer, as he is termed, has only the investment in his weave shed and is at liberty to buy yarns in the market at will. In America, weavers generally spin their own yarns, as likewise do many large knitters, and by far the larger part of the investment is in the spinning plant; they, therefore, must run their spinning in order to make any reasonable return on their investment.

(2) Yarns for manufacture into 77 per cent of the cotton manufactures of this country thus are spun by the manufacturers themselves, who spin exactly what they want and who naturally are not hypercritical about it. (See p. 43, Tariff Board's Report, Table 19, where the total yarn production of the United States in 1910 is given at 2,037,653,722 pounds, and on p. 173, where yarns for sale is given at 470,370,995 pounds.)

(3) Yarns destined for the yarn trade then are special as compared to the larger part of the domestic production, and should be treated accordingly. They are subject to all the inspection, expense, and risk of products for sale and distribution; freights, selling expenses, whims, and fluctuations of the markets, vagaries and prejudices of buyers, carrying charges until sold, claims for rebates especially if sold on a falling market when many buyers are seeking pretexts for cancellations—none of which are incident to the costs of yarns valued simply as steps in a process of continuous manufacture. Imported yarns thus are to be compared to domestic yarns for sale to the yarn trade, and to those only.

Making yarns for sale and distribution is vastly more exacting and more expensive than for one's own consumption, and marketing such yarn is far more difficult than most of the fabrics into which they enter. A piece of cloth or other fabric stands for itself in its completed state, while the value of a lot of yarn is difficult to establish in case of controversy. There is no such thing as a commercial lot of perfect yarn; the slightest defects in each single thread are magnified by buyers by no means infrequently, even though such defects may be completely covered up in the body and finish of the finished fabric.

Yarns advanced over singles in the gray, especially when plied, can generally be more cheaply converted into most fabrics than into yarns for sale undergoing the delicate and difficult processes of bleaching, dyeing, mercerizing, gassing, etc., and are therefore entitled to rates in proportion.

(4) Considering yarns for the trade then as 470,370,995 pounds domestic production, and those imported as 8,809,174 pounds (Table 19, p. 43, Tariff Board Report), the whole schedule is unquestionably not on a competitive basis, but converting the figures in that same table into percentages, and assuming that those ratios are the same for yarns for the yarn trade as for the whole domestic production, we find:

Counts of yarns.	Per cent.	All domestic yarns.	Yarns for sale.	Importations.	Per cent of imports.
		<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	
Under No. 20 (coarse).....	50	1,014,069,688	235,185,498	1,069
Nos. 21 to 40 (medium).....	42½	866,328,605	199,907,674	2,068,736	1.0
Nos. 41 and over (fine).....	7½	157,255,429	35,277,824	16,711,114	19.0
Total.....	100	2,037,653,722	470,370,995	18,809,174	1.9

¹ See special footnote * at bottom of Table 19, p. 43, Tariff Board Report.

In other words, the percentage of importations of yarns above No. 40 to the domestic production of the same counts for sale to the yarn trade is 19 per cent—a competitive amount.

It is true that there is no available data with which to check the assumption that the same proportions of fine, medium, and coarse yarns are produced in the United States for the yarn trade as are produced for all purposes; but it is believed to be so, and is certainly near enough so for purposes of comparison.

I have previously pointed out that 78/2 and 80/2 are on a strictly competitive basis, as shown by the actual domestic production collected from the mills—in my letter of the 8th instant, the real contact point to be taken as a starting point.

PARAGRAPHS 315-320—COTTON CLOTH.

(5) It seems clearly established then that imported yarns up to No. 20 are not at all competitive; 20-40 not competitive, but approaching it on special grades; 40 and over are competitive, 78½ and 80½ being the most so, and therefore to be chosen as the basis for that group.

(6) In addition to the reasons given in my letter of the 8th instant for our grouping by counts in the schedule, I would further mention that it is a suitable selection on account of the kind of cottons used in their manufacture: Yarns 1-10, lowest grades of cotton and often waste; 10-20, low grade upland cotton; 20-40, upland cotton; 40-60, staple cotton, short; 60-100, staple cotton, medium; 100 and above, staple cotton, long. Foreigners substitute Indian and other short cottons for our shortest Americans, and Egyptian for our short and medium staple cottons, to considerable advantage at times.

(7) Based on the above, how shall competitive specific rates be translated into ad valorem rates?

As previously explained we used the importations for 1910.

An inspection of page 96, your Report No. 65, shows rates for several years past in which the specific rate has not changed; the only change is in the invoice values or prices of the different years; yet note how the computed ad valorem rates run from 60 per cent down to 30 per cent. And so it seems that the ad valorem rate of 1910 of 35 per cent is fair and reasonable.

The same is true of the entire group of 60-100, except in the case of freak importations, which are yarns that are not representative or of normal quality and price, but are high priced and therefore, as previously explained, show a low ad valorem equivalent, for there is only one specific rate for the normal and the high-priced yarn alike. For example, on that same page 96, note that the importations under No. 77 are all freaks, and how the ad valorem rates are so much lower than on Nos. 76 and 78, which are of average quality and price.

As a general statement, I would emphasize that all groups of yarns as kept of importations for 1912 that are not segregated by numbers as in 1910 show too low ad valorem equivalent rates, because of those high-priced freak importations that are not representative.

As for the very low ad valorem rates on the very fine counts: It is entirely immaterial to the industry in the United States, because nothing over 150 are made here, and but little over 120. Those should be revenue rates pure and simple.

Unlike cloth rates, where the addition for mercerizing does actually increase the rate, the present extra duty for mercerizing evidently does not meet the needs of the case, for in all cases the ad valorem rate is lower on the mercerized yarn than on it in the unmercerized state. Note also how much mercerizing adds to the invoice value of yarns, notwithstanding the general impression of the cheapness of that process.

(8) As to rates on yarns that are not competitive: They are entirely matters of opinion; we explained at the hearing and in my letter of the 8th instant how we arrived at our basis of recommendations for them. As already stated, for normal yarns under 20, in normal times and under average conditions of business, they will not be imparted, anyhow, with any reasonable rate. Please note that 50 per cent of all domestic yarns produced are under 20, 42½ per cent are 20-40, and only 7½ per cent are 40 and above, the class which we ask you to recognize as competitive.

(9) It is to be noted that there is little or no difference in the yarn rates of the last three tariff bills; that in all is the same one competitive point, and the other rates are too high on the coarse numbers and unnecessarily low on the very fine counts.

(10) If your committee concludes that for reasons satisfactory to yourselves that you must use 1912 figures for making rates, we still urge that 35 per cent ad valorem be the lowest rate selected to represent the contact point—the 60-100 group. On that basis we estimate that our suggested rates below 60 would be reduced 2½ per cent.

I remain, very truly, yours,

STUART W. CRAMER,

For Tariff Committee, American Cotton Manufacturers' Association.

CHARLOTTE, N. C., February 22, 1913.

Hon. OSCAR W. UNDERWOOD,
Chairman Ways and Means Committee,
Washington, D. C.

SIR: I wish to express to you my sincere appreciation of your thoughtfulness in furnishing me with your tabulated sheet showing comparison of revenue derived under the act of 1909 and under the schedule proposed by us, the American Cotton Manufacturers' Association. Realizing that this paper was but your preliminary draft, I beg to call your attention to a couple of corrections that I think should be made in it:

PARAGRAPHS 315-320—COTTON CLOTH.

(1) On singles in the gray, "other yarns on which specific duty does not amount to 15 per cent," is correctly entered at 15 per cent under the act of 1909, but it is entered under the proposed duties to be collected under our proposed schedule at 25 per cent, which should read $17\frac{1}{2}$ per cent. It will readily be noticed by dividing the actual duty collected by the number of pounds of those yarns imported that the equivalent specific rate is 5.1 cents per pound, which corresponds to an average of No. 26 yarns, which is dutiable under our proposed schedule at $17\frac{1}{2}$ per cent.

(2) The same is true of the catch-all clause on yarns advanced beyond singles in the gray and dutiable under the act of 1909 at 20 per cent; in your table this group is included with yarns over 100, dutiable under our proposed schedule at 40 per cent, which should be changed to 30 per cent. The duty collected on these yarns divided by the number of pounds imported gives an equivalent specific rate of $11\frac{1}{2}$ cents per pound, which corresponds to No. 46 yarns, dutiable under our proposed schedule at 30 per cent.

(3) It was evidently not understood by your committee that we did not suggest rates on thread, which is a separate industry as distinct from yarn manufacture as cloth or knit goods; the members of our association do not make thread, and, therefore, are not sufficiently informed on the subject to warrant our suggesting rates. I refer to the general classification of "cable laid yarns or threads made by grouping or twisting two or more grouped or twisted yarns or threads together." This industry is confined to less than half a dozen corporations and we understood that they would present their own case; apparently we did not make that clear, but with the above explanation we would ask that in making comparisons of our rates that you leave out the consideration of cable laid yarns and threads, for all of the data that we have furnished you is based upon that assumption.

After making the above changes, the average duty collected under the act of 1909 on single yarns in the gray figures 19.33 per cent ad valorem equivalent; the duties that would be collected under our proposed schedule figures on the same class of yarns 19.45 per cent ad valorem.

For yarns combed, twisted, bleached, dyed, or advanced in manufacture beyond singles in the gray, the average duty collected under the act of 1909 figures 31.56 per cent ad valorem equivalent; the duties that would be collected under our proposed schedule figures on the same class of yarns 34.53 per cent ad valorem.

But we wish to urge most emphatically that while such a basis of figuring is an interesting comparison of duties actually collected, and that may be collected; that it in no wise shows a proper comparison between the rates in the two schedules so far as it affects the whole industry. As pointed out in my letter to you of the 15th instant, $92\frac{1}{2}$ per cent of the yarns produced in this country are No. 40's and under; the importation on these counts is insignificant in comparison to what it is on the finer counts, those above No. 40, but which constitute only $7\frac{1}{2}$ per cent of the production of yarns in this country. It will readily be seen, therefore, that for purposes of illustration, we can imagine all yarns under No. 40 as on the free list, and yet both the present schedule and our own if compared as in your table would still show duties of 32.41 and 34.53 per cent, respectively. Such a comparison, therefore, does not do justice to the whole industry, but shows only the conditions in the groups that importations are actually being made, and which constitute only $7\frac{1}{2}$ per cent of the whole. That fine yarn group, over No. 40, is on a competitive basis, as shown in my letter of the 15th instant, because the importations amount to 19 per cent of the domestic production; therefore, those rates should certainly not be lowered.

All of which again brings up the question as to what are fairly equivalent ad valorem rates, as pointed out in my letter of the 8th instant, high-priced importations with fixed specific duties give relatively low ad valorem equivalents. The larger part of the importations are of the more expensive kinds of yarns, and, therefore, the ad valorem equivalents on them are not representative of the kinds of yarns that we most largely make. This difference would amount to $2\frac{1}{2}$ per cent to 5 per cent, and in some cases 10 to 20 per cent; $2\frac{1}{2}$ per cent would be a fair average for the whole list. This is clearly demonstrated by comparing the ad valorem equivalent on this group, which is shown to be competitive as a group to the ad valorem equivalent on No. 78 and 80's yarns, which is more than competitive, if I may use the term, the latter duty being about $2\frac{1}{2}$ per cent higher than that on the whole group.

If, as stated by you, it is your intention to put the industry on as nearly a competitive basis as possible, our suggested rates on the fine yarn group are certainly fair and reasonable and should under no circumstances be reduced; but, as we have explained to you on every occasion, the rates on medium and coarse yarns, No. 40 and below, are entirely matters of opinion. We recommended certain reductions for reasons that seemed good and sufficient to us, and which we have explained in detail.

PARAGRAPHS 315-320—COTTON CLOTH.

Those reductions on a great deal of that portion of the schedule will not under normal conditions be competitive for the simple reason that on the coarse yarns no reasonable duties would be competitive anyhow. I think we all admit and understand that. Yet, there are times, when reduced duties will become competitive, and then those reductions should certainly be considered in proportion to the volume of the production affected by them. And so we claim that the proper coefficient be applied to the rates under each group that such group bears to the total production, a coefficient of 50 being given to the rates up to 20's-42½ to rates on the 20's-40 group, and a coefficient of only 70½ on the fine yarn group of over 40. The appended tables fully illustrate our point; these tables naturally are not figured out according to our grouping of rates, for that is not the issue here, but are figured out on the groupings of coarse, medium, and fine, to which these coefficients of production apply.

And so, it will be seen that after all a proper comparison of the present rates to our proposed rates is not 19.33 per cent to 19.45 per cent, but 18.50 per cent to 14.95 per cent for single yarns in the gray; and, the comparison on yarns advanced over singles is not 31.56 per cent to 33.22 per cent, but 23.93 per cent and 19.90 per cent.

When viewed in this light the reductions that we propose in yarn rates are considerable, bearing in mind that they are low to start with: no such reduction in yarns could possibly be made as we are offering in cloth for the reason that existing yarn rates are very much lower than comparative cloth rates which have been in many cases so extraordinarily high.

A careful analysis of a similar comparison that will be submitted by Mr. Parker for the cloth schedule will disclose the fact that our proposed yarn rates are quite reasonable, considering all that we have heretofore said on the general subject of yarn—and which I would not consume your time by repeating.

On this basis of comparison, it is apparent without detailed figuring that if you decide to make a reduction of 2½ per cent on the rates we have suggested for No. 40's yarn and below that the total percentages will be reduced nearly by that full amount on account of the fact that that reduction would apply to 92½ per cent of the whole; and, the fine yarn rates, the ones which we asked you to maintain, constitute only 7½ per cent of the whole.

The following tables speak for themselves:

TABLE I.—Showing rates on cotton yarns suggested by the American Cotton Manufacturers' Association compared to existing rates under the act of 1909.

YARNS, SINGLES IN THE GRAY.

Yarn numbers by groups.	Imports, fiscal year 1912, value.	Duties.			
		Act of 1909.		American Cotton Manufacturers' Association.	
		Amounts collected.	Ad valorem equivalent.	Amounts calculated.	Proposed ad valorem rates.
Not exceeding No. 20 (coarse).....	\$5.00	\$0.95	Per cent. 19.00	\$0.56	Per cent. 11.25
21 to 40 (medium) (including No. 26 equivalent).....	24,712.00	3,961.61	16.03	4,324.60	17.50
41 and above (fine).....	8,298.00	2,420.26	29.17	2,098.20	25.28
	33,015.00	6,382.82	19.33	6,423.36	19.45

YARNS, ADVANCED OVER SINGLES IN THE GRAY, ETC.

			Per cent.		Per cent.

Thanking you in advance for your careful consideration of this communication, which, in the light of recent events, seems to us to be the most important one of the series which we have sent you upon which to rest our case, I beg to remain,

Very truly, yours,

STUART W. CRAMER,
For Tariff Committee, American Cotton Manufacturers' Association.

TESTIMONY OF LEWIS W. PARKER.

Lewis W. Parker, having first been duly sworn, testified as follows:

Mr. PARKER. Mr. Chairman and gentlemen, in an editorial appearing in the Boston Herald of about a year ago I was criticized as an anomaly because I, as a cotton manufacturer, favored reduction in duties. Anticipating the questions by the gentleman from Connecticut, I will explain that I did so for two reasons: In the first place, because I am an American citizen who takes an interest in the welfare of his country, and I do not feel I am called upon because I am in an industry necessarily to antagonize the interest of what I regard to be that of the community. Secondly, I do not claim to be altogether public spirited. As a business man and as a manufacturer, I have for years felt that the tariff is to-day too high; that it has had a retarding rather than a beneficial interest in the promotion of the interests of the United States, and having myself invested in the industry of cotton manufacture I did not feel that I was going adverse necessarily to the interests of my friends and fellow manufacturers when I advocated the policy which seemed to me to advance my own interests. Therefore I claim no excess of public spirit. I simply advanced a policy which seemed to be sound and in accord with my own interests.

Now, in presenting to-day, as the American Cotton Manufacturers' Association does, a schedule to your committee we do so recognizing two things: First, that it is incumbent upon us to show in that schedule that we are making a suggestion of reasonable reduction in the tariff as now existing, because we understand and appreciate that the

PARAGRAPHS 315-320—COTTON CLOTH.

majority of the committee are, I may say, determined if it can be done in justice to the community to cause a reduction. Consequently we have outlined our schedule and suggestion upon the basis that so far as the duties affect the classes of goods which appeal to the great masses of citizens, and that so far as they affect the classes of goods which the great majority of the people use, we must expect to make reductions in a very considerable amount, and that perhaps there is not the same necessity to consider reductions in the classes of goods which are worn by those of better means.

Therefore, I may surprise even the worthy chairman of this committee when I tell him that the schedule we submit as to the great mass of products worn by the great mass of people is below even the schedule suggested in his own bill. We have divided, and suggest to your committee a careful consideration of that division of rates, somewhat different from that made by your own committee. I have a few copies of it here, if you desire to follow it as I go along.

We suggest a division based upon the character of the cloth, and in basing it on the character of the cloth it very naturally, as I said a moment ago, will be found that the great reductions suggested by us apply to the cheaper and the more common articles. For instance, we suggest a class one, to include all cotton cloths, including calicoes, sheetings, or plain weaves, but not including coarse stripes, checks, plaids, or figures made entirely of single yarns, except selvages in the grey. Now, we start with goods containing yarns 1 to 9, 10 per cent, where the Underwood bill is 15 per cent; goods containing yarns from 10 to 19, $12\frac{1}{2}$ per cent, where the Underwood bill is 15 per cent; goods containing yarns from 20 to 39, 15 per cent, just in accord with the Underwood bill. Now, above that, 40 to 60, 20 per cent; 60 to 90, 30 per cent; 100 and over, 30 per cent.

The Underwood bill is above us on numbers below 40. It is under us on numbers above 40.

Now, why do we make that distinction? In the class of goods in which we recommend a reduction as against the Underwood bill are classes like duck, osnaburgs, sheetings, and print cloths, because those are the classes which experience has told us we have advanced sufficiently in manufacturing to be to-day on a somewhat reasonably competitive basis with foreign manufacturers. However, I do not want to inject in any sense partisan views, but I may say personally that there are in our committee some who adhere to the views of the party in power, and we have believed that a tariff for revenue might reasonably be considered as imposing a minimum of a 10 per cent duty; and therefore we have started with a tariff of 10 per cent as a minimum and build up from that 10 per cent. I do not think that I misquote what may be called Democratic doctrine when I say that as far back as 1830, in the discussion of Calhoun and Webster controversy, in the days of nullification—and perhaps I may add just by way of parentheses that I may have gotten my views somewhat by descent, because my grandfather was a leader in the cause of nullification, and my father, of course, was a Confederate soldier—nevertheless, I say, in the debate of Calhoun and Webster for the reduction duty, 20 per cent was the minimum suggested. We have suggested, under changed conditions, 10 per cent, believing that a 10 per cent basis on this cheaper cloth would make a competitive relation

PARAGRAPHS 315-320—COTTON CLOTH.

to this extent—not that I would claim for one minute that the goods will be imported under all conditions at 10 per cent, but that at least that 10 per cent would prove an experimental basis of duty in America and would keep the price down to a reasonable level.

Mr. JAMES. Mr. Clay recommended an average tariff rate of 20 per cent.

Mr. PARKER. Well, we start at 10 on the average goods. We go somewhat above that basis on finer goods.

The CHAIRMAN. I will say, in passing, that when we wrote this bill we really were making a reduction on those wares of an average of 32 per cent, and we were trying to be somewhat conservative in our reductions.

Mr. PARKER. Not only that, if the chairman will permit me, I think with all deference to himself, and I am certain I can say with regard to my own action that I have availed myself, and so has our committee in making these suggestions to you, of the work of the Tariff Board which came up subsequently, and I do not want to-day to appear egotistical, but I think the chairman will bear me out when I say that if he will review the correspondence between myself and the members of the Ways and Means Committee in those earlier days of two years ago, he will find that the suggestions made by me as to the reductions correspond pretty well with what the Tariff Board subsequently determined; if he will read my letter of April 21, 1911, afterwards confirmed, he will also find the rates pretty well borne out by the Tariff Board. At the same time you did not have the foresight, and we did not have the foresight, and we could not make a suggestion to your committee that would follow the suggested action of the Tariff Board afterwards, and therefore we have revised our suggestions to you, based upon the subsequent report of the Tariff Board, that came into my hands.

The CHAIRMAN. I will say that we will be glad to have any suggestions that you can offer, and we hope that we may always have rates that will not be an injury to your industry.

Mr. PARKER. We take this position: I recognize—and I may say to the committee that when I say "I" it means the committee—the committee recognizes the fact that we must have a condition of competitive production, and therefore we have endeavored to make a schedule which in our judgment is as nearly a competitive relation as we can suggest to you.

Mr. LONGWORTH. Is this true or not, that a general schedule which would be fairly protective of the cotton industry in Massachusetts would be excessively protective of the industry in the South?

Mr. PARKER. It would to an extent, Mr. Longworth, so far as my suggestions go, I admit very frankly that the idea of protection does not enter into it. Personally, I have never been a protectionist, and do not pretend to be one now. I have endeavored to form the suggestions with regard to a tariff for revenue, making such a schedule as would permit reasonable importations without injury to the manufacturer, and yet sufficiently low to prevent extreme prices to the consumer.

Now, I say to you gentlemen that for the years 1906 and 1907—and I say it as a manufacturer, and it is the basis to-day of every

PARAGRAPHS 315-320—COTTON CLOTH.

position I have taken on the tariff as a manufacturer—the greatest curse that has ever befallen us as manufacturers were the extreme prices which came to us in the years 1906 and 1907. It has taken this industry five years to recover from that; that is, the prices of 1906 and 1907. The industry has not recovered as yet. You can not get the nerve into the buyers to-day, and they won't get the nerve until they feel that conditions will not arise where there will be a collapse in prices.

Mr. FORDNEY. Was the tariff law responsible for your high prices in 1906 and later years?

Mr. PARKER. In my judgment; yes, sir.

Mr. FORDNEY. Then why is it not so to-day?

Mr. PARKER. I will tell you. In 1906 and 1907, if there had been a basis in the schedule as we outline here, the minute the price of cloths got at all abnormally high there would have been such a large importation that they would have at once checked the increased price, and I never have seen the condition which I saw in selling my friends cloths which normally sold at 22 to 27 cents. I sold them in 1907 at 44 cents per pound.

Mr. FORDNEY. How long have you been in business?

Mr. PARKER. Fifteen years. I am still a child.

Mr. FORDNEY. Has your business been fairly prosperous in that time?

Mr. PARKER. I have had just what every other manufacturer has had, and that is what I complain of. I have had a cycle of two years with abnormal profits, as a rule, and a cycle of two years of a rather unsatisfactory business, and two years of unprofitable business.

Mr. FORDNEY. In the 15 years you have been in business, how many times has your company paid dividends?

Mr. PARKER. I have tried to pay dividends every year. I have passed with some of my companies. Take the first company that I was president of, the Victor Manufacturing Co. In its history of 15 years, I am pleased to say, it has never passed a dividend. It has paid 8 per cent—

Mr. FORDNEY. You have in the South some 14,000,000 spindles, have you not?

Mr. PARKER. About 12,000,000 spindles.

Mr. FORDNEY. Has that industry been prosperous, and have they been paying dividends for the last 15 years?

Mr. PARKER. That industry, I should say, to-day is not generally prosperous. That industry for the last five or six years, I would say, has not been generally prosperous.

Mr. FORDNEY. Is it not true that during the past 15 years many of the cotton mills of the South have gone into the hands of receivers and gone out of existence because of no profits?

Mr. PARKER. I am sorry to say that is so. I can not make a profit under present conditions, and I have been considering a change that might perhaps relieve the conditions and enable me to make a profit.

Mr. FORDNEY. You are not making a profit to-day, but you are making a lower rate of duty so that you can get greater importations and more competition?

Mr. PARKER. No, sir; I do not want to be misunderstood on that. My position is that, under the experience of the tariff, there is no

PARAGRAPHS 315-320—COTTON CLOTH.

inducement for me to go out and seek a foreign market to develop a foreign trade; that as soon as I had developed a foreign trade, then in the cycle of years, as I have pointed out, the prices in America would become extreme, and I would be, under those circumstances, just as weak as any other man. I can not continue to develop that foreign trade, getting 5 cents abroad, if I can get 6 cents in America.

Mr. FORDNEY. Now, my friend, when we are importing from \$60,000,000 to \$80,000,000 annually, would it not be much better for you to take care of the American market than the foreign, where you come into competition with much lower-paid labor than you have?

Mr. PARKER. I think that they will find that in the class of goods—certainly, those that I make—we are not to-day importing any \$60,000,000 or \$80,000,000 worth. As a matter of fact, in prices which we make any reduction in we have done so in order to make competition for the present, because, carrying out the policy, we feel that with a competitive tariff, as a matter of fact, there are no imports practically of goods, taking the general figures of these coarse heavy yarns of 1's to 40's.

Mr. FORDNEY. The importations are of a higher grade of goods?

Mr. PARKER. Yes, sir; of a higher grade of goods.

Mr. FORDNEY. That require a greater amount of labor per yard than the low grades?

Mr. PARKER. Yes, sir.

Mr. FORDNEY. Now, the very reason that the high-grade goods are imported is because your foreign operator has a class of labor that he pays much less money than you pay your labor, and therefore that labor enters more largely into the productions. You can not compete with the foreigner; is that not right?

Mr. PARKER. I would not state it in quite such broad terms.

Mr. FORDNEY. That is where your competition comes from, is it not?

Mr. PARKER. I would say, as a general proposition, that the greater proportion of labor there is in any particular piece of fabric the less are we able favorably to compete with the foreigner.

Mr. FORDNEY. What proportion of the cost of your finished goods is labor?

Mr. PARKER. It depends entirely upon the class of fabric that is made at different mills. I control 16 mills. In those mills I have various classes of fabric ranging from the cheapest osnaburgs, referred to here, to what is reasonably fine—not as fine as the finest.

Mr. FORDNEY. But I mean what proportions of labor is employed?

Mr. PARKER. The proportion of the labor would range from about, I would say, 8 to 10 per cent in the osnaburgs and to probably 25 per cent in the finer goods.

Mr. FORDNEY. So that when your finished products are turned out there is from only 8 to 10 or 25 per cent of the value of those goods in labor?

Mr. PARKER. I would say that is about the average range. There are some where the labor ranges much more.

Mr. FORDNEY. Supposing in that class of goods, the finer or high grade?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. PARKER. Yes, sir. Now I will explain. In our special schedule, we have not failed to give—I would not use the word “protection” but at least to recognize the difference in condition.

Mr. FORDNEY. Being a Southerner, you do not like the word “protection”? [Laughter.]

Mr. PARKER. In class 2, we provide for what may be called the figured work—stripes, checks, colors, etc. Now following out our list, we advance the rate of duties in this case from a basis of 10 per cent to one of 15 per cent.

The CHAIRMAN. You did not go any further than class 1. I would like you to take up this class 2.

Mr. FORDNEY. I would like to ask just one question. How many spindles have you had working in the South in the 15 years since you went into business?

Mr. PARKER. I think, speaking from memory, there were about 4,000,000 spindles.

Mr. FORDNEY. And now you have 12,000,000?

Mr. PARKER. Yes, sir.

Mr. FORDNEY. So you have increased from 4,000,000 to 12,000,000 under a high rate of protection?

Mr. PARKER. That is right.

Mr. FORDNEY. Do you think you would have had that increase under a lower rate, or under free trade?

Mr. PARKER. I think it would be entirely a matter of academic discussion if we should undertake to discuss all that has happened in this country, where we have not had free trade for 100 years.

Mr. FORDNEY. But you know you have prospered under protection?

Mr. PARKER. That is a question that I may answer from a personal standpoint. I do not assume that the cotton mills in the United States to-day are prospering.

Mr. FORDNEY. No, neither do I; but they have been building up.

Mr. PARKER. Yes, sir; for various reasons, and I will tell you why. The question was asked a friend of mine how to build cotton mills in the South, and his explanation was that the treasurer was the only man who is going to get the salary, and he raised a great deal of enthusiasm in the community and raised subscriptions in the community, and he got the position. I will say to you in all seriousness that the cotton mills in the South are of that character. The man wanted the job at first and afterwards there had to be a reorganization.

Mr. FORDNEY. The demand for American-grown cotton since you went into business has doubled and trebled, has it not?

Mr. PARKER. The demand of the United States?

Mr. FORDNEY. The price; not the demand, but the price paid for raw cotton in this country since you became engaged in that business has not only doubled, but much of the time trebled in value, has it not?

Mr. PARKER. The first one manufactured, we did so on the basis of 4 $\frac{3}{4}$ -cent cotton. I have paid—

Mr. FORDNEY. You have paid as high as 17 cents?

Mr. PARKER. No, sir; I have tried to use better judgment than that. I have tried to get it at not above 13 and 14.

The CHAIRMAN. Now, take up the second class.

Mr. PARKER. Now, passing from class 1—

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. HARRISON. Let me ask you one question before you pass from class 1. Our bill started with 50 as a classification?

Mr. PARKER. No; you start 1 to 50.

Mr. HARRISON. You are starting from 1 to 40?

Mr. PARKER. I want to explain that.

Mr. PALMER. You range from 1 to 9?

Mr. PARKER. From 1 to 9, 10 to 19, and 20 to 40—1 to 9 represents a wholly distinct class of goods. For instance, take duck, and goods of that character. When you go from 10 to 20 you are in the sheeting goods. They are wholly different conditions. When you get into 20 to 40 you get what we term general medium weight cloths, and there you have a wholly different use and a wholly different manufacture.

Mr. HARRISON. Now, proceeding to a further subdivision, such as suggested in the classification, what effect would it have upon the imports, and, secondly, upon the revenues, if we were to begin with only a 5 per cent ad valorem tax on 1 to 9, and 10 to 20?

Mr. PARKER. That just depends entirely upon circumstances. My own judgment has been, and it is to-day, as I said a moment ago, that we can go to an extreme in the policy of tariff revenue as we can get an extreme in the policy of protection. I do not regard any tariff as a tariff for revenue which does not impose a reasonable tariff of 10 per cent. I do not think the cotton manufacturing industry should be selected as the industry in which most extreme reductions are to be made because it is an industry absolutely free in competition. Every manufacturer is as free as the air itself to make any class of goods that he may desire, and I say because I do not think we have general efficiency in that regard in the cotton manufacture, we have shown ourselves free from any charge of trusts or monopoly—that we ought not to be picked out—one industry to be picked out from any other that you have in the schedule.

Mr. HARRISON. In what class in your subdivision would our export cloth come?

Mr. PARKER. That is from 1 to 9 and 10 to 19.

Mr. HARRISON. Is it not very probable that even under the free-trade basis you would have very little importation in 1 to 9 and 9 to 20?

Mr. PARKER. I think there would be importation under only one condition, that the prices became unreasonably high in America, and it is my judgment—because it stands to reason if we are exporting 3 yards of sheetings made of yarn, and 10, 14, and 15—exporting it to China or to Arabia or to South Africa, and exporting them practically all the time—it stands to reason we can meet those goods at home without any injury, but that while that is the case, a time will come when there will be a depression abroad and the time will come when prices abroad are below what we can possibly live on, and such a condition has been my experience more than once. I do not think it is fair, to come down to it, and pick out the cotton mills industry under these conditions, expose us to depressions of the foreign trade every time. We have had depressions enough of our own. Therefore, I say, give us a reasonable duty of 10 per cent which protects the manufacturer against production abroad.

Mr. LONGWORTH. You want to revise the tariff?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. PARKER. I will withdraw that word. I will not put it in that way—well, any low revenue to the Government [laughter], in the event of prices becoming at all high, and yet will give low prices to the consumer at all times.

Mr. LONGWORTH. Of course the cloths in 1 to 9 are a much more highly manufactured product than machine tools, for instance, are they not?

Mr. PALMER. That are made in Cincinnati. [Laughter.]

Mr. PARKER. I do not suppose there is any product in the United States except cotton and wool in which the relation of production has the same relation of cost of plant as that of cotton and therefore you ought to consider the fact that a cotton mill costing a million dollars can not turn out in a year more than \$750,000 worth of products, and therefore you ought to consider the question of the cost of the plant in connection with that.

Mr. LONGWORTH. I am in favor of giving reasonable protection. I used the word "protection," whether it be in North Carolina or in Cincinnati.

Mr. HILL. You stated that there are no combinations or trusts in the industry.

Mr. PARKER. To the best of my knowledge, as I say.

Mr. HILL. You have a combination of 16 mills, have you not?

Mr. PARKER. Not a combination; no, sir. I have 16 mills having an aggregate spinnage of 525,000, which is just about one-sixtieth of the spindleage of the United States, or just about one and one-half per cent of the spindleage of the United States.

Mr. HILL. Where are they located?

Mr. PARKER. They are located in South Carolina, within a few miles of my residence.

Mr. HILL. I congratulate you on your success.

Mr. PARKER. There are 125,000 spindles to the plant in the aggregate, which is just about the size of one plant in Fall River—it is just about the size of the R. B. Knight Mills in Rhode Island—

Mr. HILL. What proportion of your employees are women?

Mr. PARKER. I have not the figures before me, but I do not think over one-third.

Mr. HILL. What proportion are children?

Mr. PARKER. I should say—I ought to, perhaps, be better informed on that; I do not have that particular department of the work—but I should say probably one-sixth.

Mr. HILL. Is there any restriction as to the use of children employed in your mills by the State law?

Mr. PARKER. There is.

Mr. HILL. What is it?

Mr. PARKER. Twelve years, minimum.

Mr. HILL. Is there any restriction on night work for women and children?

Mr. PARKER. There is.

Mr. HILL. What is it?

Mr. PARKER. They can not work after 9 o'clock at night, and then except to make up 60 hours a year on account of breakdown.

Mr. HILL. And you can not work children up to 12 years after 9 o'clock in the evening?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. PARKER. No, sir; not to exceed 60 hours during the year, and not to exceed 11 hours in any one day.

Mr. HILL. What is the comparative rate of wages in the mills which you—no; I will not ask you that—in the mills of South Carolina, compared with the mills of Massachusetts?

Mr. PARKER. I have always thought that the wages in the mills of South Carolina were less than they were in the mills of Massachusetts, but in the memorial presented to the Ways and Means Committee by the committee which was equally composed of northern and southern men, and had gotten a number of Massachusetts manufacturers—to my great surprise it was stated that there was no difference in cost. I still think they are wrong, and I will say that in my judgment the labor cost in Massachusetts is 10 per cent higher than in South Carolina.

Mr. HILL. You will accept the statement of the Tariff Board that they are very, very, very much lower in the Southern States than in the Northern States, will you not?

Mr. PARKER. I do not think the Tariff Board makes that statement.

Mr. HILL. Well, I will read it to you.

Mr. PARKER. I do not think it says "very, very, very much."

Mr. HILL. Table 210, in which the hourly earnings in different occupations in the cotton industry are given as follows: Females: Great Britain, 100; Southern States, 142.5; Northern States, 178.6.

I shall not take up the time of the committee to go through the whole list, but I would call your attention to table 210 in the report of the tariff board, by which, I think, you will see that the wages in the United States are nearly double the wages of Great Britain, and are in the Northern States on an average 50 per cent higher than they are in the Southern States.

Mr. PARKER. I do not so read the table.

Mr. HILL. I commend the table to you for consideration.

Mr. PARKER. I am glad to say that I have studied it very hard before.

The CHAIRMAN. You say you have studied this tariff board report as to the wages in the South and North?

Mr. PARKER. I have.

The CHAIRMAN. And you do disagree with Mr. Hill in what he says?

Mr. PARKER. I do not agree with Mr. Hill's statement that the tariff board's statement says that the cost of wages in the South are "very, very, very much" lower than they are in the North. I agree with Mr. Hill's statement that there is a difference in the wage North and South.

Mr. LONGWORTH. You object to the two "verys"?

Mr. PARKER. I should say lower.

The CHAIRMAN. You think the difference is about 10 per cent?

Mr. PARKER. I think the difference ranges from 10 to 20; probably in some cases it is as high as 25, but certainly in the average case as high as 10.

Mr. HILL. I think you are very much mistaken, and they are very, very much. I would like to ask you this question. You stated you accepted this tabulation—and by the way, I want to congratulate you on your classification. When the bill I had the honor to prepare

PARAGRAPHS 315-320—COTTON CLOTH.

was submitted, I was much criticized by a gentleman whom I think has business relations with you, that the classification could not be made on the basis of plain weaving and figured weaving, etc. I notice you have taken that in making up the bill with your recommendation to the committee. Do you think that is a sound proposition?

Mr. PARKER. I may have, of course, failed to understand your bill, but I do not find in that bill any distinction between plain weaving and figured weaving.

Mr. HILL. Then I think you have not read the bill. I will read paragraph 5:

Cotton cloth, plain woven, in the grey, or bleached, dyed, colored, stained, painted, printed, mercerized, or otherwise finished, containing not more than five square yards to the pound, etc.

Paragraph 6:

Cotton cloth, fancy woven, in the grey, or bleached, dyed, colored, stained, painted, printed, mercerized, or otherwise finished, containing figures, produced by various weaving devices known as dobby, etc.

Mr. PARKER. Please read paragraph 5 again.

Mr. HILL (reading:)

Cotton cloth, plain woven, in the grey, or bleached, dyed, colored, stained, painted, printed, mercerized, or otherwise finished, containing not more than five square yards to the pound, etc.

Paragraph 6:

Cotton cloth, fancy woven, in the gray, or bleached, dyed, colored, stained, printed, etc.

Mr. PARKER. May I interrupt you one minute? Under your section, how would this piece of goods I have on, this shirt, come in? Is that a figured shirt?

Mr. HILL. If you will take it off and let me examine it I will tell you. [Laughter.] Now, Mr. Parker, I do not want you to think that in asking you these questions I have any criticism to make of you.

Mr. PARKER. I understand.

Mr. HILL. I am heartily in favor of giving you every ounce of protection you need, whether you call it protection or revenue tariff, as well as every cotton manufacturer; but do you not recognize that with an increasingly high duty—one that you do not need on the fabric—it is carried right straight through, and must be, into the finished product that the people of this country buy in the way of the shirt which you have on—and which you have suggested—in the way of collars that men wear, and everything of that kind—that you ought to add the difference in the cost of production, with the doubt on your side every time; is not that fair?

Mr. PARKER. That is entirely a questionable statement of policy. Personally I do not believe in basing a tariff on the alleged difference in cost. In my own judgment it is an impossible basis. I think the test—the proper test—is at what particular duty will there be a fair competitive relation between the foreign product and the domestic product.

Mr. HILL. Very well; we will take it that way. I want to ask you if you do not figure the cost of goods before you sell them?

Mr. PARKER. I always do if I can.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. HILL. Then why is it not just as possible to figure the duty on comparative cost as in a mercantile transaction if carried on on the basis of the respective cost?

Mr. PARKER. The only question is, What is to determine the questionable cost?

The best way to determine what can be done by two sections or two countries is to show what is done under a particular tariff. If the tariff is 10 per cent, the imports come in—

Mr. HILL. We will take it on that basis, but won't you agree with me that these gentlemen in making up their tariff bill have got to start on some fair basis for the foundation of the fabric in order to reach a conclusion on the higher finished products?

Mr. PARKER. That is what we have undertaken to do, and that is why we suggest 10 per cent as a minimum basis. I do not want to be misunderstood here, and ask my friends in the East to bear me out or not in this statement; I am not seeking to make any suggestion which is favorable to the southern manufacturer as against the eastern manufacturer. On the contrary, I think my friends from the East who are going to appear here will tell you that the tariff which we have suggested cuts, in a degree never before attempted, southern products, and have allowed a relative degree of protection—if you want the word—in eastern products that have never before existed.

Mr. HILL. Of course you know that there is a considerable cotton industry in the State from which I come. I fully concur in your views. I probably will be criticized for making the bill I made, but I made it absolutely on the basis of the findings of the Tariff Board. Now, were they just, were they fair? You started with 10 per cent.

Mr. PARKER. You started with 5.

Mr. HILL. Do you make duck?

Mr. PARKER. No, sir; I do not make duck at all.

Mr. HILL. You make heavy sheetings, of course—

Mr. PARKER. We do, in limited quantities.

Mr. HILL. The Tariff Board shows that the American costs, including selling expenses, or American selling prices on sample No. 4, heavy sheeting, was $5\frac{6}{10}$ cents.

Mr. PARKER. Yes, sir.

Mr. HILL. That the English cost for the same thing was $7\frac{1}{2}$ cents, leaving the selling price $7\frac{1}{2}$ cents as compared with the American selling price of $5\frac{6}{10}$, and that without any reference to duty, the English price being the price abroad and the American price being the price here. Do you dispute that?

Mr. PARKER. No, sir; except in part. I told you to-day that the great mass of the cotton productions are sold to-day in England higher than in America, but I told you at the same time that the profit on the English manufacture is many thousands of dollars. The reports show that the English mills are paying dividends of from 10 to 100 per cent; there are very few cotton mills in the United States making a dollar, and it is because of that fact, because we see the English mills making money on a wide market, that I say we must change our conditions so that American mills will have the same wide market.

Mr. HILL. Then your purpose in making a high rate of duties is ultimately to advance the price to the English price?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. PARKER. Making it higher?

Mr. HILL. Yes; higher than would be suggested by the report of the Tariff Board, is because you desire an advance in the prices?

Mr. PARKER. No, sir; that is the same question again. I do not think we have suggested a rate which is any higher than that suggested by the Tariff Board.

Mr. HILL. The rate which I have suggested was 5 per cent. There was nothing in the Tariff Board report that justified even that rate, not a thing.

Now let me ask you this: Taking those goods under your class 1—under your class 1 there is an average difference in favor of the American manufacturer to-day; I mean less cost or less selling price in favor of the American manufacturer—an average of about 20 per cent below the English selling price?

Mr. PARKER. Yes, sir.

Mr. HILL. So that in addition to that margin which now exists of 20 per cent, or which did exist in 1911, you think there should be a duty of 10 per cent in addition to that?

Mr. PARKER. I would not, if that were the normal condition. I will state to you frankly that if you want the cotton manufacturers of the United States to suffer from the depression that occurs to the cotton manufacturers of England, then put your tariff of 5 per cent into this bill. If, on the other hand, you want to have a condition under which there will be a limitation of prices to the consumer so that the American mills can not be unreasonable to a consumer, but at the same time the American mills can not be subjected to the rest of the depressions abroad—then adopt my schedule.

Mr. HILL. Would not a 25 per cent margin be sufficient?

Mr. PARKER. On what class of goods?

Mr. HILL. That class of goods—class 1 of your schedule.

Mr. PARKER. It varies according to the character of the goods. I will state to you that if you want to pick out a policy which will injure the mills of Connecticut and Massachusetts—and, as is claimed by some people, but I think unadvisedly, that the effect of my suggested tariff is to build up the South to the disadvantage of New England—all I say to you is write the bill which you suggest into law.

Mr. HILL. How about the bill which the gentleman on the other side of the table suggests?

Mr. PARKER. I think the bill as suggested by the other side of the table two years ago was an excellent bill under the conditions and the knowledge we had two years ago. With the change of conditions and greater knowledge brought about by the report of the Tariff Board, I think there are some modifications that we can make in the Underwood bill.

Mr. HILL. You are familiar with the cotton industry generally, are you not, in the South?

Mr. PARKER. I try to be.

Mr. HILL. Do you not think the bill which was drawn and passed by the majority of the House of Representatives would be absolutely destructive of the knit-goods industry in this country?

Mr. PARKER. I know nothing of knit goods.

Mr. HILL. Do you think that bill was fairly balanced between the lower grades of cotton goods and the finer finished fabrics?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. PARKER. I have only to say what I said to the chairman of this committee two years ago when he asked me before some other members of this committee to express an opinion as to what the duty should be on certain knit goods—I told him I did not know anything about it.

Mr. HILL. You see that the margin of difference in 1911 was about 20 per cent?

Mr. PARKER. In 1911 the mills of the United States were under a restricted market, and, under a policy of extreme protection, were having not unparalleled success, but were having great misfortunes befalling them.

Mr. HILL. You make the distinction between finished, mercerized, etc., of a 5 per cent rate of duty, precisely the same as is made in the bill of the majority?

Mr. PARKER. That is right.

Mr. HILL. Do you deny the accuracy of the statement made by the tariff board that there should be practically no allowance made in the tariff rate from finished to unfinished goods, in that reduction?

Mr. PARKER. I have never seen such a statement in the report and do not think they express an opinion. I have seen a report to the effect that bleaching and printing were not higher in America than abroad, and whilst that is the case, following out that policy of revenue, not cost—following out the policy of tariff for revenue, I feel that the product which is advanced by mercerizing or other finish is the class of product that goes to the consumer of the higher class rather than those of the plain gray goods—I feel that that class of goods should bear an advanced duty over the ordinarily cheap goods in the gray.

Mr. HILL. Why should we do so? Was not the great criticism made in the cotton schedule in the Payne bill on the article of mercerization?

Mr. PARKER. The most severe criticism was made on the article of mercerization, because it took that single item and gave it an enormous increase of duty, whereas, under the suggested bill which we made, there is an increase of 5 per cent only for the combined matters—bleaching, coloring, and mercerization—and to other process of finish after the cloths were once manufactured.

The CHAIRMAN. And you think when Mr. Hill wrote that article of mercerization it was absolutely unjustified?

Mr. HILL. You need not ask Mr. Parker. I will concede it myself. But I wish the chairman and Mr. Parker to understand that it was written in there, and I voted for it with the best possible information that we could secure at the time, and when that information was invalidated I took it out and our Democratic friends, with the information before them that it was not correct, left that in.

The CHAIRMAN. Oh, no; I corrected that this morning. We did not. There is no item in this bill that puts mercerization under their basis except dyeing and bleaching that you carried in your tariff bill and carry now. Mercerization is wiped out.

Mr. PARKER. You did not individualize mercerization. You grouped it with one or a dozen processes of subsequent manufacture.

Mr. HILL. What would the cotton cloth which is rated at 30 per cent here under your schedule—your class 1, plain in the gray—be worth?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. PARKER. I did not work under all that class of cases.

Mr. HILL. I know, but which ones?

Mr. PARKER. I will tell you very frankly—

Mr. HILL. A yard, I mean.

Mr. PARKER. I will tell you very frankly, as well as I can. In the schedule, which I myself would have suggested, at the outset had put that less than 30 per cent. I had a couple of honest opinions of men, who told me they could not equalize process conditions with less duty than 30 per cent, and we put them at 30. I think that piece of goods would sell at approximately, I should say, 8 cents a yard in the gray [indicating]. Is that right?

Mr. HILL. It is numbered 100 and over.

Mr. PARKER. Mr. Lanshaw, who is thoroughly familiar with that, says it is about 6 cents in the gray.

Mr. HILL. And under your schedule, if that were simply bleached and mercerized, not dyed at all, it would have a 10 per cent additional duty. Do you think it ought to have it?

Mr. PARKER. Under my schedule they have 10 per cent over what?

Mr. HILL. Over what it would in the gray, 10 per cent ad valorem.

Mr. PARKER. Where do you get that statement?

Mr. HILL. I get it from your schedule here—by any one or more processes, including mercerizing, 40 per cent, where it used to be 30.

Mr. PARKER. One hundred and over. That is an advance of 10 per cent; yes, sir.

Mr. HILL. Do you think it ought to be to represent the difference in cost of production?

Mr. PARKER. I think that we are producing it with a difference in cost of production. That class is imported to-day in large quantities, yarn over 100. Now, do you want to keep down your revenue on that class of product, reducing the duty from what it is now to below 30? The duty on that piece of goods—what number is that?

The CHAIRMAN. You agree with us that the actual importations are the best test?

Mr. PARKER. That is the only test with goods made from yarns over 100. Importation has brought into America large quantities. Therefore we apply the duty, not with a view to representing the difference in cost as much as to put the two matters on a competitive relation. You can destroy the competition just as much by killing the domestic industry as you can by prohibiting importations. In my efforts I have tried to take a bill which will allow reasonable importations under certain conditions.

Mr. HILL. But the same distinction is drawn with the low grades, starting with No. 9—5 per cent difference for mercerization.

Mr. PARKER. Because, as I have said before, I feel that when you go into advanced processes of manufacture you can reasonably expect it to yield an advance of revenue.

Mr. HILL. Then, in making up this schedule, you have ignored entirely the Tariff Board report and made it what you think to be on a fair commercial basis?

Mr. PARKER. On the contrary, from my judgment, in making up this tariff we conformed with the Tariff Board report, and have put suggested tariffs at those prices that recognize the difference of cost in conversion and will yield a revenue under normal conditions.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. HILL. But the sample I gave you gives you a margin of 50.9 per cent between the American selling price and the English similar fabric imported with the duty of 5 per cent on it.

Mr. PARKER. Let me illustrate my position by an extreme illustration of cloth. Everyone of you is familiar with the tracing cloth, a cloth used by architects and draftsmen—

Mr. HILL. Why not take the print cloths. People do not buy much tracing cloth.

Mr. PARKER. I stated that I wanted to use an extreme illustration to illustrate, and I have now in the tracing cloth. The product of tracing cloth to-day in America is approximately 20 per cent. The duty under the Payne-Aldrich bill is 50 per cent. The only effect of reducing the duty on tracing cloth from 50 per cent to 30 would be to destroy revenue and also at the same time to destroy competition.

Mr. HILL. Of course you will admit that the question of tracing cloth is not in this first classification.

Mr. PARKER. No, sir.

Mr. HILL. So it has nothing to do with this. The fundamental proposition that I want to get at is, Do you think that over and above the difference in cost of production there should be a margin of 30 to 40 to 50 per cent as a leeway for business contingencies in making a tariff?

Mr. PARKER. I can only repeat what I have said a half dozen times, that in suggesting the tariff I would not be bound by the question of difference in the cost of production. I would consider that as an element in fixing the tariff; but the real test is at what point can the tariff be put which will create a competitive relation between foreign and domestic products.

Mr. HILL. The fact of the matter is, according to the Tariff Board's report, that on these fabrics to which I am referring I think 98.21 per cent of the American consumption is made in the United States.

Mr. PARKER. That being the case, I think we can reasonably expect—and I think you will find it so by looking at my suggested tariff—to make a reasonable reduction in that schedule.

Mr. HILL. Do you not consider it a reasonable reduction to reduce it to the cost of production here and abroad?

Mr. PARKER. That unquestionably would be one of the questions to be considered.

Mr. HILL. You would conduct your own business on that basis?

Mr. PARKER. I would expect to give very great consideration to the cost of production abroad, etc., but I would not want to be governed by that sole condition.

Mr. HILL. You are governed by it in the transaction of your own business?

Mr. PARKER. No, sir; I am constantly compelled to sell my goods for less than they cost me.

The CHAIRMAN. I want to ask you a question right there. Of course our friend Hill and his colleagues last year put up a dummy bill to shoot at, which was not bothering us very much, because when they wrote their rate bill they wrote a bill which taxed $11\frac{48}{100}$ per cent as compared with a tax of 40 per cent ad valorem. So we are not worried particularly about that. Mr. Hill examined you as to what the minority stood for last year. That bill was somewhat

PARAGRAPHS 315-320—COTTON CLOTH.

lower than our bill on the lower rates. It was a great deal higher in the higher rates, was it not—the higher goods?

Mr. PARKER. Mr. Underwood, I must admit that I perhaps have not studied that bill as much as I should because I had somewhat the view—perhaps erroneously—that it was not introduced with the expectation of becoming a law and I therefore did not give it careful consideration. My impression is the bill makes very great reductions in both the fine and coarse goods.

The CHAIRMAN. If you have read both bills, which of those bills would the manufacturer, if he had to take one or the other, accept—which do you think would be to the best interests of your association of manufacturers?

Mr. PARKER. I will state it this way: If I were asked which I thought of these two bills would be to the best interest of the mills of South Carolina, or the mills I am interested in, I would say the Hill bill. If I were asked which of those two bills is the fairest bill to the cotton-mill industry of the whole United States, and not recognizing any sections, as the North against the South, I would say unquestionably the Underwood bill.

The CHAIRMAN. Mr. Parker, you have taken up class 2 of your bill here. Go on with your explanation.

Mr. FORDNEY. Mr. Parker, may I interrupt you to ask just one question?

Mr. PARKER. Yes, sir.

Mr. FORDNEY. What proportion, if any, of your products do you ship to China and Japan?

Mr. PARKER. Personally, I am not shipping at all. I do not make goods for export to China and Japan.

Mr. FORDNEY. Your concerns are not shipping any?

Mr. PARKER. Our concerns are not shipping any to China and Japan. At the same time there are a lot of mills that do. On the other hand, it may be interesting to you to know that the class of goods that we are making in a number of my mills is what we call fine product, or it certainly would be called fine product 10 years ago, and the prices for that product are so low to-day in America that we are able to export the cotton and sell it at Manchester, England, at a higher price than we can in America. In other words, there is an export market for a reasonably high-grade fabric manufactured in the United States. That is absolutely an abnormal condition. It is an unreasonable condition, and is not going to continue long, I hope, because, if it does, there will be some of us in the hands of the receivers.

The CHAIRMAN. Take up class 2 and go on with your explanation, please, Mr. Parker.

Mr. PARKER. Class 2 covers an advanced character of manufacture. It requires more skill in the operative, and it requires more expense in operation. Therefore, class 2 covers generally what might be called fancy cloths, inclusive of cords, stripes, checks, plaids, figures, drills, twills, and kindred weaves, crêpes, terry pile weaves, gauze, and leno weaves, and cloths composed wholly or in part of any of the foregoing in the gray; cotton cloth composed of two-ply or more yarns, either wholly or in part, except if in selvages only in the gray. Of course, if the two-ply yarn is in the selvages, we do not regard it as an ad-

PARAGRAPHS 315-320—COTTON CLOTH.

vanced character of manufacture. On that advanced there is 5 per cent more duty than in the plain goods. On those goods, when finished by bleaching, by mercerizing, by dyeing, by napping, by any one of a dozen different processes, 5 per cent more, and if it is to go through a dozen different processes, it only gets that single 5 per cent. There is no cumulative duty for the different processes.

Then comes the third process—that is, the jacquard weave. So far as I am concerned, I have not a jacquard in the plant I am connected with, and I do not expect that we shall have any; but I do not say that the proposed duties in the original Underwood bill did not provide for the jacquard in the way of getting a duty that would be either compensatory for the difference in the cost, or which would be sufficient revenue under the conditions. On the jacquard work to-day there are enormous importations, and therefore there is no reason to reduce those duties.

The CHAIRMAN. Right there, Mr. Parker, let me ask you if you can give the committee some idea of the amount of American production in these jacquards as compared with the importations?

Mr. PARKER. I am very sorry that I can not give you that offhand, but I think I can get it for you. The jacquard production is so small in America that it would be very much more easy to indicate the American production of jacquards than of the ordinary class of cloth. I think I can get that information for you, Mr. Chairman.

The CHAIRMAN. Will you do that?

Mr. PARKER. Yes, sir. There are only a few mills in the United States doing jacquard work.

The CHAIRMAN. You say that is competitive now?

Mr. PARKER. I think that is competitive now. In fact, I would go a little further and say that in a great many classes of product it is so competitive in a way as to destroy the domestic competition. There is such a large importation that there is no domestic production. I think you will find—and, of course, that will be a subject to address itself to the discretion of your committee—that in one or two of these schedules as applied to jacquard work on fine numbers we have advanced the schedule a little above the Payne-Aldrich bill.

Mr. FORDNEY. Just one further question, Mr. Parker, and I will not bother you any further.

Mr. PARKER. You are not bothering me, sir.

Mr. FORDNEY. I believe I understood you correctly, and if not, I want to do so. You said that the consumer of cotton goods in the United States, buying goods produced in this country under a protective system, buys his goods cheaper to-day than the consumer of that class of goods is able to buy them in free-trade England?

Mr. PARKER. No, sir; I never stated that.

Mr. FORDNEY. But you say you are shipping your products to England and are getting a higher price there than you are in this country.

Mr. PARKER. I did say that, but you must draw a distinction. Unfortunately, the consumer in America does not get his goods at the same relation to what it costs the manufacturer, as the consumer abroad gets them in relation to what it costs the manufacturer abroad. In a large proportion of cotton goods to-day the American manufacturer is getting less for his goods than the manufacturer in

PARAGRAPHS 315-320—COTTON CLOTH.

England does, but the consumer in America is paying more than the consumer in England is paying.

Mr. LONGWORTH. That is on account of the retail profits that come after the manufacture?

Mr. PARKER. It is the profits behind manufacture, on account of a different system of distribution.

Mr. LONGWORTH. With which, of course, the tariff has nothing to do?

Mr. PARKER. Yes.

Mr. FORDNEY. The manufacturers of cotton goods in this country are getting less per yard for their products under our protective system than the manufacturers of England are getting for free-trade goods; is that right?

Mr. PARKER. At the present time; yes, sir. I will not hesitate to admit, Mr. Fordney, that so far as I am concerned, I started out some time ago as a young man, after leaving college, in the belief that the consumer paid the manufacturer's price, plus the duty. I have become long since convinced that there is very little relation between the duty and what the manufacturer gets out of the goods. On that I am speaking for myself.

Mr. FORDNEY. Between the manufacturer and the consumer to-day somebody, then, is making abnormal profits?

Mr. PARKER. No, sir; my experience tells me that the distributor is not making abnormal profits, but the consumer is getting into extravagant habits and expects to get his goods in such a way as to cause abnormal cost in distribution. To illustrate: I can go to London and buy a package, and that package is given to me with a little handle on it, and I am expected to take it back to the hotel. If I buy that package in this country, it is wrapped up, and they ask me where I want it sent to.

Mr. FORDNEY. If I understand you, the price to the manufacturer in this country is less than it is to the manufacturer in England, yet the consumer in the United States is paying a higher price for the goods than is the consumer in England for his goods?

Mr. PARKER. I think so, as a rule; yes, sir.

Mr. FORDNEY. Where does that difference in price come in 'as between the manufacturer and the consumer?

Mr. PARKER. Let me illustrate that to you by a single little incident. One afternoon last summer I went home a little earlier than usual and found my little boy at the telephone ordering a watermelon, which was to be charged to me at 10 cents. I live a little way out of town, and it would cost that merchant more than 10 cents, or more than the cost of the melon, to deliver that watermelon to me. I told my boy that if I caught him doing that again I would have to give him a reminder. I told him that it was not the right thing to expect that merchant to spend 10 cents in delivering that watermelon to me. However, we might as well recognize the fact that the American public does demand service in distribution which has to be paid for by the consumer, and when the American public is willing to reduce its demands in that respect it will get the goods cheaper.

Mr. FORDNEY. You think our system of distributing the goods has absorbed that difference in the price?

Mr. PARKER. Yes, sir.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. FORDNEY. And that is not the case in England?

Mr. PARKER. They do not expect the same service in England.

Mr. FORDNEY. You can not add that to the tariff?

Mr. PARKER. I do not.

Mr. LONGWORTH. Let me ask you for a simple explanation. Take print cloth: What would be the difference in the price that you would get in your mill for that cloth and the price that the consumer would pay for it, say, at the average dry goods store in Washington?

Mr. PARKER. Take a piece of cloth of common construction, of 80 square, four-yard cloth. I am getting to-day for that piece of cloth approximately 7.25 cents in the gray. The price to the consumer on that piece of goods would run, I think, about 12½ cents.

Mr. LONGWORTH. That is pretty nearly 80 per cent?

Mr. PARKER. Yes; but that is much below the relation in the finer goods. The finer pieces of cloth, I will get only 6.7 for, but will be sold to the consumer at prices ranging from 16 to 25 cents.

Mr. LONGWORTH. Somebody grabs off a profit ranging anywhere from 80 to 300 per cent?

Mr. PARKER. I would not say that. I do not believe that the average retail merchant has any abnormal profit. It is a question of management under our abnormal conditions. We simply have to reverse those conditions.

Mr. LONGWORTH. You say that generally the American housewife is not so careful in the way she buys as is the average European housewife?

Mr. PARKER. I think that is true as a rule.

The CHAIRMAN. Now, getting back to these jacquard goods, I want to get some facts in regard to those. Some of your recommendations in reference to the jacquard goods would carry them above the rates in the present Payne-Aldrich law. Of course, the committee is not committed to the present Payne tariff law, and neither is the country, and therefore we are not hesitating to go into those rates.

Mr. PARKER. I understand.

The CHAIRMAN. Do you consider that those jacquard goods that you manufacture are in the line of luxuries or necessities?

Mr. PARKER. They are of a class of luxuries that only a comparatively small percentage of the public could use. Take the jacquard that we have in a quilt, an expensive quilt, and you will find that to-day practically all of the expensive jacquard quilts, the highest priced jacquard quilts, are being imported. The American merchant can not get into the market at the import price. I know that four years ago we attempted to manufacture, for instance, what is known as a dimity quilt. We then found that the larger proportion of that class of quilt are imported, and to-day there is not a press in the United States able to print those dimity quilts. Therefore, all of the printed quilts of that kind are imported.

The CHAIRMAN. What class of people use those jacquards?

Mr. PARKER. They go to people of above moderate means.

The CHAIRMAN. Does that apply to the damask tablecloths and jacquards?

Mr. PARKER. No, sir; they are cheaper, and it is only in the higher numbers of these things that we advise any duty in excess of the Payne-Aldrich bill.

PARAGRAPHS 315-320—COTTON CLOTH.

The CHAIRMAN. You feel, in your recommendation to the committee, where you put this high rate on these jacquard goods, that it is simply a class of goods where there is more imported than is made here to-day?

Mr. PARKER. That is my judgment. I would be glad to get the information in detail and submit it to the committee.

The CHAIRMAN. If you can let us have the amount of importations as compared with the American consumption, we would like to have it.

Mr. PARKER. Yes, sir.

The CHAIRMAN. Let us have it all along the line.

Mr. PARKER. Exactly.

The CHAIRMAN. Now, take up class 3.

Mr. PARKER. Well, class 3 covers the jacquard work.

The CHAIRMAN. Take up class 4.

Mr. PARKER. Class 4 is really a modification of class 2, and therefore it covers the point that I raised with Mr. Hill. Here is a piece of goods, for instance, with colored yarn, woven in stripes, and under his classification it would have a 5 per cent duty, whereas we recognize that, as it is made of colored yarns or mercerized yarns or yarns of two-ply or more, in that case it comes under a different class, as class 4, and is given a higher duty.

The CHAIRMAN. There is no duplication of the other class under class 4?

Mr. PARKER. No; it is given the same duty as though that cloth were printed after being woven. You see, in this case, the yarn was woven in; they are fast colors and woven in and bleached afterwards.

The CHAIRMAN. That is given the same rate of duty, as you say, in class 2?

Mr. PARKER. That is right.

The CHAIRMAN. Except that it is woven in instead of printed, and put on the same basis?

Mr. PARKER. That is right.

The CHAIRMAN. Now, the next classification.

Mr. PARKER. The next classification provides that where a—

cotton cloth contains two or more numbers of yarn, excepting selvages, it shall be dutiable at the rate provided for cotton cloth composed of the higher or highest number of yarns in such cloth; where any yarn content in cloth, except selvages, is composed of two-ply or more twisted yarn, the higher or highest number of yarn in such resulting thread shall designate the class as above herein provided.

To illustrate, suppose you have two yarns—

The CHAIRMAN. This is merely administrative.

Mr. PARKER. This is merely administrative.

The CHAIRMAN. Explain the classification.

Mr. PARKER. To bear out the real intent of the bill, first in your bill you fix the duty based on the highest numbers of yarn in it. Now, suppose that highest number of yarn is twisted. Then, unless you provide that the duty be determined by the number of yarn in a given twisted yarn, it is much lower than any number of yarn that is not twisted.

The CHAIRMAN. Is that likely to change this and advance this class to any great extent?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. PARKER. Not at all. It simply explains the classification. To illustrate, Mr. Chairman: Suppose a piece of goods is made for 40 warp and 80 filling. Under the Underwood bill and also under this suggested bill the duty is placed with regard to the 80 filling. Suppose instead of having 80 filling, we take it and twist two yarns of 80; it then becomes a 40 in weight. If you did not have this clause, the duty would be based on the yarn as being 40, although it has two yarns of 80 in it by the additional process of twisting.

The CHAIRMAN. I see. In other words, the 80 yarn is smaller, of course, than the 40 yarn?

Mr. PARKER. Yes.

The CHAIRMAN. Just half?

Mr. PARKER. Yes.

The CHAIRMAN. And if you allowed it to be based on the cost of these two yarns, you would classify it as 40?

Mr. PARKER. Yes, sir.

The CHAIRMAN. And you want to make it in the classification as 80?

Mr. PARKER. Yes, sir.

The CHAIRMAN. Is there anything further you want to say?

Mr. PARKER. There is one other matter that I would like to bring to the attention of the committee for a moment.

There is no question but what we are to-day facing in all trades, I think, and certainly in cotton manufacturing, a tendency toward depression based upon a fear of a change in this tariff.

Now, I respectfully suggest to the committee, as one who has been just as earnest as any man on your committee in favor of a reversal of the policy of this Government, in favor of reasonable reductions, that it is much a safer and better way to err on the side of a slightly higher duty than may be regarded necessary under present conditions than it is to err on the side of being a little under. In the first place, if you err in the way I have suggested, it can be corrected if necessary. If you err the other way, and wish to change it, it will take years to correct it; and while I am most earnestly in favor of a reduction of this tariff, at the same time I say, in contemplating the whole industry of the United States, that it is better to err by a slight excess than to err by any deficiency.

Mr. FORDNEY. Mr. Parker, if prices are to be lowered, caused by the lowering of the rate of duty, where will you begin to curtail in the cost of the production referred to?

Mr. PARKER. If I believed that the prices I was to receive for my goods would be lowered by the rate I have suggested on these duties, then I would say to you, Mr. Fordney, that I would go out of business as quickly as I could. It is the very fact that the prices we have received are so low now that makes me consider whether there had not better be a change of policy.

Mr. FORDNEY. Is it not true that if the value of your goods in the market was lowered, in order to continue in business you must lower the cost of production, and you would begin on labor first of all?

Mr. PARKER. In answering your question, if you will allow me, I will do so in the terms of a letter written two years ago to the chairman of this committee, dated June 30, 1911, where, differing from a majority of my associates who thought that the time had not come

PARAGRAPHS 315-320—COTTON CLOTH.

to reduce the tariff, I had recommended a reduction in the tariff. It was stated that the effect of that would be to reduce the price of labor. I wrote then what I say now:

I agree with the committee in the statement that there has been in the past few years an increase of wages of cotton mill employees and a decrease of hours of labor. I do not agree, however, with the conclusion of the committee that the only way in which foreign competition can be met is by a reduction of wages. I do not think that a reduction of wages should be considered at all, for the reason that the wages of cotton mill employees are already low and below the basis of a majority of industries; furthermore, as I shall point out later, I believe that foreign competition can be successfully met in many lines of goods with the present basis of wages paid in the United States as contrasted with those paid abroad.

I reaffirm that statement.

Mr. FORDNEY. Mr. Parker, I believe you have admitted that the Tariff Board reports show that labor does not receive higher wages in this country in cotton mills than they receive in Europe?

Mr. PARKER. That is right.

Mr. FORDNEY. Now, that competition is from Europe and from the Orient, from Japan?

Mr. PARKER. I do not think there is any competition from Japan, to any extent.

Mr. FORDNEY. Well, I do not know whether there is any in your line of goods or not, but there is generally. However, if you must accept lower prices for your product, the difference in the cost of labor and raw materials makes that difference in cost, does it not?

Mr. PARKER. Not necessarily.

Mr. FORDNEY. Where does it come from?

Mr. PARKER. It is consistent with a cheaper cost of production to have an increase of wage.

Mr. FORDNEY. How can you, with the same class of machinery employed to-day as is employed abroad, lower your cost of production, unless you get cheaper raw materials, which it takes labor to produce, or lower the wages in your own factory?

Mr. PARKER. I heard yesterday afternoon a very intelligent discussion of this very question by a very intelligent manufacturer from the State of Georgia, Mr. Fuller E. Callaway. Mr. Callaway stated that in his long experience as a manufacturer, which I think is quite as long as my own, he had advanced the wages of his employees so that he is paying to-day 40 per cent more than he paid when he began manufacturing, and yet his cost of manufacture is no greater than it was when he began manufacturing, because he has learned and they have learned. Their efficiency has been greatly increased.

Mr. LONGWORTH. But, generally speaking, you say that your labor is more efficient than the corresponding labor in England.

Mr. PARKER. I have no doubt about that.

Mr. LONGWORTH. You think your labor is more efficient?

Mr. PARKER. I do.

Mr. LONGWORTH. Taking the average workman?

Mr. PARKER. I do. I would go further than that, although my good friends from New England will not agree with me, and say that we have an advantage in labor in the South. We have a superior class of workmen in the South, because all of our help are native whites, and are of the same general condition of life as those who employ them, because we all come from the same origin.

PARAGRAPHS 315-320—COTTON CLOTH.

Speaking generally, the operators in cotton mills in a foreign country have followed the footsteps of their fathers and ancestors, who were also in it.

Mr. LONGWORTH. In England?

Mr. PARKER. In England.

Mr. FORDNEY. Mr. Parker, I would like to ask you this—

Mr. PARKER. Let me make this statement: The reason why we are going to have very great trouble in cotton manufacturing is that the cotton manufacturing industry is a mere stepping-stone to higher industries, and that explanation particularly goes for New England, where the help to-day there is using the cotton industry as a stepping-stone toward higher industrialism. We will have the same condition in the South.

Mr. LONGWORTH. In the foreign countries the workers stay in that class of manufacture for generations?

Mr. PARKER. Yes, sir; the father and grandfather of this man have been in it, but the man who enters a cotton mill in the South to-day is merely using it as a means of advancing his condition, not with any expectation of remaining there for generation after generation, but to advance himself into a higher state.

Mr. LONGWORTH. Are they unionized?

Mr. PARKER. No, sir; they are not unionized.

Mr. LONGWORTH. None of them?

Mr. PARKER. No, sir—well, I say none of them—

Mr. LONGWORTH. They are very highly unionized in England?

Mr. PARKER. They are in England. I think that is possibly one of the retarding effects on the amount of production.

Mr. LONGWORTH. By limiting the output?

Mr. PARKER. Yes.

Mr. FORDNEY. An ex-Senator of the United States, in a speech which I have read, said that he was in favor of a law, and that a law shall be written, that will reduce the hours for the day's work.

Mr. PARKER. Yes.

Mr. FORDNEY. "I am in favor of a law when that law shall be written which will increase the pay for that man's labor per day; I am in favor of a law, and that law shall be written, that will lower the cost of production of that man's labor." It is my opinion that our insane asylums are just chock full of such follies. What have you to say about that? Do you think that that is possible?

Mr. PARKER. That it is possible that there may not be an increase? I admit that I have not fully understood you. You say you favored a law—

Mr. FORDNEY. No; I do not say I favored it. I said an ex-Senator.

Mr. LONGWORTH. Mr. Fordney did not announce his idea.

Mr. PARKER. I beg your pardon.

Mr. FORDNEY. I did not say that I favored such a law or believed that such a law could be made practicable. I say they are impracticable.

Mr. PARKER. I will only say, Mr. Fordney, that 10 years ago, in absolute sincerity, I made an address to the legislature of my own State, in which I stated that my machines could not produce in 60 hours what they were producing in 66 hours. I earnestly favored, therefore, an opportunity to protect myself by a gradual reduction of hours

PARAGRAPHS 315-320—COTTON CLOTH.

from 66 to 60. The legislature, in its wisdom, applied the 60-hour law, and I am producing more on the machines to-day in 60 hours than I did formerly in 66 hours.

Mr. FORDNEY. And you are doing what the average man in the same business is doing?

Mr. PARKER. Yes.

Mr. HARRISON. Then you agree with the findings of the Tariff Board upon the woolen schedule, to the effect that in the United States a high rate of wages is frequently coincident with low cost of production?

Mr. PARKER. Absolutely. There can not be any question about that.

Mr. McCALL. The superior efficiency that you speak of, that your working people have over those of England, has been due to the use of the automatic loom, has it not?

Mr. PARKER. Not entirely.

Mr. McCALL. Is it not chiefly due to that?

Mr. PARKER. In the use of the automatic loom it is more pronounced; but there is even the use of the plain loom, in my judgment, and I think the Tariff Board's report shows an excess of production on the part of the American weaver as contrasted with the production of the foreign weaver in plain goods; but I do not apply the same principle to the finer work, and certainly not to the jacquards.

The CHAIRMAN. Are there any further questions?

Mr. HILL. The reason why they do not use the automatic loom in England is because they limit the production?

Mr. PARKER. That is my understanding of conditions; yes, sir.

Mr. HILL. How many looms do you assign per man?

Mr. PARKER. I think we run as many as 28 looms to an operator.

Mr. HILL. Is that work done by piecework?

Mr. PARKER. It is. I will state to you a general proposition, Mr. Hill, that I make in manufacturing these goods, and that is that it is a pleasure to me to see an individual weaver make just as much as he can through his superior skill and superior energy; and in the same mill I have had one weaver making \$2.50 a day on ordinary plain-print cloth, while the majority of the weavers complain that they can not make more than \$1.50 or \$1.60.

Mr. HILL. Still you think we ought to keep a higher duty on those products?

Mr. PARKER. Yes, sir. I have not exactly put it that way; but I will not repeat it the way I put it.

Mr. HILL. You have specified that 5 per cent—

Mr. PARKER. As I stated before, I consider that 10 per cent is as low as can afford reasonable revenue or that will tend to prevent undue depression of American industry and at the same time prevent undue prices to the consumer.

Mr. HILL. How is the revenue affected, with almost no importation?

Mr. PARKER. It will not affect it in a period like this at all, but I have just learned from experience that England is going to have its period of depression within the next year or two, and when it does I do not wish it to affect us.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. HULL. What differences are there between the methods of the cotton manufacturers in their effort to build up an export trade and the methods of the manufacturers of other commodities engaged in an export business?

Mr. PARKER. I could say, as a general proposition, with the exception of a few cotton mills in the South, and a very few in New England which have, however, an old export trade, that there is no effort made, practically, and certainly there has not been any in the last two years, to develop the export trade on the general mass of products. We might as well recognize the fact that on the general mass of products, even though individually we went out and built up an export trade, there can not be the nerve to resist a return to the home market if prices in America become high.

Mr. HULL. You say there is a difference in the cost of distribution in this country, as compared with the cost of distribution in foreign countries. What difference exists in that cost between this country and the other principal countries manufacturing cotton?

Mr. PARKER. I am not prepared to answer that, but I do not think the proof shows that there is any excess cost, certainly in the oriental markets, in the matter of transportation. I think we are able to get our goods to the oriental markets as cheaply as the Englishman can get his goods there. I know, however, that the cost for distribution is higher in America than it is in England. In England, for instance, all the mills are in a very small locality; therefore, they practically dispose of their products through one board of trade, as it might be called, run through one individual agency. Therefore, there is some saving of cost to those manufacturers in the matter of distribution, and I should say that that would probably amount to from 2 to 2.5 per cent of the cost of production, although that is merely guesswork.

Mr. HULL. It is true, is it not, that England, Germany, and France have their methods of distribution simplified in other ways?

Mr. PARKER. They have.

Mr. HULL. That is, with respect to the amount of the commission?

Mr. PARKER. Unquestionably. That is one of the necessary results, and we will have to come to it in some way, and during that period of adjustment I feel that we had better be careful in our move.

The CHAIRMAN. That is all, Mr. Parker.

Mr. Parker at a later date submitted the following communications:

TARIFF LEGISLATION.

PARKER COTTON MILLS CO.,
Greenville, S. C., February 15, 1913.

HON. O. W. UNDERWOOD,
Chairman Ways and Means Committee,
House of Representatives, Washington, D. C.

DEAR SIR: Referring to my conversation with you when in Washington a few days ago: Notwithstanding the statements otherwise made to you, I beg to assure you as positively as I can make assurance that the effect of the schedule proposed by the American Cotton Manufacturers' Association is to reduce to a great degree the average of duties imposed on cotton cloths as contrasted with the Payne-Aldrich or the Dingley bills.

Owing to the peculiar provisions of the Payne-Aldrich bill, and to some extent of the Dingley bill, in the application of specific duties, there may be certain cases of unusual constructions or character of goods, in which the duties under the American Manufacturers' classification will be equal to those of the Payne-Aldrich and Dingley bills,

PARAGRAPHS 315-320—COTTON CLOTH.

but these will only apply to goods of high class or unusual construction, and under the peculiar wording of the Payne-Aldrich and Dingley bills.

Referring to the memoranda left with you:

I would refer you to the Tariff Board Report, table No. 38, page 95, stating the production of cotton cloths for the year 1909 in the United States, which is stated as 6,059,935,527 yards, which are divided into classes as follows:

Plain cloths, 69.8 per cent; twills and sateens, 6.4 per cent; drills, 3.7 per cent; tickings, denims, and stripes, 4.3 per cent; gingham, 8.8 per cent; fancy weave fabrics, 7 per cent.

The plain cloths represent class 1 of the American Cotton Manufacturers' Association's schedule. In the plain cloths I have included, however, napped fabrics, which as a general proposition are plain cloths, though occasionally there may be a fabric napped of a twill or sateen.

The duties on these plain cloths, which is the product as a general proposition in greatest use by the mass of the people, and which, as stated, represents 69.8 per cent of the entire production in the United States, are greatly reduced by the proposed schedule, and are, furthermore, on an average, considerably reduced, as contrasted even with the bill known as the Underwood bill.

Twills, sateens, drills, tickings, denim, and stripes come within class 2 of the American classification, and I think, on an average, the rates suggested by the American association as to these goods are no higher than the Underwood bill. They represent in the aggregate approximately 15 per cent of the American production.

Ginghams come within class 4 of the American classification and would take a duty under it on an average slightly in excess of the Underwood bill, but considerably less than the Payne-Aldrich or Dingley bills.

The only class of goods in which the duties proposed by the American classification approximates the duties of the Dingley bill is fancy woven fabrics, which, as stated, represents but 7 per cent of the entire manufacture of cloths in the United States.

Table No. 91, page 171 of Tariff Boards report, shows the number of looms operating in the United States in 1909 and the class of goods upon which they operate, being as follows: Looms on plain cloths, 473,373, being 75.5 per cent of the entire looms; looms on twills, including sateens, 78,292, being 12½ per cent of the entire looms; looms on fancy weaves, 74,895, being 12 per cent of the entire looms.

I take it that in the statement of the looms on fancy weaves are included the looms operating on gingham. In the above statement I have excluded looms operating on tapes or narrow fabrics, which are covered under a different schedule. This table simply proves the statement of production already given you.

There is no inconsistency between the Underwood bill and the American schedule, excepting that the Underwood bill does not distinguish between fancy weaves, inclusive of jacquard work and plain weaves, whereas the American classification would make distinction between this work and give an increased duty to the fancy weaves, as a general thing, and a decreased duty to the plain weaves, as contrasted with the Underwood bill.

The Underwood bill classifies cloths generally into two classes—those containing yarns below No. 50 and those containing yarns above No. 50. The American classification simply suggests breaking this classification up into a series of classes.

From a standpoint of statistics there is an advantage in the American classification as contrasted with the Underwood bill, as it will be possible later to determine exactly what classes of fabrics have been imported and what classes are excluded by a prohibitory tariff, if such exclusion takes place. In the Underwood classification it would be practically impossible to make this determination. As a general proposition, it can be said that duck, osnaburgs, and certain flannel constructions would range in yarns 1 to 9's, inclusive; sheetings would range in yarns 9's to 20's, inclusive; print cloths and medium weights would range in yarns 20's to 40's, inclusive. I think from a point of administration it will be well to have three classes, therefore, representative of the yarns under 40's.

Certainly in my judgment there should be two classes, of which 1's to 25's might be made one class and 25's to 50's another class. My judgment is for the three, but I feel quite confident there should be two.

With three classifications there is certainly no advance in plain cloths over the Underwood bill up to No. 40, and, on the contrary, as to a considerable proportion of the product under No. 40, there is a decided reduction.

If, however, in your judgment it would seem advisable to make only two classes under 50, I would suggest that one class be cloth containing yarns 1 to 25, and another class cloth containing yarns 25 to 50. If this decision be made and duty be put at 10 per cent on plain goods containing yarns not over No. 25, there would be a decided

PARAGRAPHS 315-320—COTTON CLOTH.

reduction even as against the Underwood bill, and the second class would be cloths containing yarns 25 to 50, which would be at the same rate as the Underwood bill.

The second class, under the Underwood bill, comprises yarns above No. 50. My judgment is that this class should be subdivided, and whilst I think the subdivision suggested by the American schedule is the proper one, if the subdivisions are more in number than you are willing for, then I would suggest that on cloth containing yarns not exceeding No. 80 and not less than No. 50 that the duty be 20 per cent, as fixed by the Underwood bill, and that on numbers exceeding No. 80 the duty should be 25 per cent in the gray. However, my judgment still is that on yarns exceeding No. 100 there might well be placed a duty of 30 per cent in the gray.

Accepting, however, your view that the duties must not exceed in any case the Dingley bill, I suggest as follows:

Plain cloths, being class 1 as defined in the American classification: Cotton cloth containing yarns not finer than No. 25's, 10 per cent; cotton cloth containing yarns Nos. 25 to 50, 15 per cent; cotton cloth containing yarns Nos. 50 to 80, 20 per cent; cotton cloth containing yarns Nos. 80 and above, 25 per cent. Goods finished, etc., will take in each case 5 per cent additional.

In my judgment a distinction should be made in favor of fancy weaves. The Tariff Board report clearly shows that the American mills are competing in the weaving of plain goods. It shows, furthermore, that in fancy weaves the American mills are at a disadvantage, and I think this disadvantage should be recognized by an additional duty of 5 per cent in the case of dobby work, and an additional 10 per cent in the case of the jacquard work.

If you feel that you must modify the rates suggested by the American association and make the modifications above suggested, I feel quite sure none of the rates will exceed the Dingley rates and a good proportion of them will be enormously below the Dingley rates.

It is hardly fair that the importers shall cite certain samples of which they undertake to give the construction, prices, and duties, which may or may not be correct. In all the citations I have used, I have taken the 100 samples referred to in the Tariff Board, which are representative of approximately all classes of fabrics. When the comparison is made of these 100 samples of the American classification as distinguished from Dingley bill, it is apparent that on the great mass of them there are very great reductions, though there may be a few in which the reduction is slight, and a very few in which there is no reduction, or even a slight increase.

The cases, however, in which there are no reductions or slight increases, are the cases of fancy fabrics, which represent, as stated, only about 7 per cent of the American production, and on which according to Table 91 of the Tariff Board Report, only 12 per cent of the looms were operating.

The importers who have filed a brief with you state that the duties are now prohibitory, on practically all plain fabrics, and that the duties likewise suggested in the American classification are prohibitive.

As I have shown, the American classification makes great reductions in a great number of fabrics, and in my judgment, under average conditions, places these fabrics in a competitive condition with foreign prices. Certainly is this the case when American prices are at all high and foreign prices low.

The differences existing on many plain fabrics between the prices of the American product and foreign product, are such that importations would not occur at all times, even under free trade. For instance, the American prices on most plain fabrics are to-day below the English prices on the same fabrics, but English prices are abnormally high and American prices on many fabrics abnormally low.

The samples submitted by the importers are practically all samples of fancy weaves, in which it is not contended that the American classification makes as great reduction as does the Underwood bill. On the contrary, as stated, there are many plain fabrics on which the American duties are below the Underwood duties.

It is hardly right that reductions should be made, as suggested in the American classification on certain plain cloths without some compensatory increase on the fancy fabrics, and fabrics of very fine yarn.

I have heretofore submitted to you a statement showing the effect of the American classification as compared with the Payne-Aldrich bill, on 100 characters of cloths selected by the Tariff Board as representative of all cloths appearing on the American market, both imported and domestic. I am, therefore, submitting to you now another table, showing the effect of the American classification on what we may call "standard cloths," or in other words, cloths of a character going into general distribution, as distinguished from fancy effects, which go into limited distribution. It is of this last character that the samples submitted by certain importers are.

PARAGRAPHS 315-320—COTTON CLOTH.

The table that I submit to you herewith is representative, I feel sure, of three-fourths of the cloths manufactured in the United States, and you will note a very great reduction made in the duties. It has been my idea that there would be no desire to reduce duties where importations were now of such a character as to show the cloths to be on a competitive basis, but to reduce duties considerably in such cases as the present duties were prohibitory of imports. I thought that this was in line with the policy suggested by you.

I understand that Mr. Cramer will be in Washington to-morrow in the hope of seeing you, and I furthermore asked Mr. MacLea, who is connected with my New York office, to present this schedule to you, and explain the same if you could give him the opportunity. I know how busy you are, and hesitate to impose upon you.

I will add, however, that in my judgment a very serious mistake will be made if the reduction on fancy and jacquard work is unduly made. I think the mills can stand the reduction suggested on plain work, and I believe by such reduction there will be a fair competitive relation between domestic and foreign production, but there is not as yet any justification for similar reductions in cloths made from fine yarns, or in cloths of fancy weaves.

Thanking you, I am, yours, very truly,

PARKER COTTON MILLS COMPANY,
LEWIS W. PARKER, *President.*

[Inclosure.]

The working of the proposed rates for a cotton-cloth tariff.

By LEWIS W. PARKER, for The American Cotton Manufacturers' Association.

[Proof that the reductions proposed cut the Dingley law or the Payne-Aldrich law rates very materially, taken from Tariff Board Table No. 172, pp. 569, 570.]

	7	Classes 2 and 3.
	100	

Total production cloth, 6,059,035,527 square yards.

SUMMARY.

Highest duty rates proposed (yarn content over No. 40) affect less than 8 per cent of the various productions needed in trade and commerce in United States.

Only 8 per cent of all yarns needed for trade and commerce in United States is above No. 40.

Great reductions on all goods needed for the masses. Away below the Dingley or Payne-Aldrich rates.

PARAGRAPHS 315-320—COTTON CLOTH.

HOW THE AMERICAN COTTON MANUFACTURERS' ASSOCIATION'S PROPOSED NEW COTTON CLOTH RATES WORK, AS PROFOUNDED BY MR. LEWIS W. PARKER.

A summary comparison of the duties that have applied since 1897, together with a showing on the same cloths of administration of the law and subsequent Payne-Aldrich rate.

[This table covers that portion of the 100 Tariff Board samples known as dyed yarn fabrics, but does not include velveteen, corduroys or cotton cloth with silk mixture.]

Sample No.	Designation.	Finished cloth rate, Dingley law, as originally provided.	Rate, Dingley law, administered, 1909.	Payne-Aldrich law.	New proposed rate based on yarn content.
63	Chambray.....	35.18	35.18	35.18	30.00
68	Repp.....	35.00	35.00	39.34	30.00

PARKER COTTON MILLS CO.,
Greenville, S. C., February 23, 1913.

HON. O. W. UNDERWOOD,
Chairman Ways and Means Committee,
House of Representatives, Washington, D. C.

DEAR SIR: Appreciative of your willingness to receive further suggestions from me with reference to the schedules proposed by the American Cotton Manufacturers Association, I beg to submit the following statements in addition to those previously made by me:

FIRST. AS TO THE PROPOSED SCHEDULE ON YARNS.

Mr. Cramer, of the committee of the American Cotton Manufacturers' Association, has gone most fully into this matter with you and I would not elaborate his statements except to emphasize the following facts:

PARAGRAPHS 315-320—COTTON CLOTH.

(a) The schedule proposed by us does permit somewhat higher duties on yarns of the same numbers as contrasted with yarns appearing in plain cloths, and this we have done for two reasons:

First. Because it clearly appears by the report of the Tariff Board that foreign manufacturers have considerably lower costs in the production of yarns, as such, in relation to American mills, than they have in the production of cloth. In other words, it is clearly shown by the Tariff Board report that to some extent the American mills have overcome in their weaving departments the disadvantages in the preparatory departments up to and including spinning. The reason of this lies in part in the fact that the automatic machinery very commonly used in weaving in America is not so commonly used abroad, and in part to a greater opportunity for the exercise of greater activity in weaving as contrasted with spinning. The relative cost of weaving to the American mills is less in proportion than in other departments of the plant, in contrast with foreign costs.

Second. Yarn is not an item of consumption by the public, but is only, as it were, a raw material for other manufactures. The public, therefore, is not interested at all in the duties applicable to yarns, but in duties applicable to the finished product. It certainly is fair that if there be accorded to the finished product a rate of duty which, whilst competitive, at the same time affords protection, that the manufacturer of goods made from yarns bought should reasonably expect that the producer of these yarns should likewise be given such protection as comes from the tariff competitive in nature.

The importations of yarns less than No. 40's have been in times past very slight, and therefore it is impossible to state with definiteness what duties would be competitive. We have, however, suggested duties which in my judgment will prove reasonably competitive, in the knowledge that should it appear later that the duties as suggested by us are not competitive the proper course will be to reduce these duties to a point which will make competition. It is much safer and better, however, to err for the present on the side of being slightly high than to be too low.

SECOND.—WITH REGARD TO THE CLOTH SCHEDULE.

As I have previously indicated to you, you will fall into a most unfortunate error if you undertake to compare the schedule suggested by the American Cotton Manufacturers Association with the Payne-Aldrich bill on the basis of imports of any year, say, 1912, for the reason that as the duties under the Payne-Aldrich bill were in many instances excessively high there could necessarily be no imports of classes of goods in which the Payne-Aldrich bill was so excessively high; the importations are necessarily in that class of product in which the Payne-Aldrich bill was reasonably competitive. Under the Payne-Aldrich bill there was the greatest irregularity in duties. For instance, goods containing identically the same yarns but varying in count, in print-cloth numbers, would take duties varying very greatly. To illustrate, by Tariff Board Table No. 172, a cloth 27 inches, 56 by 56, 8.70, whose finest yarn was No. 40, was given by the Payne-Aldrich bill a specific rate, equivalent to an ad valorem duty of 56 per cent; when the same yarns in another piece of cloth 28 inches wide, counting 40 by 44, weighing 9.15 was given a duty of only 39 per cent.

However, under the American classification, the duty would have been the same in each case, to wit, 20 per cent. The same irregularity existed in many classes of cloths under the Payne-Aldrich bill, and therefore, as stated, the importations under the Payne-Aldrich bill were necessarily of exceptional characters of cloth, as to which for various reasons the duties were competitive and not prohibitive.

To illustrate further, I would refer you to the report issued by the Department of Commerce and Labor, entitled "Imported merchandise entered for consumption in the United States and duties collected thereon, 1912," page 13, where the duties on cloths in the gray, "exceeding 150 and not exceeding 200 threads to the square inch," ranged under the Payne-Aldrich bill from 21 per cent to 49.62 per cent, the differences in duties depending upon the weight and value. No such variations would appear in the schedule of the American Cotton Manufacturers' Association. Therefore, as before stated, it can be fairly assumed that only such importations occur as relate to cloths in which, even after application of duties, conditions may be regarded as competitive. Many other illustrations could be cited to you.

I would refer you again to the table submitted a few days ago, in which we demonstrate from the Tariff Board Report that over 90 per cent of the goods distributed throughout the United States come within the provisions of classes 1 and 2 of the American schedule in yarns not exceeding No. 40. And therefore in order to deter-

PARAGRAPHS 315-320—COTTON CLOTH.

mine the extent of the reduction suggested by the American schedule it is necessary to bear in mind at all times that there is this great disproportion between the product of yarns under No. 40 and the product of yarns over No. 40. We freely admit that we have not made the same percentage of reduction as to cloths containing yarns over 40 as we have in cloths containing yarns under 40, but on the other hand it must be remembered that the consumption of cloth containing yarns under 40 is 9 times as much as it is of cloth containing over 40.

There is no doubt, and this fact is clearly shown by the report of the Department of Commerce and Labor above referred to, that the duties have been practically prohibitive of the importation of cloths containing yarns under 40's. It is therefore a mere matter of opinion as to what reduction may be necessary to bring these cloths into competitive relation between the American manufacturer and the foreign manufacturer. As a general statement, it may be said that after a very careful consideration of the subject, the American Cotton Manufacturers' Association has suggested duties that relate to yarns under No. 40, which are only about 50 per cent, on an average of the duties existing under the Payne-Aldrich and Dingley bills.

We believe that this reduction is sufficient to bring the domestic and foreign mills into competition with relation to such classes of cloth. All we can say is that we express our honest judgment in this relation, and that if it appears that a still greater reduction is necessary in order to bring about competition, it can be easily made after experience has shown that it is advisable. Great injury may result from making too great a reduction at this time.

I do not hesitate to say that although I, myself, have been for years a consistent advocate of reduction in duties, I feel that in my desire to manifest entire frankness in my dealings with your committee and in my further desire to subject the characters of cloths in which I am personally interested in manufacturing to the same severe test that I subject other manufacturers with relation to their goods, that I may have gone even too far in suggesting the reduction of duties as great as we have suggested in cloths containing yarns under No. 40. Certainly a great number of the best cotton manufacturers of the United States, in whose judgment I have confidence, and upon whose judgment I would ordinarily rely, have expressed to me great concern at the great reductions suggested by the American Cotton Manufacturers' Association, and have urged that in my desire to meet the view of your committee we have gone further than we should in the suggestion of duties applicable to cloths containing yarns under No. 40's.

To show the extent of these reductions, we have hitherto submitted to you in detail a comparison of rates with reference to the 100 samples of cloth appearing in the Tariff Board's Report and selected by the Tariff Board as representative, in a sense, of all cloths consumed in the United States. These samples were selected by the board to cover all characters of constructions, so as to show the application of the various tariffs to all classes of constructions. In our dealings with your committee we have continued to use these samples for the reason that there can be no dispute with relation to the application of duties to the goods represented by these samples. All facts with regard to them appear in the Tariff Board Report and there can be no dispute with relation thereto.

I refer you again to these tables previously submitted. However, I beg now to submit to you an additional table, entitled, "Coefficient Comparison of One Hundred Tariff Board Samples of Cloth" of table 19, page 43. This table shows that in pounds of production 49½ per cent of all goods manufactured in the United States contained yarns, the highest number of which does not exceed No. 20; 42½ per cent contain yarns not less than No. 20 and not over No. 40, and only 7½ per cent of the poundage production in the United States relates to goods whose lowest number in yarns is No. 40.

Applying these facts to the 100 samples of cloth, the following results appear: The average rate of duty on 15 samples, yarns content not over No. 20 illustrative of classes of cloth composed of 49½ per cent of the total distribution under the Dingley bill was 31.04 per cent ad valorem; under the Payne-Aldrich bill 36.78 per cent, and under the American classification 17.50 per cent. Likewise on 9 samples, yarn content, combining under No. 20 and over No. 20 but not over No. 40, which classifies them as cloth contained in 49½ and 42½ per cent of the total distribution under the Dingley bill as administered, the equivalent ad valorem duties were 36.33 per cent, under the Payne-Aldrich bill 38.68 per cent, and under the proposed American classification 28.61 per cent. Ditto on 23 samples, yarn content Nos. 21 to 40, which classifies them as cloth contained in 42½ per cent of the total distribution, under the Dingley bill the rate ad valorem as equivalent was 40.59 per cent, under the Payne-Aldrich bill 41.95, and under the American classification 24.57.

PARAGRAPHS 315-320—COTTON CLOTH.

The combination of these three classes illustrates, as stated, 92½ per cent of the total distribution of cloths in the United States, and the application, therefore, of the respective rates to these 47 samples would show results as follows:

	Per cent.
Dingley bill.....	36.72
Payne-Aldrich.....	39.67
American.....	23.08

The rates above, as stated, apply to cloths containing yarns not exceeding No. 40.

Working in the same manner on 43 samples shown in the report above referred to, of cloth containing yarn above No. 40, the comparison shows as follows:

	Per cent.
Dingley bill.....	45.23
Payne-Aldrich.....	51.85
American.....	38.88

We attach hereto a table illustrating the statement above given, but we further give you in detail the coefficient comparison of the 100 samples condensed, as stated in the table set forth above, omitting, however, from the 100 samples velveteens, corduroys, and cloths composed in part of silk.

In justice to ourselves we must again call your attention to the fact that we have been most particular in all our illustrations to use only such samples of cloth as have been passed upon by an impartial board, to wit, the Tariff Board.

It is hardly fair that we should now be confronted with a number of samples presented by certain importers with relation to which general information can not be obtained. On our part we have endeavored to keep clear from any representations to you which are not sustained by the determinations of the impartial board, and it does not seem to me to be fair that your committee should confine itself to a study of the samples thus passed upon by the Tariff Board.

However, as we have been asked to criticize the statements made by Mr. Shipley in presenting for your consideration certain samples, though we have not had time to examine in detail the 42 samples submitted by him, we have examined certain of these and present our views to you as follows:

Sample No. 1.—A bleached 36-inch rep, stated by Mr. Shipley as containing the finest yarns content, No. 70, dutiable value 10.72 cents per yard, taking a duty under the Dingley bill equivalent to 23.3 per cent, Underwood bill 25 per cent, and Parker rate, class 2, 40 per cent. Our analysis of this piece of cloth shows no yarns in excess of No. 52 bleached, equivalent to a No. 50 gray yarn. This piece of cloth would not fall under the American classification in class 2, but would come under class 1, and in the American classification would take a duty of 25 per cent and not 40 per cent, as stated by Mr. Shipley.

In the same connection it may be stated that we have nothing except Mr. Shipley's word as to the dutiable value of this cloth, which he states at 10.72 cents per yard. If the dutiable value should be over 11 cents, in place of the duty being under the Dingley bill 23.3 per cent, as stated by him, it would become 35 per cent.

Sample No. 2.—Twenty-seven-inch bleached fleeced back pique counting over 100 but not over 150 threads to the inch, stated by Mr. Shipley to be a jacquard weave. In our opinion, this is not a jacquard weave, and therefore would not, as stated by him, fall into class 3 of the American Association's schedule, but into class 2. As stated by Mr. Shipley the duties would be as follows:

Dingley bill.....	23.1 per cent ad valorem.
Underwood bill.....	20 per cent ad valorem.
American schedule.....	35 per cent ad valorem.

Mr. Shipley states the dutiable value to be 10.8 cents per square yard. Of course, we have no evidence as to the dutiable value, but if the dutiable value was over 11 cents to the square yard the rate of duty under the Dingley bill would be 35 per cent ad valorem and not 23.1 per cent, as stated by him.

Sample No. 5.—Twenty-seven-inch bleached mercerized jacquard waisting counting over 100 but not over 150 threads to the inch. As to this the following statements are made by Mr. Shipley:

Finest yarn content, No. 80.

English converters' price, 4½ d., less 2½ per cent, equal 0.0816, giving it a square yard dutiable value of 10.89 cents, weight 3.026 ounces per square yard; Dingley duty equivalent, 32.1 per cent; Underwood rate, 25 per cent; and Parker rate, class 3, 45 per cent. According to us the highest number of yarn content in this goods is No. 42 in the bleached, equivalent in the gray to No. 39, and the duty as based on the gray

PARAGRAPHS 315-320—COTTON CLOTH.

yarns would be 35 per cent, or based on finished yarns 37½ per cent, in place of 45 per cent, as stated by Mr. Shipley.

Sample No. 7.—White drill, 27-inch, counting over 200 but not over 300 threads, stated by Mr. Shipley to contain finest number of yarn No. 60, weight 5.4 ounces, dutiable value 11.7 cents per square yard, and stated by Mr. Shipley to take duties as follows:

Dingley bill.....	32 per cent ad valorem.
Underwood bill.....	25 per cent ad valorem.
American schedule.....	35 per cent ad valorem.

According to us the finest number of yarn in this piece of cloth is No. 32 and not No. 60, and therefore has, of course, fallen within class 2 of the American classification, and would take a rate of 30 per cent, in place of 35 per cent, as stated by Mr. Shipley.

Sample No. 19.—Twenty-eight-inch bleached jacquard waisting, counting over 150 but not over 200 threads. Stated by Mr. Shipley to contain finest number of yarn No. 140, dutiable value over 12 cents per square yard, with duties, stated by him, as follows: Dingley bill, 35 per cent ad valorem; Underwood, 30 per cent ad valorem; American class 3, 50 per cent ad valorem.

According to us the finest number of yarns appear to be No. 54 equivalent to a 50 to 52 in the gray. This piece of goods, therefore, would take, under the American classification, a rate of 37½ per cent and not 50, as stated by Mr. Shipley.

We could pursue this comparison further, but the instances given you show, in our judgment, the errors into which Mr. Shipley has fallen. It furthermore illustrates the necessity of confining the comparisons of such goods as have been passed upon by the impartial board, so that it is not necessary for the committee to accept either Mr. Shipley's statements or our own statements.

It is for this reason that all comparisons we have made have been of the cloths analyzed by the impartial board. It might be well to add that the analysis made by the Tariff Board was checked by the Analytical Bureau of the Treasury Department of New York, and can be accepted, whereas Mr. Shipley's statement and our statements as to yarns content would necessarily have to be checked by your committee.

I am appending to this letter a graphic chart showing the distribution of over 90 per cent of cloth manufactured in the United States. I would respectfully ask that this letter, together with the exhibits attached hereto, be printed and made a part of the records of the hearing before the committee.

I am also taking the liberty of adding hereto an editorial appearing in the Dry Goods Guide of February, 1913, in relation to the American schedule.

I beg to thank you for your courteous attention to this matter.

Yours, very truly,

PARKER COTTON MILLS Co.,
LEWIS W. PARKER, *President.*

[Inclosure.]

Coefficient comparison of 100 Tariff Board samples of cloth, based on Table No. 19, page 43, showing yarn productions to be under No. 20, 49¾ per cent; No. 20 to 40, 42½ per cent; over No. 40, 7¼ per cent.

	Dingley law as intended.	Dingley law as administered 1909.	Payne-Aldrich law.	American Cotton Manufacturer's Association, proposed rates.

Average American Cotton Manufacturers' Association rates=24.3 per cent, or 40.16 per cent reduction of Payne-Aldrich cotton-cloth rates.

[From Dry Goods Guide, February, 1913.]

COTTON TARIFF RATES PROPOSED BY LEWIS W. PARKER.

The proposed schedule for cotton cloth as presented to the Ways and Means Committee by Lewis W. Parker of Greenville, S. C., who represented the American Cotton Manufacturers' Association, shows a considerable change in method of applying the duties. Heretofore under the Payne-Aldrich law or the Dingley law and its predecessors, the duties were assessed in specific rates according to weight and number of threads to the square inch without any consideration of the fineness of the yarns in the fabric. Irrespective of the fact that the old rates were competitive in some instances, although mostly otherwise as shown by the Tariff Board's report, the proposed Parker rates indicate an attempt to do away with the difficulties that existed heretofore, and to provide a more adequate rate according to the real class of yarn which composes the fabric. The rates shown as per the schedule given in detail below range from 10 to 40 per cent except that on jacquard or very fine yarn productions this is slightly exceeded—not, however, on the class of goods which amounts to anything in distribution. While a 35 or 40 per cent rate may be shown as applicable to some cloths equal to the old Dingley rates, it is apparent that in the same classification a 25 or 20 per cent rate or even less will be made to apply. This is a step in the right direction. It seems to be admitted in the Tariff Board report that the high conversion costs fall upon the finer yarn numbers, and also that the heaviest labor costs come in the same category, indicating it is evident that higher rates should be made on fine yarn productions, even though the count and weight might be very similar to ordinary yarn productions. No serious criticism of the Parker rate has appeared as we go to press, but there will doubtless be attempts to make the higher rates in the Parker schedule appear as raises on the Dingley law basis. There is no question but what the rates on the great mass of goods used are considerably reduced below the old Dingley rates. For instance, a 39-inch 4-yard 80 by 80, containing 28's in warp and 38's in filling, which can be bought in England at 7.24 cents, and which was dutiable under the Dingley law at 2½ cents a square yard, which equals 41 per cent ad valorem, will be dutiable under the Parker rates at 15 per cent ad valorem if in the gray, or 20 per cent ad valorem if finished in any conceivable way. If similar reductions can be shown in the great mass of goods used it will no doubt be a most acceptable substitute for the Underwood bill, and at the same time give a measure of higher rates on that class of fabrics little made in this country, but which require higher duties to equalize the cost differences between here and abroad with due consideration of trade distribution—a most important factor.

PARAGRAPHS 315-320—COTTON CLOTH.

FEBRUARY 20, 1903, big reduction in duties over 90 per cent of distribution as suggested by Mr. Lewis W. Parker:

	Containing yarns.					
	1-9	10-19	20-39	40-59	60-99	100 and over.
Class 1: Cotton cloth, including calico, sheeting, and plain weaves, not including cords, stripes, checks, plaids, or figures made entirely of single yarns, except selvages, in the grey..	<i>Per cent.</i> 10	<i>Per cent.</i> 12½	<i>Per cent.</i> 15	<i>Per cent.</i> 20	<i>Per cent.</i> 30	<i>Per cent.</i> 30
Ditto. If advanced in any way beyond the grey condition by any one or more processes, similar to and including bleaching, napping, dyeing, printing, mercerizing, coloring, or other processes not specially otherwise provided for....	15	17½	20	25	35	40
Class 2: Cotton cloth of fancy or figured weaves of any description, cords, stripes, checks, plaids, figures, drills, twills, and kindred weaves, crepes, terry pile weaves, gauze and leno weaves, and cloth composed wholly or in part of any of the foregoing in the grey: cotton cloth composed of two-ply or more yarns, either wholly or in part, except if in selvages only, in the grey.	15	17½	25	30	35	40
Ditto. If advanced in any way beyond the gray condition by any one or more processes similar to and including bleaching, napping, dyeing, printing, mercerizing, coloring, or other processes not specially otherwise provided for....	20	22½	30	35	40	45
Class 3: Cotton cloth of jacquard weave, whether composed of single yarns, two-ply yarns, or more, either wholly or in part in the grey.....	25	27½	30	35	40	45
Ditto. If advanced in any way beyond the grey condition by any one or more processes, similar to and including bleaching, napping, dyeing, printing, mercerizing, coloring, or other processes not specially otherwise provided for....	30	32½	35	37½	45	50
Class 4: Cotton cloth composed wholly or in part of bleached, colored, dyed, or mercerized yarns, selvages excepted, shall pay the same rates of duty according to construction as provided for cotton cloth of the foregoing classes 1, 2, and 3 when advanced in any way beyond the grey condition, viz—						
Class 1.....	15	17½	20	25	35	40
Class 2.....	20	22½	30	35	40	45
Class 3.....	30	32½	35	37½	45	50

Further provided, that cotton cloth of the foregoing classes 1, 2, 3, and 4 containing two or more numbers of yarn, excepting if in selvages only, shall be dutiable at the rate provided for cotton cloth composed of the higher or highest number of yarn in such cloth; where any yarn content in cloth, except selvages, is composed of two-ply or more twisted yarn, the higher or highest number of yarn in such resulting thread shall designate the yarn class as above herein provided.

Classes 1 and 2: Over 90 per cent of the distribution.

PARAGRAPHS 315-320—COTTON CLOTH.

TESTIMONY OF S. B. CHASE, FALL RIVER, MASS.

Mr. CHASE. Mr. Chairman and gentlemen, I will endeavor not to use those words of offense any more than I can help. I have understood that the word "protection" and the word "specific" are both a little out of order in these days. But I realize that there are different kinds of protection. A good umbrella may keep off all the rain, and when it is made of cheesecloth it may let a part of it drip through, but both mean something in the way of protection.

There has been an impression abroad that the cotton schedule has been greatly increased of late, under the Payne-Aldrich bill, especially for the benefit of the manufacturers. Such is not the case. Of course, the committee knows that ninety one hundredths of all the goods that are made and consumed in this country come under the schedules of the Wilson bill, as originally made in that bill. I think I am safe in making that statement, that nine-tenths of all the goods made and consumed in this country will come under the Wilson bill.

I was in Washington when the Wilson bill was framed and I know that it made a reduction in cloths made from coarse yarns of from 33½ to 50 per cent, on medium goods from 22 to 33½ per cent, and on cloths made from fine yarns from 11 to 22½ per cent. So that the cotton schedule, as it relates to at least nine-tenths of the production and consumption of this country has been subject to a large reduction from the old-time McKinley tariff.

I have to take exception to the testimony of my friend Mr. Parker in regard to the cost of goods in Massachusetts, at least, and abroad. I can not say about South Carolina, because I do not know. I know that it costs us a good deal more to make the kind of goods that I am engaged in manufacturing, which is the so-called high grade of goods, than it does abroad. I have to take exception to the statement that it costs less to make goods with high-priced labor than it does with low-priced labor. I have found that if I pay 3 cents a pound for spinning yarn, that it costs 3 cents a pound. I do not know how to make it figure out 2½ cents if we pay the operators 3 cents, and, as every manufacturer knows, nine-tenths of the work done in the cotton mill, or somewhere in that vicinity, is done by piecework. If we pay high prices, it means high cost, and the cost has greatly increased of late years. There is no question about that. Public sentiment and legislation have in the North, and especially in Massachusetts, eliminated largely child labor. The age limit has been raised once or twice, and of course that means more expensive labor. The hours of labor since the old bill was passed have been reduced from 60 hours per week down to 54, and the production has been curtailed 10 per cent, while the wages of operatives per capita are higher notwithstanding the shortness of the hours and the reduction of product, so that we are not meeting the issue of a lower tariff by a lower cost of production; it is impossible for us to do so.

As almost everyone knows, there always has been an increasing expense coming upon us—in fact, it has come upon us—in the compensation laws which have been passed, remunerating workmen in case of accident. That is compulsory now by law and the cost of that is a very considerable item. While I do not appear as a stand-

PARAGRAPHS 315-320—COTTON CLOTH.

patter or taking the ground that we do not want any reduction whatever in the tariff, I ask this committee to be very careful and very moderate in their action, and we would like to be experimented with a little gradually, rather than to have, as the expression is, the dog's tail cut off behind the ears with one fell stroke.

I have a brief to file, and as I want to leave on an early train, I do not wish to extend my remarks. I am perfectly willing, however, to stay a little while and answer any questions the committee may desire to ask me.

The CHAIRMAN. The American Cotton Manufacturers' Association for which Mr. Miller, Mr. Cramer, and Mr. Parker appeared, represents a large proportion of the cotton industry of this country, does it not?

Mr. CHASE. A large portion, but not a majority portion.

The CHAIRMAN. Do you belong to the association?

Mr. CHASE. No, sir.

The CHAIRMAN. Are there any mills in your State that belong to the association?

Mr. CHASE. I could not answer that question, because I do not know. I think probably there are, but I would not want to state it as a fact, because I do not know.

The CHAIRMAN. You do not controvert the questions of cost and the questions of competitive rates that they stated here, do you?

Mr. CHASE. I do not question Mr. Parker's statement as to his own mills, and as far as his knowledge goes.

The CHAIRMAN. What grade of yarns do you use?

Mr. CHASE. We spin all the way from 36's to 200's.

The CHAIRMAN. I suppose competition in the 36's, which is a low grade of yarn, is not very great?

Mr. CHASE. It is a small factor with us. We generally use those for mixtures and cords, and sometimes we use them more largely.

The CHAIRMAN. What is the principal production of your mill? What grade of yarns?

Mr. CHASE. Under normal conditions, perhaps the largest factor of production would be around an average of 75's.

The CHAIRMAN. 75's.

Mr. CHASE. Yes, sir.

The CHAIRMAN. Over that you run—

Mr. CHASE. Over that we make 60 warp and 90 filling or 100 filling; somewhere around there.

The CHAIRMAN. Is not a good deal of the cost of your mills caused by the yarns above 100, between 100 and 200? Do not the very high grade yarns produce the high cost?

Mr. CHASE. The cost of those yarns is all figured separately. If we figured the average cost, it would be impossible for us to sell any goods made of 36 yarns or of 100 yarns. It would simply hit the average.

The CHAIRMAN. What I mean is, that whatever competition there is comes when you get above the 100's?

Mr. CHASE. Competition from abroad, you mean?

The CHAIRMAN. Yes.

Mr. CHASE. Yes, sir; about in that region.

PARAGRAPHS 315-320—COTTON CLOTH.

The CHAIRMAN. That is where the strong competitive yarns are?

Mr. CHASE. Yes, sir.

The CHAIRMAN. You do not combat what Mr. Parker said about the lower grade yarns and cloth made out of the lower grade yarns, do you?

Mr. CHASE. I do to a certain extent; yes, sir.

The CHAIRMAN. The committee will be glad to hear you on that.

Mr. CHASE. When it comes to the extreme low grades, about which I know nothing, I do not combat that; but on what I call medium yarns, I think there is no question that if he claims they are made cheaper here than they are in England, he is wrong.

The CHAIRMAN. He did not make that claim. He did state, I think, that they could make some low-grade yarns as cheap. But on the medium-grade yarns I did not understand him to say that.

Mr. CHASE. Possibly I misunderstood him. I could not hear very well, anyway.

The CHAIRMAN. He said the rate on these medium-grade yarns and the cloth made out of them would be equalized. For instance, you call a medium-grade yarn from 40 to 60, do you not?

Mr. CHASE. No.

The CHAIRMAN. What do you call medium?

Mr. CHASE. I should call medium grades from 30 to 40. When you get up to 60, I call it fine.

The CHAIRMAN. From 30's to 40's?

Mr. CHASE. Yes, sir.

The CHAIRMAN. On the plain yarns, the white and gray yarns, from 20's to 39's, we put on a duty of 15 per cent. Do you think that is a reasonable tariff?

Mr. CHASE. I do not think it is enough.

The CHAIRMAN. The Tariff Board seems to indicate that he was right with reference to that.

Mr. CHASE. Possibly the Tariff Board did. I am simply expressing my individual opinion.

The CHAIRMAN. In other words, you mean to say that you could not do it in your own mill? Is that it?

Mr. CHASE. That is right. I want to say a word about ad valorem duties and to see if you have considered a certain fact in relation thereto. I just want to make a suggestion. I am not going to argue the question. I have bought Sea Island cotton in my day as low as 12 cents a pound, and I have paid over 40 cents. I have made that into goods with a labor cost of 50 cents, and the costs which are affected by this same principle, on materials, taxation, etc., of which we have an excessive amount over on this side, would run it up to 75 cents. The cotton, with the waste out, at 12 cents would be about 17 cents. Adding that to 75 cents would make it 92 cents a pound. If you give us a duty of 30 per cent ad valorem, which is 27 cents a pound in round numbers, on 90-cent goods in which the labor and other factors which are affected by the tariff is 75 cents. Now, we will take the 40-cent cotton. That, with the waste out, costs us nearly 60 cents. You add labor and other materials of 75 cents and you have \$1.35, and that at 30 per cent ad valorem would give over 40 cents a pound. Don't you see the difference?

PARAGRAPHS 315-320—COTTON CLOTH.

The CHAIRMAN. There is no tax on the cotton, and we assumed that the cost to the English manufacturer is as much if not more than it is to you. We also assume that you have been conducting your business in an up-to-date business way; and as he has just as much waste as you have, that would equalize that proposition.

Mr. CHASE. Not at all, sir; and I think you will see your mistake in just a moment.

We admit that the raw material is so near on a parity that it is not worth discussing. It is the labor that we are talking about; the labor and other factors of American cost, which are high. What I say is that when the Englishman pays 40 cents and I pay 40 cents the tax on his goods makes 40-cent cotton give me a much larger protection, if I may use that word, when his cotton is 40 cents than it does when his cotton is 12 cents, because the ad valorem is figured on the total cotton, the labor, and all the other costs, is it not?

The CHAIRMAN. Yes.

Mr. CHASE. And so you see, from a protective standpoint, a great deal less protection is given to us on 12-cent cotton than it is on 40-cent cotton?

The CHAIRMAN. I recognize, Mr. Chase—

Mr. CHASE (interrupting). Pardon me. I just wanted to show that principle. I do not propose to argue the difference between ad valorem and specific duties. I am in favor of specific duties. I would rather have them a great deal lower proportionately than the ad valorem would figure and have them specific.

The CHAIRMAN. I see what you mean, of course. When the cotton is high and the imports come in, you figure that you get an actual higher rate of tax on the raw material?

Mr. CHASE. You are bound to; you can not help it.

The CHAIRMAN. But there is this proposition: If we were figuring this merely from the standpoint of the manufacturer, and if the Government was not involved at all, there might be a great deal in your argument, and we might be willing to concede it; but when we are levying this tax primarily for revenue, from our standpoint, because we are acting for the benefit of the Government, the protection that grows out of it is merely an incident that comes to you. From our standpoint it is a different proposition than if we were levying a protective tariff, where we were levying it primarily for you and the revenue to the Government was an incident.

Mr. CHASE. I understand that.

The CHAIRMAN. Looking at it from the standpoint of the Government, we are very much less liable to reach a block by reason of changing conditions if we have an ad valorem rate to adjust itself to those conditions than we are if we have a specific rate that does not adjust itself. In other words, if we were to put on a specific rate that was reasonably fair in a normal market a drop of prices would probably—and often does under the present bill—make that specific rate a prohibitive rate, and the Government gets no revenue under those circumstances.

Of course, from the manufacturer's standpoint, you may say he needs protection more, but from our standpoint we can say that the Government will probably need revenue more because of this drop all

PARAGRAPHS 315-320—COTTON CLOTH.

along the line. Therefore, looking at it from the standpoint of the Government, it seems to us that the ad valorem rate is a rate that is more apt at all times to bring in revenue to the Government. Of course, if there is a fall in the market it will bring less revenue, but it supplies some revenue instead of making a block and supplying nothing.

Mr. CHASE. I quite agree with you from a purely revenue point of view. Of course, if you want rates low enough so that no goods can be made here, then, of course, you would get all the revenue from cotton cloth, because the people wear it and it would all come in from the other side. If it is intended to grant the manufacturer incidental protection—but we haven't time to thrash this out.

I believe the specific rate is the rate, because the labor and other factors—I will not say that labor is exactly a factor, but it is more a factor than the raw material. You know very well that the raw material in the country where you come from—you must know it—goes way up and away down, and that is where the ad valorem rate works very badly.

The CHAIRMAN. If I were looking at it from your standpoint, I think I might reach your conclusion, but I am looking at it from a different standpoint; we are looking at it from two different angles. We think it is more important to levy this tax to secure some revenue, that that is the primary purpose.

Mr. CHASE. We are in your hands.

The CHAIRMAN. What we desire to do is to levy a rate that will only produce reasonable competition; that is what we want.

Mr. CHASE. We will agree to that. If you will give us a rate that will give us a reasonable chance to compete with Europe, that is all that I will ask for, as far as I am concerned. I know it is pretty hard to get it.

The CHAIRMAN. The human machine is not very perfect, but we are going to make the effort.

Mr. McCALL. If you were going to try to reduce the cost of your goods, where would you begin?

Mr. CHASE. I do not know where I would begin. I do not think there is any place to begin.

Mr. McCALL. You have not control of the price of raw material?

Mr. CHASE. There is only one price that we could control, if that is what you are getting at. We have control of labor, but we haven't got much control of that.

Mr. McCALL. At any rate you would try to begin reducing by cutting down labor?

Mr. CHASE. As Mr. Parker well said, the labor in the cotton industry to-day is too low. Taking into consideration the conditions that exist in the high cost of living it does not afford a sufficient reward to attract people to the industries. We are short of labor.

Mr. McCALL. You would have to stop production?

Mr. CHASE. Pardon me.

Mr. McCALL. If you had to reduce your price below where you could afford to make the goods, and if you could not cut down the price of labor you would have to stop production?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. CHASE. Surely, and that is what we do do when we get in a corner sometimes. Sometimes we have had to cut labor. We dislike to do it. Under present conditions it ought not to be done and we ought not to be forced to do it. I think it would be wrong to put this tariff so low so as to force that issue. I think if you investigate matters you will find that cotton-mill labor is not overpaid.

Mr. McCALL. I think it is very low paid.

Mr. CHASE. It is low paid.

Mr. McCALL. I do not think you ought to be compelled either to cut the price of labor or to stop production.

Mr. CHASE. The conditions in our country are different from those in Mr. Underwood's country. There he has, as he has testified, the native-born laborer that comes out of the mountain sections. I have been down through there and seen it. He has got good labor. We are dependent upon Europe for our fresh supply of labor, on immigration. We have a great many non-English-speaking people coming in and it is quite a problem how to handle them. We are spending money educating them in English, the adults, I mean, sending them to schools, so that they may learn our language in order that they may become good and efficient operatives. The children of our former operatives, who have attained a little education in the public schools, fare better, because they go into the better classes of industry that have natural protection and do not need any laws to protect them, like street railways, electrical concerns, etc.

Mr. McCALL. And policemen?

Mr. CHASE. Yes, sir; policemen. There is a great variety of labor that does not need any protection and which offers high pay for that class of people.

Mr. PALMER. Your contention is that under the present conditions and the prices of labor you are unable to compete with the foreign manufacturer in your line of goods?

Mr. CHASE. We know we can not.

Mr. PALMER. Yes; you know you can not?

Mr. CHASE. Yes, sir.

Mr. PALMER. Is that true of all the mills in New England in your line?

Mr. CHASE. In my line; yes, sir. It simply can not be done.

Mr. PALMER. What State are you from?

Mr. CHASE. Massachusetts.

Mr. PALMER. Have you observed recently in the Massachusetts newspapers the advertisement of the banking firm of Hornblower & Weeks, of Boston, advertising to sell securities in certain cotton mills?

Mr. CHASE. I do not know whether I have or not. I get a good many circulars of that sort.

Mr. PALMER. You know that firm, do you not?

Mr. CHASE. I have heard of them.

Mr. PALMER. It is a very reputable firm, is it not?

Mr. CHASE. So far as I know. I do not know anything about them, except that I know there is such a firm.

Mr. PALMER. Is that the firm of which Mr. S. W. Weeks, recently elected Senator from Massachusetts, is a member?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. CHASE. I do not know.

Mr. PALMER. I want to read you a part of the advertisement of Hornblower & Weeks, who are advertising in New England papers to sell securities in cotton mills. They say:

The kind of cloth manufactured can be produced in this country in competition with any foreign product, and in fact a considerable quantity is exported from this country each year. A cotton mill capitalized and operated on the above basis should be able to make a good profit, irrespective of tariff changes and other political conditions. In the present case we can say that the management views tariff revision with no apprehension.

Do you agree with that statement?

Mr. CHASE. To what mill does that refer, if I may ask?

Mr. PALMER. This particular advertisement is to sell securities in a mill of which George A. Draper, of Hopedale, Mass., is the president, and former Gov. Eben S. Draper is a director.

Mr. CHASE. It is not a mill making fine goods. If it is, they are stating things which are not true and deceiving the public. I do not hesitate to say that, whether Mr. Weeks is a member of the firm or not.

Mr. PALMER. You disagree with what Mr. Weeks's firm is saying to the people of New England?

Mr. CHASE. I do if it refers to the kind of mill that I represent. Of course, there are all sorts of mills.

Mr. PALMER. I understood you to say, however, when I first asked you that the conditions, so far as labor costs are concerned and possible competition with foreign manufacturers, were the same with respect to all New England cotton mills?

Mr. CHASE. Oh, no; I did not say that. I might say that there are mills in New England that make goods almost entirely for export.

Mr. PALMER. What class of goods is that?

Mr. CHASE. Heavy drills.

Mr. PALMER. They can, of course, compete with the foreign manufacturer?

Mr. CHASE. They evidently do.

Mr. PALMER. This advertisement seems to cover a mill near New York.

Mr. CHASE. I guess I know what it is now.

Mr. PALMER. At Cohoes, the Harmony Mills.

Mr. CHASE. I guess they are very anxious to get rid of it.

Mr. PALMER. Who is?

Mr. CHASE. The people that own it. There is no doubt about that.

Mr. PALMER. Mr. Weeks seems to be reasonably anxious to get rid of the securities.

Do you know that mill?

Mr. CHASE. I know what it is; yes, sir.

Mr. PALMER. What kind of goods do they make?

Mr. CHASE. I do not know; nothing very fine.

Mr. PALMER. Nothing very fine?

Mr. CHASE. No, sir.

Mr. PALMER. They make the cheaper classes, you mean?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. CHASE. Yes, sir; as far as I know. I do not absolutely know, and I do not want to go on the record here as saying something that I do not know. You know in court you are not allowed to say anything except what you have personal knowledge of. I have not personal knowledge of that, but I have a very strong impression. I think I have knowledge enough to make the statement that that mill does not make fine goods, but I can not say that from personal observation. I never was in the mill in my life. I know it has been a broken-down concern.

Mr. PALMER. Are the Drapers large cotton mill manufacturers in New England?

Mr. CHASE. The Drapers are large cotton machinery manufacturers. They are not cotton-mill men.

Mr. PALMER. Manufacturers of cotton-mill machinery?

Mr. CHASE. Yes, sir.

Mr. PALMER. And of course they are interested in the prosperity of the cotton manufacturing trade?

Mr. CHASE. The Drapers are machinery manufacturers and they like very much to fill up a mill building with machinery for somebody else to run. It is their business. That has been the curse of the cotton business. Some of my friends here in the machinery business probably will not like what I say.

Mr. PALMER. In this particular case although the Drapers may have filled the mill with machinery—I do not know about that—they seem to have become directors also in the cotton mill itself.

Mr. CHASE. Yes, sir.

Mr. PALMER. And they are advertising through their bankers that they have no fears whatever on account of any tariff revision.

Mr. CHASE. Possibly they have not; I do not know.

Mr. PALMER. You say as to the cheaper class of goods they may be all right?

Mr. CHASE. There are certain classes of goods made in this country on which the question of protection may be dismissed. It is not a matter of much consequence. That is where the raw material is about all the value there is in the goods.

Mr. FORDNEY. Are the cheaper grades of goods that you were speaking of made for export?

Mr. CHASE. They may be cheap or they may be dear. It is a question of the raw material.

Mr. FORDNEY. You do not know whether this mill mentioned in this advertisement manufactures the class of goods that are now being exported?

Mr. CHASE. I do not; no, sir.

Mr. FORDNEY. It may be that those very grades of goods are made in that mill for export. That would relieve it from the question of fraud. It would be correct, then, would it not?

Mr. CHASE. I do not like to speak for anyone else; but I imagine that if Mr. Eben Draper, for whom I have a very high regard and who I think is a man of very sound sense, were here—if the statement comes from him that on the kind of goods that they are making they have no fear of tariff changes—he would qualify that by saying that he did not suppose Congress would pass a law making absolute free trade.

PARAGRAPHS 315-320—COTTON CLOTH.

You might revise the tariff to a considerable amount, but none of us would expect that you gentlemen are going to take the whole tariff off. If we did, we should be scared blue; there is no question about that. But we think, or he thinks, that there may be reductions, and I think it is the basis upon which that statement is made.

Mr. PALMER. He simply desires to express his confidence in the Democratic Party?

Mr. CHASE. Exactly, although he is a standpat Republican himself. He is confident that you are not going to try to ruin the country.

Mr. FORDNEY. I have no doubt that if you knew now just exactly what they would do, you would be blue in the face. But that is a joke. You have stated that you have labor troubles, or at least you have had labor troubles in the cotton mills of Massachusetts within the last year.

Mr. CHASE. We have had no trouble in our town, but we have had them in Massachusetts.

Mr. FORDNEY. I believe you stated that under existing conditions you could not afford to pay higher wages than you are paying now, and that the rate of wages, in your opinion, is not sufficiently high to attract labor to that industry?

Mr. CHASE. That is so.

Mr. FORDNEY. If you had a greater measure of protection that would curtail importations of goods that come in competition with your goods, you could pay a higher rate of wages to your labor, could you not?

Mr. CHASE. I do not know. I want to be perfectly candid. Of course the possibilities of paying higher wages under a high tariff are very much greater than under a low tariff, but sometimes there are conditions of home competition that would prevent you from paying higher wages. You asked me if you should raise the tariff instead of lowering it, if it would increase wages. I could not tell you. That would depend upon the condition of the trade. We could raise them if we could raise the price of our goods.

Mr. FORDNEY. That is the point I want to get at.

Mr. CHASE. That is it.

Mr. FORDNEY. On the other hand, with the distressing conditions which you have in the cotton mills of New England to-day, if the rate of duty on that class of goods is lowered and if, by reducing that rate of duty, the price of those goods would be lowered to the consumer in this country, you will be in greater distressed condition than you are to-day, and labor would also be in a greater distressed condition, would it not?

Mr. CHASE. If the duty were lowered, so that the goods could be brought in free, of course it would tend further to depress our business. There is no doubt about that.

Mr. FORDNEY. Increased importations of the class of goods you are making would have the tendency to bring about greater competition and lower prices, would it not?

Mr. CHASE. Certainly.

Mr. PALMER. Do you think it would also lower the amount of production of that class of goods in this country?

PARAGRAPHS 315-320—COTTON CLOTH.

In other words, would the rate suggested by Mr. Parker, as an example, result in such largely increased importations as would not be absorbed by the demands of the country?

Mr. CHASE. I am inclined to think it would. I want to be perfectly candid and say that I do not know. I mean no disrespect to any member of the committee when I say that I doubt if any of them know just where the dividing line comes between protection and allowing it to come in—

Mr. PALMER (interposing). The manufacturers in this country would do their best to keep that competition down by meeting it in price, so far as they could, would they not?

Mr. CHASE. We always do.

Mr. PALMER. Assuming that the rate would be written at such a figure that you could keep the competition down by the reduction of price without decreasing your production, then the demand for labor in the American mills would be just the same as it is now, would it not?

Mr. CHASE. Yes.

Mr. PALMER. And if the demand for labor continued the same you would have to pay labor just as much as you do now?

Mr. CHASE. Yes.

Mr. PALMER. So that the first effect of such a reduction of price would not be the lopping off the wages of labor, but in somewhat reducing the profits of the manufacturer; is not that true?

Mr. CHASE. When I tell you that King Phillip Mills, which I am representing here to-day and of which I am the manager, lost over \$50,000 last year, to reduce our profits below that would be a hardship, would it not?

Mr. PALMER. You suffered a loss?

Mr. CHASE. Yes; we did.

Mr. PALMER. By reason of the reduction in price of your commodity?

Mr. CHASE. So did most of the mills in our line of business.

Mr. PALMER. You did not take that out of labor, did you?

Mr. CHASE. No, sir.

Mr. PALMER. In other words, when competition results in a lower price on an article manufactured in this country without decreasing the amount of production, the loss, if any, comes not out of labor, but out of the capital invested?

Mr. CHASE. In a long pull, it would have to be shared by labor.

Mr. PALMER. Let us see about that. Is not the cost of labor the first lien on your plant?

Mr. CHASE. I do not know exactly what you mean by the first lien.

Mr. PALMER. What you have got to pay to your labor must come out first, must it not?

Mr. CHASE. Surely.

Mr. PALMER. Is it not true in all manufacturing enterprises that when losses occur, the losses are taken out of those things which are taken of the business last, and not first?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. CHASE. I can tell you—

Mr. PALMER (interrupting). In other words, would you not first reduce the dividends rather than the labor? Would you not be bound to do so?

Mr. CHASE. Yes; I think that is the first step, perhaps; but it is not always done in every case.

Mr. PALMER. No; I think not.

Mr. CHASE. When you have to reduce the dividends to a certain point and then not get a fair return on your capital, you are eventually going to run your plant cheaper or abandon the business.

Mr. PALMER. You do not claim to have arrived at that point in the cotton mills of New England, do you?

Mr. CHASE. I hope not.

Mr. PALMER. You could still reduce dividends to some extent, if you were compelled to accept lower prices for your product and get a fair return upon the actual amount of capital invested?

Mr. CHASE. No, sir; not under present conditions. If you are speaking of present conditions that would be impossible.

Mr. PALMER. Do you mean that you could not lower the present dividends in New England?

Mr. CHASE. No, sir; not with a good many plants, because they are paying nothing. I do not see how you could get below nothing.

Mr. PALMER. I have seen some tables of earnings of the cotton mills in New England which have made me wish I had a little money in them.

Mr. CHASE. These mills which I represent have made a good deal of money in days gone by, at times. We have had very prosperous periods and we have had very depressing periods. If we spread over the generation of time and did a fair return, we are satisfied.

Mr. FORDNEY. The gentleman asked you if, when reducing the price and so on, the first thing would be to reduce the dividends. When you are not paying any dividend it is pretty hard to reduce that any further, is it not?

Mr. CHASE. That is just the remark I made.

Mr. FORDNEY. In the last 10 years, of the New England and southern mills there are a great many of the mills that have paid no dividends at all?

Mr. CHASE. That is true of some.

Mr. FORDNEY. Only those most favorably situated and with the most economical methods of manufacture have paid the dividends?

Mr. CHASE. I would not go as far as that. I think the majority of the mills have paid dividends. I would not say it was a favored few. I think the majority pay dividends more or less. Some of them have paid good dividends; some have paid an average of 5 to 6 per cent, and some have paid little or nothing. That is about the condition as I understand it.

Mr. FORDNEY. With your own concern, Mr. Chase, as an illustration, what have you paid in the past 15 years?

Mr. CHASE. We have paid 6 per cent, and have not skipped.

Mr. FORDNEY. You have not paid any more?

Mr. CHASE. No—yes, we have in 15 years.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. FORDNEY. But on the average you have not?

Mr. CHASE. We have always paid a 6 per cent dividend, and some years ago we paid an extra dividend.

Mr. PALMER. How much was that?

Mr. CHASE. Fifty per cent.

Mr. PALMER. How many stock dividends have you had in the meantime?

Mr. CHASE. We increased our stock.

Mr. PALMER. How much?

Mr. CHASE. Fifty per cent.

Mr. PALMER. Out of the profits?

Mr. CHASE. Well, you might call it out of the profits.

Mr. PALMER. You call it a stock dividend, do you not?

Mr. CHASE. A stock dividend, if you choose.

Mr. PALMER. Then you have done pretty well, have you not?

Mr. CHASE. Very well, indeed, sir.

Mr. RAINEY. What is the name of your mill?

Mr. CHASE. The King Phillip Mill. Certain information has been pulled out of me, and that is all right. I have nothing to hide about the 50 per cent dividend. In 1898 cotton was selling, as you gentlemen from the South know, at a very low price, about 4 to 5 cents a pound. For the King Phillip Mills I bought two years' supply of cotton, or nearly so, and we had a tremendous advance; it more than doubled in price, and that is where that 50 per cent dividend came from. We made it just after that period; that is, we declared that dividend within a year or two afterwards.

Mr. FORDNEY. That dividend was occasioned by your taking advantage of a low market for your raw material and laying in two years' supply?

Mr. CHASE. Yes, sir; plunging in very heavily and winning out.

Mr. FORDNEY. The value of your raw material increased and you made an extraordinary profit?

Mr. CHASE. Yes, sir.

Mr. LONGWORTH. Mr. Parker said that the cost of labor to the Massachusetts mills was 10 per cent more than in the southern mills. Do you agree with that?

Mr. CHASE. I could not answer that question, for I do not know. In a general way, I understand and believe that the cost of labor is considerably less in South Carolina than in Massachusetts. I could not give the amount, because I have no means of knowing.

Mr. LONGWORTH. Another statement he made in reply to a question by Mr. Underwood was that in his judgment the Hill bill would have been of greater benefit to the southern manufacturers, although it reduced the duty on the cheaper grades of cloth, and that the Underwood bill would have been a greater benefit to the New England manufacturers, although it carried substantially less duties on the higher grade of cloth. Do you agree with that?

Mr. CHASE. I do not think I do.

The CHAIRMAN. I do not think that is a proper differentiation between the two bills. There is a very great difference in the moderate grade of cotton goods that most of the southern mills are

PARAGRAPHS 315-320—COTTON CLOTH.

making. The very low grades do not apply to the southern mills any more than they do to the northern mills. The southern mills are making well up into the 70's, are they not, Mr. Chase?

Mr. CHASE. Yes, sir; some of them are running the finer yarns.

The CHAIRMAN. Many of them are running way above these low-grade goods?

Mr. CHASE. Yes, sir. I do not know how many, but I know some of them are.

Mr. RAINEY. Your mills are in Fall River?

Mr. CHASE. Yes, sir.

Mr. RAINEY. Do you remember what the price of raw material was in 1902; was the material used in the Fall River mills at that time at low price?

Mr. CHASE. I could not tell you.

Mr. RAINEY. Are you familiar with the Bourne mill, in Fall River?

Mr. CHASE. Yes, sir; I know of it.

Mr. RAINEY. I notice in 1902 they paid a dividend of 12½ per cent and in 1903 they made a stock dividend of 40 per cent. Then upon the stock so watered, in 1903, they paid 9½ per cent dividend. Was there an element of cheaper raw material going into that situation in those years which made that remarkable condition possible?

Mr. CHASE. I can not tell you any more about the Bourne mill than I can tell you about the mills in South Carolina. It is over in Rhode Island.

Mr. RAINEY. I find in 1905 the Chase mills made a stock dividend of 20 per cent and in 1907 another stock dividend of 33½ per cent, and they are now paying 6 per cent on the stock, on the entire issue of stock which they have watered in this way twice. Is that about what the other mills in Fall River do?

Mr. CHASE. No; it is very far from it.

Mr. RAINEY. Are you familiar with the Davis mills?

Mr. CHASE. Yes, sir.

Mr. RAINEY. They are in Fall River, are they not?

Mr. CHASE. Yes, sir.

Mr. RAINEY. I have a statement here as to those mills. I find that in 1909 they made a stock dividend of 25 per cent. At that time they were paying 6 per cent, and they have continued to pay 6 per cent just the same after watering their stock in this way. I find, also, that in 1907 the Davis mills made a stock dividend of 25 per cent, and continued to pay 6 per cent, and they still continue to pay this same amount.

Mr. CHASE. The Davis mills?

Mr. RAINEY. Yes.

Mr. CHASE. Do you find any account there where they reduced their capital stock \$500,000, and that they had to put in new capital on account of the losses they made?

Mr. RAINEY. No, sir; I do not find that.

Mr. CHASE. That is true.

Mr. RAINEY. When did they do that?

Mr. CHASE. I could not tell you.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. RAINEY. According to this statement that was never done. They still have \$1,250,000 capital.

Mr. CHASE. You get all of these good stories, but I can tell you a lot of the other sort, where mills have lost half their capital and all of it.

Mr. RAINEY. Your mills are the King Phillip Mills?

Mr. CHASE. Yes, sir.

Mr. RAINEY. Let us see if they have that correct. I know you will know about that.

Mr. CHASE. I can tell you a very good story about that.

Mr. RAINEY. In 1906 you watered your stock 50 per cent.

Mr. CHASE. We never watered it at all.

Mr. RAINEY. You made a stock dividend.

Mr. CHASE. Yes, but it wasn't watered. It is not capitalized now for what it is worth.

Mr. RAINEY. You gave the option of either cash or stock?

Mr. CHASE. Yes, sir.

Mr. RAINEY. Most of them took stock, did they not?

Mr. CHASE. Yes, sir.

Mr. RAINEY. That was in 1906? In 1902 you paid a dividend of 16 per cent, did you not?

Mr. CHASE. Yes, sir; one year.

Mr. RAINEY. After you had paid this large dividend in 1906, which they all took in stock, you continued to pay 6 per cent right down to date?

Mr. CHASE. Yes, sir.

Mr. RAINEY. They have you right then?

Mr. CHASE. Yes, sir; that is right.

Mr. RAINEY. Are the Laurel Lake Mills in Fall River too?

Mr. CHASE. Yes, sir.

Mr. RAINEY. Do you know anything about those mills?

Mr. CHASE. Not very much.

Mr. RAINEY. They say here that it made a stock dividend of 100 per cent in 1907, and in 1905 they paid 5½ per cent; in 1906 they paid 11 per cent; then, in order to keep down their apparent earnings, they issued a stock dividend of 100 per cent; and then in 1907, much to their surprise, they paid 14 per cent on the watered stock.

Mr. CHASE. There, again, you are off your base. The Laurel Lake mill got into financial difficulties and had half of their capital, or more than half of it, wiped out. I guess perhaps none of the gentlemen here can give me the exact figures, but they had to put in fresh money; and when they got on their feet they gave the stockholders that dividend to square up with them; and that is all they did do.

Mr. RAINEY. When did they get on their feet?

Mr. CHASE. They got on their feet when they had good times—in 1906 and 1907.

Mr. RAINEY. In 1907 they paid 14 per cent and in 1908 13 per cent?

Mr. CHASE. Nobody will question that in 1906 and 1907 the cotton mills of this whole country had the most prosperous period in their entire history.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. RAINEY. Were they not just as prosperous in 1908?

Mr. CHASE. No, sir; 1908 was a hard year.

Mr. RAINEY. Those mills which you say were in such financial difficulties in 1908 paid 13 per cent.

Mr. CHASE. They probably made it in 1906 and 1907. We paid 6 per cent this last year and lost \$50,000. If you go by that, you would say that we made money; but we did not.

Mr. RAINEY. Are you familiar with the Merchant's Co. in Fall River?

Mr. CHASE. Yes, sir.

Mr. RAINEY. They made a stock dividend in 1907 of 50 per cent and have increased their dividends every year since that time in spite of the fact that they watered their stock 50 per cent. That is correct, is it not?

Mr. CHASE. I know a little something about the Merchant's Manufacturing Co., because I own some stock in it, and the statement that they have increased their dividends every year since 1907 is not true. I do not know where you got it, but it is not true.

Mr. RAINEY. I did not say that they had increased every year over the preceding year. But in 1907 they paid 5½ per cent, when they had not paid that much since 1901, and since this watering of their stock they have increased their dividends to 6 per cent and pay it now on their watered stock. That is correct, is it not?

Mr. CHASE. No, sir; it is not correct; they did not pay any 6 per cent last year that I know of.

Mr. RAINEY. They paid it in 1910?

Mr. CHASE. In 1910 I do not know.

Mr. RAINEY. They did according to this statement. And they paid it in 1909.

Mr. CHASE. I can not tell you about that. I know they have not paid any 6 per cent. I know they ran down to 4 per cent for quite awhile.

Mr. RAINEY. When did they run down to 4 per cent?

Mr. CHASE. I can not tell you; I can not give you dates. I know when you say they have paid 6 per cent right along that they have not done it.

Mr. RAINEY. They paid 6 per cent for three years after they watered their stock, is not that so?

Mr. CHASE. I do not know what they paid.

Mr. RAINEY. Do you know the Pocasset mills there?

Mr. CHASE. I know there is such a mill.

Mr. RAINEY. I see they paid a stock dividend of 100 per cent in 1907, and in 1907 they paid 6 per cent cash dividend; after watering their stock in 1908 they still paid 6 per cent; in 1909 they paid 6 per cent, and in 1910 they paid 6 per cent. They did pretty well, did they not?

Mr. CHASE. They have done very well, I think, so far as I know.

Mr. RAINEY. Do you know the Richard Borden mills? They are in Fall River.

Mr. CHASE. Yes, sir.

Mr. RAINEY. In 1907 they paid a stock dividend of 25 per cent, and in the same year they paid a 20 per cent dividend in cash; in

PARAGRAPHS 315-320—COTTON CLOTH.

the next year they paid 13 per cent in cash. That is right. The next year, 1909, they paid a dividend of 8 per cent and in 1910 a dividend of 10 per cent. That is correct as to their history?

Mr. CHASE. I do not know. As to some of those mills, I do not know.

Mr. RAINEY. You know of the Tecumseh mills there in Fall River?

Mr. CHASE. Yes, sir.

Mr. RAINEY. Have you any interest in it?

Mr. CHASE. Yes, sir; I am a stockholder.

Mr. RAINEY. They paid a stock dividend in 1906 of 50 per cent, did they not?

Mr. CHASE. They made it some time; I think somewhere around there.

Mr. RAINEY. And the same year they paid 6 per cent on their capital stock, did they not, including water, and the very next year after that (this is 1907) they paid 14½ per cent on their capital stock, water and all, did they not?

Mr. CHASE. I think so.

Mr. RAINEY. Yes, they did.

Mr. CHASE. I can not remember the figures.

Mr. RAINEY. And in 1908 they paid 9½ per cent.

Mr. CHASE. I know they paid some extra dividends.

Mr. RAINEY. In 1909 they paid 6 per cent and in 1910 6 per cent. What did they pay last year?

Mr. CHASE. Six per cent.

Mr. RAINEY. Just the same?

Mr. CHASE. Yes.

Mr. RAINEY. They have done pretty well?

Mr. CHASE. Yes.

Mr. RAINEY. Do you know the Troy mills, there in Fall River? They are not so large; they have only 50,000 spindles. But you know about them, do you not?

Mr. CHASE. Yes.

Mr. RAINEY. They paid a 100 per cent bond dividend in 1909; they distributed that to their stockholders? Have you any interest in those mills also?

Mr. CHASE. No, sir.

Mr. RAINEY. And in that year they paid also a 13 per cent dividend. The next year they paid 12 per cent in dividends, and also paid interest on the bonds, which they distributed gratuitously. They have paid as high as 20 per cent in dividends, which was paid in 1906. That is true, is it not?

Mr. CHASE. Yes, sir; I presume it is true.

Mr. RAINEY. I have gone through only a portion of these Fall River mills, but do you not think on a showing like this we could reduce the tariff on their products considerably and not give them an excuse for paying the laborers in their mills less money than they now pay them?

Mr. CHASE. What you have said may all be true history. As to some of them I do not know anything; as to some others I do.

Mr. RAINEY. I think it is all true.

Mr. CHASE. I have remarked before that in 1906 and 1907 we had a most extraordinary situation. Mr. Sparkley related it this morning

PARAGRAPHS 315-320—COTTON CLOTH.

in regard to his own business, and he did not want to see such times again, because we have been suffering the inevitable reaction from those extreme prices.

Mr. RAINEY. These do not seem to have reacted much.

Mr. CHASE. We are quite willing to admit we have had a protective tariff, and when goods have shot up to high prices there have not been foreign goods coming in to spoil the profit that we got on them.

But go back with me to 1903, 1904, and 1905; there was a condition of things then which was deplorable. There was a strike in the city of Lowell that lasted for six weeks; there was a strike in the city of Fall River which lasted for six months, and not a spindle turned on account of the great depression in business and inability of mills to pay the operatives the wages they demanded. As the inevitable reaction they had a tremendous curtailment of production, because, bear in mind, Fall River is the largest cotton manufacturing city in this country. Not a spindle turned there for six months, a great vacuum was created in the market, and we had the most extraordinary period of prosperity during 1906 and 1907 following.

We admit there were great profits made at that time. Some of these mills which had debts upon their plant, incurred during the building of the mills, paid off those debts and capitalized the profits by these stock dividends that you speak of.

Mr. RAINEY. But those conditions did not prevail in 1902, when the King Phillip mill paid 16 per cent?

Mr. CHASE. No.

Mr. RAINEY. Under all these circumstances, do you not think you could get along with less profits and not cut down the wages of your laborers, if we took off some of this tariff which you have been enjoying so long?

Mr. CHASE. We can get along with less profits than we have made in some of those periods of prosperity, of course.

Mr. RAINEY. And you can still pay your laborers just as much as you are paying them?

Mr. CHASE. I have not asked you to keep the tariff where it is.

Mr. RAINEY. No; and we do not intend to do it.

Mr. CHASE. I have not asked that. You seem to be arguing with me as if I was asking you to keep the tariff up.

Mr. RAINEY. Do you want it lowered?

Mr. CHASE. I would just as soon have it lowered; yes, sir. I do not think it makes much difference, if you do not lower it too much.

Mr. RAINEY. Then, what are you protesting against?

Mr. CHASE. I am protesting against what it is in the so-called Underwood bill; and I did not like the Parker bill that was put in here this morning, as to the extent of the reduction; and I do not like, as I said in the first place, the ad valorem duty.

Mr. RAINEY. If the Underwood bill is adopted, will you have to lower the wages of your laborers?

Mr. CHASE. I could not answer that question, because I do not know.

Mr. RAINEY. Would you have to decrease your profits?

Mr. CHASE. I think we would.

Mr. RAINEY. You are sure of that?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. CHASE. I think so; quite sure of it.

Mr. RAINEY. That is all.

Mr. PETERS. What is your attitude, Mr. Chase, toward the duty on textile machinery?

Mr. CHASE. I suppose I have got to plead guilty to being a general all-around protectionist. I do not think, however, I am a very rabid one, an extreme one. But I think that textile machinery should have the same treatment that the cotton-goods people have, or anyone else that is manufacturing in the United States.

Mr. PETERS. About how much of the total purchase of machinery by our mills in the course of a year is imported machinery?

Mr. CHASE. I do not think a great deal now.

Mr. PETERS. You think it is a very small proportion?

Mr. CHASE. I think so.

Mr. PETERS. Would you say that the duty of 45 per cent added substantially to the cost of an American mill?

Mr. CHASE. Oh, undoubtedly.

Mr. PETERS. Could you give the difference in cost say between a No. 40 revolving flat card here and the same card purchased in England, which would be used in manufacturing the same class of goods?

Mr. CHASE. I am not familiar with prices in either country at present; I have not had anything to do with them.

Mr. HARRISON. Are you a member of the Arkwright Club?

Mr. CHASE. Yes, sir.

Mr. HARRISON. Would you mind telling this committee what is the purpose of that club, in its relation to the cotton industry?

Mr. CHASE. That club has a great many purposes. It is an association of manufacturers for mutual benefit.

Mr. HARRISON. In what way does it benefit the manufacturers?

Mr. CHASE (continuing). For legislation just like this proposed legislation, and also legislation in the Legislature of Massachusetts. They get together and discuss things relating to their business and affairs. It is partly social. They have a dinner once a month. They meet together to confer as to the general good of the business. I do not know as I can express it in any better terms than that. I have not attended a meeting there for several years myself, so I do not really know what is going on these days.

Mr. HARRISON. What kind of matters used to be discussed at the Arkwright Club in relation to the cotton industry at the time when you used to frequent it?

Mr. CHASE. We used to have a great many matters connected with freight transportation that used to take up about as much time as anything in the last meetings that I attended there, which was a good while ago—dealing with the railroads, getting rates on freight right, and as to the routing of cotton, looking after cotton claims; we have had a great deal of trouble in that way by cotton getting lost.

Mr. HARRISON. This club is composed, is it not, of the leading men in the cotton industry in New England; the heads of the great corporations?

Mr. CHASE. I think a great proportion of them belong, so far as I know.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. HARRISON. And they would usually meet at luncheon and discuss the conditions of trade?

Mr. CHASE. Yes, sir.

Mr. HARRISON. Do you recognize this description of a club meeting [reading]:

These business men get together and have their luncheon, and they sit around the table and have their oysters and other things and talk with each other. There is no order about it, and just as soon as the cigars are lighted and the servants retire the president stands up and says, "The secretary will read the records."

I will say that I am reading this from the testimony of the secretary of the club, Mr. Stanwood, a couple of years ago, before the Committee on Expenditures in the Department of Justice.

After the cigars are lighted and the servants retire, do the gentlemen of the Arkwright Club ever discuss reducing wages of the laboring men in the cotton mills in Massachusetts?

Mr. CHASE. I have never heard them do so, to the best of my recollection.

Mr. HARRISON. You did not happen to attend the meeting of February 19, 1908, did you?

Mr. CHASE. I could not tell you now; that is a good while ago. But I do not think I did, because for years I have been to very few meetings there.

Mr. HARRISON. Mr. Stanwood, the secretary, reading from the minutes of a meeting on that date, read as follows:

The question of the expediency of further curtailment of production by the cotton mills represented by members of the club and of the necessity of an early reduction of wages was discussed at length by many members. Informal votes disclosed the fact that the sentiment of the members present was unanimous that both steps are necessary.

It was thereupon voted that the committee appointed on the subject of curtailment at the last meeting of the club, held on December 18 last, be requested to consider the two questions of further curtailment and of reduction of wages, and to report at a special meeting of the club to be called by the president.

And Mr. Stanwood, the secretary, further said:

It was given out to the Boston News Bureau and the Associated Press for the purpose of letting the employees of the different mills throughout New England understand that a reduction of wages was impending, and that the condition of the trade was such that it would be necessary to make a reduction in wages.

Now, 1908 was a year of great labor disturbances in the cotton mills in New England, was it not?

Mr. CHASE. It was a year of great depression, following the panic.

Mr. HARRISON. There was an agitation constantly among the workmen, was there not, and a demand for higher wages?

Mr. CHASE. I do not so recollect; no, I think not.

Mr. HARRISON. My impression is that there were more strikes in New England in that year than in any of the years immediately preceding it.

Mr. CHASE. If you will allow me I will tell you, as far as our town is concerned, just what happened.

Mr. HARRISON. If you will permit me to continue this line of inquiry I will ask you—

Mr. CHASE (interposing). I do not know anything about what you are talking of there.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. HARRISON. That was not the year you happened to attend the sessions of the Arkwright Club?

Mr. CHASE. I was not there, and heard nothing about that action whatever.

Mr. HARRISON. 1908 was one of the years in which you have heard of the large dividends described by Mr. Rainey? Were wages actually reduced in the cotton mills of New England in the year 1908?

Mr. CHASE. Yes, sir.

Mr. HARRISON. You say they were reduced?

Mr. CHASE. Yes, sir.

Mr. HARRISON. Do you know how much they were reduced?

Mr. CHASE. I know how much they were reduced in our town; that is all.

Mr. HARRISON. What were they reduced in your town?

Mr. CHASE. I say I know, but I think it was seventeen and a fraction per cent. I want to tell you how they were reduced, now, because it is nothing more than fair.

Mr. HARRISON. I do not wish to interrupt your testimony, but I want to get these facts on the record in relation to one another.

The wages in New England were reduced 17½ per cent, in your town, and the general effect, as I understand it, was to reduce the wages of mill operatives in New England in a sum equaling over \$80,000 a week?

Mr. CHASE. I do not know about that.

Mr. HARRISON. That was in the year 1908. It appears, then, that you do not wait for tariff reductions, do you, to reduce wages?

Mr. CHASE. I want to explain that matter to you, and it will show itself very clearly so far as it affects our town.

Mr. HARRISON. I will be very glad to have you make an explanation.

Mr. CHASE. We had an agreement with our operatives lasting through some years there, based on what was called a sliding scale.

When the price of print cloths was so and so and the price of the raw material was so and so, wages would be so and so, on what we called a margin. That is, there is a margin for labor between the cost of the material and the selling price for the goods.

An agreement was entered into because we had not had peaceful relations. We had a very harmonious agreement, that wages should rise and fall in accordance with that margin. When the panic in the fall of 1907 took place things all went to pieces in the prices of goods, and the wages automatically were reduced. There was no request on our part for a reduction. They were reduced automatically by this agreement. Nothing was said. The operatives accepted the working of the agreement just the same as they had accepted it on going up. Previously to that wages had been extremely high, the highest known in the history of this country.

Mr. HARRISON. You confine that remark to your own town, do you not?

Mr. CHASE. That was true of Fall River, and nowhere else, so far as I know.

Mr. HARRISON. You do not know whether this meeting of these gentlemen at the Arkwright Club, on February 19, 1908, at which the heads of the industry resolved to curtail their output and reduce

PARAGRAPHS 315-320—COTTON CLOTH.

the wages of labor, had anything whatever to do with the fact that the wages of labor were reduced \$80,000 a week throughout Massachusetts?

Mr. CHASE. I do not know anything about the rest of Massachusetts. I do not know who reduced and who did not.

I know that our wages had nothing to do with any meeting of the Arkwright Club, because it was an automatic local agreement between the trade-unions and the manufacturers.

Mr. HARRISON. Just one other inquiry, if you please, in relation to this Arkwright Club.

What effect, if any, upon the industry had the resolutions of the club from time to time about curtailing the production of the cotton mills?

Mr. CHASE. That I can not tell you.

Mr. HARRISON. Did you ever attend any one of these meetings at which the secretary testified they agreed to curtail production?

Mr. CHASE. I do not think I did. I do not recall any such.

Mr. HARRISON. I suppose, of course, you are willing to accept the statement as appears upon this record to that effect.

Mr. CHASE. Surely. If it is a matter of record it is undoubtedly true.

Mr. HARRISON. What was the purpose of the vote of the gentlemen of the Arkwright Club to curtail production?

Mr. CHASE. I presume the idea was that there was a great accumulation of unsalable goods; they could not go along any longer, and they would agree voluntarily to curtail the production.

Mr. HARRISON. Were they afraid the public might possibly be able to buy cotton goods a little cheaper?

Mr. CHASE. Oh, no.

Mr. HARRISON. You think that had nothing to do with it.

Mr. CHASE. No man would think of stopping a cotton mill if it was possible to keep it going. It costs too much money to stop it.

Mr. HARRISON. Even though he had to sell at what he considered a loss in the cost of production?

Mr. CHASE. Surely.

Mr. HARRISON. He would still keep on manufacturing and selling?

Mr. CHASE. He would at a slight loss; that has been done many a time.

Mr. HARRISON. Do you know, as a matter of fact, when these circulars in favor of curtailment were sent around among members of the Arkwright Club and agreed to by them, a curtailment was ever actually put in operation?

Mr. CHASE. So far as I know, no curtailment was put in operation by general agreement.

Mr. HARRISON. Here is what the secretary of the club said:

The president added that the vote for curtailment in 1907 was almost unanimous; that those who were reluctant to approve the movement ultimately curtailed the full time, and during the late winter and early spring 10,000,000 out of 13,000,000 spindles in New England and New York reduced their products at least 10 per cent. He also cited the resolution of the American Cotton Manufacturers' Association and the agreement to stop one day or more in each week until the goods advanced to a parity with the price of cotton, to become effective on the assent of 60 per cent of the spindles represented in the association and the action of the international association.

PARAGRAPHS 315-320—COTTON CLOTH.

So it appears from the official minutes of the meeting of the Arkwright Club that the purpose of those votes for curtailment was to raise the price of their output, so that they could keep up this 10, 12, and 16 per cent dividend, even though cotton was a little higher than usual that year?

Mr. CHASE. That is a very nice way for you to put it, perhaps, for effect upon people who are listening, but it is not so.

Mr. HARRISON. It seemed to work out that way, did it not?

Mr. CHASE. They have never curtailed production to raise the price of goods so long as goods would bring the cost, that I have ever heard of.

Mr. HARRISON. I have just read you the statement of the secretary in which he said it was for that purpose.

Mr. CHASE. For the purpose of raising the price of goods; yes. I say if the goods were at cost, if the goods could be sold at cost, they would never curtail to raise the price, but when they get to below cost they would curtail. Anybody would.

Mr. HARRISON. In other words, they were afraid the public could buy cheaper cotton goods, even though they did cut into these 16 per cent dividends.

Mr. CHASE. Would you run a mill right along and lose money?

Mr. HARRISON. Speaking from a consumer's point of view, I would be very glad to buy cotton goods cheaper, even if it reduced your dividends below 12 and 16 per cent.

I will say that the Arkwright Club seems to have taken the opinion of one of the leading counsel of New England to the effect that these agreements did not contravene the Sherman anti-trust law, and it was only after they received that opinion that these curtailment agreements were circulated and agreed to.

The CHAIRMAN. Are there any further questions?

Mr. HILL. The importations, as I understand it, to total consumption are 1.79 per cent, or so reported by the Tariff Board in the cotton industry. Sitting here for the last two weeks the impression is irresistible—in fact, it has been stated in words—that it is necessary in order to raise revenue to make these rates competitive in these various industries, and the figures of 25 and 33½ per cent of the American production would have to be surrendered, or importations to that extent practically made.

The CHAIRMAN. Wait a minute. If you are making that statement, referring to this side of the committee, I want to correct you.

Mr. HILL. I will refer the chairman of the committee to his own statement on the night that Mr. Topping was here in relation to the steel industry.

The CHAIRMAN. Wait just one minute. I do not want any misstatement to go into the record. I do recognize and have stated very often that there must be a reduction in these rates to a reasonable competitive basis. To say that I have ever said it should be 25 or 30 per cent of American consumption taken away from American manufacturers; is absolutely untrue. I wish that to be of record.

Mr. HILL. I refer to the statement made the night that Mr. Topping was here. Whether 25 per cent, 10 per cent, or 33½ per cent, what would be the effect upon the cotton industry of the United

PARAGRAPHS 315-320—COTTON CLOTH.

States to surrender to foreign producers such a portion of the industry as would give a largely increased revenue to the United States Treasury?

Assume that it was 10 or 15 or 20 or 25 per cent, whatever it may be. What effect would 25 per cent have?

Mr. CHASE. The effect would be, of course, to make business hard for the American mills.

Mr. HILL. Would you hold competition down as long as you could?

Mr. CHASE. Certainly.

Mr. HILL. Just as Mr. Topping said they would do in the steel industry?

Mr. CHASE. Surely.

Mr. HILL. Would it not necessarily compel a very severe reduction in wages when it would become impossible for the industry to meet the foreign competition on any other basis?

Mr. CHASE. I think that would necessarily be a result under those conditions.

Mr. HILL. In view of the fact that the Tariff Board states that many of the products of the cotton industry are now sold for less than the English product by a considerable percentage in a number of cases, would not that intensify the difficulty in passing that point and then securing revenue after that? In other words, is it possible, in your judgment as president of the Cotton Manufacturers' Association of this country, for any committee to fix a tariff rate which will establish a certain amount of competition and stop there, without imperiling the whole industry?

Mr. CHASE. I do not think so.

Mr. HILL. You do not think it possible?

Mr. CHASE. I do not think so. Nobody knows where that point is, either.

Mr. HILL. That is it exactly. I fully agree with you.

The CHAIRMAN. You recognize the fact we are going to get revenue from this tariff? We have to have a reasonable competitive rate somewhere and there is no reason why you should not stand your proportion of that reasonable competitive rate, as well as the other fellow.

Mr. CHASE. I expect to.

The CHAIRMAN. And all we are trying to do is to bring about a parity. The present tariff bill is written like a mountain range with some high peaks and low valleys. Some fellows are standing the competition coming through the low valleys, and others are having the advantage of the high peaks. We are trying to equalize you, and I am sure you will agree with me that if we can succeed in doing that, you ought to stand your share, as well as the other fellow.

Mr. CHASE. I think this, Mr. Chairman, in all candor, that even from your own point of view, you are not going to accomplish what you think you are as far as the American consumer is concerned. You may get some revenue for the Government.

We have heard a good deal about the high price of cotton and gentlemen have said a good deal about large dividends that have been paid by certain corporations in years gone by. I sold a lot of goods to a retailer. This is a matter of record and can be proved. There were about forty or fifty thousand yards. I put them up in pieces

PARAGRAPHS 315-320—COTTON CLOTH.

and shipped them to his store. The expense on a yard from my mill to his store was practically nothing; there was no use to consider it as anything. My price for those goods was $8\frac{3}{4}$ cents. He refused to buy them at that price. At any rate, he came back with a bid of $8\frac{1}{2}$ cents.

I could, at $8\frac{1}{2}$ cents, get possibly a little over a cent a yard profit, but I sold the goods. The man hurried me a good deal for delivery. I went to the city where the merchant did business a short time afterwards and went into the store and wandered around, until I came to the counter and recognized the goods that I had made. I asked the clerk how much it was, and I found it was then selling for 25 cents a yard.

The CHAIRMAN. I recognize of course the great difference between the wholesale price and the retail price, but this committee can not adjust that. We do hope to relieve the consumer in some places, but if we are wrong about that and you are right, and we do not succeed in doing that, if we equalize these duties so that they are reasonably competitive all along the line, at least we will give more revenue to the Government and the other people through the Government will get some benefit from this tax, which they do not get when it is a prohibitive tax. You recognize that?

Mr. CHASE. I recognize the revenue feature.

The CHAIRMAN. And I think you will agree that we ought to make the effort.

Mr. CHASE. But when it comes to the consumer I do not believe you are going to do anything.

The CHAIRMAN. But at any rate, we will give the people the benefit of getting some portion of the tax that is left. But I do not think you will disagree that that is a commendable purpose, if we do it in moderation.

Mr. CHASE. If you will be careful, I have nothing to say. [Laughter.]

Mr. LONGWORTH. Is there any class of cotton goods with the manufacture of which you are familiar that the statement made in the circular quoted by Mr. Palmer would be a true statement?

Mr. CHASE. I think there are cotton goods made in this country where the tariff would not make a particle of difference; that is, you would hardly know the difference whether there is a tariff or not. The amount of labor employed would be so little, with goods made as they are now, with automatic machinery, that it would cut hardly any figure.

Mr. LONGWORTH. Does it apply to any goods you manufacture yourself?

Mr. CHASE. No; it does not apply to anything made in our town, either, so far as I know.

Mr. LONGWORTH. Or made in Fall River?

Mr. CHASE. No.

Mr. FORDNEY. You stated a minute ago you sold a certain grade of goods to a certain merchant for $8\frac{1}{2}$ cents per yard and later on, those goods were being retailed at 25 cents a yard.

Mr. CHASE. That is true.

Mr. FORDNEY. In reference to reducing the cost of the article to the consumer, I can give an illustration in another way which would

PARAGRAPHS 315-320—COTTON CLOTH.

be just as fair, as to reducing the duty on manufactured articles which we produce.

In the State of Michigan to-day, in which State I have the honor to live, a bushel of potatoes can be purchased for 40 cents. The other morning when leaving for Washington, I stepped into a dining car and paid 15 cents for one baked potato. [Laughter.]

The duty on a bushel of potatoes is 25 cents, and in order to reduce the value or the cost of that baked potato to the consumer that duty of 25 cents on a bushel of potatoes must be distributed. [Laughter.] That is a fair illustration, is it not?

Mr. CHASE. As far as the consumer is concerned it is. I have not any more question about it than I stand here that, as far as concerns the duties on cotton goods or the general duties on articles of consumption that are levied in the customhouse, the consumer does not know anything about it. They do not cut any figure worth mentioning.

I am not trying to whack the people who retail goods. They are doing a legitimate business, and Mr. Parker touched upon that. The cost of distribution in this country is something that is a perfect scandal; there is no question about it.

We have made money in our business at times—big money at times. I am not here to deny that. All these statistics that have been poked at me most of them are true, I guess. But if you take 25 years instead of going back three or four or a half dozen or 10 they will tell a different story. The average has not been so big. We have had these periods when we have made money. I have known a mill to make 40 or 50 per cent in one year when they had not been making any for five or six years, to speak of, but perhaps had lost money. That is the nature of the business.

But if you are going to help out the consumer you have to get at something else besides the tariff. If you are going ahead to get some revenue for the Government, that is another matter.

COTTON GOODS—BRIEF OF S. B. CHASE.

An impression prevails that the tariff on cotton goods has been largely advanced by the so-called Payne-Aldrich bill. This is not the case so far as it applies to 80 to 90 per cent of the cotton goods produced or consumed in this country.

Except in the very highest schedules, which do not apply to any considerable proportion of goods consumed in this country, the rates are identical with the Wilson bill.

The Wilson bill reduced the rates of duty on cloths made from coarse yarns from $33\frac{1}{2}$ to 50 per cent, on medium goods from 22 to $33\frac{1}{2}$ per cent, and on cloths made from fine yarns from 11 to $22\frac{1}{2}$ per cent.

Previous to the Wilson bill no element for classification was taken into consideration in fixing the rates of duties excepting the count of the threads per square inch.

It was proven to the satisfaction of the framers of the Wilson bill that duties to be just and fair should be based also upon the fineness of the yarns used in the construction of the cloth and the so-called Fall River schedule was adopted. While that schedule was not perfect from the standpoint of high tariff or low tariff men, both schools of thought regarded it as the most perfect and scientific ever enacted. Subsequent tariff bills have retained this principle, and, as before stated, but few changes have been made. We appreciate the fact that there is an apparent demand for a further revision of tariff schedules and do not propose to offer objections to a reasonable modification of rates. We are willing to try to adapt our business to such rates as will afford us an opportunity to compete with our foreign rivals. We do not believe this committee or the people of the country at large will require us to

PARAGRAPHS 315-320—COTTON CLOTH.

do business on a basis that will not afford a decent living to those engaged in the industry according to the American standard.

Public sentiment and legislation is making every effort to eliminate child labor, to shorten the hours of work, to provide compensation for accidents, and to increase in many ways the obligations of the employer to the employees. Progress in these lines has already largely increased the cost of production.

We feel that the approach toward lower duties should be made with great care and moderation. Drastic action in that direction may, and we think will, lead to demoralization and suffering among a large body of people whose wages may be lowered or whose employment may be utterly taken away.

While making no objection to a reasonable reduction of rates, we think it should be done by slow and successive steps.

We wish to point out the difficulties and dangers attending the method of ascertaining the numbers of yarns contained in a fabric and of the ad valorem system. Yarns in the finer numbers especially are subject to great variation in size even when spun upon the same machine. A slight variation in the diameter of rolls on a mule or frame owing to unavoidable difference in thickness of roll covering will cause a variation of as much as 20 per cent. For instance, cloths made from No. 100 yarn will have individual threads as coarse as No. 90 and as fine as No. 110, and we doubt if any expert at the customhouse would be able to properly classify a fabric by sizing the yarns.

A simple method of evading an ad valorem duty will be the consignment by foreign manufacturers of goods to a sales agent in this country, he putting an estimated nominal value upon the merchandise which may enable him to evade a large fraction of the duty intended to be collected.

Respectfully submitted.

S. B. CHASE,

Treasurer King Philip Mill, Fall River, Mass.

**TESTIMONY OF F. B. SHIPLEY, OF F. B. SHIPLEY & CO.,
NEW YORK CITY.**

Mr. Chairman and gentlemen, because of the signal service rendered by him to the cause of honest textile tariff legislation I dislike exceedingly to take issue with Mr. Parker upon a question of fact. But, feeling that in some measure something is due to the consuming public, I feel it my duty to do so. I came in in the midst of Mr. Parker's testimony. I did not hear it all, and did not know all the rates provided for in his schedule until just this minute, but I did hear Mr. Parker say—and, mind you, it appears that from the other standpoint Mr. Parker is regarded by his colleagues as a very radical downward revisionist—that he wanted 5 per cent additional duty upon jacquards, because jacquards were a luxury. This was so at variance with my common knowledge that during the recess for the lunch hour I went to a department store in Washington and there bought four samples of jacquards probably within four minutes.

The first one, according to my best judgment, seems to have been made in England, and the retail price at the store at which I bought it was 25 cents. It is mercerized as well as jacquard. Twenty-five cents a yard at retail, in view of the figures of retail profits which have been quoted to us, is not a high price.

Mr. HARRISON. Into what kind of articles does that material go?

Mr. SHIPLEY. This particular cloth seems to be a bleached, mercerized fabric, with a jacquard figure, and containing an extra thread. It embodies a great many of the complex classifications of the present law.

Mr. HARRISON. For what purpose is it used?

Mr. SHIPLEY. It is used for waists and dresses; as an ordinary dress material. It is neither the cheapest nor the dearest, but

PARAGRAPHS 315-320—COTTON CLOTH.

a fair average of the character of fabric that an average woman in moderate circumstances would buy. Remember that Mr. Parker, who I admit is at least as great an authority and as competent a man as exists in the trade, classifies all jacquards as luxuries. I purchased the finest and highest priced jacquard waisting of that nature that I could find, in the brief period I was in the store, at 25 cents a yard retail. Within my common knowledge I do not mind admitting that the price—this seems to be an English cloth—in England does not vary far from 11 to 11½ cents.

Mr. PALMER. Then it is more of a luxury here than it is over there?

Mr. SHIPLEY. Yes. I regret, Mr. Chairman, that it is not possible to go through the 6,000 or 8,000 examples of specific cases that would be necessary to show the side of the consumer in this matter.

The next sample I bought is also a jacquard, mercerized waisting in common use. This [indicating] is the sample. I purchased this at 19 cents, the same character of goods. That is made in America.

Mr. HARRISON. For what purpose is that used?

Mr. SHIPLEY. For the same purpose, Mr. Chairman, that dress and waist material are commonly used.

Finally, Mr. Chairman, I purchased another jacquard waisting in the same store for 15 cents a yard. It is not merely jacquard, but it is mercerized, and I think—while I have no means of exactly knowing what this particular sample cost—I think it is not an overstatement to say that it cost not more than 9½ cents a yard, with terms which would bring the cost to that store down to about 9 cents.

Mr. PALMER. You say these goods are used for ladies' waists?

Mr. SHIPLEY. They are goods which are absolutely in common and general use. Within the last year or two fashions have changed a little more toward plainer things.

Mr. PALMER. Do you mind telling what store you were in?

Mr. SHIPLEY. Not a bit. I bought it at S. Kann Sons & Co., commonly known as the "Busy Corner." Then, we bought another character of jacquard cloth which would probably be termed an imitation flannel, about the cheapest and lowest priced cloth of this sort which a consumer can buy, for the purpose of making dressing gowns and sacks, bath robes, and similar things, which are not ordinarily characterized as luxuries.

Bear in mind always that it has been stated to you—this [indicating] is jacquard also, and it cost 29 cents a yard. If time permits I shall have something to say later on about the particular mill that produced this particular cloth.

Mr. DIXON. You mean the retail price is 29 cents?

Mr. SHIPLEY. The retail price is 29 cents. I do not know the wholesale price. This particular mill sells direct to the consumer, and I presume its price is in the neighborhood of 20 cents.

Mr. Chairman, in so diverse a subject the case of the consumer and the distributor is exceedingly difficult to present within narrow limits. In our brief I try to state the general principles of the case in such a manner as would enable the layman to understand at least the lowest rate of duty which would not materially affect the American manufacturer.

PARAGRAPHS 315-320—COTTON CLOTH.

Through all this argument it seems to be admitted that the wages cost is not greater per yard in the United States than abroad, although in the 10 or 15 years that I can remember about textile tariff agitation the wages cost has always been the crux of the matter, the turning point, the issue. It has always been the high wages that have been paid to the American workingman. But now, since we have had a Tariff Board—and I am not here to defend the report of the Tariff Board, but to praise it in some respects, to a moderate degree—since we have had a Tariff Board we have been able to find out what at least four years of effort on my part and the whole history of the trade has never shown.

It was perfectly possible for you gentlemen when Mr. Chase, for instance, was on the stand here to-day, to say "Mr. Chase, what was the output of your mill last year?" If he had said a million dollars you could then have said to him "What were the total wages paid by you?" and if he said \$200,000 no figuring would help you to show that the percentage was greater than 20. That is what I have been contending all along, that not only was the total wage percentage insufficiently great to be a factor when worked out in the yard prices and percentages of cost, but it was in the great masses of goods of America less than it was abroad. That point seems to be conceded.

Mr. Parker, than whom no one better knows the conditions, says that to-day the great mass of cotton fabrics are cheaper in America than they are in England, the chief competing nation. He says the undertone of all this has been that you could not do much for the consumer because other conditions prevented it. I want to show you that you can do something for the consumer. I have in my hand a sample—I do not know which it is until I examine it—a certain kind of Scotch gingham of a particular construction. It is made in literally hundreds of designs. This particular gingham was woven in Lancashire, in the north of England, and finished in Scotland. It is the character of cloth that is made in checks and stripes and various classifications specially covered by Mr. Parker's schedule, as I just this minute learn. The mill price of those goods in England and in Scotland range normally from what they call 4 pence farthing to perhaps 5 pence, at the very outside and extreme. The normal price averaged from that would be about 9 cents in American money. The duty is 5 cents a square yard. The cost of bringing a yard of these goods from the mill in England or Scotland to New York would be about seven-tenths of a cent a yard. A quick calculation will show you that to land these goods in New York would cost approximately 15½ cents. Adding to that an importer's gross profit of 10 per cent you will readily see that this cloth can not be sold and is not sold by the importer at less than 17½ cents per yard.

Mr. Chairman and gentlemen, goods of this nature of lower grade are made satisfactorily and cheaply in America at prices not higher especially than the corresponding in Great Britain, but in a medium grade like this there is a little art of finish—some things to learn. In consequence, I have found another cloth made in Pawtucket, R. I. I have analyzed it to the best of my ability. I have found no essential difference in count, in weight, or in construction. There is a

PARAGRAPHS 315-320—COTTON CLOTH.

slight difference in these designs, but each have matching designs. I was unable to get the exact duplicate.

The total wages cost involved in cloth of this character, according to the Tariff Board, is approximately 35 per cent. This particular mill at Pawtucket, R. I., which has, I understand, managers and foremen and workmen that were imported some time or other from the very locality in which these goods were made and finished. This mill has produced a cloth which simulates the finish of the goods that I first showed you. They sell this cloth to-day throughout the United States for 15½ cents, and do, as I understand, a large and successful business.

Mind you, I am speaking now of one case only—

Mr. RAINEY. Is that the mill price?

Mr. SHIPLEY. This is the mill price, sir. The natural result, because of these dividing lines and fixed retail prices, is that the retailer can not pay 15½ cents for the domestic cloth and sell it for 19 cents. He is obliged to put it in the next classification, and he therefore sells either of these cloths that he may choose to buy for 25 cents. The ordinary retailer is naturally tempted by this slight difference in price to give the benefit to this particular cloth—give the benefit to the domestic cloth—and the net result is that, whichever way she goes, the consumer pays 25 cents a yard for this cloth. But if you will calculate backward, calculate the reverse proposition, and take the mean Scotch price of 9 cents a yard, you will readily see that without duty those goods could be brought over here with an importer's profit and sold to the consumer for 15 cents. But if there were a reasonable duty, such as I hope is going to be put on, the natural result would be that this piece of goods, paying perhaps 20 per cent, could come over here and go to the consumer at 19 cents a yard. And I submit to you that if that be true it follows that the consumer is going to save 6 cents a yard.

I do not know, and I believe even the Tariff Board has been unable to find out, what it costs this particular mill to make these goods. I understand that their doors were closed to examiners. I do not know that as a matter of fact, but it is a matter of common gossip in the trade.

I am going to pass to another case under which it seems to me that the consumer might benefit, and I am naturally taking cases that are pointed and to some extent extreme, but I assure you that there are hundreds of them. And if this matter becomes an issue, which I hope it will not, I shall endeavor to see that Congress is furnished with illustrations of many cases.

This case is the matter of the so-called Scotch hollands. They are goods that originated near Glasgow, and as near as I can tell, and even in the opinion of the learned courts, after due contest on the part of the domestic interests, they are ordinary cotton goods. They are even coarse cotton goods, and they have some special old-fashioned machinery near Glasgow which finishes these goods very suitably for window shades, so that the fabric is so softened that it runs smoothly up and down while it remains flat. As far as I know, and at least in the Dingley law, these goods were regarded as ordinary cotton goods, and paid duties that would apply to them as ordinary cotton goods,

PARAGRAPHS 315-320—COTTON CLOTH.

namely, about 25 or 30 per cent. The goods under the Payne law were singled out by name, and the words "window hollands" were written into the law, among some other things, so that it was not readily seen, but the words were and are there, with the net result that the average duty was raised from 25 or 30 per cent to last year approximately 46 per cent of their value. The Tariff Board report shows that the total wage cost entering into the production of these goods in the gray is $11\frac{6}{10}$ per cent, if I remember correctly. I personally investigated the finishing cost in Scotland. I found there that they were done on these old-fashioned beetling machines, exceedingly slow, cumbersome, and expensive, and the result was that the average cost in Scotland—there were 117 different widths and colors, so that it was difficult to get any one figure—but the average cost of finishing these goods in Scotland with these old-fashioned machines as against the patent beetling machines used by the two concerns making them in America was about two and one-fourth times. In other words, gentlemen, we know that in the gray cloth the total wage cost is only 11 per cent, and that the finishing cost is actually less in America, and we find the goods especially singled out to be protected by a tariff of 46 per cent.

Mr. KITCHIN. Supposing that would be put on the free list, if it were made cheaper here than abroad, how would that help the consumer? Could they bring it over here at all?

Mr. SHIPLEY. Yes, sir; the goods could be brought over here, and they were brought over here last year to the extent of about \$700,000. They will always be brought over here. I believe that those curtains hanging in this room are Scotch goods, made—

Mr. KITCHIN. Yet the cost here is a great deal less than the cost abroad?

Mr. SHIPLEY. The cost here is a great deal less than the cost abroad.

Mr. KITCHIN. Why is that? That our people want more profits?

Mr. SHIPLEY. Yes, sir; if you could examine these goods you would find that while they are as like as two peas, that you would not ordinarily be able to tell them, yet at the same time there is some peculiarity of local conditions around in this particular spot near Glasgow that enables them to finish these goods, that they lie flat at the window and when they roll them up they do not pucker and wrinkle, and the American goods, while an excellent imitation, are not so good. And I say to you that they have tried to imitate this particular finish in other parts of Great Britain without success, and if we had free trade in these goods the price of the domestic goods would, in my opinion, come down still to somewhat less than the foreign goods.

I have the price list issued by the only two manufacturers of these goods, so far as I can learn. I am speaking of Scotch hollands. There are only two manufacturers, so far as I can find, of these particular goods. They have a price list which was used by both of them in 1909. It covers a great many different widths and colors, and these prices of the two particular manufacturers, the sole manufacturers in America, are identical and have remained identical, and if you will take the corresponding prices of the Scotch goods, add the duty, and you will find that width by width and straight through

PARAGRAPHS 315-320—COTTON CLOTH.

this complicated price list the domestic prices of these two mills, one in Wilmington, Del., and the other in Pawtucket, R. I., these prices are just under the prices at which it is possible to import the goods. And I say to you that if that duty were substantially reduced and window hollands were taken out of a special classification and put into the classification of ordinary cotton goods, which is what they are, the consumer of cotton goods would benefit to some degree, at least.

Mr. Chairman, my time being short—

The CHAIRMAN. Your time has really expired, as Mr. Harrison has put it down here. How much more time do you want?

Mr. SHIPLEY. I would like a week.

The CHAIRMAN. Will five minutes do you?

Mr. SHIPLEY. I will try to finish in that time.

The CHAIRMAN. You may proceed.

Mr. SHIPLEY. I am going to pass up a great many illustrations that I had here, illustrations of particular mills which I think I could show you were built up directly on an excessive tariff, and mills which are protected by a tariff in five or six times the total amount involved by any possible difference in wages, or any possible difference in the cost of production. And to show you that these mills have been made possible and have increased their dividends and profits directly since this act, permit me to say one thing quickly, that I take issue with Mr. Parker as to his statement that the English mills are making money.

Shortly after he said that I dug out Mr. Tattersall's circular—Tattersall's trade circular. Mr. Tattersall, you will remember, is the authority on cotton mills in Lancashire, and I find here a total of 73 spinning mills for some 24 years, showing an average dividend on all of them for 24 years of $5\frac{1}{100}$ per cent per annum.

Mr. DIXON. What were they for last year?

Mr. SHIPLEY. They were high for last year, I will admit. They were not so high as the dividends paid in 1907 by American mills.

I wish to point out just one or two things, and I wish I had time to exhibit or read to the committee such things as this [indicating]—the advertisement from the Drapers' Record of London, the leading dry-goods trade journal of the world, an advertisement of the Pacific Mill in Lawrence, Mass., in which they state—and there are more of them, and through all of them runs the same thing—that they are actively and successfully engaged in selling their product in England, and not selling it to England to be exported, then, as other cotton goods, you know, but they are actually engaged in the home trade there, and not upon cheap goods, but fancy and fine goods.

Mr. RAINEY. What kind of goods do they make?

Mr. SHIPLEY. This Pacific Mills Co. makes a great mass of different kind of goods. They started their advertising in Great Britain on a particular kind of crepe, as it is called. They go through here and give a list of seven classes of goods which they say they are carrying in stock, and doing an extensive business.

Mr. PALMER. Will you put that in the record, giving the names of those different classes of goods?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. SHIPLEY. Yes; I will be very glad to file that with the committee.

I might say that if Mr. Rainey will look at his list and see the figures of the Pacific Mills, he will find that it is and has been for many years an exceedingly prosperous concern. Its surplus is twice its total capitalization. And measured by the value which it puts upon its machinery and real estate—or did, at least last year; they have some new arrangement which I do not understand, by which it appears they are going to increase their stock \$9,000,000, or 300 per cent, which I admit I do not understand—but prior to this change a few months ago you will find that this mill has earned 30 to 40 per cent on the valuation which it puts upon its plant. And I beg you gentlemen in considering these alleged dividends and earnings of these mills to inquire into the capitalization and cost of erecting these plants, to find out whether this large capitalization is the result of honest investment or the result of stock manipulation for the last 20 years.

HON. OSCAR W. UNDERWOOD,

*Chairman Committee on Ways and Means,
House of Representatives.*

SIR: The act of 1909 provides 133 classifications for ordinary cotton cloth, each classification bearing a different specific rate of duty. Each of these classifications is multiplied because of gradations of value; that is to say, a given specific rate is applied to cloths of a given character under a value range covering different cloth values and therefore operating to provide different ad valorem equivalents. As the dutiable values of imported cloths are calculated upon foreign moneys, less varying discounts, the result expressed in American currency is an indeterminable multiplicity of rates. The duties applicable under paragraphs 315 to 319, inclusive, are further complicated and multiplied by qualifying provisions contained in paragraph 321, which provides additional cumulative specific duties upon cloth containing threads other than the ordinary warp and filling threads, or cloths which have been, in whole or in part, mercerized. This, of course, results in still more and different ad valorem equivalents. Under other paragraphs given, cotton cloths are singled out and provided for by name, such as cotton table damasks, window Hollands, Jacquard figured upholstery goods of a given weight, and velveteens. Cloths that may have escaped these provisions are cared for by paragraph 332, which covers anything which may have been overlooked, such as bed sheets, at 45 per cent ad valorem.

The minimum rate of duty provided is (under paragraph 316) $1\frac{1}{2}$ cents per square yard upon a bleached cloth valued at 9 cents, or 16.55 per cent ad valorem. The maximum rate is upon a given cloth, valued at 4 cents, which is assessed (under paragraph 316) $4\frac{1}{2}$ cents plus (under paragraph 323) 1 cent for mercerization plus 2 cents for extra threads, a total duty of $6\frac{1}{2}$ cents upon a value of 4 cents, or 162.5 per cent ad valorem.

It will thus be seen that under the present law the variation in duties provided is 148.84 per cent, or, in other words, the maximum rate of duty is nearly 12 times the minimum rate. It is the practice of the customs authorities to calculate foreign values to the third decimal, from which it will be seen that, expressed in ad valorem equivalents, the present law makes provision for 148,840 different rates of duty.

The importations of ordinary cotton cloth covered by paragraphs 315 to 319, inclusive, for the fiscal year 1911, amounted to \$8,832,612, upon which a total duty of \$3,797,449 was collected, or 42.99 per cent ad valorem. It should be borne in mind, however, that the average ad valorem rate thus shown does not show the average ad valorem rate provided by the law, because the higher rates are more rigidly prohibitive and importations have naturally gravitated toward the lower rates.

Other cotton cloths coming under other paragraphs of the law bring the grand total of importations for the year 1911 to \$10,023,856, which annual volume has varied but slightly in any year of the operation of the present law. The exports of cotton cloth for the same year totaled \$24,387,099, but in considering the ratio of imports to exports it should be noted that the figures given by the Bureau of Statistics are undoubtedly much less than the actual amount. On page 100 of its report the Tariff Board says:

“Our exports of cotton cloth * * * are probably understated, as our export figures are far from being accurate. This is due to the fact that our present regulations are not sufficiently stringent to compel shippers of merchandise going to foreign

PARAGRAPHS 315-320—COTTON CLOTH.

ports to report the figures as accurately * * * as is required in the case of imported merchandise. * * * Manifests when filed frequently contain no information as to the quantity and value of the merchandise, the manifest simply reading so many cases of dry goods * * * without stating either weight or value.

"In such cases the forwarding agent sometimes guesses at the value, or where he fails to do so the shipment in question is not reported at all to the Bureau of Statistics."

To illustrate this, the Tariff Board shows that in the case of exports of cotton cloth to Canada for the years 1909-1911, for instance, the value reported by the Bureau of Statistics is \$666,597, while the Canadian Government places the value of the same shipments at \$1,028,397, showing an obvious understatement of American exports of over 50 per cent. In any event, it is clear that our exports of cotton cloth are several times greater than our imports.

Bearing in mind that our annual imports are approximately \$10,000,000, we now find that the value of the total production of cotton cloths manufactured in the United States is given at \$421,237,839 for the year 1909. Adding to this the average percentage of increase of the 10 previous years, and adding 10 per cent because of increased values, the census figures for 1911 may be conservatively estimated at \$550,000,000; so that it will readily be seen that under official statistics the ratio of importations to domestic production is less than 2 per cent. These figures do not, however, convey a correct idea of the conditions. The value of importations under the law is rigidly construed to be the ordinary wholesale market value, and therefore include the foreign mill's cost, the foreign mill's profit, bleaching, dyeing, and finishing costs, and frequently the profit of a foreign intermediary.

On the other hand, the figures for domestic production represent almost invariably either the mill's cost or the mill's selling price for goods in the unfinished state, and that, as a rule, before the wholesale value can be ascertained it is necessary to add the finishing costs—the broker's commission and the converter's profit. All of this amounts to not less than 20 per cent, showing conclusively that in the year 1911 the ratio of imports to domestic production did not greatly exceed 1½ per cent.

Supplementing these figures, the importations for the year 1900 were 3.5 per cent of the production reported by the Census of 1900, and the importations for the year 1910 were 2.3 per cent of the value of cotton cloths reported by the Census of 1910, but under the misleading system of calculation above referred to, these percentages are doubtless overstated. But even admitting that the importations have been between 2 per cent and 3 per cent, it is obvious that at no time during these 11 years have importations of cotton cloth been of sufficient volume to materially affect the American cotton manufacturing industry as a whole, and it is therefore clear that both the Dingley tariff of 1897 and the Payne tariff of 1909 are, as a whole, substantially prohibitive.

It will be instructive to ascertain why there have been any importations under these laws. Because of the diversity of cloths and conditions, it is not practicable to fully analyze the reason for importations in detail. The large and growing exportations to neutral markets is conclusive proof that upon many classes of cotton goods the American manufacturers are able to compete with foreign competitors upon even terms, creating the presumption that many classes of cloth would not be imported into the United States under ordinary conditions, even if there were no tariff at all. Though it can not be proven by any statistics available, it is a matter of common knowledge among those qualified to know that it is, and for many years has been, possible to import cotton cloths into America only when the foreign cloths possess some peculiar merit of quality, finish, design or novelty, or when imported for the purpose of being copied at home, or when American manufacturers are unable to supply the demand, or when American prices are so much higher than foreign prices as to render importation profitable. As these conditions more or less constantly prevail, there will always be some small percentage of foreign cotton cloths imported.

In considering the effect upon importation of any rate of duty, it must always be remembered that foreign goods are already handicapped by the cost of ocean transportation (which has more than doubled within a few years) as well as the natural disadvantage and expense of buying and selling at long range. A careful analysis of this phase shows the average cost to be not less than 8 per cent.

It is admitted by both advocates and opponents of a prohibitive duty that upon many classes of staple goods American prices are as low as the foreign, in ordinary times. It is, however, a matter of certain record that there have been frequent periods when the prices of such goods have been advanced far beyond the foreign prices, even when the relative costs of production did not materially differ. For example, in the year 1907, the prices of American staple cloths, within a few months, were advanced an average of not less than 30 per cent, although there was no material

PARAGRAPHS 315-320—COTTON CLOTH.

increase in the cost of production. On the other hand, it is clearly a matter of common knowledge in the trade that certain other classes of both plain and fancy cotton goods are materially higher in the United States than abroad. An investigation will show that such cloths are generally made in mills or finished by finishing works having special facilities or competence. The special merits of such cloths give these American producers advantages that eliminate the ordinary conditions of American competition. For example, in gingham, which are extensively used as dress material, the prices of the lower grades are on a par with foreign prices. But as the qualities improve, the discrepancy in prices increase until they represent approximately the cost of the foreign cloths plus the cost of importation. To make a specific illustration, there is commonly produced in England and Scotland a medium grade dress gingham of a certain construction. The mill price in Great Britain is normally 9 cents.

This cloth has been copied by one cotton mill at Pawtucket, R. I., and the American cloth is so slightly different from the foreign cloth that the difference can be detected only by experts. The duty on the foreign cloth is 5 cents a yard, and, with the expense of importation, costs ordinarily about 15½ cents to import. Adding an importer's gross profit of 10 per cent, it will be seen that this cloth can not be sold at wholesale for less than 17 cents. The price of the domestic cloth is 15½ cents, at which price the American mill is doing a large business. The Tariff Board's report places the total American labor cost for weaving goods of this class at 31.28 per cent. The finishing cost is slightly less in America than in Great Britain. In such a case, it is evident that the American manufacturer is enabled by the high tariff to obtain a price approximately 60 per cent higher than the foreign price. A similar condition exists in the case of so-called Scotch window Hollands. These goods are, in fact, plain cotton cloth, finished suitably for window shades, and were always so regarded until they were singled out by the Payne law and provided for at a special rate greatly in excess of the Dingley rate. The average duty collected on the Scotch window Hollands in 1911 was 46 per cent. The Tariff Board fixes the total American labor cost in the manufacture of the unbleached cloth at 11.6 per cent. The cost of finishing these goods in Scotland is more than twice the domestic finishing cost, because of difference in machinery. The American manufacture of these goods is in the hands principally, if not entirely, of two companies, one in Providence, R. I., and the other in Wilmington, Del. It has been publicly charged and never refuted that the costs of these American "Scotch" Hollands is actually less than the foreign costs. In spite of this it appears that for many years these two American mills have maintained prices uniform with each other, adjusted just below the prices at which the Scotch goods could be imported.

In this case, it appears that the tariff is being used for the benefit of what is substantially if not actually a monopoly. Space does not permit of detailing further examples, but it is a matter of common knowledge that on many cloths in common use American prices are materially higher than the foreign prices for equivalent goods and maintained at prices slightly under those at which the foreign goods could be imported.

An analysis of the Tariff Board's report shows that American wages, while somewhat higher on the average than in Great Britain (the principal competing country), are fully offset on the average by greater per capita production. It appears further, however, that the cost of erecting and equipping a cotton mill is less in Great Britain than in the United States. This difference varies in every case, but from such figures as can be calculated, the average seems to be about one-third less in Great Britain than in the United States. But this appears to be largely offset by the greater efficiency of American looms and the greater number of looms tended per operative. But in considering this item it should not be forgotten that this greater equipment cost works out into a very small percentage of the selling price of the product—not more than 1 per cent or 2 per cent at the outside. Thus, if a given mill in England cost \$500,000 and a corresponding mill in the United States cost \$750,000, the difference to be offset would be \$250,000. If 10 per cent per annum were set aside to care for this extra cost, it is obvious that the American mill would be handicapped at the rate of \$25,000 a year, if the capacity of such a mill were \$2,500,000 per annum, so that it will be seen that 1 per cent of the value of the product would be sufficient to offset the additional cost of such a mill. This element would of course vary slightly more or less in all cases.

To sum up, it appears certain that there is ordinarily no economic reason either in labor or in mill cost to justify materially greater production costs here than abroad. But, as it does appear that these costs frequently are greater, the reason must lie in some causes other than those ordinarily assigned. It is our belief that these reasons can be found in excessive capitalizations, less economical financial management, and the need for greater profit in good times to offset the periods of dullness conse-

PARAGRAPHS 315-320—COTTON CLOTH.

quent upon the limitations of the home market. It is undoubtedly true that certain of the finer classes of cotton goods can be manufactured more economically in Europe than in America. This is due to favorable climatic conditions, to temperamental differences of the operatives, who are more thorough and painstaking, and to the larger and more diverse market enjoyed by Great Britain and Germany. Another reason is that the value of cloths other than staple cloths is largely dependent upon design and the vagaries of fashion. Many designs can be produced advantageously only in large quantities. The foreign manufacturers can afford to take the risks of large quantities, knowing that if the demand falls off in one part of the world the goods can still be sold in another part, while the American manufacturer of such goods, because of the artificial price standard obtaining, is limited to the home market.

The processes of finishing, that is, of bleaching, dyeing, printing, and mercerizing, are less in America than abroad. This is a matter of common knowledge readily verified and is confirmed by the Report of the Tariff Board.

We oppose specific duties on cotton cloth because they operate to assess rates, the ad valorem equivalents to which are deceptive, irregular, and without necessary relation to values or other conditions of manufacture.

We oppose the so-called "scientific stepping stones of value," because this system provides arbitrary dividing lines in rates which bear no systematic relation to values. For example, under the present law a given cloth valued at 20 cents is dutiable at 8 cents, while the identical cloth under a rise in market value of one one-hundredth of 1 cent is dutiable at 11½ cents. Thus this difference in value of one one-hundredth of 1 cent is assessed 3¼ cents, or 32,500 per cent. The ranges of value provided in the various "stepping stones" operate to provide materially different ad valorem equivalents. Thus under paragraph 317 a given cloth valued at 0.1601 cent is assessed at 8 cents, or approximately 50 per cent, while a similar cloth valued at 20 cents bears the same specific rate of 8 cents, or only 40 per cent. We oppose the arbitrary dividing lines provided in the present law, dependent upon the number of threads to the square inch, because this system imposes greatly different rates of duty upon cloths substantially identical and differing but slightly in value. For instance, a given cloth counting 100 threads is dutiable under paragraph 315 at 3¾ cents, while the identical cloth containing 101 threads is thrown into another classification and is dutiable under paragraph 316 at 5¼ cents. Thus this difference of one thread, costing less than 1 per cent, is assessed a specific rate 40 per cent higher than the substantially identical cloth covered by paragraph 315, the net result of which is that this additional value is taxed over 4,000 per cent. Further, under the method used by the customs authorities in determining the number of threads to the square inch the exact count necessarily varies and can not exactly be determined. For example, in the same piece of cloth a given square inch may contain 98 threads, while another square inch a few inches away may contain 102 threads. The conditions of weaving, dyeing, and finishing render this variation inevitable.

We oppose the system in the present law providing a given duty upon unbleached cloth, a higher duty upon the same cloth if bleached, and a still higher duty on the same cloth if dyed, because this system operates to provide disproportionate rates upon the processes of bleaching and dyeing. For instance, a given unbleached cloth valued at 4 cents pays under paragraph 316, 2 cents or 50 per cent, while the same cloth bleached at a cost of one-half cent pays 3 cents or 66⅔ per cent, and the same cloth dyed, at a cost of 1 cent, pays 3¾ cents, or 75 per cent. By this it will be seen that the cost of bleaching bears a duty of 200 per cent and the cost of dyeing a duty of 175 per cent, in spite of the conceded fact that these processes are cheaper in the United States than abroad.

We oppose the cumulative provisions of paragraph 323, because they operate to assess ad valorem equivalents which are widely disproportionate to the values of the elements upon which these cumulative duties depend. For instance, a given cloth under paragraph 315 valued at 11 cents is assessed 3¾ cents, or 25 per cent, while the same cloth into which one or more mercerized colored threads have been introduced at a cost of, say one-half cent per yard, is then not only thrown into the colored class and assessed at 3½ cents, but must also bear an additional 1 cent for mercerization and a still additional 2 cents for extra threads, making a total duty of 6½ cents, or 56 per cent ad valorem. Thus this additional 1½ cent in value is assessed an extra duty of 3¾ cents, or 750 per cent.

We favor a system of straight ad valorem duties, because such a system obviously would operate to provide a given rate of duty upon all cotton cloths of the same general class, and incidentally, the same rate upon each element entering into its manufacture.

PARAGRAPHS 315-320—COTTON CLOTH.

We recognize that there is some justice in the claim that a higher rate of duty on fine yarn goods is necessary to equalize a lower rate of duty on coarse yarn goods.

We recognize that climatic conditions in certain parts of Europe render it possible to spin fine yarns more economically than in the United States, and to equalize this disadvantage we favor a slightly higher ad valorem for cloths composed of fine yarns than the rate for cloths composed of coarse yarns. A further reason for this distinction and for opposing the present system is that the number of threads per square inch is not necessarily proportionate to the fineness of the yarn.

In the Sixty-first Congress the reason assigned for changing the basis of duties on cotton cloth from ad valorem to specific was that it would remove the incentive to undervaluation, but we find that the system obtaining in the present law has increased this incentive for the reason that great differences in actual duty result from slight differences in value, with the result that an undervaluation of a minute fraction of 1 cent will frequently throw the cloth into a lower classification saving as much as $3\frac{1}{4}$ cents a yard. Thus, an undervaluation of one-fourth of a cent may result in the saving of 13 times the undervaluation, whereas under an ad valorem rate, say, of 20 per cent, the gain from undervaluation could not be more than 20 per cent of the amount undervalued.

The conditions of manufacturing nearly every character of cotton cloth are such as to render it readily possible to ascertain approximately the exact foreign market value at any given time, and under the ad valorem system it is improbable that any considerable undervaluation would be attempted. However, we recognize that on many kinds of cotton cloth the value is frequently dependent upon slight differences of finish and design, and that in such cases it is practically impossible for the customs authorities, with the limited means at their disposal, to detect undervaluations. To prevent this in the interest of collecting full revenue and in justice to both honest importers and American manufacturers, we recommend the creation of a special board for the purpose of ascertaining and fixing for customs purposes the foreign values of textiles.

A competent and properly organized board would have the cooperation of reputable foreign manufacturers, and by keeping in touch with market conditions abroad could readily ascertain the exact foreign values of textiles from day to day. Such a board could eliminate undervaluation not only in cotton cloths, but in linen and woolen cloths as well, and would undoubtedly more than pay for itself in saving the expense to the Government of litigation in undervaluation cases.

We believe that the peculiarly favorable climate of certain parts of Europe, and the essentially different temperament of foreign labor, will for many years prevent the American manufacturer from successfully competing with certain classes of fine goods. We believe that those American manufacturers who have been tempted by the high prices obtainable under the present high tariff to undertake the manufacture of such goods are doing so under so great a disadvantage that the additional cost to the American public so resulting is so great as to be in operation an unreasonable tax, which does not find its way into the public treasury, but is surely paid for the support of a comparatively small number of mills.

We find in general no truth in the frequent claim that these excess prices are paid as extra wages to the operatives in American cotton mills.

Taking into consideration the costs and inconveniences of importation, we believe that any tariff in excess of 10 per cent on coarse goods, of 15 per cent on medium goods, and 20 per cent on fine goods, would in the main be prohibitive. But that such rates would undoubtedly admit of the larger importation of goods not now successfully made at home and that this might readily result in importations of two or three times the present volume. But when it is considered that even under such an increase the imports would not exceed 6 per cent or 8 per cent of the home production it will readily be seen that it would not materially affect the industry in America beyond creating a moderate and regulative competition.

We believe that such a reduction would result in a considerable saving to the consuming public on many classes of goods and would tend toward establishing the cotton industry in America upon a less artificial basis.

We believe that with the natural advantage of proximity to the source of raw material, with the greater energy of American labor, and with the great efficiency of American mechanical methods that American cotton manufacturers will ultimately dominate the markets of the world in ordinary cotton cloth and should be content to buy from other countries those few classes of cotton cloths which can not advantageously be made at home.

Respectfully submitted.

FREDERIC B. SHIPLEY.
PHILIP F. TIMPSON.

IMMEDIATE AND IMPORTANT.

(Of interest to retailers.)

The past six months have demonstrated thoroughly the fact that serpentine crêpe is a prime factor in English retailing. So encouraging have been the sales of this world-famous fabric that we are now starting a systematic publicity campaign of much larger proportions than heretofore. Besides the leading English fashion and ladies' publications we shall use such papers as the London Daily Mail, the London Daily Mirror, and other advertising media of recognized worth. This will still further acquaint the consumers with the peculiar, original, superior merits of serpentine crêpe, and thus create a demand for this popular fabric, unparalleled in the annals of cotton crêpe. Remember, the genuine and only original

SERPENTINE CRÊPE

was originated and is made only by the Pacific Mills, the largest makers of printed cotton goods in the world. It is guaranteed by the Pacific Mills trade-mark and by the words "Serpentine crêpe" on the selvage, every yard. It is the most profitable cotton crêpe to handle; it gives the most satisfaction to the wearer; the crinkle is absolutely permanent—neither washes out, stretches out, nor wears out; the newest patterns are in colorings appropriate for early fall and winter wear.

Now is the time to stock the latest designs of serpentine crêpe in order to reap the full benefit of our publicity campaign. You can not lose. For we create the sales and help the retailer by our publicity aids—such as show cards, advertising printed matter, illustrated leadlets for mailing, color-type pattern books, fashion imprints, with the dealer's name and address printed on them; also, electrotypes for use in catalogues, etc., free of charge to the retailer.

Our London agent carries a large stock and complete assortment, ready at all times for immediate delivery. Better communicate with him at once.

PACIFIC MILLS,
*Boston, U. S. A., Agent for Great Britain, Australia,
 New Zealand, South Africa, India, and Other Colonies.*

Address all correspondence to London Stock Warehouse, Frank Speake, 48 Newgate Street, E. C. Telegraphic address: "Serpentine, London."

[Advertisement extracted from the Drapers' Record, Dec. 28, 1912.]

PACIFIC MILLS FABRICS.

The entire extensive collection of printed and dyed lines of cotton dress goods, crêpes, muslins, cambrics, shirtings, curtain etamines, cretonnes, and furnishing fabrics manufactured by Pacific Mills will be shown, in new quarters, on January 1, by us as sole selling agents for Pacific Mills.

London stock of many important lines will be carried throughout the season for prompt delivery to retailers and makers-up.

Among the lines thus stocked will be the well-known Serpentine crêpe, new designs and colors produced specially for the British market.

Acacia crêpe: An original and attractive crêpe weave in beautiful plain shades.

Crêpe chiffon: A dainty crêpe fabric, in plain shades and designs of surpassing beauty.

Pamilla cotton: A newly advertised wash fabric of exceptional quality, woven from fine yarns of high-grade cotton, in printed designs and plain colors of warranted fastness, finished by a special process.

Galatea cloth: Another newly advertised wash fabric—one of sturdy construction and proved worth as to durability and general excellence.

Panier mull: A dainty mercerized wash fabric in floral designs of great beauty.

Storm serge: A remarkable cotton dress fabric, rivalling worsted serge in appearance and wear. Made in plain colors of the prevailing fashion and in duplex-printed designs, showing exactly the same on face and back, giving the effect of woven designs.

PARAGRAPHS 315-320—COTTON CLOTH.

We shall be pleased to make appointments to show the entire collection of Pacific Mills Fabrics on and after January 1, at the convenience of buyers.

LAWRENCE & Co.,
Selling Agents for Pacific Mills.

SUPPLEMENTAL BRIEF OF F. B. SHIPLEY, OF F. B. SHIPLEY & Co., NEW YORK, N. Y.

The CHAIRMAN AND MEMBERS OF THE COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

SIRS: The purpose of this supplementary brief is to show that the rates of duty upon cotton cloth suggested by the American Cotton Manufacturers' Association and known as the Parker rates, would in practice be higher than the Underwood rates, as well as higher than the Dingley rates.

Broadly speaking, the low ad valorem provided in the Parker schedule apply to cloths which are not susceptible to importation in any event. That is to say, cloths which are made as cheaply or more cheaply in America than abroad. The higher rates are arranged so as to be substantially as prohibitive as the rates of either the Dingley law or the Payne law, and in many cases more so.

For the sake of brevity and simplicity this analysis has eliminated consideration of gray cloths, because the importation of such in recent years has been so small as to be inconsiderable. During the past 17 years the total importations of gray cloths have been but 5.22 per cent of the total importations of cotton cloth, or in other words only about one-eighth of 1 per cent of the home consumption.

The lowest rate in the Parker schedule deserving any attention is 17½ per cent upon plain cloths advanced in any way from the gray state, and containing yarns not finer than from No. 10 to No. 19. Possible importations of such cloths are practically nil. Therefore the practicable starting rate of the Parker schedule is 20 per cent for plain cloths containing yarns the highest number of which is the No. 20 to No. 39. This, it should be noted, applied to strictly plain cloths only. When any other character of weave (except Jacquard) has been introduced, the rate becomes 30 per cent; and when the Jacquard weave has been introduced the rate becomes 35 per cent. Therefore the average practicable minimum rate of the Parker schedule is 28.3 per cent. But even this minimum applies to cloths of so cheap and common a nature that there is no likelihood of any considerable importation under it under ordinary conditions.

In considering possible foreign competition, there must be added to this rate, as to all others, the cost of importation which, because of advancing ocean freight charges has increased until its average is not less than 8 per cent. It is therefore obvious that even this minimum rate, applying as it does to coarse cloths, is prohibitive.

It should not be forgotten that yarns of widely divergent sizes are ordinarily used in the same cloth. That is to say, the warp is one size and the filling another. Even coarse cloths usually contain some proportion of relatively fine yarn. Yarns can not be considered fine in the trade or labor cost senses until they approach No. 60 or No. 80. Broadly speaking, cloths which can be manufactured more cheaply abroad than at home almost invariably contain yarns at least as fine as No. 60, and the average is probably between No. 80 and No. 100.

In consequence of the foregoing, the really applicable rates of the Parker schedule will be seen to begin not under the fourth yarn classification provided, namely, that which covers yarns from No. 40 to No. 59. The rates for these classifications are 25 per cent for strictly plain cloths, 35 per cent for cloths of other ordinary weaves, and 37½ per cent for cloths of Jacquard weaves. Thus considered, and eliminating the other inapplicable rates, the arithmetical average of the Parker schedule is 39.16 per cent.

From this classification to the next there is a sharp advance, namely, on strictly plain cloths, from 25 to 35 per cent; on other ordinary weaves from 35 to 40 per cent, and on Jacquard weaves from 37½ to 45 per cent. No one who has studied the character of cotton cloth importations in the last decade can doubt, therefore, that all of the applicable rates of the Parker schedule are prohibitive of any foreign competition, except such as would come in any event.

PARAGRAPHS 315-320—COTTON CLOTH.

Certain minor defects of the Parker schedule deserve consideration. For instance it provides one set of rates for gray cloths and another higher set of rates for cloths which have been bleached or dyed, although it is now established that these processes are less expensive in America than abroad.

Again, under class 2, it provides a still higher set of rates for weaves which, though ordinary, are not strictly plain weaves, than for strictly plain weaves. For example, a plain woven dress gingham containing a No. 40 yarn, such as Exhibit A (on file), hereto attached, would pay 25 per cent, while a cloth illustrated by Exhibit B (on file), identical in every respect, except that two colors have been introduced, thereby forming a stripe, would pay 35 per cent. There is no appreciable difference between the cost of these two exhibits.

Again, under class 3, a still higher set of rates is provided for cloths of Jacquard weave. For instance, a given plain cloth in class 1 would pay 25 per cent, while a cloth of the identical quality the yarns of which have been manipulated by the Jacquard process so as to form a design, would pay 37½ per cent. The Jacquard process in ordinary cotton cloths is but very slightly more expensive than the plain process and is of course correspondingly more expensive abroad, so that in consequence this cost would be proportionately covered by the same ad valorem duty. To illustrate how unimportant is this extra cost it may be stated that a liberal average cost of preparing a Jacquard card would be \$5. So that under a production of \$1,000 this initial cost would become only one-half of 1 per cent. This percentage, however, would be slightly increased by the higher cost of the Jacquard loom and by its slightly lower productive capacity, but in no ordinary case can the Jacquard process be considered sufficiently more expensive to warrant any higher rate of duty.

In class 2 of the Parker schedule no good purpose seems to be served by the specification (for the purposes of assessing higher rates) of such descriptions as "stripes," "checks," "drills," "twills and kindred weaves." All of these apply to cloths which are substantially plain cloths and to weaves which are ordinary weaves. Nor does there seem to be any reason for the insertion of the words "terry pile weaves." This provision covers mainly if not exclusively Turkish towels and Turkish toweling used for the manufacture of bath robes. Both of these articles are made from coarse yarns and manufactured as cheaply in America as abroad. Indeed Turkish towels are exported from the United States to Canada in spite of the preferential duty in favor of Great Britain.

The minute subdivisions of yarn sizes provided in the Parker schedule are of a nature calculated to produce great difficulty and confusion in classification and administration. It is not practicable ordinarily to accurately determine, for instance, whether a yarn is No. 19 or No. 20, or whether it is No. 59 or No. 60, or whether it is No. 99 or No. 100, since there is an inevitable variation of one or two numbers either way. These subdivisions are placed, either intentionally or accidentally, at precisely the usual dividing lines. For instance, it is customary to use No. 20, but never to use No. 19. The same applies to No. 60 and No. 59 and to No. 100 and No. 99. While the yarn size classification seems to be the only practicable and proper measure of distinction between different rates of duty, yet the six classifications provided as they are in the Parker bill are too closely drawn to be practicable.

On the contrary the subdivisions in the Underwood bill are practicable and would create no doubt in the minds of either the manufacturers or the customs officials, except when yarns closely approach the dividing lines of No. 50 and No. 100. Further, these Underwood subdivisions are more closely in accord with the general distinctions in labor costs.

To see that the Parker rates are generally higher than the Dingley rates it is not necessary to analyze particular cloths. An arithmetical comparison clearly shows this.

The contingent specific rates provided by the Dingley law cover so vast a number of ad valorem equivalents that a detailed comparison is not possible. Some of these specific rates work out to ad valorem equivalents higher than the Parker rates. But as the accepted belief is that such unduly high specific rates were surreptitiously inserted into the law without the full knowledge of Congress this element may be properly eliminated for comparative purposes.

For convenience we have appended hereto a table comparing the maximum ad valorem rates of the Dingley law by paragraphs with the Underwood and Parker rates. In all of these 77 classifications the Parker rates are higher than the Dingley rates, and of course higher than the Underwood rates. It is only fair to say that many instances were found where the Dingley rate and the Parker rate were identical. But where the Parker rates were found to be less than the Dingley rates the cloths to which these

PARAGRAPHS 315-320—COTTON CLOTH.

eductions applied were almost invariably such as could not be imported except under extraordinary conditions.

We have also attached hereto 40 samples upon which the three several rates of duty applicable have been calculated. In all of these cases the Parker rates have been found to be higher than either the Dingley or the Underwood rates.

In considering these samples it is fair to remember that there is the greatest difficulty in ascertaining the exact sizes of yarns after cloths have been finished. And that we have been prevented by lack of time and immediate information from providing illustrations covering every character of cloth susceptible to importation. However, it is quite clear that this number can be multiplied ad infinitum. Enough ground has been covered to prove the contention.

Incidentally we point out that in the figures presented to the Ways and Means Committee by Mr. Parker himself illustrating the applicable rates on 82 cloths, 14 of these cloths by his own figures show increases over either the Dingley law or the Payne law, or both. A very large percentage of the other cloths in his list which show decreases are cloths of a nature which could not be imported in any event, such as cheese cloth, sheetings, cheap shirtings, print cloths, sateens, etc.

Respectfully submitted.

FREDERIC B. SHIPLEY.

NEW YORK, February 8, 1913.

COTTON CLOTHS.

[The samples attached to descriptions are in the files of the committee.]

Sample No. 1 (36-inch bleached rep): Count, over 100, but not over 150 threads; finest yarn content No. 70; dutiable value 10.72 cents; Dingley duty, 2½ cents per square yard, 23.3 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 40 per cent.

Sample No. 2 (27-inch jacquard bleached fleecy-back piqué): Count, over 100 but not over 150 threads; finest yarn content, No. 30; weight, over 4 ounces per square yard; dutiable value 10.80 cents per square yard; Dingley duty, 2½ cents per square yard, equals 23.1 per cent; Underwood rate, 20 per cent; Parker rate, class 3, 35 per cent.

Sample No. 3 (27-inch bleached striped dress fabric): Count, over 100 but not over 150 threads; finest yarn content, No. 90; dutiable value over 16 cents per square yard; Dingley duty, paragraph 306, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 40 per cent.

Sample No. 4 (27-inch bleached checked dress fabrics): Count, over 150 but not over 200 threads; finest yarn content, No. 70; dutiable value over 12 cents per square yard; Dingley duty, paragraph 307, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 40 per cent.

Sample No. 5 (27-inch bleached mercerized jacquard waisting): Count, over 100 but not over 150 threads; finest yarn content, No. 80; English converter's price, 4½d. less 2½ per cent, equals 0.081675, giving it a square yard dutiable value of 0.1089; weight, 3.046 ounces per square yard; Dingley duty, at 3½ cents per square yard, equals 32.1 per cent; Underwood rate, 25 per cent; Parker rate, class 3, 45 per cent.

PARAGRAPHS 315-320—COTTON CLOTH.

Sample No. 6 (28-inch fancy bleached voile): Count, over 50 but not over 100 threads; finest yarn content, No. 80, 3-ply; dutiable value over 9 cents per square yard; Dingley duty, paragraph 305, 25 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 40 per cent.

Sample No. 7 (white drill, 27-inch): Count, over 200 but not over 300 threads; finest yarn content, No. 60; weight, 5.4 ounces; dutiable value 11.70 cents per square yard; Dingley duty, 5 cents per square yard, 3.75 cents per linear yard, equals 32 per cent; Underwood rate, 25 per cent; Parker rate, 35 per cent.

Sample No. 8 (27-inch bleached checked dress fabric): Count, over 150 but not over 200 threads; finest yarn content, No. 80; dutiable value, over 12 cents per square yard; Dingley duty, paragraph 307, duty, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 40 per cent.

Sample No. 9 (bleached jacquard dress material): Count, over 100 but not over 150 threads; finest yarn content, No. 70, 2-ply; dutiable value over 11 cents per square yard; Dingley duty, paragraph 306, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 3, 45 per cent.

Sample No. 10 (jacquard bleached waisting): Count, over 150 but not over 200 threads; finest yarn content, No. 70; dutiable value over 12 cents per square yard; Dingley duty, paragraph 307, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 3, 45 per cent.

Sample No. 11 (27-inch bleached checked dress fabric): Count, over 100 but not over 150 threads; finest yarn content, No. 100; dutiable value over 11 cents per square yard; Dingley duty, paragraph 306, 35 per cent; Underwood rate, 30 per cent; Parker rate, class 2, 40 per cent.

Sample No. 12 (28-inch fancy bleached dress cloth): Count, over 150 but not over 200 threads; finest yarn content, No. 80, 2-ply; dutiable value over 12 cents per square yard; Dingley duty, paragraph 307, 35 per cent; Underwood duty, 25 per cent; Parker duty, class 2, 40 per cent.

Sample No. 13 (26-inch fancy white dress goods): Count, over 100 but not over 150 threads; finest yarn content, No. 60, 3-ply; dutiable value, 7.56 cents per linear yard; Dingley duty, paragraph 306, 35 cents per square yard or 2.52 cents per linear yard, 33½ per cent; Underwood rate, 25 per cent; Parker rate, class 2, 40 per cent.

Sample No. 14 (27-inch bleached checked dress fabric): Count, over 150 but not over 200 threads; finest yarn content, No. 80; dutiable value over 12 cents per square yard; Dingley, paragraph 307 duty, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 40 per cent.

Sample No. 15 (27-inch bleached striped dress fabric): Count, over 100 but not over 150 threads; finest yarn content, No. 90; dutiable value, over 16 cents per square yard; Dingley duty, paragraph 306, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 40 per cent.

Sample No. 16 (jacquard mercerized cotton table damask): Finest yarn content, No. 40; Dingley duty (specially provided for par. 321), 40 per cent; Underwood rate (specially provided for par. 14), 25 per cent; Parker rate, class 3, 37½ per cent.

Sample No. 17 (bleached voile, width 24 inches): Count, over 100 but not over 150 threads; finest yarn content, No. 100, 2-ply; dutiable value, over 12½ cents per square yard; Dingley duty, paragraph 306, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 45 per cent.

Sample No. 18 (jacquard bleached waisting): Count, over 150 but not over 200 threads; finest yarn content, No. 60; dutiable value, over 12 cents per square yard; Dingley duty, paragraph 307, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 3, 45 per cent.

Sample No. 19 (28-inch bleached jacquard waisting): Count, over 150 but not over 200 threads; finest yarn content, No. 140; dutiable value, over 12 cents per square yard; Dingley duty, paragraph 308, 35 per cent; Underwood rate, 30 per cent; Parker rate, class 3, 50 per cent.

Sample No. 20 (27-inch bleached checked waisting): Count, over 100 but not over 150 threads; finest yarn content, No. 100; dutiable value, over 11 cents per square yard; Dingley duty, paragraph 306, 35 per cent; Underwood rate, 30 per cent; Parker rate, class 2, 40 per cent.

Sample No. 21 (27-inch bleached checked dress fabric): Count over 150 but not over 200 threads; finest yarn content, No. 70; dutiable value, over 12 cents per square yard; Dingley duty, paragraph 307, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 40 per cent.

Sample No. 22 (28-inch bleached fancy dress cloth): Count, over 200 but not over 300 threads; finest yarn content, No. 120; dutiable value, over 15 cents per square

PARAGRAPHS 315-320—COTTON CLOTH.

yard; Dingley duty, paragraph 308, 40 per cent; Underwood rate, 30 per cent; Parker rate, class 2, 45 per cent.

Sample No. 23 (38-inch bleached crepe): Count, over 100 but not over 150 threads; finest yarn content, No. 120, 2-ply; dutiable value, over 12½ cents per square yard; Dingley duty, paragraph 306, 35 per cent; Underwood rate, 30 per cent; Parker rate, class 2, 45 per cent.

Sample No. 24 (29-inch white imitation charmeuse): Count, over 150 but not over 200 threads; finest yarn content, No. 80; dutiable value, over 12 cents per square yard; Dingley duty, 35 per cent; Underwood rate, 20 per cent; Parker rate, 40 per cent.

Sample No. 25 (36-inch dyed rep, twill weave): Count, over 100 but not over 150 threads; finest yarn content, No. 40; dutiable value, 12.375 cents per square yard; weight, 4½ ounces per square yard; Dingley duty, 3½ cents per square yard, equals 28.2 per cent; Underwood rate, 20 per cent; Parker rate, class 2, 35 per cent.

Sample No. 26 (36-inch jacquard all-cotton flannel): Count, over 50 but not over 100 threads; finest yarn content, No. 30; dutiable value, over 12 cents per square yard; Dingley duty, paragraph 305, 30 per cent; Underwood rate, 20 per cent; Parker rate, class 3, 35 per cent.

Sample No. 27 (jacquard all-cotton imitation wool blanket): Count, over 50 but not over 100 threads; finest yarn content, No. 30; dutiable value, over 12 cents per square yard; Dingley duty, paragraph 305, 30 per cent; Underwood rate (specially provided for par. 15), 25 per cent; Parker rate, class 3, 35 per cent.

Sample No. 28 (36-inch dyed rep, twill weave): Count, over 100 but not over 150 threads; finest yarn content, No. 60, 2-ply; dutiable value, over 12½ cents per square yard; Dingley duty, paragraph 306, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 40 per cent.

Sample No. 29 (dyed Jacquard dress material): Count, over 100 but not over 150 threads; finest yarn content, No. 70, 2-ply; dutiable value, over 12½ cents per square yard; Dingley duty, paragraph 306, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 3, 45 per cent.

Sample No. 30 (32-inch colored corded shirting): Count, over 100 but not over 150 threads; finest yarn content, No. 40; weight, 2.93 ounces per square yard; dutiable value, 10.89 cents per square yard; Dingley duty, paragraph 306, 3½ cents per square yard or 3.01 cents per linear yard, 27.6 per cent; Underwood rate, 20 per cent; Parker rate, class 2, 30 per cent.

Sample No. 31 (27-inch mercerized grenadine): Count, over 50 but not over 100 threads; finest yarn content, No. 80; dutiable value, over 12 cents per square yard; Dingley duty, paragraph 305, 30 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 40 per cent.

Sample No. 32 (32-inch Jacquard colored dress gingham): Count, over 200 but not over 300 threads; finest yarn content, No. 80; dutiable value over 17½ cents per square yard; Dingley duty, paragraph 308, 40 per cent; Underwood rate, 25 per cent; Parker rate, class 3, 45 per cent.

Sample No. 33 (36-inch Jacquard dyed sateen): Count, over 150 but not over 200 threads; finest yarn content, No. 90; dutiable value over 12 cents per square yard; Dingley duty, paragraph 307, 40 per cent; Underwood rate, 25 per cent; Parker rate, class 3, 45 per cent.

Sample No. 34 (28-inch dyed fancy voile): Count, over 50 but not over 100 threads; finest yarn content, No. 80 3-ply; dutiable value, over 12 cents per square yard; Dingley duty, paragraph 305, 30 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 40 per cent.

Sample No. 35 (28-inch dyed Jacquard waisting): Count, over 150 but not over 200 threads; finest yarn content No. 140; dutiable value, over 12½ cents per square yard; Dingley duty, 40 per cent; Underwood rate, 30 per cent; Parker rate, class 3, 50 per cent.

Sample No. 36 (colored voile, width 24 inches): Count, over 100 but not over 150 threads; finest yarn content, No. 100, 2-ply; dutiable value, over 12½ cents per square yard; Dingley duty, paragraph 306, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 45 per cent.

Sample No. 37 (27-inch fancy dress material): Count, over 50 but not over 100 threads; finest yarn content, No. 60; dutiable value, over 12 cents per square yard; Dingley duty, paragraph 305, 30 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 40 per cent.

Sample No. 38 (40-inch dyed cotton moreen): Count, over 100 but not over 150 threads; finest yarn content, No. 80, 3-ply; dutiable value, 19.10 cents per square

PARAGRAPHS 315-320—COTTON CLOTH.

yard; Dingley duty, paragraph 306, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 2, 40 per cent.

Sample No. 39 (27-inch corded poplin colored): Price, 5½d.; count, over 100 but not over 150 threads; finest yarn content, No. 70; dutiable value over 12½ cents per square yard; Dingley duty, 35 per cent; Underwood rate, 25 per cent; Parker rate, class 2 40 per cent.

Sample No. 40 (37-inch Jacquard dyed lining sateen): Count, over 200 but not over 300 threads; finest yarn content, No. 110; dutiable value, over 17½ cents per square yard; Dingley duty, paragraph 308, 40 per cent; Underwood rate, 30 per cent; Parker rate, class 3, 50 per cent.

Sample No. 41 (32-inch Jacquard colored Scotch shirting): Count, over 200 but not over 300 threads; finest yarn content, No. 80; dutiable value, over 17½ cents per square yard; Dingley duty, paragraph 308, 40 per cent; Underwood rate, 25 per cent; Parker rate, class 3, 45 per cent.

TESTIMONY OF ALBERT F. BEMIS, BEMIS BRO. BAG CO., BOSTON, MASS.

The witness was duly sworn by the chairman.

Mr. BEMIS. I should like to speak on paragraphs 315, 316, and 332. I appear here as an individual, and as a member of the National Association of Cotton Manufacturers—a member of the American Cotton Manufacturers' Association—and informally representing the manufacturers of this country of cloth bags.

The recommendations I desire to make are as follows: I recommend no changes in classification or descriptive phraseology in Schedule I, or other schedules of the tariff, which would result in putting bags or sacks made in whole or in chief part of cotton on the free list, and especially that the raw material for such bags which is cloth described in paragraphs 315 and 316 be left upon the dutiable list.

That is my chief recommendation, Mr. Chairman, and the reason for making it is this: By the provisions of the so-called farmers' free list bill, passed about 18 months ago, H. R. 44013, Sixty-second Congress, I believe your committee proposed putting upon the free list various articles, including burlap and bags or sacks, composed wholly or in part of jute or burlap, or other material suitable for bagging or sacking agricultural products. In other words, you propose putting upon the free list bags or sacks composed wholly or in part of materials suitable for bagging or sacking agricultural products.

Gentlemen, it is not clear whether in the wording of this bill you had in mind to put cotton bags upon the free list, but the result of the passage of that bill; that is, had it become a law the result would have been that practically all the cotton-cloth bags made in this country would have been admitted free of duty. And in so far as all duty levied on the raw material—that is, the cloth out of which these bags are made, described in paragraphs 315 and 316, requires a duty of approximately 35 per cent to equalize the difference in cost of production in this country and Europe—you thereby would have established a premium to the foreign manufacturer for making those bags in foreign countries.

In support of my contention on this point I would refer you to decision of the Board of General Appraisers in the Treasury Department and to court decisions—the United States Court of Appeals and the United States Supreme Court—in which they have several times interpreted the meaning of the words "suitable for." The

PARAGRAPHS 315-320—COTTON CLOTH.

most notable cases are the *Chew Hing Lung v. Collector* case, and the one which is the most illuminating in this regard is the *Kahlen* case, Treasury Decision 3147, in which it describes the words "suitable for" as meaning "actually, practically, and commercially fit."

It is not necessary, I think, to go any further in that line to prove that practically all the cotton-cloth bags made in this country are actually, practically, and commercially fit for bagging or sacking agricultural products.

The CHAIRMAN. Will you let me ask you a question right there?

Mr. BEMIS. Yes.

The CHAIRMAN. Are there any agricultural products sacked, as a rule, in cotton bags now?

Mr. BEMIS. \$25,000,000 worth, nearly, sir.

The CHAIRMAN. What are they?

Mr. BEMIS. Flour.

The CHAIRMAN. That is not an agricultural product. That is a manufactured product.

Mr. BEMIS. Has that been determined by a court decision?

The CHAIRMAN. It is apparent that it is not an agricultural product.

Mr. BEMIS. It occurs in the agricultural products schedule of the tariff.

The CHAIRMAN. Agricultural products are, as applied in that bill, related to products of the farm, not the factory or the mill.

Mr. KITCHIN. Are wheat, corn, rye, and barley packed in these cotton bags?

Mr. BEMIS. Yes, sir; they are.

Mr. PALMER. \$25,000,000 worth of bags of that kind?

Mr. BEMIS. No, sir. If flour, meal, and products of that nature are not agricultural products there would not be \$25,000,000 worth of cotton bags used for packing agricultural products. But even so, sir, according to various decisions of the Board of General Appraisers and the United States courts the use of that word is so broad that if bags are suitable for that purpose, even though they are not brought in to be used exactly for that purpose, they would be considered to come under that classification and be admitted free.

The CHAIRMAN. I would suggest a change in the word, that instead of using "suitable for" we would say "for."

Mr. BEMIS. I should say—

Mr. KITCHIN. It says "suitable for and commonly used."

Mr. BEMIS. I would say, sir, that it would not be a proper thing to put upon the free list cotton-cloth bags or cotton bags at all, provided you do not at the same time put upon the free list the raw material or the cloth out of which they are made.

The CHAIRMAN. Let me ask you, in these cotton bags is there any material number of cotton bags used for putting in strictly agricultural products?

Mr. BEMIS. Yes, sir.

The CHAIRMAN. What are the agricultural products that are put in those sacks?

Mr. BEMIS. The gentleman has just pointed out that cotton bags are used in a small degree for sacking wheat and barley—more for seed purposes than otherwise.

PARAGRAPHS 315-320—COTTON CLOTH.

The CHAIRMAN. How many cotton bags are used for that purpose?

Mr. BEMIS. Offhand I really could not say.

The CHAIRMAN. It is a small percentage of the cotton bags that are produced, is it not?

Mr. BEMIS. Specifically for grains untreated in any mill I should think it might be.

The CHAIRMAN. Then if it is only used—of course, that was the purpose of the committee, not to apply it to flour or meal or things of that kind, but strictly to products of the farm.

Mr. LONGWORTH. Oats and bran and things of that sort. Are those cotton bagged?

Mr. BEMIS. No; very little. They are used—that is a point that I should like to bring out; that there is a considerable quantity, sir, of cotton-cloth bags that are used for bran, if that is an agricultural product.

The CHAIRMAN. I should say it is not an agricultural product. It was not the intent of the committee, of course, to go that far. If there is any trouble in the language used, we will be glad to alter it according to the suggestion. There is no controversy between the committee and yourself upon the question of these products that are the manufacture of a mill that manufactures flour, but the purpose of the committee was to give an opportunity to the farmer to have the bagging, if possible, to sack his agricultural products. What I wanted to know was whether they were actually used for a large proportion of the output?

Mr. BEMIS. I would say that the farmer uses but a very, very small quantity of cloth bags of any description for the sacking of his product.

The CHAIRMAN. That is what I thought.

Mr. BEMIS. That is, directly.

The CHAIRMAN. If the language of the act was held strictly to agricultural products, there would not really be any serious proposition here, would there?

Mr. BEMIS. I think it would be a very unjust thing in principle, sir, to put upon the free list any finished product, leaving the raw material dutiable.

The CHAIRMAN. That is done very often in these schedules.

Mr. BEMIS. Do you favor the principle, sir?

The CHAIRMAN. Not as a rule; no. There are some exceptions to all rules, though.

Mr. BEMIS. But hardly to so fundamental a principle as this.

The CHAIRMAN. For instance, take fine gun barrels in the present law, admitted free of duty. It is just an instance that happened to come into my mind. And yet the steel and the products out of which the gun barrel is made to bear a duty. You will find a great many instances of that kind if you will run them down.

Mr. BEMIS. There is another objection to such a law in that it is unnecessary, it seems to me, to so radically change a classification as to adopt or establish an entirely new classification which has not been interpreted through a long series of years of importations and trade uses. You open a pretty wide gap, or the possibility of a pretty wide gap, in the goods that would come in under a new phraseology.

PARAGRAPHS 315-320—COTTON CLOTH.

The CHAIRMAN. If we were placing these on the free list, and it seriously endangered your industry by putting them there, brought about a serious amount of competition on these particular cotton bags, I think there would be something in your argument that would require our consideration. But if it is only a very limited amount that are used for that purpose or could be used if they were imported, I do not think it is a serious proposition to you.

Mr. BEMIS. Mr. Chairman, it seems to me that the matter can be covered without introducing this illogical condition, even if it applies to but a small quantity, at first sight.

The CHAIRMAN. We should be glad to have your suggestion as to how you would cover it.

Mr. BEMIS. I can not make a suggestion without knowing what you are proposing to do, sir.

The CHAIRMAN. I stated that the purpose of the committee was clearly to limit the free bags directly to agricultural products of the farm, and you state that there is not very much of the cotton bagging used for that purpose, and therefore—

Mr. PAYNE. There is a large quantity of them that are suitable for that purpose, are there not?

Mr. BEMIS. I think there are, sir.

Mr. PAYNE. For the bulk of the business the bags are suitable for that purpose?

Mr. BEMIS. I should think so.

The CHAIRMAN. We will change the language so that it will guard against any illegitimate use of the power.

Mr. BEMIS. In my judgment, that would have admitted free to this country \$25,000,000 worth of cotton bags free. There would have been no revenue resulting. It would have taken the value of the raw material, which is, we will say, \$20,000,000 or \$21,000,000 or \$22,000,000, away from the cotton mills of this country.

The CHAIRMAN. As I understand the suggestion you are making, you are not complaining about the use of that small number of bags, but you do not want the language where they could be used for some other purposes?

Mr. BEMIS. Yes, so far as cotton bagging is concerned.

The CHAIRMAN. We will try to guard against that.

Mr. KITCHIN. Do you represent any manufacturing company that makes bags out of other material than cotton?

Mr. BEMIS. I appear here not representing them, no, sir; I appear here as an individual. I believe later on the bag manufacturers are to appear under Schedule J.

Mr. KITCHIN. Their raw material was put on the free list by that bill, was it not?

Mr. BEMIS. By that bill. We hope to submit a brief on that later; that is, the manufacturers of bags intend to do so.

Mr. KITCHIN. How many bag manufacturers are there in the United States?

Mr. BEMIS. I am very glad you asked that question, because I believe people do not understand how large an industry it is. There are in the United States, according to the census figures, or there were in 1909, 109 factories.

Mr. KITCHIN. How many factories are there now?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. BEMIS. But there are not many large ones.

Mr. KITCHIN. How many are there now?

Mr. BEMIS. I could not say. I do not know how those 109 were made up, but I can say, sir, that there are principal factories, there are important factories engaged in this line of industry, one or more in 21 of the States. Every member of this committee, sir, except your chairman comes from a State in which there are factories.

Mr. KITCHIN. Who are the big manufacturers?

Mr. BEMIS. Is this on the cotton schedule?

Mr. KITCHIN. No; I am talking of bags not of cotton now. Then I am going to get down to the cotton.

Mr. BEMIS. Who are they?

Mr. KITCHIN. What other large manufacturer of bags not made of cotton are there?

Mr. BEMIS. That matter, I think, will be submitted later in a brief.

Mr. KITCHIN. Are you going to come down and help them at the hearing when we get to Schedule J?

Mr. BEMIS. I expect to come.

Mr. KITCHIN. I wish you would look it up and see about Collins, and other manufacturers of bags not made of cotton.

Mr. BEMIS. I will try to find out about it before Schedule J comes up.

Mr. KITCHIN. You say you do not know much about the bag manufacturing business that uses other materials than cotton?

Mr. BEMIS. I did not say that. I said that I was appearing as an individual, and not representing them to-day.

Mr. KITCHIN. Now, there are some other manufacturers of bags not of cotton. Can you name some of them without looking at your papers?

Mr. BEMIS. Certainly, sir.

Mr. KITCHIN. Just name them.

Mr. BEMIS. Do you mean those who make no cotton bags, but make other bags?

Mr. KITCHIN. Yes, sir.

Mr. BEMIS. Make no cotton bags?

Mr. KITCHIN. Yes.

Mr. BEMIS. Unless I went into the paper end of it, I could not. I do not believe, sir, I could name any.

Mr. KITCHIN. Let us come down to cotton. What other large cotton-bag manufacturers are there?

Mr. BEMIS. There is the Fulton Bag & Cotton Mills, of Atlanta, Ga.

Mr. KITCHIN. What is the largest one?

Mr. BEMIS. Bemis Bro. Bag Co.

Mr. KITCHIN. Where is that located?

Mr. BEMIS. Its home office is in St. Louis.

Mr. KITCHIN. Are you a bag manufacturer? Do you manufacture bags, or are you interested in a company or companies that manufacture bags?

Mr. BEMIS. I am.

Mr. KITCHIN. What is your company?

Mr. BEMIS. The Bemis Bro. Bag Co.

Mr. KITCHIN. Is that the largest one?

Mr. BEMIS. I think it is, sir.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. KITCHIN. That is located where?

Mr. BEMIS. The company is incorporated in Missouri.

Mr. KITCHIN. What kind of bags do you make—sugar bags and flour bags mostly?

Mr. BEMIS. All kinds. They are used for all purposes.

Mr. KITCHIN. What are they used for mostly?

Mr. BEMIS. I should think for flour.

Mr. KITCHIN. What is the annual output in dollars and cents in bags a year?

Mr. BEMIS. You mean in this country?

Mr. KITCHIN. Yes—you.

Mr. BEMIS. In this country, I will have to refer to the Census report.

Mr. KITCHIN. About how much?

Mr. BEMIS. I should think it was something like \$60,000,000.

Mr. KITCHIN. Sixty million cotton bags?

Mr. BEMIS. No; \$60,000,000 of all kinds of cloth bags.

Mr. KITCHIN. Sixty million dollars of all kinds of cotton bags?

Mr. BEMIS. I should think so. Not all kinds of cotton bags—all kinds of cloth bags.

Mr. KITCHIN. Let us get at the cotton bags.

Mr. BEMIS. I have given you that previously. I think it is about \$25,000,000.

Mr. KITCHIN. How much does your company make of that? How large was the output of your company last year, say, in dollars and cents, about?

Mr. BEMIS. I really do not know. It would be merely an estimate.

Mr. KITCHIN. What office do you hold in that company?

Mr. BEMIS. I hold the office of president, sir.

Mr. KITCHIN. President of the company; and you have no idea how many dollars' worth a company turns out of which you are president?

Mr. BEMIS. I did not say that I had no idea. I said—

Mr. KITCHIN. Tell me about how much—make a good guess.

Mr. BEMIS. I should think something like \$8,000,000—perhaps \$9,000,000.

Mr. KITCHIN. Just think again; and do you not on reflection think that you make about 50 per cent—your company?

Mr. BEMIS. No, sir.

Mr. KITCHIN. Where are the branches of your company? In how many States have you branches?

Mr. BEMIS. We have branches in Indiana—I think about eight States.

Mr. KITCHIN. And they are under different incorporations, are they not?

Mr. BEMIS. No, sir.

Mr. KITCHIN. All under the same corporation?

Mr. BEMIS. Yes, sir.

Mr. KITCHIN. Your stockholders own stock in other incorporated companies that make bags of this kind, do they not?

Mr. BEMIS. You mean other mutual—other stockholders in the Bemis Bros. Bag Co. that own stock in another company that makes bags of the same nature?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. KITCHIN. Yes, sir.

Mr. BEMIS. That does occur in one case, sir.

Mr. KITCHIN. Where is that case?

Mr. BEMIS. That is in Houston, Tex.

Mr. KITCHIN. What is that company in Houston, Tex., named?

Mr. BEMIS. That is the Texas Bag & Fiber Co.

Mr. KITCHIN. That company is supposed to be competing with your Missouri company in Texas, is it not?

Mr. BEMIS. I would not say so, sir.

Mr. KITCHIN. It is not supposed to be? The people generally think they are competing down there?

Mr. BEMIS. I do not know, sir.

Mr. KITCHIN. I know that you know whether they are competing, but I mean the people generally?

Mr. BEMIS. Well, sir, that is a condition which is perfectly clear. I mean it is a condition which exists in innumerable cases throughout this country.

Mr. KITCHIN. I know. When did you organize your company in Texas? When was that company organized?

Mr. BEMIS. I do not remember exactly. Probably four or five years ago.

Mr. KITCHIN. Since the investigation of the Waters-Pierce Oil Co. and Standard Oil Co. down there; since the laws against monopoly?

Mr. BEMIS. Yes.

Mr. KITCHIN. About four or five years ago you organized there; since this Waters-Pierce Oil Co. and Standard Oil Co. investigation down there, when Texas made more stringent laws against trusts and monopolies, did you not?

Mr. BEMIS. I think it was prior to that.

Mr. KITCHIN. It was in the last six years, was it not?

Mr. BEMIS. I do not remember whether or not it was prior to that, sir.

Mr. KITCHIN. It was in the last six years, was it not?

Mr. BEMIS. I do not remember whether or not it was prior to that.

Mr. KITCHIN. Do you not know that you just organized there in the last six or seven years?

Mr. BEMIS. I can not state the date of it; I do not remember.

Mr. KITCHIN. Did you not organize a new company there in order to avoid the antitrust or antimonopoly laws of Texas?

Mr. BEMIS. When we considered opening—the stockholders, understand, are not the same. Some are the same.

Mr. KITCHIN. I know—

Mr. BEMIS. When that factory was opened the question came up the same as it would come up in any case—

Mr. KITCHIN. I am not criticizing you, understand.

Mr. BEMIS (continuing). Under what conditions that plant should be organized. An examination of the laws was entered into, as would be done in the case of starting any company.

Mr. KITCHIN. So you thought it was safer to organize a new company with a new name after these stringent antitrust or antimonopoly laws were put on the statute books of Texas, did you not?

Mr. BEMIS. Well, I do not know—

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. KITCHIN. That might not have been the moving cause, but that was one thing you people discussed before you organized, is it not?

Mr. BEMIS. I should imagine it would naturally be.

Mr. KITCHIN. Can you not recall another company that you organized somewhere else than in Texas? In fact, Texas had about the most severe and strict antitrust laws that you have been able to find in the United States, did it not?

Mr. BEMIS. Well, it has that reputation.

Mr. KITCHIN. Yes, sir; and you formed this other company—what is the next largest company that competes with yours?

Mr. BEMIS. I do not know. I really do not know.

Mr. KITCHIN. Name two or three large competing companies.

Mr. BEMIS. The Fulton Bag & Cotton Mills, Atlanta, Ga., and I should say there was H. & L. Chase, which is not a corporation, at St. Louis, Mo., the Cleveland-Akron Bag Co.

Mr. KITCHIN. What territory does the Georgia company sell in?

Mr. BEMIS. They sell all over the country, so far as I know.

Mr. KITCHIN. Do they sell in Texas in the same territory that your Houston company sells?

Mr. BEMIS. What plant that those interested have in Texas I do not know. I do not know whether it is a separate corporation or not.

Mr. KITCHIN. You do not know whether they go down as far as Texas or not, do you?

Mr. BEMIS. You mean from Atlanta?

Mr. KITCHIN. Yes.

Mr. BEMIS. I do not know.

Mr. KITCHIN. Your Texas concern sells to Texas, Oklahoma, and that section of the country, does it not?

Mr. BEMIS. Yes; I should think so.

Mr. KITCHIN. And the Georgia concern sells up in North Carolina and South Carolina, Alabama, and Mississippi, does it not? I mean this Georgia competing concern.

Mr. BEMIS. Those markets are nearer the company.

Mr. KITCHIN. And your company in Missouri does not sell much in Georgia, South Carolina, North Carolina, and Alabama, does it?

Mr. BEMIS. We do if we can get the business.

Mr. KITCHIN. But I mean you do not do it. You do not get the business, do you?

Mr. BEMIS. We can not get it.

Mr. KITCHIN. Is it not a fact that your competing concerns—for instance, this Georgia concern and your company—have an agreement parceling out the territory?

Mr. BEMIS. Absolutely not, sir.

Mr. KITCHIN. Do you mean to say that the Georgia concern can undersell you and run you out of Virginia, North Carolina, South Carolina, and Alabama, when you make over one-third of the total output?

Mr. BEMIS. I do not put it so radically as you do.

Mr. KITCHIN. How would you put it—conservatively?

Mr. BEMIS. I would say absolutely without question that a factory—and the factory located in Atlanta, Ga., can and does undersell us right near its own home.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. KITCHIN. In these States that I have mentioned?

Mr. BEMIS. Yes.

Mr. KITCHIN. You say there is one up in Maine?

Mr. BEMIS. Maine?

Mr. KITCHIN. That other company that you mentioned.

Mr. BEMIS. No; there is no factory in Maine.

Mr. KITCHIN. You mentioned another company besides yours?

Mr. BEMIS. There are the cotton seamless bags made in Maine, but that is not one of the companies that I mentioned.

Mr. KITCHIN. The Georgia company is the next biggest one to yours? What is the next biggest to the Georgia, and where is that located?

Mr. BEMIS. I can not speak with certainty, and I do not wish to be quoted as saying.

Mr. KITCHIN. So you do not know anything about your competitors?

Mr. BEMIS. Just a minute——

Mr. KITCHIN. You make so much of it yourself that you do not know about your competitors?

Mr. BEMIS. I do not know about their concerns. These companies, gentlemen, are and always have been what you would consider private companies. There has been no interchange of information regarding their capital used in the business, and that sort of thing. And I can not tell you with positiveness regarding the relative size of the companies. The other companies that I mentioned, the Cleveland-Akron Bag Co., of Cleveland; the H. & L. Chase Co.

Mr. KITCHIN. Really, this Chase Co. is a part of your company, is it not?

Mr. BEMIS. Which company?

Mr. KITCHIN. The Chase Co.?

Mr. BEMIS. No; absolutely not.

Mr. KITCHIN. Does your company and that company sell in the same territory?

Mr. BEMIS. We do.

Mr. KITCHIN. From what kind of cloth do you make most of your bags?

Mr. BEMIS. Do you mean cotton bags?

Mr. KITCHIN. Yes; cotton bags?

Mr. BEMIS. We make it from numbers averaging about 20.

Mr. KITCHIN. Do you make the cloth yourself or buy the cloth?

Mr. BEMIS. Both.

Mr. KITCHIN. You manufacture this right from the yarn, do you not?

Mr. BEMIS. Some.

Mr. KITCHIN. Do you not know that you do most of it?

Mr. BEMIS. I do not wish to make a statement which is not going to be correct.

Mr. KITCHIN. I know. I want to get at the facts. What per cent of the bags that you produce do you make from yarns and not from cloth purchased?

Mr. BEMIS. Very roughly, about half.

Mr. KITCHIN. Do you not think you make a little more than half?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. BEMIS. That is just merely a rough estimate. It is as close as I could give it offhand.

Mr. KITCHIN. Now, the other half, the other per cent you buy, what kind of cloth is that?

Mr. BEMIS. The same.

Mr. KITCHIN. What does that cloth sell for? What do you have to pay for that cloth by the yard? You say it is from the number 20's. What did it cost you last year?

Mr. BEMIS. It is almost impossible to answer such a broad question.

Mr. KITCHIN. You know what that class of goods sells for, do you not? Of course you buy it in big quantities and get it as cheap as anybody does.

Mr. BEMIS. You mean how much per pound?

Mr. KITCHIN. Yes; how much per pound?

Mr. BEMIS. At the present time?

Mr. KITCHIN. Well, say at the present time; yes, sir?

Mr. BEMIS. We use all the way from No. 8's to No. 32 or 34's.

Mr. KITCHIN. You told me that you used all about No. 20. I want to see how this tariff on your raw material you are talking about affects you. I wish to find out how much tariff you pay now. You say it would not be right to put your bags on the free list, when the raw material is not on the free list, that you have to pay such a big price for that. I wish to see what kind of cloth you use and what is the tariff on that cloth.

Mr. BEMIS. I see. On No. 20 cotton, for instance, do you mean?

Mr. KITCHIN. You are president of the company. Do they not let you know anything about what the cloth costs that they purchase?

Mr. BEMIS. They do not put it up to me in this particular way.

Mr. KITCHIN. Are you the business president, or are you what they call the lobbying president of the company?

Mr. BEMIS. That is for you to judge, sir, I think.

Mr. KITCHIN. What size bags do you make? Perhaps we can get at it in that way.

Mr. BEMIS. We make bags of all sizes, from a salt pocket to a bag to carry 220 pounds of flour.

Mr. KITCHIN. You say you manufacture your own cloth? What do you estimate, in manufacturing your own cloth, that cloth costs you per yard?

Mr. BEMIS. The 20's?

Mr. KITCHIN. Well, say 20. You say you make most of them out of the 20's?

Mr. BEMIS. Well, in reading over the report of the Tariff Board—

Mr. KITCHIN. You do not want any Tariff Board. They do not know what it costs you. I am asking you about what it costs you, not what the Tariff Board says.

Mr. BEMIS. I think I can answer your question best that way.

Mr. KITCHIN. Answer it that way, and then I will come down to what it costs you.

Mr. BEMIS. I looked up the cases which they cited in regard to the cost of production and the cost of the finished product in comparison with our costs, and it seemed to me that they represented very accurately the cost of the product in the United States, and our mills were quite similar to that.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. KITCHIN. Of course, that is perfectly plain to you, but it really does not give me the information, because I would have to go through that tariff report and sift it out and then know as little about the cost of your cloth as you appear to know.

Mr. BEMIS. It varies so much. I do not know how I can give it to you any better.

Mr. KITCHIN. I imagine you ought to know very much more about the cost per yard of your cloth than the Tariff Board would know, when they never examined it or your factory. Did the Tariff Board ever send an expert, or one of their men, to this mill to see what it cost you to manufacture this cloth? If they did send a man there I would ask it, but since they did not send a man there, I thought I would ask the president of the company, who ought to know more than a man who had never been there. Can you not give any idea of what you estimate this manufactured cloth cost you?

Mr. BEMIS. You mean at 12 cents a pound for cotton?

Mr. KITCHIN. Well, 12 for cotton. Anything to get the information from you.

Mr. BEMIS. On No. 20 yarn. It would be approximately 21 or 22 cents net per pound, I should think.

Mr. KITCHIN. Well, 21 cents, then. You do not buy the cotton and spin the yarn, do you?

Mr. BEMIS. Yes.

Mr. KITCHIN. You even buy cotton and spin the yarn, and then make it that way, right from the raw cotton? There is no tariff on raw cotton, is there?

Mr. BEMIS. None, as far as I know.

Mr. KITCHIN. You do not use long-staple cotton, do you? There is not tariff even on that.

Mr. BEMIS. Well, it is not taxed very much.

Mr. KITCHIN. You say it costs you about 22 cents a pound to manufacture it, when cotton is 12 cents?

Mr. BEMIS. I did not say it cost 22 cents. I said that was the finished cost at 12 cents a pound for cotton—just about the finished cost.

Mr. KITCHIN. That is, when cotton is 12 cents, and you buy your cotton and spin it into yarns and then make it into this cloth out of which you make your bags, you estimate that that cloth costs your company 22 cents a pound?

Mr. BEMIS. Approximately.

Mr. KITCHIN. How many yards in a pound?

Mr. BEMIS. Five yards.

Mr. KITCHIN. How much is the tariff on that cloth that is worth 22 cents a pound—five yards to the pound?

Mr. BEMIS. I think I can tell you by looking it up, sir.

Mr. KITCHIN. Four and one-half cents to the yard it cost you. How much would the tariff be on that? Would it be as much as one-fourth of a cent? So, the truth about the business is that your plea about the tariff, about paying the tariff on your raw material, on cotton cloth, cuts very little figure in this matter, does it, when you come right down to the facts?

Mr. BEMIS. I would say this on that subject, that just at the present time apparently we could satisfactorily compete with England.

PARAGRAPHS 315-320—COTTON CLOTH.

But, if you are referring to England, I would say that it would be a gross injustice to any industry to put the finished product on the free list, with the raw materials dutiable, and furthermore—

(Here Mr. Bemis unfolded a large paper of statistical data.)

Mr. KITCHIN. I know, but I am trying to bring it out from you that this tariff item is not even a fraction of the cost of your finished product. What part of your finished product is represented by labor? What part of the bags—the finished product—say a dollar's worth of the bags, would be labor?

Mr. BEMIS. Are you referring to what might be called the cloth bag converting department of our business?

Mr. KITCHIN. Let me make myself plain. Suppose that you have bags costing you \$100 to produce. What per cent of that would constitute your labor; 50 per cent, 60 per cent, or 25 per cent of it?

Mr. BEMIS. Would the raw material be raw cotton or cloth?

Mr. KITCHIN. That has not anything to do with it.

Mr. BEMIS. I can not answer otherwise.

Mr. KITCHIN. What part of it is labor?

Mr. BEMIS. Would we start with the amount—would we sow the seed—put in the labor for raising the cotton?

Mr. KITCHIN. Do you raise your own cotton also?

Mr. BEMIS. No, sir; we do not.

Mr. KITCHIN. You are the most modern cotton manufacturer of whom I ever heard, if you raise your own cotton.

Mr. PAYNE. You want to explain to them that you do not make it out of the raw cotton at once. You would put it into cloth first?

Mr. BEMIS. He has already brought out the fact, Mr. Payne, that we do make some that way.

Mr. KITCHIN. If you have \$100 of finished product, what per cent of that is labor? All manufacturers can tell that. We have had perhaps 150 down here and all could tell. Why can you not tell?

Mr. BEMIS. From one point of view the whole thing is labor.

Mr. KITCHIN. That is, you are including the labor of the men who make the cotton, then the labor of the fellow who raises the mule, then the labor of the fellow who makes fertilizer. We are not talking about that kind of labor. We are talking about the proportion of labor cost to the cost of the finished product in bags. When you have turned out \$100 worth of bags, cost value, how much have you paid out for labor on them?

Mr. BEMIS. It would make a difference which bag it was. If it was a bag—

Mr. KITCHIN. Whether it is a little or a big one?

Mr. BEMIS. Yes; whether it is a little one or a big one, and whether the bag has been made by us from raw cotton or made by us from cloth.

Mr. FORDNEY. Mr. Kitchin, I wish to get the information you are going into. You do not seem to understand each other, it seems to me.

Mr. KITCHIN. Brother Fordney, I have put that question to every practical manufacturer, or some of us have, that has been before us for the last two weeks, and every one of the others understood what it meant and gave it, and all these briefs here show it. I have read dozens of them. I thought he would understand it. Why can't he answer?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. **FORDNEY**. What he means is, that about half the bags he produces he makes out of goods which he buys manufactured and the other half he makes from the raw material.

Mr. **KITCHIN**. The half, the 50 per cent for which you buy the cloth and make into bags; what part of \$100 worth of that finished product would be labor—the wage earnings?

Mr. **BEMIS**. Yes; I understand what you mean now. Please understand that I am answering only approximately. I did not expect to have to reply to all these questions.

Mr. **KITCHIN**. Do the very best you can. Of course, being president of the company, you would have to guess?

Mr. **BEMIS**. That is correct; I should say about 5 per cent.¹

Mr. **KITCHIN**. Ninety-five per cent is raw material?

Mr. **BEMIS**. No; 95 per cent—

Mr. **KITCHIN**. Oh, I understand.

Mr. **BEMIS**. Ninety-five per cent is not raw material.

Mr. **KITCHIN**. Ninety-five per cent is the overhead charges and salaries of the president and other officers, and the profits?

Mr. **BEMIS**. The president of the particular company that I am interested in is—

Mr. **KITCHIN**. What I am going to say is, that if only 5 per cent of your product is labor, then you need not talk to us about this cheap, pauper labor of India, Japan, and China. You have got it in your factory.

The **CHAIRMAN**. Mr. Bemis, I do not like to interrupt your statement, but if you desire to finish in the morning you can do so, and then we will go on with the other witnesses.

Mr. **BEMIS**. I have finished, sir.

Mr. Bemis also furnished the following brief:

BOSTON, *January 20, 1913.*

THE COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

GENTLEMEN: The undersigned respectfully submits the following petition and recommendation as a member of the National Association of Cotton Manufacturers and also of the American Cotton Manufacturers' Association, and as a manufacturer of bags or sacks.

PARAGRAPHS.

The paragraphs of the present tariff law referred to in this brief are Nos. 315, 316, and 332.

RECOMMENDATIONS.

I recommend that no change in classification or descriptive phraseology be made in Schedule I or other schedules of the tariff which would result in putting bags or sacks, made in whole or chief part of cotton, upon the free list, especially should the raw material for such sacks (cloth described in paragraphs 315 and 316) be left upon the dutiable list.

I recommend further that the present relation be maintained between the duties assessed at present upon cotton goods and competing fabrics.

¹ Mr. Bemis later sent the following written explanation of this estimate: "It is figured from the present goods market, which is comparatively high, that 5 per cent covers only 'productive labor.' Nonproductive labor and all other costs equal 7 per cent, making total conversion cost about 12 per cent.

PARAGRAPHS 315-320—COTTON CLOTH.

FARMERS' FREE-LIST BILL.

By the provisions of H. R. 4413, Sixty-second Congress, we believe your committee proposed putting upon the free list " * * * gunny cloth, and all similar fabrics, materials, or coverings, suitable for covering and baling cotton, composed in whole or in part of jute, * * * , or any other materials or fibers suitable for covering cotton; and burlaps and bags or sacks composed wholly or in part of jute or burlaps or other materials suitable for bagging or sacking agricultural products."

It is not clear whether, in framing this bill, you really had in mind to put cotton bags upon the free list. However, the classification or description quoted above would undoubtedly, if passed, have put practically all cotton bags upon the free list. The cotton bag manufacturing industry then would have been in the condition of having its finished product upon the free list and raw material dutiable at varying rates of duty, but approximately 35 per cent. In so far as this 35 per cent is justified by the difference in cost of manufacture in this country and abroad, the passage of the farmers' free-list bill would have established a premium of about 35 per cent in favor of the foreign manufacturer for the entire manufacture of these cotton bags (both cloth and finished bags) in foreign countries. This certainly you could not have intended doing, as it would have been a gross injustice not only to the bag manufacturing industry but to the manufacturers of goods classified under paragraphs 315 and 316.

LEGAL INTERPRETATION "SUITABLE FOR."

That the foregoing statement that the farmers' free-list bill would have given free entry to bags or sacks made of cotton cloth and other materials or fabrics is clear from a study of decisions regarding the use of the descriptive term "suitable for" in the present and previous tariff laws. There have been numerous legal interpretations of this term, not only in the form of rulings of the Board of General Appraisers and Treasury Department, but also in the form of decisions by the court of appeals and the Supreme Court of the United States. Probably the most famous case was that known as *Chew Hing Lung v. Collector* (176 U. S., 156). One case covering the suitability of materials not previously used was the *Hatters' plush case* (T. D., 32253). The case, which is probably the most illuminating in the present instance, was the *Kahlen case* (T. D., 31947), in which the interpretation of "suitable for" was given as "actually, practically, and commercially fit."

"Agricultural products" are clearly such things as grain, vegetables, flour, meal, starch, sugar, etc. Not only are bags made of materials described in paragraphs 315 and 316, and various materials in other schedules, used to-day chiefly for "bagging and sacking agricultural products," but still other materials on the dutiable list might become "suitable for" or "actually, practically, and commercially fit" for bagging or sacking agricultural products, should bags of such materials be admitted free.

At present the value of cotton bags produced in the United States is approximately \$25,000,000 annually. At present this product if imported would come under paragraph 332. "Goods not specially provided for." The quantity of cotton bags imported is negligible, and, as long as the United States continues to be the principal producer of raw cotton, bags made of such cotton probably will all continue to be made in this country unless a premium, such as you propose, be established for their manufacture in foreign countries.

DATA REGARDING CLOTH-BAG INDUSTRY.

The following describes the condition of the cloth-bag industry of the country in 1909 and is taken from the census reports of 1910. It is not clear what portion of the industry is engaged in the manufacture of cotton bags, but it is a substantial portion. The statistics are three years old, but are the latest available:

Number of factories.....	109
Salaried employees.....	798
Wage earners (average number).....	7,968
Total.....	8,838
Salaries.....	\$1,068,000
Wages.....	\$2,942,000
Primary horsepower.....	6,855
Capital.....	\$24,625,000
Cost of materials.....	\$46,364,000
Value of products.....	\$54,882,000

PARAGRAPHS 315-320—COTTON CLOTH.

It is useless to make any statement as to the effect upon the revenue of the Government that would result from the passage of such a law as the farmers' free-list bill. There certainly would be no increase of revenue to the Government. On the other hand, there would be a very material loss of business, both to the manufacturers of coarse-cotton goods and the manufacturers of cotton bags. Undoubtedly the manufacture of most of the cotton bags and the cloth out of which they are made would be transferred from the United States to Canada, England, or other foreign country.

COMPETING ARTICLES.

In framing any revision of the tariff upon articles covered by Schedule I or other textile schedules, the classification and descriptive phraseology should be so carefully drawn and rates so correlated that the present relation between cotton goods and competing materials made from other fibers may not be materially disturbed. At present the coarsest grades of cotton goods compete successfully to some extent with burlaps. If the latter were admitted free, they would displace a considerable quantity (25,000,000 to 50,000,000 yards annually as a very rough estimate) of such cotton goods.

Respectfully submitted.

ALBERT F. BEMIS,
40 Central Street, Boston, Mass.

At a later date Mr. Bemis submitted the papers that follow:

EASTERN OFFICE BEMIS BRO. BAG CO.,
Boston, Mass., February 8, 1913.

HON. OSCAR W. UNDERWOOD,
House of Representatives, Washington, D. C.

DEAR SIR: Inclosed please find:

1. Copy of my letter of January 27, the original of which was mailed to you in care of Mr. Roper, clerk of the Committee on Ways and Means. The original may have miscarried in the mails, as I have not received an acknowledgment of receipt of it.
2. Further data regarding the cloth-sack manufacturing industry of the United States.

When I appeared before the Committee on Ways and Means January 22 you asked me to make a suggestion regarding phraseology in order that sacks used by farmers might be admitted free, leaving sacks for other purposes dutiable. I could make no offhand suggestion at that time, and, after a comprehensive study of the subject, I am thoroughly convinced that such a plan would not be practicable or desirable for reasons which I think are clearly brought out in document No. 2, which I trust will receive your serious consideration in connection with the briefs already submitted by me and referred to therein.

I am taking the liberty of sending to Mr. Payne what is virtually a duplicate of document No. 2 in partial reply to questions regarding the industry which he has asked me. I would be glad to furnish copies for all other members of the committee and write each one a line personally on the subject, if that would be of the slightest assistance to you.

With best regards and again thanking you for your kindness to me while in Washington, believe me,

Very sincerely, yours,

ALBERT E. BEMIS.

[Inclosure.]

JANUARY 27, 1913.

SCHEDULE 1—HEARING OF JANUARY 22, 1913.

HON. OSCAR W. UNDERWOOD,
Chairman Committee on Ways and Means,
House of Representatives, Washington, D. C.

DEAR SIR: One reply made by me during the cross-examination of Mr. Kitchen I should like to explain, as I did not have the opportunity to do so at that time. That reply is my estimate of 5 per cent as being the cost of the labor of converting cotton cloth into a finished bag of average size and quality and expressed in percentage of

PARAGRAPHS 315-320—COTTON CLOTH.

the cost of the finished product. The estimate as given was 5 per cent. It is figured from the present goods market, which is comparatively high. Five per cent covers only "productive labor." Nonproductive labor and all other costs would equal 7 per cent, making a total conversion cost of about 12 per cent. The conversion cost expressed in percentage of the cost of finished product will necessarily vary with variations in the cloth market; also, with the size and character of the bag. However, to cover what Mr. Kitchin evidently had in mind, 12 per cent would not be far wrong for an average-sized cotton bag. Under present market conditions this estimate is low, if anything.

The accuracy of this statement and of my reply made to Mr. Kitchin may be checked very roughly by reference to the brief submitted to the committee by me January 22. Note the extract from the census reports of 1910 regarding the cloth-bag industry. Expressed in percentage of the value of products there given, the labor cost figures about 5.36 per cent; total conversion cost, about 15.5 per cent. Of this, according to the wording of the statistics, 1 or 2 per cent may be profit. In the figures that I have given you above, showing our own conversion costs, no profit whatever is included.

Further cost figures.—Within the next week or two I hope to submit further data regarding the cost of production in this and foreign countries (even if such information proves to be tardy) in the hope that the same may be of use to your committee in its present and prospective work.

With best regards and many thanks for your kindness to me while in Washington, I remain,

Yours, truly,

A. F. BEMIS.

[Inclosure 2.]

BOSTON, MASS., February 7, 1913.

Paragraphs 332, 352, and 354, present tariff law.

HON. OSCAR W. UNDERWOOD,
*Chairman Committee on Ways and Means,
House of Representatives, Washington, D. C.*

DEAR SIR: This letter is sent with the purpose of supplementing the information supplied by the brief filed with the committee under Schedule I, and printed on pages 3220 and 3221 of Tariff Schedules No. 14, Hearings, etc., and under Schedule J, pages 3512 to 3516, Tariff Schedules No. 16, Hearings, etc., also in the hope of clarifying the following points regarding the tariff on cloth sacks that were left indefinite at the hearings before your committee January 22 to 25, inclusive:

- A. Selling methods.
- B. Use of cloth sacks by farmers.
- C. Comparative manufacturing costs, United States and elsewhere.

POINT A.

There is no "trust" or combination of any kind, either for the purchase of raw material or selling of finished product, among the cloth sack manufacturers of the United States. There is no "water" in the capitalization of this industry. In the distribution of the product there are no middlemen. Ninety-nine per cent of the product is sold by the sack manufacturers direct to consumers.

POINT B.

Consumption of new sacks by farmers.

COTTON SACKS.

Produced and sold annually in the United States.....	600,000,000
Used directly for sacking agricultural products (1 per cent).....	6,000,000
"Commercially suitable" for sacking agricultural products.....	500,000,000

It is clear from the above that there would be no material benefit to the farmer from placing cotton sacks on the free list, even if it were possible to do so without gross injustice to the manufacturers of cotton cloth and sacks.

PARAGRAPHS 315-320—COTTON CLOTH.

JUTE SACKS.

Estimate of burlap sacks manufactured in United States and imported annually; also classification of same as to use.

MADE AND IMPORTED.

Burlap sacks manufactured annually in the United States.....	470,000,000
Burlap sacks imported annually, chiefly from India.....	55,000,000
Total burlap sacks consumed annually in the United States.....	505,000,000

CLASSIFICATION OF USE.

Factory products:	
Bran and other mill stuffs.....	200,000,000
Fertilizer.....	50,000,000
Flour (mostly export).....	28,000,000
Sugar.....	23,000,000
Packing-house products.....	10,000,000
All other factory products.....	69,000,000
	<hr/>
	380,000,000
Farm products:	
Wheat, corn, and oats (domestic sacks).....	35,000,000
Wheat (foreign sacks).....	50,000,000
All other farm products (domestic sacks).....	35,000,000
All other farm products (foreign sacks).....	5,000,000
	<hr/>
	125,000,000
Total factory and farm products.....	505,000,000

The following table gives the production in 1912 of the three principal cereal crops of the United States, the rate of protective duty on each under the present law, and the approximate amount of each crop sacked:

It is clear from this table that over 95 per cent in volume of the three principal cereal crops of the United States is handled without sacking—only 2¾ per cent being handled in sacks of domestic manufacture, and 1½ per cent in sacks of foreign manufacture.

Proportionately less of these cereals each year is sacked. It will probably be but a short time before 99 per cent of the three principal cereal crops of the United States is handled in bulk.

Fully 99 per cent of the "agricultural products" of this country which are handled in sacks (whole grains, seeds, potatoes, nuts, onions, etc.) is dutiable under the present tariff at a rough average of 25 per cent ad valorem.

Inasmuch as only 5 per cent of the agricultural products of the United States is sacked and inasmuch as those products that are sacked have the benefit of a 25 per cent protective duty, wherein is a reasonable competitive duty on sacks any burden to the producer of agricultural products?

The sack manufacturers of this country should be given the same measure of protection or competitive rates of duty as may be granted any other manufacturers.

Crops.	Bushels.	Pro- tected by duty of—	Estimated amount sacked.	Per cent sacked.
Corn.....	3,124,746,000	<i>Per bush.</i> \$0.15	<i>Bushels.</i> 4,000,000	0.13
Wheat.....	730,267,000	.25	96,000,000	13
Oats.....	1,418,337,000	.15	125,000,000	8.8
Total.....	5,273,350,000	225,000,000	4.26

PARAGRAPHS 315-320—COTTON CLOTH.

POINT C.

COMPARATIVE MANUFACTURING COSTS, UNITED STATES AND ELSEWHERE.

There were one or two inaccurate and very general statements made orally at the hearings on January 24 and 25 regarding the cost of manufacturing burlap sacks in this country and the chief competing country, India. Below find a statement of costs, the correctness of which we would be glad to prove if desired:

Actual cost of making in the United States during the past year 89,835,000 plain, unprinted burlap sacks.....	per 1,000..	\$5. 49
Average charge by Calcutta mills over the cost of the burlap cloth for making burlap sacks, as per quotations and purchases of June 8, 1910, Aug. 2, 1910, July 18, 1911, and Oct. 24, 1912.....	per 1,000..	\$1. 60
Difference against United States manufacture.....	do.....	\$3. 89
This difference equals.....	per bag..	\$0. 39
This difference equals approximately.....	per pound..	\$0. 52
This difference (at lowest market price) equals (ad valorem maximum), per cent.....		10
This difference (at highest market price) equals (ad valorem minimum), per cent.....		5
This difference (at average market price) equals (ad valorem average), per cent.....		7½

It is clear from the above that the present differential of about 6 per cent ad valorem, or three-eighths cent per pound specific, is the minimum which would enable the manufacturer in this country to compete with India. Especially would this be true should a comparison be made between the necessarily high labor cost of manufacturing on our Pacific coast, where the manufacturers of this country are at a very much greater disadvantage in competing with India and need a differential of 12 per cent. The figures given above as the cost in the United States are an average between factories operating in several different parts of the country.

SUMMARY OF ARGUMENT AND CONCLUSIONS.

1. The cloth-sack industry of the United States is properly conducted, and is as much entitled to fully competitive rates as any other industry.

2. Only about 1 per cent of the cotton-cloth sacks is used for sacking the direct products of the farm, and not more than 25 per cent of the burlap sacks.

3. Practically all farm products that are sacked are dutiable, and only 5 per cent of such products is sacked. The present duties on burlaps and burlap sacks are in no sense a burden to the farmer.

4. The present differential between burlaps and burlap sacks is the minimum permissible as figured from the average cost of manufacturing in this country and the cost in foreign countries.

The above data, in our judgment, still further support the rates recommended in the brief of the bag manufacturers' committee, found on pages 3512 to 3516, Tariff Schedules No. 16, Hearings, etc. (1 cent per pound on burlaps under paragraph 352 and 1½ cents per pound on sacks, paragraph 54), and we further urge your favorable consideration of those recommendations.

Very respectfully submitted.

ALBERT F. BEMIS,
President Bemis Bro. Bag Co.

TESTIMONY OF CHARLES M. HOWARD, REPRESENTING THE WINDSOR PRINT WORKS, NORTH ADAMS, MASS.

Mr. HOWARD. Mr. Chairman, this is the first time that I have ever appeared before a committee like this, and if I show any embarrassment it will be entirely due to diffidence. I shall be glad to answer any questions that may be put to me.

I am here speaking for the cotton-print business, and especially to the proposition that you are putting on bleached goods the same duty that you are putting on printed goods, which we think is not proper.

PARAGRAPHS 315-320—COTTON CLOTH.

This memorandum is submitted for the reason that in the recently proposed tariff bill there is a difference of but 5 per cent between the proposed duty on gray or unbleached cloths and the proposed duty on the same cloth bleached, dyed, printed or otherwise treated.

I want to say here that we buy most of our cloths. Some mills make them, but we buy ours.

We shall endeavor to show that a still further distinction should be made between the duties of these fabrics bleached and these fabrics dyed or printed, as contrary action would not only seriously injure and handicap the cotton-printing industry, but by this handicap react upon the cotton-cloth mills of both the North and South of whom the cotton printers or finishers are the largest customers.

Without burdening your committee with unnecessary details, and speaking as a representative of a typical cotton printing mill, the Windsor Print Works, merchandising its own products, located in North Adams, Mass., representing an investment of \$1,600,000, having 14 printing machines, employing 750 hands, with an annual production of exclusively printed and dyed cotton fabrics of fifty to sixty million yards, approximately valued at \$4,000,000. Let me say right here that of the \$1,600,000, \$1,000,000 is common stock and \$600,000 preferred stock.

According to the latest figures available, 1911, there are in the United States about 29 establishments equipped to do cotton printing, ranging from 2 to 25 machines, the United States Finishing Co. having 50 machines. These mills operate a total of 392 machines, and we estimate the average daily product of each machine to be 250 pieces of 50 yards each. We have a daily consumption of cloth of 98,000 feet, or per working year of 300 days 29,400,000 pieces, or 1,470,000,000 yards. This is printed material alone, and does not include dyed cotton fabrics. These figures give you an idea of an industry the magnitude of which deserves serious consideration.

The cotton-printing industry is progressive and develops from a low quality of goods, ranging from 4½ to 6 cents a yard to finer and higher grades, selling as high as 60 cents. It needs encouragement. We can now produce workmanship equal to that of any country in the world, due to a protection, the withdrawal of which would undoubtedly bring in foreign competition that would destroy the progress made for reasons which we shall show.

In England a few years ago the large printers formed a trust called the "Calico Printers' Association." There are a few independents, but the business is largely controlled by this association. They group the products in the different mills to cheapen production. I understand they are very autocratic, not printing or selling to anyone who does not give them all of their printing business.

There is no lack of domestic competition in this field. It is persistent and keeps prices down to the lowest point. The production of our cotton printing mills when running full would more than supply any domestic demand for our products. Business has been poor for the last few years, but the outlook for the future, if undisturbed, is more hopeful. It has been very difficult in the last few years for printers to make any money.

PARAGRAPHS 315-320—COTTON CLOTH.

We must not overlook the fact that the foreigner has and is seeking the markets of the world and can handle them owing, aside from manufacturing advantages, to their shipping and banking connections. The American cotton printer keeps his cost of printing down only by the efficiency of organization, large runs for patterns, and consequent greater production per machine.

It might be well to note here that this is one of the mills visited by the Tariff Board, and their report is in the book.

To give you an example of the English printing, if they get an order for home trade of 5,000 yards, 12 colorings, that is considered a good order. I took an order the other day from one man, two patterns, one coloring, of 300,000 yards each pattern, making 600,000 yards. That is the only way we can bring down our costs.

I think the tariff board shows that the cost per yard is about the same here as in England, but that is due to the small runs they make. I visited a mill in Manchester a short time ago, and they had 45 machines. They told me their product was just half of the product we make on 14 machines. That was because of the small runs with a great many colorings. Our mill is running slack, and in January we will lose money.

In the actual factory cost of cotton printing, labor, drugs, and coal are the principal items. Approximately, labor is 50 to 55 per cent, drugs 24 per cent, and coal about 6 per cent. Owing to the variety of products, it is impossible to do other than generalize in the above estimations. Our labor is paid much more than that of Great Britain. I have taken Great Britain as that is the most available comparison. Germany, I think, is about the same. In nine branches the increase ranged from 50 per cent to 250 per cent. The following table will give an idea as to these higher wages in more detail:

(1) Average wages paid in domestic cotton-printing establishment to the operatives in nine divisions. We give nine only for the reason that these were the only divisions available in the cotton-printing establishment of Great Britain for comparative purposes.

(2 and 3). For checking-up purposes we have incorporated as far as possible, unfortunately in four instances only, the average hourly and average weekly wages per week of 54 hours as obtained by the government investigators and incorporated in the report of the tariff board on Schedule I, table 205.

(4) The average wages paid similar operatives in cotton-printing establishments in Great Britain. These are the only figures we could obtain, and we believe they are accurate.

(5) The per cent of increase in wages paid over here over those paid in Great Britain. In determining this per cent we have placed our minimum against their maximum.

PARAGRAPHS 315-320—COTTON CLOTH.

The English labor is generally considered more efficient than ours for the reason that the occupation has been a family trade, the father and grandfather having followed it before.

Here on this side, outside of our very skilled help, we have to take anything we can get.

Mr. FORDNEY. One of the gentlemen yesterday stated that our labor was more efficient in the cotton mills in this country than in Europe. Do you agree with him?

Mr. HOWARD. We do not spin or weave at all, and I know nothing about that; but I know in our work the skilled labor, like the overseers and men like that are more efficient because they push up on account of production. But the common labor, we have to take anything we can get. I know at our works we have a great deal of trouble. They come in one day and go out the next. They are very independent and when you call them down for making errors, they say "If you don't like us, get somebody else."

Mr. FORDNEY. The predominating part of your labor is that common labor, is it not?

Mr. HOWARD. Yes; that is the predominating part of our labor.

In the matter of dyes, we have here an element in our processes, in the dye stuffs particularly, that will presumably receive protective consideration. The foreign printer therefore, being able to purchase dyes at a lower cost, would have considerable advantage over us in this direction.

Coal is a very important and expensive item. Outside of its use for the generation of power, steam is used extensively in many processes. To-day, in our mill, outside of the development of colors, the mill is run absolutely by electricity. We have to use it to keep up a great amount of steam that is necessary to be used in the work in the development of colors, etc.

We estimate the cost of this item is double that of Great Britain, not only on account of its initial cost due to the short hauls, etc., but also on account of the superior quality of the English coal for the purposes of this industry. Over there, I understand, their mines are very near their works, and in some cases almost right next to their works, where we have this long haul, which, as you know, enters very largely into the cost. Then, besides, on account of the superior quality of their coal they can get more steam out of it and it is much better than ours.

PARAGRAPHS 315-320—COTTON CLOTH.

Now with regard to the relation of bleached to dyed and printed fabrics. In figuring our costs 21 processes are treated separately. The other manufacturers may divide this differently, but the processes still exist. We have a regular system of costs and at the end of every month we know every operation that our goods have gone through. This is tabulated and sent down and is also kept by the works. We figure it very closely. As I say, other manufacturers may divide it differently, but I am speaking only for the Windsor Co.

The CHAIRMAN. Your time has expired, but the committee will be very glad to have you finish your paper.

Mr. HOWARD. Of these 21 operations, 6 only are borne by the process of bleaching, and 2 of these are folding and packing. This leaves at least 15 operations exclusively cotton printing or dyeing. You gentlemen can readily see why we feel that there should be a still further distinction by additional protection to dyed and printed cotton fabrics over those bleached. There is the difference. You might compare this room with the Congressional Library in decoration.

We can not start the operation of printing until the cloths are bleached. It costs us more to bleach, because we are not rigged to do bleaching exclusively, and which, in itself, is a comparatively simple operation. We figure a bleachery turning out our production could do so at about 25 per cent of our cost. In Canada they have a duty of 10 per cent more for printing than for bleaching, and it seems to me that we ought to have that on account of so many processes. I will not read all of these processes, but I will just tell you of two, and that is designing, which is very expensive, and also the engraving, which is very expensive. We have to carry a great many hundred thousand pounds of copper rolls. Then, we have the sampling, which is very expensive. We figure that cost at from \$40,000 to \$50,000 a year just for samples which we make and deliver to our customers without cost to them for their selling purposes. This expense the bleachers do not have. They make the plain white, and it is always the same. Ours is constantly changing. In most instance a 5 per cent increase on dyed and printed goods over the rate on gray goods is not sufficient for the reason that raw material represents a very large proportion of the cost of gray goods, and the cost of finishing is largely labor and protected supplies and is often equal to the labor cost of the gray goods alone. Referring to the testimony given by Mr. Shipley yesterday in regard to Pacific Mills advertising goods in England, I would like to say they are advertising in London a special fabric made of print cloth yarns, for which they get more over there than they do in this country. That will be found in the tariff report there. I know they sell a great deal in Canada.

I want to present to you some samples of our goods.

The CHAIRMAN. This same paragraph that you are speaking to was spoken to yesterday by gentlemen representing the American Cotton Association, and they introduced a schedule here.

Mr. HOWARD. They presented a schedule on the weaving and then added 5 per cent for the bleaching and printing. You can see that that seems hardly fair.

PARAGRAPHS 315-320—COTTON CLOTH.

The CHAIRMAN. Do not a number of the mills of that association print cloth?

Mr. HOWARD. No, sir; not at all. All of the printing works are in New England. There is a distinction. They make goods in which they weave a stripe, called "shirting." That is nothing compared with ours. It is an entirely different process. Ours is much more complicated. It is the most complicated and scientific business I know of. I have been in it all my life, and I think that any man running a print works successfully should have a monument and that his family should be pensioned.

Mr. HULL. What is the percentage of the cost of printing to the cost of the article?

Mr. HOWARD. Do you mean the cost above the gray cloth?

Mr. HULL. Yes. What is the percentage of that as compared with the value of the articles?

Mr. HOWARD. For instance, we buy cloth at 7 cents, and the average cost, I think, is about 2 to 2½ cents for printing.

Mr. HULL. You mean by that that the cost would be about 30 to 40 per cent of the value?

Mr. HOWARD. Of the gray cloth?

Mr. HULL. Yes.

Mr. HOWARD. I should judge about 30 per cent. I should think that would cover it. Of course there are some fine goods that would cost a very great deal more. We have some goods that cost up as high as 4½ cents to print, and on others the cost is as low as a cent and a quarter.

Mr. HULL. Where cloth is bleached, mercerized, printed, and dyed those different items of cost would constitute a great deal more—

Mr. HOWARD (interrupting). No, sir; mercerizing costs more than ordinary bleaching.

Mr. HULL. Mercerizing costs more than ordinary bleaching?

Mr. HOWARD. We first have to bleach the cloth and then we have to mercerize it. We do not mercerize all of our goods.

Mr. HULL. It is only about 5 per cent of the value of the article, is it not?

Mr. HOWARD. It costs more than that. The lowest goods I have cost half a cent. Of course on the higher grades of goods it would be more. In the lowest grades we make we figure the mercerizing costs about half a cent. I am not absolutely positive about that. If you want me to, I can tell you exactly, by letter.

We are not doing much of that at the present time, and it does not seem to be so much in taste as it was before.

Mr. HULL. If I understand you, the cost of printing of the class of goods you spoke of is about 30 to 40 per cent of their value in their finished state.

Mr. HOWARD. I am not much of a figurer, but I do not think it would be quite as much as that in the finished state. It would be on some goods; it would be more than that on some. On the lower grades of goods it may be 25 per cent, and on the still lower grades, lower than the kind we make, it may be less than that. All of our work is labor, drugs and coal and things like that.

Mr. HULL. Does bleaching cost more or less than mercerizing?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. HOWARD. I could not state that authoritatively. I understand bleaching can be done as low as half a cent. As I said in my brief, it costs us more, because a bleaching works rigged up for nothing but bleaching can do it cheaper than we can. We figure about three-quarters of a cent a yard for bleaching.

Mr. HULL. The cost of mercerizing in this country and other countries is practically the same, is it not?

Mr. HOWARD. That I can not answer; I do not know.

Mr. HULL. But you think there is a difference in the cost of bleaching?

Mr. HOWARD. I know there is. The goods have to be bleached first, and then after they are bleached they are mercerized.

Mr. FORDNEY. How many men are employed in the industry which you represent?

Mr. HOWARD. I could not say. I know we have about 750 men and 14 machines.

Mr. FORDNEY. You could not give an estimate of the approximate number?

Mr. HOWARD. I could not; no, sir.

Mr. FORDNEY. What is the average wage paid in your mills?

Mr. HOWARD. I could not give you the average, but it ranges from 50 to 200 per cent in increase over Great Britain.

Mr. FORDNEY. The difference that you pay in wages over wages paid in Great Britain for the same class of labor is from 50 to 200 per cent?

Mr. HOWARD. Yes, sir. I think the Tariff Board showed that our cost of printing is approximately the same as theirs, but they make so few goods. They make small runs. I asked a gentleman in Paris how small a quantity they would take and they said four pieces, that is, 6, 7, or 8 colors—and that is what brings up their cost on account of the small runs. That mill in Manchester that I spoke of, where they have 45 machines, and where their product was just half of our product made on 14 machines, when I told them they said nothing, but they evidently did not believe me. They sent one of their men over a year or two years ago and he told me they thought I was telling fairy tales, and he also said that I did not put it strong enough. That is the only reason we can make goods as low as we can on account of the volume.

Mr. FORDNEY. On account of the volume of business?

Mr. HOWARD. Yes, sir. We use domestic cotton and we export no goods. I have tried to do it once or twice, but in England and Germany they would send over for a case of goods of 27 different styles, and each style of a different coloring, and we could not do that under 4 cents a yard. We sell our goods here, and we will have 5 or 6 colorings in a case; that is, there will be a blue, a helios, and a pink and something like that in the same pattern but in different colors. Most of the printing in England is what they call job printing. We do not do that. We do a regular corporation printing; we buy our cloth and print ahead for the wants of the trade. That is at a very large risk, because the styles are changing all the time, while with the bleached goods it is always the same and there is no change at all. In view of that fact, we think that we really ought to have more protection than 5 per cent.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. FORDNEY. Your labor cost is a very large proportion of your cost?

Mr. HOWARD. It is 55 to 60 per cent for labor alone.

Mr. KITCHIN. I believe you were in favor of the Tariff Board, were you not?

Mr. HOWARD. Yes, sir; entirely so.

Mr. KITCHIN. You were in favor of it at the time it was established and you were in favor of it until it made their report, were you not?

Mr. HOWARD. I have been in favor of it all the time. They came to our works and went through them.

Mr. KITCHIN. They made a report on the cost of printing here and abroad, did they not?

Mr. HOWARD. Yes, sir.

Mr. KITCHIN. Did not a representative of the Tariff Board examine your industry?

Mr. HOWARD. Yes, sir. They went through our mills. They examined three mills and ours was one of them.

Mr. KITCHIN. They examined your mills and others and then examined the English mills that came in competition with you and the tariff board reported that it cost you on an average less to mercerize and bleach and dye and print than it does in England, did they not?

Mr. HOWARD. As I remember, they said it was about the same.

Mr. KITCHIN. You do not mind my reading to you?

Mr. HOWARD. No.

Mr. KITCHIN. "Finishing includes the processes of bleaching, printing, dyeing, mercerizing, etc. It is the general rule in England that the finishing of cotton fabrics is carried on in establishments separate and distinct from the weaving mills. This is also true in a large measure in the United States. Since the converter or the weaving manufacturer must pay the actual commission charges, the comparison of these finishing charges in England and the United States is adequate to show the relative cost of finishing in the two countries.

"A comparison of 16 specific samples for which finishing data were obtained shows that in most cases the differences between the charges in the two countries were slight, but that the American charges were slightly lower on most of the samples."

Mr. HOWARD. If you will pardon me, they included in that bleached goods and printed goods and took the average.

Mr. KITCHIN. They also took the printed goods separately, too.

Mr. HOWARD. I understood, I could not state positively—

Mr. KITCHIN (interposing). You really think, now, with your knowledge of the business, that they did not get the correct information?

Mr. HOWARD. I do not think they got it correct on the printed goods, although, as I said—

Mr. KITCHIN (interposing). They have the data correct on all these other businesses except yours?

Mr. HOWARD. I would say that, because they probably went into this very thoroughly. I know they did with us; but, as I stated to the gentleman on my right, the difference between England—I have

PARAGRAPHS 315-320—COTTON CLOTH.

taken England as the point, you know, and I presume it is the same in Germany—it is on account of their small products.

Mr. KITCHIN. Really, if we were to write this bill according to the Tariff Board's report, we would not allow you any duty at all on the printed goods, would we? I do not say that we are going to do it, but if we did do it we would not allow you any duty.

Mr. HOWARD. I do not know, but I think you would.

Mr. KITCHIN. You are not so much in favor of the Tariff Board now as you were before they made this report, are you?

Mr. HOWARD. Yes, I am; I believe in having a tariff board. I am sure we would be very glad to have them do it.

Mr. KITCHIN. After making that report, do you want us to write a bill in accordance with that report?

Mr. HOWARD. I want you to write a bill and give us protection, because if you do not they will come over here and do all the business.

Mr. KITCHIN. When the Tariff Board reports that you do not need protection upon a certain specific article, do you think that the Tariff Board is wrong, and that Congress really should give protection whether they say it needs it or not?

Mr. HOWARD. I have not read the report. Undoubtedly they know more about it than I do. But I know we need protection, and if we do not get it—

Mr. KITCHIN (interposing). But the Tariff Board says that you do not need protection.

Mr. HOWARD. Then in that they are wrong.

Mr. KITCHIN. That is the point I am trying to make.

Mr. FORDNEY. Let me say to the witness that the gentleman from North Carolina read the report of the Tariff Board and he was so displeased with it that he refused to vote for any further funds to continue the Tariff Board in existence.

Mr. KITCHIN. That was after the Underwood bill, which showed that we did not need that extra expense of maintaining a tariff board, because the Ways and Means Committee was a sufficient tariff board to write proper tariff bills. The Tariff Board report vindicated the Underwood bill.

Mr. HOWARD. If they are going to talk that way I must say that I won't be in favor of it.

Mr. KITCHIN. That is all.

Mr. HOWARD. I would like to make this statement: Yesterday you were speaking of this being for revenue for the Government. I can not get it through my head why in order that we may get a few million dollars' worth of revenue we should have to put up millions that go abroad for them to use instead of keeping it in this country for the industries of this country to make prosperity and increase the purchasing power. That is a question that I can not get through my head.

The CHAIRMAN. If I should answer that question fully I might bring on a political controversy, because my friends at the other end of the table would not agree with me. If they will let me state to you what our purpose is without bringing on a political controversy I will be glad to answer your question. As I stated yesterday, and believe, the primary purpose of taxing the American people is to

PARAGRAPHS 315-320—COTTON CLOTH.

raise revenue for the Government. If you get protection out of levying those taxes, it is only an incident, whereas the man who believes in the protection theory believes that protection is the purpose and the revenue that flows in is an incident to it. Believing that primarily the purpose of levying the tax is to raise revenue for the Government, we can not consent and allow taxes to be so high that they prohibit importation, and where the taxes all go to the benefit of the manufacturers, while none of it goes into the pockets of the Government. Therefore, when we find a schedule blocked, we feel it our duty to open it to an extent where the Government will get some proportion of the tariff.

Mr. HOWARD. Mr. Chairman, do you think that the consumer will get the benefit of this?

The CHAIRMAN. Well, we hope he will; we think he will on some articles. On some articles he probably will not; but we hope he will get the benefit by his Government getting a reasonable proportion of the taxes that are levied under this law instead of the manufacturer getting all of it; because if it is a prohibitive tax, that tax goes into the pockets of the manufacturer and none of it goes into the pockets of the Government.

Mr. HOWARD. The people get caught in between. They do not always get any benefit of it. I know in our goods that we might have a difference of a cent or a cent and a half a yard, but the consumer would pay the same price whether our price is high or low.

The CHAIRMAN. Even if this does not result in reducing the price to the consumer, we hope it will to some reasonable extent; but even if it does not, if we pull down the prohibitive wall where there is some competition and the Government gets some benefit from these taxes, the people will get the benefit by gathering these taxes themselves that they can spend on public improvements, maintaining the Army and the courts, and to that extent they get the benefit of the lowering of these taxes, because they get some revenue. We are not complaining against taxes where there is a reasonable amount of importation, but we are protesting against those taxes where they are prohibitive and practically nothing comes in.

Mr. HOWARD. I think you have a pretty hard job and I do not envy you.

Mr. FORDNEY. Mr. Chase, of Massachusetts, showed yesterday where the consumer got it in a certain class of goods where he sold for $8\frac{1}{2}$ cents a yard and which was then retailed at 25 cents. The consumer got it in the neck in that case.

Mr. HOWARD. Yes, sir; and they do our goods the same way.

Mr. PETERS. Just in that connection, the gentleman from North Carolina called attention to the report of the Tariff Board, and I would like to read from page 502 of that report, where they make a comparison of 100 samples of cotton finishing in the United States, and where the Tariff Board goes on to say:

It will be seen from the table that in the case of most of the samples for which data were obtained in the two countries the American charges were lower. In a few instances the American rates are only about one-half of the English.

The duty has been shown elsewhere in this report to be, in most cases, in excess of the total cost of finishing in this country. A comparison of the duty with the difference in the finishing charges in the United States and England, in cases where

PARAGRAPHS 315-320—COTTON CLOTH.

such charges are higher in this country, will show that the duty is many times that difference.

The CHAIRMAN. Mr. Howard, your position is evidently not sustained by the Tariff Board. However, we will consider what you have to say.

Mr. HOWARD. I think we had better drop it.

COTTON PRINTING IN THE UNITED STATES.

OBJECTS.

This memorandum is submitted for the reason that in a recently proposed tariff bill there is a difference of but 5 per cent between the proposed duty on gray or unbleached cloths and the proposed duty on the same cloths bleached, dyed, printed, or otherwise treated. We shall endeavor to show that a still further distinction should be made between the duties of these fabrics bleached and these fabrics dyed or printed, as contrary action would not only seriously handicap the cotton-printing industry but by this handicap react upon the cotton-cloth mills of both the North and South, of whom the cotton printers or finishers are the largest customers.

THE COTTON-PRINTING INDUSTRY.

Without burdening your committee with unnecessary details or figures, and speaking as a representative of a typical cotton-printing mill, the Windsor Print Works, merchandising its own products, located in North Adams, Mass., representing an investment of \$1,600,000, having 14 printing machines, employing 750 hands, with an annual production of exclusively printed and dyed cotton fabrics, fifty to sixty million yards, approximately valued at \$4,000,000, first let me give an idea as to the magnitude of this industry.

According to the latest figures available (1911), there are in the United States about 29 establishments equipped to do cotton printing, ranging from 2 to 25 machines—United States Finishing Co., 50 machines. These mills operate a total of 392 machines, we estimating the average daily product of each machine running full at 250 pieces of 50 yards each, we have a daily consumption of cloth of 98,000 pieces, or per working year of 300 days, 29,400,000 pieces, or 1,470,000,000 yards. This is printed material alone, and does not include dyed cotton fabrics. These figures give you an idea of an industry the magnitude of which deserves serious consideration.

The cotton-printing industry is progressive, has developed from a low quality of goods, ranging from $4\frac{1}{2}$ to 6 cents per yard to finer and higher grades, selling as high as 60 cents. It needs encouragement. We can now produce workmanship equal to that of any country in the world, due to a protection the withdrawal of which would undoubtedly bring in a foreign competition that would destroy the progress made for reasons we shall show.

In England a few years ago the large printers formed a trust called the "Calico Printers Association." There are a few independents, but the business is largely controlled by this association. They group the products in the different mills so as to cheapen production. I understand they are very autocratic, not printing or selling to any one who does not give them all of their printing business.

COMPETITION.

There is no lack of domestic competition in this field. It is persistent and keeps prices down to the lowest point. The production of our cotton-printing mills when running full would more than supply any domestic demand for our products. The business has been poor for the last few years, but the outlook for the future, if undisturbed, is more hopeful. We must not overlook the fact that the foreigner has and is seeking the markets of the world and can handle them, owing, aside from manufacturing advantages, to their shipping and banking connections. The American cotton printer keeps his cost of printing down only by the efficiency of organization, large runs for patterns, and consequent greater production per machine.

PARAGRAPHS 315-320—COTTON CLOTH.

FACTORS IN FACTORY COST.

In the actual factory cost of cotton printing, labor, drugs, and coal are the principal items. Approximately labor is 50 to 55 per cent; drugs, 24 per cent; coal, about 6 per cent. Owing to the variety of products, it is impossible to do other than generalize in the above estimations.

LABOR.

Our labor is paid much more than that of Great Britain, in nine branches the increase ranging from 50 per cent to 250 per cent. The following table will give an idea as to these higher wages in more detail. In the compilation of this table we present:

(1) Average wages paid in domestic cotton printing establishments to the operatives in nine divisions. We give nine only for the reason that these were the only divisions available in the cotton printing establishments of Great Britain for comparative purposes.

(2 and 3) For checking-up purposes, we have incorporated as far as possible, unfortunately in four instances only, the average hourly and average weekly wages per week of 54 hours, as obtained by the Government investigators and incorporated in the report of the Tariff Board on Schedule I, Table No. 205.

(4) The average wages paid similar operatives in cotton printing establishments in Great Britain. These are the only figures we could obtain and we believe they are accurate.

(5) The per cent of increase in wages paid here over those paid in Great Britain. In determining this per cent we have placed our minimum against their maximum.

Class of labor.	General New England wages.	Report Tariff Board, Table 205, per hour.	Report Tariff Board, Table 205, per week of 54 hours.	Great Britain, wages.	Per cent increase United States over Great Britain.
Foreman in print room.....	\$45-\$60			\$25.00	80
Machine printer.....	28- 33	\$0.4960	\$26.78	12.50	124
Sketcher.....	25- 30	.4805	25.92	\$7.50- 12.50	100
Machine engraver.....	24- 30	.4550	24.57	10.00	140
Hand engraver.....	24- 30			10.00	140
Plate cutter.....	24- 26	.4701	25.38	7.50- 9.00	166½
Assistant colorist.....	40			7.50- 12.50	220
Overseers.....	35			10.00	250
General help.....	9- 12			5.00- 6.00	50

The English labor is generally considered more efficient than ours, for the reason that the occupation has been a family trade, the father and grandfather having followed it before.

DRUGS.

We have here an element in our processes, in the dyestuffs particularly, that will presumably receive protective consideration. The foreign printer, therefore, being able to purchase dyes at a lower cost would have considerable advantage over us in this direction.

COAL.

Is a very important and expensive item. Outside of its use for the generation of power, steam is used extensively in many processes. We estimate the cost of this item as double that of Great Britain, not only on account of its initial cost due to the short hauls, etc., there, but also on account of the superior quality of the English coal for the purposes of this industry.

THE RELATION OF BLEACHED TO DYED AND PRINTED FABRICS.

In figuring our costs 21 processes are treated separately. Other manufacturers may divide this differently, but the processes still exist. Of these 21 operations six only are borne by the process of bleaching, and two of these six are folding and packing. This leaves at least 15 operations exclusively cotton printing or dyeing. You gentlemen can readily see why we feel there should be a still further distinction by additional protection to dyed and printed cotton fabrics over those bleached. We can not start the operation of printing until the cloths are bleached. It costs us more to

PARAGRAPHS 315-320—COTTON CLOTH.

bleach, because we are not rigged to do bleaching exclusively, which in itself is a comparatively simple operation. We figure a bleachery turning out our production could do so at about 25 per cent of our cost.

SUMMARY.

The relief to be hoped for or maintained is based upon—

1. Our higher labor and drug costs.
2. The fact that the production of our printing and dyeing establishments is more than sufficient to supply all domestic demands, and we can not yet do an export business of any extent against foreign competition due to foreign banking and shipping connections and their study for years of export requirements, which we have yet to learn.
3. The domestic competition is strong and foreign competition in addition would be destructive.
4. The success of a cotton-printing mill depends upon running practically full capacity. The mills in this country have been unable to do this for some time.
5. The printing and dyeing are many steps ahead of bleaching and, therefore, should not be classed with that process, but receive greater protection.

RECOMMENDATION.

While specific duty may be distasteful, yet this particular industry would seem appropriate as an exception. An ad valorem duty on the cloth used by us in the gray, then sliding specific duty on each of the processes of bleaching, dyeing, and printing, would give a stable protection that would protect us and our labor in times of foreign depression.

Respectfully submitted.

CHARLES M. HOWARD,
Vice President, Windsor Print Works.

JANUARY 22, 1913.

ADDENDA.

Since compiling the above we learn that Canada has a protective tariff of 25 per cent on bleached cotton goods and 35 per cent on printed cotton goods. Canada gives England a preferential duty on the above. We understood formerly it was 33½ per cent of above duties, but that the duties now on English goods into Canada are 15 per cent on bleached goods and 25 per cent on printed cotton fabrics.

We attach to this memorandum:

- (1) A schedule of the 21 mill operations referred to in the memorandum.
- (2) Samples of some of our products with approximately total cost of manufacture of each; also price of gray cloth.

Operation in a cotton-printing establishment as mentioned in the memorandum (departments marked * are those in which bleaching enters. The total number of processes are shortened by two or three in our various products).—1, design or styling of mill (this department is absolutely necessary and costs many thousands of dollars per year); 2, engraving (this department keeps tied up continually hundreds of thousands of pounds of highest grade copper); *3, shear; *4, bleach; 5, mercerizing; 6, white; 7, color; 8, printing; 9, slop pad; 10, steam; 11, develop; 12, soap; 13, cut; 14, indigo; 15, fancy dye; *16, starch; 17, nap; 18, tenter; *19, calender; 20, schreiner; *21, fold; *22, pack; 23, sampling.

Sampling.—A most expensive department that does not exist in bleacheries. This department covers the samples we make and deliver to customers without cost to them for their selling purposes. Foreign printers charge for these. It is impossible to do so in this country, so this department distributes millions of samples per annum at a cost of many tens of thousands of dollars.

In most instances a 5 per cent increase on dyed and printed goods over the rate on gray goods is not sufficient, for the reason that raw materials represent a very large proportion of the cost of gray goods and the cost of finishing is largely labor and protected supplies and is often equal to the labor cost of the gray goods alone.

PARAGRAPHS 315-320—COTTON CLOTH.

TESTIMONY OF ARTHUR H. LOWE, FITCHBURG, MASS.

Mr. Lowe was duly sworn by the chairman.

Mr. LOWE. Gentlemen, I am not familiar with this and I may not say what I would like to say, and as I have prepared a paper, I would like to ask your patience while I read it.

I shall take little of your time in presenting a few facts relating to the manufacture of cotton goods in the Eastern States.

New England in 1912 had 17,139,945 active cotton spindles. More than 190,000 wage earners are employed in our cotton mills and are dependent on them for a living, with probably 400,000 more persons dependent on them. These employees are paid annually about \$80,000,000.

At least \$300,000,000 is invested in New England mills, the stockholders being many in number and widely scattered over the country. The value of their product is about \$200,000,000 annually. The cost of materials other than fuel or power is about \$90,000,000 a year, nearly all of this being brought from other parts of the Union.

Therefore, any measure that affects our New England mills directly affects other parts of the United States.

Besides this, the four leading Southern States in cotton manufacture had in 1912 over ten and a half million active spindles. Depression in our great industry in New England means that there will be depression in the South.

We know that the standard of living of our mill employees is better and that wages are higher than in England.

We desire to keep them so, as undoubtedly do you.

We do not appear here to claim that all the rates of duty now existing are right, but we do urge that the committee continually keep before it the effect upon hundreds of thousands of people of a sudden and radical change. I believe that the schedule submitted to-day to your committee by the committee of the American Cotton Manufacturing Association represents the lowest rates that it is wise to make in any case, and I think that the rates upon the finer goods should be higher. I urge that none of the rates be made lower than the schedule submitted.

In view of the fact that labor is a large proportion of the cost of producing fine goods, running sometimes as high as 60 per cent of the total cost, we claim that the rates of duty should be highest upon such goods into which the larger percentage of labor enters.

I read that the chairman of this committee has said that he would like to see all the industries in open and in real competition with each other. That competition exists now among domestic mills and is very keen. Further reductions in the tariff rates would result in reduction in the wages paid to our labor.

The Payne-Aldrich bill increased the imports free of duty from 40.3 per cent to 51.2 per cent of the amount of imports as compared with the Dingley bill and reduced the average duty upon imports from 25.5 per cent under the Dingley bill to 20.1 per cent under the Payne bill, and, notwithstanding the criticisms of the Payne bill, under it we have paid the highest wages ever known in normal times.

PARAGRAPHS 315-320—COTTON CLOTH.

Your committee will be unusually skillful if you shall be able to increase the free list, reduce duties, and increase wages, which were the results obtained under the Payne bill.

We hear much these days about the high cost of living and that the tariff is held responsible for the condition. One of the reasons for the high cost of living is because we are living upon things that cost high and the cost of most things is regulated by the price of labor paid for producing them. High wages and high cost of living will always go together. You can not legislate low cost of living as long as high wages are paid for labor. Another reason for high cost of living is the fact that for the moment the proportion of consumers is all out of proportion to producers and not because duties are high or low upon certain articles.

A large part of the increase in the costs of cotton goods is due to the reduced number of hours per week that cotton mills are now operated, and to new legal requirements, such as the workingmen's compensation acts. In the last 20 years the earning capacity of the cotton mills in the New England States has been reduced more than 10 per cent due to shorter hours and other causes.

Some claim that a tariff should be for revenue only. This means that the importer shall be encouraged and the American manufacturer discouraged. A case of goods imported to obtain the revenue, displaces a case of goods that should have been made in our country by our labor. Encourages industrial development abroad, discourages it at home. Goods made in Germany and imported and sold in this country can not be made in Alabama or Massachusetts.

Goods imported into this country do not pay any of our taxes, gentlemen; they do not help us in the education of our people, nor do they help to perform any of the other functions of the Government.

I represent especially the manufacturers of gingham, an important branch of this industry. A gingham is woven wash fabric made from colored yarns.

I would like to take just a moment of your time to describe the manufacture of gingham fabrics. We receive the cotton from the South; it comes to our warehouse; it is carefully inspected there; and then it is taken to the opening room. It goes through the opening room machinery, picking machinery, cards, drawing, fine speeders or coarse speeders, spinning, spooling, and warping. The yarn is then taken to the dyehouse and put through various processes, some of which are very dangerous to the material. We often suffer a loss for bad colors, over bleaching, and so forth. After the processes in the dyehouse it goes to the beamers, where it is put upon beams. Then it goes to the dressing room, and is dressed and is ready for the loom. Many of these patterns are so intricate that they require anywhere from one to three or four or five separate beams, according to the ornamentations to be put upon the cloth. The boxes are from 1 to 6, and the harnesses of this intricate motion are anywhere from 4 to 20. Now, the result is that when this has all been done, it is taken to the weaver, and some of our patterns of goods can only be produced at the rate of 10 yards in a day at the most. Then the cloth, after it has gone through these processes, comes to the inspecting

PARAGRAPHS 315-320—COTTON CLOTH.

room, the finishing room, where it is prepared for the market. In addition to the ordinary cloths it requires cards, expensive cards, showing patterns, colors, styles, and so forth.

This requires very high-class and expert artisans. We require designers, dyers, and fancy weavers, and also a high grade of labor in our finishing room. The goods that we make range in retail price from $7\frac{1}{2}$ to 25 cents a yard. There is close competition on the coarser qualities among the domestic mills. We make a high-grade gingham that retails at from 25 to $37\frac{1}{2}$ cents per yard, which comes in competition with the well-known Anderson gingham from abroad. Many of the Anderson ginghams are now imported under the present tariff, and I believe that the duty applying to that line of goods should remain as now. The gingham business is done in seasons, requiring the accumulation of goods and heavy interest and insurance charges.

I believe in the creation of a permanent tariff commission, before whom tariff schedules, rates, and conditions shall be laid, as railroad matters are now laid before the Interstate Commerce Commission. Its power would probably be only advisory, but such a commission would readily decide whether an industry was suffering because of too low a tariff or discover if excessive profits were being made on account of too high a tariff.

I believe that the present system of duty should be preserved. Innumerable troubles are sure to come under the ad valorem system. The ad valorem duties would protect us favorably when business is good and we least need such protection; and would work to our disadvantage during times of bad business when we need the most protection. Undervaluations can not be prevented unless you could incorporate into the administration part of the act something like publicity of invoices.

The CHAIRMAN. Mr. Lowe, your time has expired. Are you nearly through with your statement?

Mr. LOWE. I have just a part of a page, Mr. Chairman.

The CHAIRMAN. All right; finish your statement.

Mr. LOWE. Proper valuation can be evaded by skillful manipulators of goods and the men and women engaged in the business of manufacturing, from the stockholders to the poorest paid employee are bound to suffer through very large importations.

There is no industry in which domestic competition is keener. The South competes with the North in coarse goods and is rapidly advancing along fine goods lines.

The cotton mills of Anreica are scattered from Alabama to Maine. A steady advance is being made in the character of the goods made, so that as our workmen become more skilled, we shall not be importing our most expensive fabrics from abroad as we do now. With our higher wages and higher costs all along the line, with our scattered plants, as against the centralized mill districts of England, with our tremendous contributions of local, State, and Federal taxes which are not imposed on English goods, and with the standards already set up for our employees, we urge you to see that a radical reduction would mean either ruin to our industry, or a complete readjustment of our cost of production based on present wages.

PARAGRAPHS 315-320—COTTON CLOTH.

With the prices of materials practically determined by others than ourselves, the burden of that readjustment would fall upon labor.

While appreciating how we may differ on the economic policy we beg you to study the practical difficulties that confront us if your action makes such readjustment necessary.

In concluding, I would say that New Englanders believe that this committee is sincerely trying to solve a difficult problem and that it is far from its desire to injure American labor and hamper American industry. We come to protest against drastic action, because we believe it will have that effect. We shall be glad at any time to procure or to cooperate in procuring any information relating to the cotton manufacturing industry desired by this committee.

I thank you for your attention.

The CHAIRMAN. I do not think it is generally understood throughout the industry, and I merely want to call your attention to one fact, which is that Congress has created in the Department of Commerce and Labor a Bureau of Foreign and Domestic Commerce, and has given it more power than has ever been given to the Tariff Board to investigate these industrial questions and report the facts ascertained both to Congress and to the President. Although it is not a tariff board, it is a bureau that has been established within the last year by this Congress, and I hope that during the incoming administration that bureau will be vitalized by the necessary appropriations to enable it to furnish this committee in the future all the necessary data and facts, for, in the end, it is this committee that must find a verdict as long as the Constitution of the United States remains.

Mr. LOWE. Is this commission to which you refer, or this board, a board to which we can appeal a case of tariff difficulty?

The CHAIRMAN. No; it is not a board. It is a bureau. It is one of the bureaus in the Department of Commerce and Labor, recently established. It has now a Division of Tariffs, and it is intended not only to look after the tariff end of the question, but to look after our foreign and domestic commerce. All of those duties will be under that bureau, and all it needs to permit it to perform the business of the Tariff Board, as the Tariff Board has performed it heretofore, is the necessary appropriation, which I think will be granted to it by the incoming administration.

Mr. HARRISON. Mr. Lowe, will you inform the committee as to the name of your mill?

Mr. LOWE. The Park Hill Manufacturing Co. at Fitchburg and Lancaster Mills at Clinton.

Mr. HARRISON. You are one of the most important manufacturers of gingham, are you not?

Mr. LOWE. I would not say that.

Mr. HARRISON. You have a considerable share of the American production, have you not?

Mr. LOWE. I represent a large interest.

Mr. HARRISON. You are an old established industry?

Mr. LOWE. The Lancaster Mill is an old established mill. The Park Hill is a more recent organization.

Mr. HARRISON. You say you are in favor of a tariff board?

Mr. LOWE. Yes, sir.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. HARRISON. Were your mills inspected by the Tariff Board in making this report on cotton?

Mr. LOWE. Yes, sir.

Mr. HARRISON. Both of them?

Mr. LOWE. I think they had agents at both of them, or representatives.

Mr. HARRISON. Were your books open to the agents as well as the mills themselves?

Mr. LOWE. Yes, sir.

Mr. HARRISON. And all your processes of manufacture?

Mr. LOWE. Yes, sir; and they have in their hands our reports as they come to my office.

Mr. HARRISON. Now, I want to ask you about the class of goods that you manufacture. They are fine gingham, are they not?

Mr. LOWE. We manufacture different grades. We start at the lower grades and go to the highest grade.

Mr. HARRISON. You manufacture from 17½-cent gingham to 37½-cent gingham?

Mr. LOWE. Yes, sir.

Mr. KITCHIN. Is that a retail or wholesale price?

Mr. HARRISON. A retail price.

Mr. LOWE. A retail price.

Mr. HARRISON. And those are manufactured to compete in our markets with the Anderson gingham, from abroad, I understood you to say?

Mr. LOWE. Yes, sir.

Mr. HARRISON. They are very much like the Anderson, are they not?

Mr. LOWE. We try to make them better.

Mr. HARRISON. Well, are they not so much alike that it would be difficult for any one not an expert to tell where these gingham were bought, whether abroad or in Fitchburg?

Mr. LOWE. I think that may be so in some cases.

Mr. HARRISON. How do the prices of your gingham compare with the Anderson gingham in our markets?

Mr. LOWE. I think the prices are substantially the same.

Mr. HARRISON. Just exactly the same?

Mr. LOWE. The prices vary, of course, in fancy goods and goods of that nature, depending much upon the patterns and coloring and weave.

Mr. HARRISON. So that your price is fixed by the unit value at the customhouse, plus the duty?

Mr. LOWE. Yes, sir; practically.

Mr. HARRISON. On the competing grades of Anderson gingham. Now, are your gingham stamped in any way with the name of the manufacturer?

Mr. LOWE. We put on all the stamps we can make stay.

Mr. HARRISON. You stamp it with your name?

Mr. LOWE. Yes, sir.

Mr. HARRISON. Are any of your own make of gingham circulating in our markets with the English stamps on them?

Mr. LOWE. I do not know of any.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. HARRISON. Have you never heard of that being done?

Mr. LOWE. Yes, sir.

Mr. HARRISON. Has it never been done to your recollection with your own gingham?

Mr. LOWE. Well, I could not say. Any transactions of that kind are pretty well covered.

Mr. HARRISON. Will you state under oath, as, of course, you are under oath, that that has never been done in your own mills?

Mr. LOWE. It never has been done in our own mills.

Mr. HARRISON. And to the best of your knowledge and belief that it has never been done to your gingham by anybody else?

Mr. LOWE. I can not say that.

Mr. HARRISON. Do you know—

Mr. LOWE. After it has passed out of our hands we have no control over it.

Mr. HARRISON. Have you any knowledge as to whether or not any of them are circulated under pretense of being English gingham in our market?

Mr. LOWE. I do not know, sir.

Mr. HARRISON. Such a matter has never been brought to your attention as to any of your own gingham?

Mr. LOWE. We have been told that some of our gingham are sold as imported gingham, but we have no way of knowing.

Mr. HARRISON. When was that told to you?

Mr. LOWE. Not within two or three years.

Mr. HARRISON. Then, two or three years ago, you were told that your gingham were circulating here as imported gingham, with the stamp of a foreign manufacturer on them.

Mr. LOWE. I never saw it.

Mr. HARRISON. You were told, though, that that was so.

Mr. LOWE. Not that they were stamped; no, sir.

Mr. HARRISON. But that they were stamped as imported gingham?

Mr. LOWE. Were sold.

Mr. HARRISON. By whom were they sold as imported gingham?

Mr. LOWE. By the retail trade.

Mr. HARRISON. Well, by whom, for example?

Mr. LOWE. I have no knowledge of any particular concern.

Mr. HARRISON. What retailers deal in your gingham?

Mr. LOWE. Well, the general retail trade.

Mr. HARRISON. Will you name to the committee any house in New York, for instance, that deals in your gingham, in the retail trade?

Mr. LOWE. I do not know that I can tell positively.

Mr. HARRISON. You have never been sufficiently interested to know who sells your goods?

Mr. LOWE. Yes, sir; we are.

Mr. HARRISON. Well, who does, then?

Mr. LOWE. Lord & Taylor sells our goods, for one.

Mr. HARRISON. Who else?

Mr. LOWE. I think that class of dealers.

Mr. HARRISON. Arnold & Constable?

Mr. LOWE. I think they have.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. HARRISON. Who was it that told you that your gingham were being sold as imported gingham?

Mr. LOWE. Our representative, the salesman.

Mr. HARRISON. Your salesman?

Mr. LOWE. Yes, sir.

Mr. HARRISON. Who did he tell you were selling your gingham as imported gingham?

Mr. LOWE. I do not think he specified who was doing it, Mr. Harrison. I just think it came to us as a matter of general report, that our gingham were being sold as imported gingham by the trade, that they had removed the marks and bands, and that they were selling our goods.

Mr. HARRISON. That is all. Thank you.

Mr. McCALL. Mr. Lowe, are you a member of the Arkwright Club?

Mr. LOWE. Yes, sir.

Mr. McCALL. Are you one of the officers?

Mr. LOWE. Yes, sir.

Mr. McCALL. You heard something stated here yesterday about the Arkwright Club?

Mr. LOWE. I am one of the vice presidents, Mr. McCall, and I am very proud of it.

Mr. McCALL. Suppose you tell the committee a little about that club, Mr. Lowe.

Mr. LOWE. I heard what was said yesterday about the Arkwright Club, and it seemed to me rather unfair that the Arkwright Club should stand before this committee in the attitude the gentleman would seem to want to have it.

Mr. HARRISON. You understand, Mr. Lowe, that my questions about the Arkwright Club were taken from the sworn testimony of the secretary of the club before an investigating committee of Congress.

Mr. LOWE. I thought it was done, in a spirit, perhaps, to show its lack of usefulness. I would like to say that the Arkwright Club is, like other commercial bodies of that kind, a very useful club. We discuss, gentlemen, not whether wages shall be raised or lowered, except, if that question arises, we discuss it to see if there is not some possible way to prevent a reduction of wages. There is no manufacturer that wants to reduce his wages. He wants to keep his wages at the highest possible point. The Arkwright Club discusses the growth of cotton, and has spent thousands and thousands of dollars in the production of cotton. They contribute two or three thousand dollars a year to Mr. Allen for the development of long staple cotton. I believe hundreds of millions of dollars of insurance has been saved through the discussions and work and efforts of the Arkwright Club, and our manufacturing establishments. We discuss the price of coal, the transportation of coal, and the discharging of coal. We work upon those items that are vital to our industry; and, sirs, it is one of the most honorable organizations in this country and needs no defense.

Mr. KITCHIN. What is the annual output of your two mills?

Mr. LOWE. In dollars or in volume?

Mr. KITCHIN. In dollars and cents.

PARAGRAPHS 315-320—COTTON CLOTH

Mr. LOWE. About \$5,000,000.

Mr. KITCHIN. How much are you exporting?

Mr. LOWE. None, to speak of. We send some to Porto Rico and Cuba.

Mr. KITCHIN. Do you send some to Canada?

Mr. LOWE. No, sir.

Mr. KITCHIN. You do not ship any to Canada?

Mr. LOWE. No, sir.

Mr. KITCHIN. About how much are we shipping to Canada of these ginghams from the United States; do you know?

Mr. LOWE. I think the quantity is small.

Mr. KITCHIN. Do we ship more to Canada than does the United Kingdom or England?

Mr. LOWE. I do not think so.

Mr. KITCHIN. If we do ship to Canada in competition with England, which has a 33½ per cent preferential duty in her favor and as against us it would show that we ought to be able to compete in our own market, with no preferential against us, with the English goods, does it not?

Mr. LOWE. There is plenty of competition here at home.

Mr. KITCHIN. I know you claim there is plenty of competition at home. That is what we would like to see; but if we can sell these goods to Canada and come in competition with goods from England, your foreign competitor, and England has a 33½ per cent preferential duty in her favor, would not that seem to indicate that we ought to be able to compete with England right here in our own market?

Mr. LOWE. That condition might be possible temporarily.

Mr. KITCHIN. You are in favor of a tariff board, are you not?

Mr. LOWE. Yes, sir.

Mr. KITCHIN. Did the Tariff Board report upon the plain ginghams and not the finer class of ginghams that were shipped in here from abroad?

Mr. LOWE. I am not positive about that.

Mr. KITCHIN. Let me read to you from it: "Ginghams, selling price, No. 2, American producers' selling price, per yard, $8\frac{3}{10}$ cents; English producers' selling price (at home, of course), $9\frac{2}{10}$ cents." How much money have you invested in your two mills? I do not mean you, personally, but how much is the capital?

Mr. LOWE. Do you mean the capital stock?

Mr. KITCHIN. Yes, sir.

Mr. LOWE. The capital stock of the Lancaster mill is \$1,000,000; the Park Hill Manufacturing Co., \$300,000.

Mr. KITCHIN. When was the million-dollar mill established?

Mr. LOWE. In 1844 or 1845.

Mr. KITCHIN. When was the last time you increased the capital stock of that mill?

Mr. LOWE. About three years ago.

Mr. KITCHIN. How much did you increase it?

Mr. LOWE. \$400,000.

Mr. KITCHIN. You increased it from the surplus that had been accumulated, did you?

Mr. LOWE. I wish we had.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. KITCHIN. Well, I just asked you the question.

Mr. LOWE. No, sir. I have been connected with the Lancaster mill for five years. At the time I took—

Mr. KITCHIN. You what?

Mr. LOWE. I have been connected with the Lancaster mill for the last five years.

Mr. KITCHIN. How much has it increased its capital stock since you have been connected with it—\$400,000, you say?

Mr. LOWE. I reduced the capital stock, which was then \$1,000,000, to \$300,000, making an assessment on the stockholders of \$300,000, making the capital stock \$600,000.

Mr. KITCHIN. Do you mean you squeezed \$300,000 of water out of it?

Mr. LOWE. There is not any water in our cotton manufacturing plant, Mr. Kitchin.

Mr. KITCHIN. How much are the assets of your company? How much do your books show the assets of your company to be?

Mr. LOWE. You mean including the real estate and machinery?

Mr. KITCHIN. Yes; the assets of the company. You know how you carry the assets on your books.

Mr. LOWE. Well, but I do not know how you want it. I do not know whether you want the real estate and machinery, or whether you want to include all the goods and processes.

Mr. KITCHIN. What is your plant, then; what are the assets of your plant?

Mr. LOWE. The Park Hill Manufacturing Co., \$600,000.

Mr. KITCHIN. How much is the capital stock on that, you say?

Mr. LOWE. \$300,000.

Mr. KITCHIN. Where do you get that extra \$300,000?

Mr. LOWE. Just at the present moment we are borrowing it, sir.

Mr. KITCHIN. How much did you have to borrow—the whole \$300,000? You had no surplus to turn into that, did you?

Mr. LOWE. Yes, sir.

Mr. KITCHIN. You have not profited much under the Dingley Act and the Payne Act, have you, if you have no surplus at all?

Mr. LOWE. We did a satisfactory business, Mr. Kitchin.

Mr. KITCHIN. How much dividends have you been declaring, say, for the last five years?

Mr. LOWE. For the last five years, at the Lancaster mill, we paid 25½ per cent in five years.

Mr. KITCHIN. Do you mean for the whole five years?

Mr. LOWE. Yes, sir.

Mr. KITCHIN. How much do you carry to surplus?

Mr. LOWE. Nothing, sir. Last year we lost \$85,000.

Mr. KITCHIN. You had no fires; you did not lose anything by fires?

Mr. LOWE. No, sir.

Mr. KITCHIN. Or bad accounts, or anything like that?

Mr. LOWE. No, sir; but we had a bad strike, Mr. Kitchin. I want to be frank with you.

Mr. KITCHIN. That strike was at the Lancaster mill?

Mr. LOWE. Yes, sir.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. KITCHIN. When was that strike?

Mr. LOWE. It lasted for about three months.

Mr. KITCHIN. When was it, I mean?

Mr. LOWE. From March to July.

Mr. KITCHIN. Of this last year?

Mr. LOWE. Yes, sir.

Mr. KITCHIN. What caused your strike; were you not paying them enough?

Mr. LOWE. We agreed to pay them the same as we are paying them now.

Mr. KITCHIN. But they wanted some more, did they not?

Mr. LOWE. No, sir.

Mr. KITCHIN. What did they strike for; was it a sympathetic strike?

Mr. LOWE. Just an agitation.

Mr. KITCHIN. An agitation?

Mr. LOWE. Yes, sir.

Mr. KITCHIN. What was the agitation about?

Mr. LOWE. I suppose the agitator wanted pay for his job.

Mr. KITCHIN. Were they agitated over the Payne-Aldrich Act?

Mr. LOWE. I do not think they were very familiar with that.

Mr. KITCHIN. What were they agitated about? Were they agitating for shorter hours or more wages, or better houses to live in, or about the high cost of living, or what?

Mr. LOWE. One of the reasons for the strike was on account of the opposition to a law which is called the fining system.

Mr. KITCHIN. Is that a law of your place?

Mr. LOWE. Yes, sir; State law.

Mr. KITCHIN. Did your manufacturers have anything to do with making that law? Your association recommended that law, did it not?

Mr. LOWE. I do not think it had anything to do with it. I never heard anything about it.

Mr. KITCHIN. You did not know there was any such law until they began to have this strike, did you?

Mr. LOWE. Yes, sir.

Mr. KITCHIN. What part did you and your company take in the agitation for the law?

Mr. LOWE. None whatever.

Mr. KITCHIN. That law is very distasteful to the laboring people in your State, is it not? It was so much so that they had strikes, was it not?

Mr. LOWE. I have said we had strikes.

Mr. KITCHIN. What were the features of that law that they objected to?

Mr. LOWE. They did not want it enforced.

Mr. KITCHIN. Well, what is the law?

Mr. LOWE. Well, it has always been the custom to scale products, one of first and the other of second quality, and that was called the fining law. There was a law passed in Massachusetts that it would be illegal to fine. That law was tested and declared by the supreme court unconstitutional.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. KITCHIN. Well, the manufacturers generally——

Mr. LOWE. That is, the law was declared to be unconstitutional; that is what I mean.

Mr. KITCHIN. The cotton manufacturers of your State were generally in favor of that law, were they not?

Mr. LOWE. I can speak for myself. I was not in favor of the law.

Mr. KITCHIN. After the strike you were not, but how about before the strike—before this rebellion?

Mr. LOWE. I was not in favor of it before the strike.

Mr. KITCHIN. Did you have to enforce that law? Was it a law that you had to enforce in your mills?

Mr. LOWE. No, sir.

Mr. KITCHIN. Why did you enforce it, then, if you did not have to?

Mr. LOWE. I say it was declared unconstitutional.

Mr. KITCHIN. I know, but these men were rebelling. You say you had satisfactory results, so far as the profits you have been making in the last few years are concerned.

Mr. LOWE. I was then speaking of the Park Hill Manufacturing Co.?

Mr. KITCHIN. Yes; and you say your dividends were about 4 per cent a year, and had no surplus at all.

Mr. LOWE. That was at the Lancaster mill.

Mr. KITCHIN. You are not satisfied with the results under the Payne-Aldrich Act, and the Dingley Act at the Lancaster mills, are you?

Mr. LOWE. Yes, sir.

Mr. KITCHIN. How much dividends in the last five years have you paid on that?

Mr. LOWE. I stated that. I think it is 25½ per cent.

Mr. KITCHIN. I thought you referred to your other mill. You are satisfied with that and have carried nothing to a sinking fund and nothing to surplus?

Mr. LOWE. No, sir; we have been reducing our surplus.

Mr. KITCHIN. You say that is a satisfactory profit. Let us see——

Mr. LOWE. No, sir. You asked me if I was satisfied with the conditions under the Payne-Aldrich bill. I presume you mean conditions as affected by the Payne-Aldrich bill?

Mr. KITCHIN. You consider that a pretty fair profit under the Payne-Aldrich bill—25½ per cent for five years?

Mr. LOWE. We consider that a fair bill for our business, Mr. Kitchin.

Mr. KITCHIN. How many women have you working in your mills—in the Lancaster mills?

Mr. LOWE. I should think probably about 25 to 30 per cent.

Mr. KITCHIN. Did not the census report show, and did not the Tariff Board also show, that there was a larger proportion of women employed, in Massachusetts particularly, than from 25 to 30 per cent?

Mr. LOWE. That might apply to spinning mills.

Mr. KITCHIN. You work from 25 to 30 per cent of women?

Mr. LOWE. Yes, sir.

Mr. KITCHIN. How many children?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. LOWE. We are not permitted——

Mr. KITCHIN. You are not permitted to by law, but how many do you work?

Mr. LOWE. We do not work any that we are not permitted by law to work.

Mr. KITCHIN. Your mills do not, but other mills——

Mr. LOWE. I do not believe any mills do in New England.

Mr. KITCHIN. You will remember the investigation as to the strike at Lawrence, Mass., and you will remember the evidence there about children working in those mills, although it was against the law? Have you ever read the speech of Representative Townsend in regard to the women and children working in the mills at Fall River?

Mr. LOWE. No, sir.

Mr. KITCHIN. Contrary to the law?

Mr. LOWE. No, sir.

Mr. KITCHIN. What is the age limit for employees in cotton mills in your State?

Mr. LOWE. Fourteen years, and no one under 21 who can not read.

Mr. KITCHIN. You can not work anybody under 21 who can not read?

Mr. LOWE. No, sir. I think that is right.

Mr. KITCHIN. Are you certain that your mills work no persons under 16 years of age?

Mr. LOWE. Yes, sir.

Mr. KITCHIN. That is all I have to ask you.

The CHAIRMAN. Are there any further questions?

Mr. PETERS. Mr. Lowe, there is a State inspection, is there not?

Mr. LOWE. Very, very rigid, Mr. Peters.

Mr. PETERS. A State inspector visits those mills from time to time to see that the laws relative to employees are conformed to, does he not?

Mr. LOWE. Both male and female, Mr. Peters.

Mr. FORDNEY. Mr. Lowe, as I take it, the gentleman from North Carolina would like to make it appear that the Payne law was responsible for the strike in your Lancaster mills. Now, the fact is that the tariff law had nothing to do with the strike, did it?

Mr. LOWE. In my opinion it had nothing whatever to do with it.

Mr. KITCHIN. I did not attribute the strike to the Payne tariff.

Mr. FORDNEY. You mixed it in with it. You had more to say about the Payne law than about the State law in your questions. Mr. Kitchin put those statements in his remarks. Now, you answer that the tariff laws, at least, had nothing to do with that strike?

Mr. LOWE. I believe so, sir.

Mr. FORDNEY. Mr. Lowe, if Congress should fix a rate of duty on your product that would put your product on a competitive basis with the same class of goods made in a foreign country, you would then be absolutely on a competitive basis in our market; but the cost of your materials, the increased cost of the raw materials, or the lower hours given for a day's work in that industry, or the increased wages to your labor would then put your industry in a very critical condition and turn over the market on your goods to the foreigners, would it not?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. LOWE. Yes, sir; we believe it would.

Mr. FORDNEY. Those three conditions—the value of the raw materials, whether or not you are getting less hours for a day's work, or more pay to your labor—those things entering so largely into the cost of production would so materially change the situation that you would be at a great disadvantage with your foreign competitor?

Mr. LOWE. Yes, sir. In 1892, under the reductions made by the Wilson bill, one of our mills was shut down, 487 looms, for 18 months.

Mr. FORDNEY. Now, is not this true, that organized labor, especially, is at all times demanding fewer hours for a day's work all over this country in the various industries, and more pay?

Mr. LOWE. Yes, sir. That is our experience.

Mr. FORDNEY. You must contend with that, and that is one of the elements of cost that is of great importance to your industry.

Mr. LOWE. Yes, sir.

Mr. FORDNEY. So that if the duties fixed by the new tariff law put you on a competitive basis now, and any of those conditions changed to your disadvantage, then your industry would be in a critical condition, would it not?

Mr. LOWE. Yes, sir.

Mr. FORDNEY. I thank you.

Mr. LOWE. I believe that the only way we could meet that condition is by a reduction of our labor, and there I differ with my friend, Mr. Parker, who thought it could all be taken care of by increased efficiency. I am not willing to admit that there is any chance to increase efficiency in my mill.

Mr. JAMES. Mr. Lowe, you said that applied all over the country. Of course, that is rather a broad statement, in reply to his question that the laboring people were asking for higher wages and fewer hours.

Mr. LOWE. I answered that is——

Mr. JAMES. You were speaking about your own industry, were you not?

Mr. LOWE. I said that had been my experience.

Mr. JAMES. Oh, yes. Now, is it not true that the demand for higher wages and fewer hours causes the increased cost of living?

Mr. LOWE. I take the other view of it, Mr. James. I take the view that the increased cost of living is due to the continually increasing cost of labor.

Mr. JAMES. Take a laboring man whom you paid in your factory 10 years ago \$15 a week. It costs him now twice as much to live and support his family as it did 10 years ago, does it not?

Mr. LOWE. He is getting about 25 or 30 per cent of that increase in his wages.

Mr. JAMES. Yes; I know; but I have heard considerable testimony here from various representatives of industries, the glass industry in particular, where they have reduced the wages of the laboring people, one of the owners swore, from 35 to 40 per cent in the last seven years, and yet the cost of living has practically gone up 60 per cent.

Mr. LOWE. That, Mr. James, is the reason we do not want anything done that will require us to reduce the price of our labor.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. JAMES. I understand, but you say, even as it is now, that labor is not satisfied at all, but is constantly demanding higher wages.

Mr. LOWE. I do not say labor is not satisfied.

Mr. JAMES. Well, if they are satisfied, what are they asking for more wages for?

Mr. LOWE. There is a continual request for more wages and less hours.

Mr. JAMES. I know, but a man who is satisfied is not asking for anything more. That is my understanding of the word "satisfied."

Mr. LOWE. He is the exception.

Mr. JAMES. That is what I thought, and therefore they are not satisfied with the wages they are getting.

Mr. LOWE. Not in comparison with the cost of living.

Mr. JAMES. You have stated that you have made 25½ per cent in the last five years, and had nothing set aside for wear and tear on the machinery, and nothing set aside for overhead charges; is that true?

Mr. LOWE. It is not only true, but we have shrunk our surplus nearly \$200,000.

Mr. JAMES. What salary do you pay the president?

Mr. LOWE. It is very low.

Mr. JAMES. Very low?

Mr. LOWE. Yes, sir.

Mr. JAMES. Are your principal stockholders in the company?

Mr. LOWE. No, sir; I think there are over 400 stockholders.

Mr. JAMES. You said the salaries are very low. What is paid to the president?

Mr. LOWE. The president receives a thousand dollars a month, sir.

Mr. JAMES. What does the vice president get?

Mr. LOWE. We do not have any. We can not afford one.

Mr. JAMES. The secretary and treasurer?

Mr. LOWE. \$6,000.

Mr. JAMES. \$6,000 to the secretary and treasurer. That is all.

Mr. RAINEY. Have you a selling agency?

Mr. LOWE. Yes, sir.

Mr. RAINEY. Are you in the selling agency?

Mr. LOWE. No, sir.

Mr. RAINEY. What officers are in the selling agency?

Mr. LOWE. What officers?

Mr. RAINEY. What officers of your company are in your selling agency?

Mr. LOWE. There are two directors, I think.

Mr. RAINEY. Those are the largest stockholders, are they not, in your company?

Mr. LOWE. I think they are—no, sir; one of them is a large stockholder, the other is not.

Mr. RAINEY. How much do they get as selling agents?

Mr. LOWE. Do you mean what—

Mr. RAINEY. Yes; what salary?

Mr. LOWE. Nothing.

Mr. RAINEY. What commission?

Mr. LOWE. It is the usual commission.

Mr. RAINEY. How much would it amount to?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. LOWE. Do you mean——

Mr. RAINEY. Yes; you know what I mean. How much would it amount to per year on the average?

Mr. LOWE. Am I required to——

Mr. RAINEY. Yes, sir; we would like to know it. You are asking for tariff duties——

Mr. LOWE. I did not know we were required to tell how much we pay in commissions.

Mr. RAINEY. I think you are. I can appeal to the House and get authority for permission to ask you that if you want me to.

Mr. LOWE. We pay $3\frac{1}{2}$ per cent.

Mr. RAINEY. On the total amount of their sales?

Mr. LOWE. Yes, sir.

Mr. RAINEY. How much will that be? How much is the total amount of your sales, your average sales?

Mr. LOWE. About two and a half million dollars.

Mr. RAINEY. And they get $3\frac{1}{2}$ per cent on that?

Mr. LOWE. That is paid the commission house.

Mr. RAINEY. How many of them are there who have a share in this \$100,000 that they get for it?

Mr. LOWE. How many members are there of the commission house?

Mr. RAINEY. Yes, sir; how many members get this; how many stockholders get this?

Mr. LOWE. There are only two stockholders interested in the commission house that I am sure about.

Mr. RAINEY. In the selling agency?

Mr. LOWE. Yes, sir.

Mr. RAINEY. They get over \$50,000 a year a piece?

Mr. LOWE. I can not tell you, sir. I do not know what their expenses are. It may cost them all they are receiving for selling expenses.

Mr. RAINEY. Well, they do not do anything but keep books, do they?

Mr. LOWE. I do not——

Mr. RAINEY. Whenever New England millmen have a selling agency, that is just a method of cutting down your apparent profits, is it not, and dividing it up in some other way? Is not that what it is done for, really?

Mr. LOWE. I believe that the business organization of the cotton manufacturers and the selling agents is as clean and as efficient and as proper as the selling agencies of any of the industries in the country.

Mr. RAINEY. I have no doubt of that. Now, you just have one selling agency, do you?

Mr. LOWE. Yes, sir.

Mr. RAINEY. For the entire country?

Mr. LOWE. Yes, sir.

Mr. RAINEY. Do you export?

Mr. LOWE. Very, very slightly.

Mr. RAINEY. Were you ever in the office of your selling agency?

Mr. LOWE. Yes, sir.

Mr. RAINEY. In what town is it located?

Mr. LOWE. New York and Boston.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. RAINEY. You have one branch in New York and one branch in Boston?

Mr. LOWE. Yes, sir.

Mr. RAINEY. These two directors—that is, these two stockholders who take down this profit of a hundred thousand dollars a year, or whatever it amounts to—do they do anything at all in those offices?

Mr. LOWE. Yes, sir.

Mr. RAINEY. They visit them once in a while, do they?

Mr. LOWE. They visit them regularly and do business thoroughly.

Mr. RAINEY. How regularly and how often do they go there?

Mr. LOWE. I find them there as regularly as I find business men at their business anywhere.

Mr. RAINEY. Do they go there every day?

Mr. LOWE. I would like—if it is in your mind that they are not properly attending to their business—

Mr. RAINEY. Oh, it is not in my mind. I want to see what is in your mind. I do not know anything about it. I was trying to find out something.

Mr. LOWE. Oh, I thought by your intimations that perhaps you thought they were not attending to their business.

Mr. RAINEY. That is all, Mr. Lowe.

The CHAIRMAN. Mr. Lowe, I believe you stated awhile ago that you had disastrous results under the Wilson tariff bill. Do you mean to attribute that to the tariff law or to the conditions at the time?

Mr. LOWE. I think the Wilson law had much effect.

The CHAIRMAN. Did you have disastrous times under the Dingley bill?

Mr. LOWE. The reason I attribute it to the Wilson bill is because of the enormous importations of our goods that were brought in, which amounted to so much in comparison with the consumption of the country.

The CHAIRMAN. You had very prosperous times under the Dingley bill, had you not?

Mr. LOWE. Part of the time.

The CHAIRMAN. Those were very prosperous years?

Mr. LOWE. Some few years.

The CHAIRMAN. The prosperity of 1906, 1907, and 1908 was under the Dingley bill, was it not?

Mr. LOWE. Yes, sir.

The CHAIRMAN. That was the greatest prosperity your mills had ever known?

Mr. LOWE. I do not think so—not in our particular branch of the business, Mr. Chairman.

The CHAIRMAN. That is, as a rule, for this industry?

Mr. LOWE. I think it is a general rule for the industry; I think it was abnormal.

The CHAIRMAN. Will you tell us whether the Wilson bill and the Dingley bill had different rates on your particular industry? Is there any difference in the rates, or did not Mr. Dingley adopt practically the same rate on your class of goods as was in the Wilson bill?

Mr. LOWE. The difference was just enough to protect us against foreign competition.

PARAGRAPHS 315-320—COTTON CLOTH.

The CHAIRMAN. I know, but was there any difference?

Mr. LOWE. I have not it in mind, Mr. Chairman.

The CHAIRMAN. As a matter of fact, do you not know that when Mr. Dingley wrote his bill he practically adopted the iron and steel schedule, with a change in one or two items, out of the Wilson bill, and there were very few changes in the cotton schedule from the Wilson bill?

Mr. LOWE. Well, there was just enough change made in that particular line of goods to take care of our products.

The CHAIRMAN. Now, if there was any I would like to have you point it out to the committee. I do not know of it myself. I think he adopted the classifications in the Wilson bill on your line of goods, and I would be glad if you can differentiate it and call it to the attention of the committee.

Mr. LOWE. I will look it up, if you want me to.

The CHAIRMAN. In reference to this classification, Mr. Dingley stated on the floor of the House, when he presented his bill, that he practically made an equalization of the rates in these two schedules, so it is difficult for me to understand where the difference is. A few days ago some gentlemen interested in the iron and steel business appeared before this committee and said that business was ruinous under the Wilson bill, due to the rates, and they admitted that they had very prosperous times under the Dingley bill, and with the exception of about two items there was no change in the rates. I am not questioning the authority of your statement, but I was questioning whether you were really informed of the facts on which you base your statement.

Mr. LOWE. I am informed of the fact that at least our business disappeared and foreign goods came in.

The CHAIRMAN. Well, was it not due largely to the fact that—

Mr. LOWE. I have not in mind the rates under the Wilson bill.

The CHAIRMAN. Was it not really due to the fact that at the time the Wilson bill went on the statute books the country was involved in a very disastrous panic?

Mr. KITCHIN. A panic extending throughout the world.

The CHAIRMAN. A panic extending throughout the world, commencing with the failure of Baring Bros. in 1893. That was during the Harrison administration; note that.

Mr. LOWE. I am only—

The CHAIRMAN. I have not been able to differentiate. I know that there are very few changes between the cotton classification in Mr. Wilson's bill and in that of Mr. Dingley, and I am inclined to think if you have time to run through it, you will find that this classification remained practically the same.

Mr. LOWE. I think it was advanced.

The CHAIRMAN. That is all.

Mr. HILL. Do you take the cotton from the raw product and carry it through to the finished product?

Mr. LOWE. Yes, sir; in nearly all of our products at Lancaster mills.

Mr. HILL. Is that the general practice in the manufacture of gingham, or do they buy the yarns?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. LOWE. One of our mills buys practically all of our yarns.

Mr. HILL. Would a mill do better, taking one year with another, and taking an average of 10 years—I mean mills of equal size—in buying their yarns and taking the average price on the market, or manufacturing yarns and simply weaving and finishing them.

Mr. LOWE. It is done both ways.

Mr. HILL. What is your experience with your two mills, one doing one way and the other the other way?

Mr. LOWE. I think if I were organizing a new mill, I would do my own spinning.

Mr. HILL. Do your own spinning and buying and finishing?

Mr. LOWE. Yes, sir.

Mr. HILL. Gingham is more a matter of fashion and fancy and pretty colors than almost any other cheap cotton cloth?

Mr. LOWE. Yes, sir; much depends on the design and color.

Mr. HILL. If there was an absolute uniformity of cost between this country and foreign countries, there still would be very material importations due to fashion and fancy and a preference of the individual for the colors, etc., would there not?

Mr. LOWE. I think there would.

Mr. HILL. That would of itself, in ginghams more particularly, continue to furnish revenue to the Government if the costs were absolutely equalized by a tariff rate?

Mr. LOWE. Yes, sir.

Mr. FORDNEY. The gentleman from Kentucky, Mr. James, spoke of a reduction of wages, especially in the glass industry. If there were any reductions in the pay of labor in the glass industry, was it equally true in your industry?

Mr. LOWE. What do you mean, sir?

Mr. FORDNEY. Is it true, Mr. Lowe, that the wages in your factory have gone down since the adoption of the Payne tariff law?

Mr. LOWE. No, sir; they have gone up very materially.

Mr. FORDNEY. I call attention of the gentleman from Kentucky, Mr. James, to the fact that the reduction of the cost of labor in the glass factories was due to the invention and putting into use of modern machinery for blowing glass, which did away with the glass blower, in window glass, fruit jars, bottles, and all that kind of glass, for which labor received from \$5 to \$15 a day. By the adoption of this new machinery a class of labor less skilled has been employed, and consequently a reduction of wages in the glass business which is not relative to any other industry in the country.

Mr. JAMES. And yet my friend Fordney wants to keep a protective tariff up on those who purchase glass in this country and permit them to work this labor at this greatly reduced cost.

Mr. FORDNEY. Yes, sir; indeed I do. I want American labor to work at American scale wages.

Mr. LONGWORTH. What proportion of your labor is native born?

Mr. LOWE. A very small proportion.

Mr. LONGWORTH. Where do they come from?

Mr. LOWE. We have 11 or 12 nationalities in one of our mills.

Mr. LONGWORTH. Some Italians?

Mr. LOWE. Some; yes, sir.

Mr. LONGWORTH. Is that very efficient labor?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. LOWE. It is not; no, sir.

Mr. LONGWORTH. Is it as efficient as English labor?

Mr. LOWE. No, sir.

My attention is called to a mistake I made, Mr. Chairman. The age limit is 14 instead of 16, and the hours of work 54 per week.

The CHAIRMAN. The correction will be noted in the record.

Mr. Lowe filed the following documents:

OFFICE OF SUPERINTENDENT OF SCHOOLS,
Fitchburg, Mass., October 3, 1911.

To employers of minors:

Your attention is respectfully directed to legislative enactments of recent date relative to the employment of minors and the attendance upon evening schools of certain persons between 16 and 21 years of age.

Certificates of all kinds that are issued are furnished school authorities by the chief of the district police. School officials in every city and town are obliged by law to use certificates thus provided, hence if any complaint or criticism is made relative to requirements, it must be understood that school officials are proceeding in accordance with the provisions of the laws of the Commonwealth.

The chief of the district police, in compliance with the provisions of an act of the legislature of 1911, has furnished a form of certificate for minors between the ages of 16 and 21 who are able to read and write in English. A copy of the same is herewith inclosed.

The form of this certificate, which differs materially from the one that has been used in former years, is for those who are able to read and write in English. This certificate is required only while an evening school is in session.

A certificate of a different kind is required at all times for those between 16 and 21 who are unable to read and write in English. A copy of this one is herewith inclosed. This form, which also has been furnished by the chief of the district police, is required by the provisions of a law enacted this year. The law reads as follows:

AN ACT RELATIVE TO THE EMPLOYMENT OF CERTAIN MINORS IN FACTORIES,
WORKSHOPS AND MERCANTILE ESTABLISHMENTS.

No illiterate minor between the age of 16 and 21 years shall be employed in a factory, workshop, mechanical or mercantile establishment unless his employer procures and keeps on file, accessible to the truant officers of the city or town and to the district police and inspectors of factories and public buildings, a certificate showing that such minor is 16 years of age or over. Said certificate shall give the place and date of birth of such minor and his personal description. The printed form of the certificate shall be provided by the chief of the district police and shall be approved by the attorney-general.

The State inspector has sent to this office a communication in which attention is called to section 56, chapter 514, of the acts of 1909. The special clause to which the inspector directs attention provides:

That an employer of minors in a factory, workshop or mercantile establishment shall keep on file and send to the superintendent of schools a complete list of the names of all minors employed who can not read at sight and write legibly simple sentences in the English language.

A reply was sent to this communication from the State inspector to the effect that this office would call the attention of employers of minors to this law.

Your superintendent of schools has made an effort to comply with the requests of State inspectors, although he is aware that a great burden is placed upon employers of minors as they try to conform to the provisions of legislative acts.

The law relating to attendance upon evening schools reads as follows:

[EXTRACT FROM LAWS OF COMMONWEALTH OF MASSACHUSETTS.]

While a public evening school is maintained in the city or town in which any minor who is over 14 years of age and who does not have a certificate signed by the superintendent of schools, or by the school committee, or by some person acting under authority thereof, certifying to the minor's ability to read at sight and write legibly simple sentences in the English language resides, no person shall employ him and no parent, guardian or custodian shall permit him to be employed unless he is a regular attendant at such evening school or at a day school; but upon presentation by such

PARAGRAPHS 315-320—COTTON CLOTH.

minor of a certificate signed by a registered practicing physician and satisfactory to the superintendent of schools, or, if there is no such superintendent, to the school committee, showing that his physical condition would render such attendance in addition to daily labor prejudicial to his health, said superintendent or school committee shall issue a permit authorizing the employment of such minor for such period as said superintendent or school committee may determine. Said superintendent or school committee, or teachers acting under authority thereof, may excuse any absence from such evening school which arises from justifiable cause. Any minor not holding the certificate described above shall furnish to his employer a record of his school attendance each week while the evening school is in session, and when this record shows unexcused absences from the sessions his attendance shall be deemed irregular according to this act. Whoever employs a minor in violation of the provisions of this section shall forfeit not more than \$100 for each offense to the use of the evening schools of such city or town. A parent, guardian or custodian who permits a minor under his control to be employed in violation of the provisions of this section shall forfeit not more than \$20 to the use of the evening schools of such city or town.

Notice will be given in due time relative to the date at which teachers will furnish weekly certificates of attendance. Such certificates will not be furnished until after the schools are well organized.

Inclosed is notice of the opening of evening schools.

Yours respectfully,

JOSEPH G. EDGERLY, *Superintendent.*

[Inclosures.]

Certificate of illiterate minor between the age of 16 and 21 years.

[Acts of 1911, chap. 310.]

This certifies that I am the _____ (parent or guardian) of _____ (name of minor) and that he was born at _____ (city or town), _____ (State or country), on the _____ day of _____, 189____, and is now _____ years, _____ months old. _____ (his or her) present height is _____ feet, _____ inches; weight, _____ pounds; complexion is _____; color of eyes is _____; color of hair is _____.

_____, ss; _____, 191____. (Signature of parent or guardian.)

Then personally appeared before me the above-named _____ (parent or guardian) and made oath that the foregoing certificate by _____ (him or her) signed is true to the best of _____ (his or her) knowledge and belief.

_____,
Notary Public. *Justice of the Peace.*

Minor's certificate of literacy.

[Acts of 1909, chap. 514, sec. 66.]

_____ (city or town) PUBLIC SCHOOLS,
OFFICE OF THE SUPERINTENDENT.

This certifies that _____, living at _____, is more than 16 years of age, having been born at _____ (city or town), _____ (State or country), on _____ (date), and can read at sight and write legibly simple sentences in the English language.

For Superintendent of Public Schools.

Signature of Minor _____ (city or town and date), 191____.

This certificate must be carefully kept till the minor is 21 years of age.

TO THE EMPLOYER.

Do not lose or destroy this card. It belongs to the minor to whom it is issued. Return it to him when he leaves your service. If he fails to take it within 30 days, return it to the superintendent of schools.

While public evening schools are maintained in _____ (city or town) any person employing a minor residing here is required by law to keep on file a certificate (issued by the superintendent of schools) of said minor's ability to read and write English; or, in absence thereof, evidence of his regular attendance upon evening school. (See acts 1909, chap. 514, sec. 66.)

PARAGRAPHS 315-320—COTTON CLOTH.

TESTIMONY OF JOSEPH McDONALD, OF PAWTUCKET, R. I.

The witness was duly sworn by the chairman.

Mr. McDONALD. Mr. Chairman and gentlemen of the committee, in looking over the calendar, I see I am down on the item of "cotton goods." I think I would amend that to some extent and say I am here largely and in a general way representing the victims.

I come before you to-day, Mr. Chairman, without any private interests to serve. I come from a State that produces great quantities of cotton goods, and therefore employs a great many mill operatives. I was born in Rhode Island and live there now, and have passed most of my life there and know a good deal about it, and am familiar with the industrial conditions there. I have worked in the cotton mills nearly all my life up to within about 12 years ago. I know somewhat of their running, of their practices, and the conditions under which they live. For years I have battled for the proposition that the people who create the wealth of the world ought at least to have a reasonable support out of that.

I would take up the wage part of this question and deal with that exclusively. I have prepared a brief which I will submit to the committee.

I am here asking that the tariff taxation upon cotton goods be lowered all along the line in the interest of the people of this country as a whole.

Theoretically, our Government is created for the promotion of the general welfare and using its tremendous powers solely with that end in view. The power to legislate is inherent in every Government; otherwise there could be no government. This power to legislate is the power to tax and that carries with it the power to compel contributions of money to defray public expenses.

This tremendous power of taxation is the prize we are contending for. Realizing that, we find men coming here in crowds for the purpose of asking you to turn over to them the taxing power of this Government. They ask you that they may be made tax collectors, without the necessity of turning over any portion of the collections to the public. Men of greater power and intelligence have succeeded in getting control of government, and thus have worked it for their own profit and private interest other than our general good. The general well-organized special interests have always more power over governmental matters than the large general interests.

I deny the proposition that has been put forth here again and again during this hearing that labor is paid higher in this country than it is abroad. On that proposition I am willing to stand, and I think it can be demonstrated to the satisfaction of this committee that that statement is true. We have here in this country a large number of workmen, more or less skilled. That there is a difference in weekly amounts, I am willing to concede; but the amount of wages received per week and the rate of wages on any given unit of product is an altogether different proposition.

I want this committee to understand, and I think they will agree with me, and I would like to impress upon them this fact—and there is not any man on this committee who will disagree with me—that

PARAGRAPHS 315-320—COTTON CLOTH.

there is no tariff on labor. There is no tariff upon labor. The labor of this country competes with the labor of the world in a free-trade market. The only protection that the American laborer has in this country against the foreign laborer is the price of a steerage passage ticket from Europe to this country. Let that thought sink deeply into the minds of this committee: The only protection the American laborer has against the laborer of the rest of the world is the price of a passage ticket from Europe or any other country to the United States.

I want to say that our laborers here get more money per week, because their labor is tremendously more effective and they do a larger amount of work in a given length of time.

A perfect illustration of this proposition can be found in one of the mills of Rhode Island to-day with which I am familiar. I know the name of every mill in the State, from one end to the other, and approximately the class of goods upon which they are working. I have woven in them, I have spun in them, and I know something about the conditions under which they work.

In one of the mills in Rhode Island we have this situation, illustrating fully the point I am trying to make, that the difference in wages in gross amount is the difference in productiveness and not in the rate of wages. In this mill there are a number of Draper looms, so-called automatic looms, and a number of plain ordinary looms. They are weaving exactly the same sort of cloth and filling the same orders, and yet a weaver runs 10 of the plain looms, while 20 of the Draper or automatic looms are run by one weaver. Both kinds of looms are turning out exactly the same kind of cloth in every particular, yet the weaver of the plain looms is paid 72 cents a cut, while the rate of wages of the weaver on the Draper or automatic looms is but 35 cents per cut. At the end of the week each gets the same amount of wages, approximately, yet the rate of wages paid to one loom is more than double that paid to the other. That is to say, at the end of the week the weaver on the Draper or automatic looms has to his credit a little more than double the number of cuts than has the weaver on the ordinary loom, and therefore each draws approximately the same amount of wages each week, because the weaver on the plain loom is paid 72 cents a cut, while the weaver on the automatic loom is paid but 35 cents a cut; therefore the rate of wages of the weaver on the ordinary loom is more than double that of the weaver on the automatic loom.

In comparing the wages of our operatives with those of Europe it is not the amount of wages received each week that should be compared, but the quantity of work done for the wages received.

The CHAIRMAN. The automatic loom is the one that pays but 35 cents per cut?

Mr. McDONALD. Yes, sir; weaving exactly the same cloth, and the other is getting 72 cents a cut, weaving exactly the same cloth.

When I went to work in a cotton mill when I was a boy, the weaver who was running six of these looms made from \$50 to \$54 a month. To-day in that same mill a weaver is running 12 automatic looms, and he is not making more than \$50 to \$55 a month.

The CHAIRMAN. What is the difference in productive capacity of the laborer then and now? How much more does labor produce now than it did then, the same man in the same time?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. McDONALD. The looms in the mill where I worked when I was a boy and somewhat later ran 144 picks a minute, and the weaver ran six looms. They could weave about 80 cuts per month if they were fairly industrious.

The CHAIRMAN. And what is a cut?

Mr. McDONALD. Fifty-two to fifty-four yards.

They can now weave, of that same sort of goods, four cuts to the loom per week without any particular trouble, making the weaver in a less length of time turn out 48 cuts a week, where it was a difficult matter for them to turn out 21 cuts a week 30 or 40 years ago.

The CHAIRMAN. Reduce that to yards. Forty-eight cuts amount to how many yards?

Mr. McDONALD. That is about the way they run, 48 to 51 yards to the cut.

We have shorter hours of labor now than we had then, but the tremendous increase in producing power of the laborer has been such within that time that he is able to produce a great deal more wealth, and the fact that the English laborer does not to any extent come here, the fact that the German laborer to a great extent does not come here, is proof positive that conditions are such that they can not improve themselves by coming here in that way.

We are importing constantly a large number of people from all parts of Southern Europe, and our mills are being filled up with them to such an extent that when notices are put up, they have to be put up in a number of different languages.

The CHAIRMAN. How much have wages increased during the period of time when this productive capacity of the workman has increased, as you have stated it?

Mr. McDONALD. I have stated the facts, Mr. Chairman. In this identical mill, in 1872, a weaver made as much per week as he is making now.

The CHAIRMAN. There is no increase in wages?

Mr. McDONALD. There is no great increase in wages. Whatever increase there has been in average wages has been partly due to a law which prohibits the employment of children. As a matter of record, I have here a statement from one of the trade papers, showing the prices paid for weaving a cut of cloth in the Fall River mills in 1884 and the prices now. In 1884 the price of weaving was 18.5 cents per cut. To-day the price for weaving a cut of print cloth in Fall River with an ordinary loom is 19.6 cents per cut. I have those figures set out in my brief.

A weaver who has been weaving from 1884 until the present time has got an advance of a little over 1 cent per cut, and I believe a print cut is 48 yards. He has received an advance of a little over 1 cent per cut within that time. That will demonstrate to you how very materially his wages have advanced. The producing power of the man has increased immensely, but his wages have in no sense kept pace with the increase in his productive power.

There is one particular thing that has been utterly ignored. It was ignored by the Tariff Board, and it is ignored in all these discussions in the relation of wages, and I want to draw the particular attention of this committee to that fact, and that is that they have constantly given us tables of gross wages instead of wages per unit

PARAGRAPHS 315-320—COTTON CLOTH.

of product—wages per week instead of wages per unit of product. What you want to know is how much the English weaver receives per cut, what the English manufacturer pays to his weaver for weaving a cut of cloth. You ought to know how much the spinner is paid per pound for spinning a pound of yarn, and you ought not to compare the wages of the English spinner, where it takes three of them to run a pair of mules, with the wages of our spinner, where it takes only one spinner to run a larger pair of mules.

The CHAIRMAN. Can you give us any data on that?

Mr. McDONALD. I can not. I have never had an opportunity to go over there, and I do not know about their statistics; but what you want to get is the wage list from the European mills and compare it with the wage list in our mills per unit of product.

The fact that we exported over \$40,000,000 worth of cotton goods last year is pretty good proof that these people do not need any particular protection on their products. If you must make a bill with protection in it, I want to impress upon this committee that it must be made on the theory that they are protecting the manufacturer and not the laborer. As I said before, the only protection the laborer has is the price of a passage ticket from Europe to the United States.

I would like to read to the committee something with reference to a proposition we have been up against in the State of Rhode Island. I do not know that we are allowed to refer to any political matters at all, but it has a bearing upon this situation.

During the political campaign a year ago last fall, the manufacturers of the State of Rhode Island organized a tariff publicity league, and different men sent in different letters and had them published as advertisements during that campaign. Among the men who were quoted from was one Mr. Benn, who owns a mill, or whose company owns a mill within a mile of the mill represented by Mr. Conant, of the Esmond Co. This is incorporated in my brief, but I would like to read it to you now.

The CHAIRMAN. Your time has expired, Mr. McDonald. How much more time do you desire?

Mr. McDONALD. I have a considerable number of figures here relating to wages, but I can cover those in answer to questions on cross-examination, if you wish. I have figures covering the wages in New England and in the South, the average of wages throughout this country, the percentage of increase, and all that sort of thing.

The CHAIRMAN. We would like to hear what you have to say about wages, because that is a very material question; but it is now 1 o'clock and we usually adjourn at this time for lunch.

Mr. McDONALD. I can tell you all these things within five or six minutes, Mr Chairman.

The CHAIRMAN. Go ahead, then; we will give you that much more time.

Mr. LONGWORTH. Are you representing any particular organization?

Mr. McDONALD. No; I think I am representing the victims.

Mr. LONGWORTH. You are here on your own responsibility?

Mr. McDONALD. I am here on my own responsibility; yes.

Mr. NEEDHAM. What is your business now?

Mr. McDONALD. I am a lawyer.

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. NEEDHAM. How long have you been practicing law?

Mr. McDONALD. About eight years. Up to that time I worked in the mills.

Mr. NEEDHAM. Did you gain quite a competence during the time you worked in the mills? Did you make much money during the time you were in the mills?

Mr. McDONALD. From the time I became a worker until to-day I never spent over \$600 a year, so you can imagine how much of a competence I gained upon that.

Mr. NEEDHAM. I am simply interested in your life.

Mr. McDONALD. As I say, I was born and brought up and worked in the print works, when I was a still younger boy, where they printed calico cloth. Machine printers had \$24 a week then, and have that now.

Mr. NEEDHAM. Of what political party are you a member?

Mr. McDONALD. I am a Democrat. [Laughter.]

One of the men, who, as I say, was quoted in this Publicity Tariff League, told how he would have to close his mill and would have to remove it, and all that sort of thing, if the Underwood bill became a law. I have here copies from the records of the Circuit Court of the United States for the District of Rhode Island where that company confessed judgment for violating the alien labor law and paid a fine of \$4,000 for that particular thing.

Mr. RAINEY. What mill is that?

Mr. McDONALD. The Greystone mill, up in Rhode Island, just a few miles from Providence. I have here, and have incorporated in my brief, the order of the court and the records of the court showing where they confessed judgment in that particular matter.

Mr. HAMMOND. Have you that circular you spoke about a moment ago?

Mr. McDONALD. Yes, sir; I have it here. I will read it to you, if you want to hear it.

Mr. HAMMOND. I would like to hear it.

Mr. McDONALD. On October 22, 1911, the following advertisement appeared in the Providence Journal:

Mr. Underwood said that if his Democratic wool tariff becomes a law \$40,000,000 of the woolen goods now made in this country would be imported.

Mr. Harrison Benn says that if that wool bill becomes a law his mill in Rhode Island will be closed and that the goods made here will be made in England and imported. Some 12 years ago Mr. Benn came from England and built with English capital a mill at Greystone, R. I. Mr. Benn is making exactly the same goods with exactly the same machinery and out of exactly the same material in this country as in England. He says the wages paid in his mill at Greystone, R. I., are more than double the wages he pays in England. Do you think it would be a good thing for Rhode Island to have the plant at Greystone closed?

Mr. Harrison Benn is one of the men named in the writ in the circuit court as being the agent who went over and contracted with this foreign help, for which his company confessed judgment, and one of the help was a girl 12 years old, who could not work under our law even if she were brought over here. That is the sort of stuff we are up against and that is the sort of stuff that is constantly being sent broadcast through this land in order to affect, if possible, the labor vote of the State of Rhode Island.

PARAGRAPHS 315-320—COTTON CLOTH.

If wages are higher here than in Europe, it must be due to the greater effectiveness of our labor; that is, our laborers turn out much more work per head. A moment's reflection will show that this must be so, as labor or the wages of labor is paid out of the workmen's products. If the production is low, the wage must be low, otherwise no manufacturing could be done. The entire product of a hand-loom weaver would not pay the wages of a weaver running 24 Draper looms; but the hand-loom weaver must get his wages, whatever they be, out of the small amount of cloth he produces. This principle applies to all forms of industry and is a complete explanation of the fact that our workmen get more wages each week than those of other countries. They get more wages because they turn out a larger product; that is to say, they do more work. That this is true is generally conceded by those who have looked into the matter.

Any person at all familiar with economic principles knows that fact, that the laborer must be paid out of the product upon which he works; and if he gets a much larger portion of product here than he does anywhere else, then our people can not possibly compete with their competitors abroad. That is, it seems to me, an axiomatic and economic truth. That our labor has increased in effectiveness is, of course, true. That statement is based upon and sustained by statistics.

Here is an illustration: In a book entitled "Tops," published by the Arlington Mills, of Lawrence, Mass., of which William Whitman, of whom you have no doubt heard, is treasurer, I find a statement of interest. This statement is put in, not for political purposes, but for business purposes, which of course did not appear before this committee:

Ten years ago in all our worsted spinning mills one man tended one comb. At the present time that man will easily tend two combs on the same quality of stock, and the production of each comb is more than double what it was. To state the matter mathematically, there has been an increase of from four to five times in the product which comes from one man's labor, due wholly to the improvements in the machinery which he attends. The speed of worsted spindles has been gradually increased from 5,000 or 6,000 revolutions per minute, and the methods by which this increased speed has been secured are such as to insure a more perfect uniformity in the quality of the yarns. The advance, in connection with improved methods, of putting up and dressing warps, so that the ends do not come down so often, enable one weaver to attend six looms to-day as easily as he could two looms 10 years ago.

Has there been any proportionate increase in wages? I tell you, gentlemen of the committee, the wages of the laborers of this country are governed by the competition of one laborer with another for work, and upon no other theory and upon no other basis. The American laborer need not fear the foreign laborer that is at home in Europe, but what he needs to fear is the foreign laborer that transports himself over here in the steerage and stands at our mill gate and bids for his job. That is the labor he needs to fear and no other, and there is absolute free trade in that thing which he has to sell.

The CHAIRMAN. You say that statement was made by Mr. William Whitman?

Mr. McDONALD. It was made in a book published by the Arlington Mill, of which he is treasurer. It is a book published by them.

Mr. DIXON. What is the date of the publication?

PARAGRAPHS 315-320—COTTON CLOTH.

Mr. McDONALD. That of course I do not know. He was treasurer at that time. It was when he was making worsted yarn, and that statement was put out for other purposes than political purposes, and is given as an actual fact. There is no question that it is a fact, too.

But I say this committee may go into their committee room and study this thing in all its bearings and study this question on all sides, and take it up on every basis that they can, and they must come around to this point, that the only protection that the American laborer has is the price of a passage ticket from Europe to the United States.

If the committee would like to ask me any questions in regard to this matter, I shall be glad to answer them.

The CHAIRMAN. If you have any definite scales of wages we would like those.

Mr. McDONALD. I have those in my brief.

The CHAIRMAN. We will be glad to read them in your brief.

Mr. McDONALD. I wish also to incorporate in my brief a copy of the last report of the bureau of labor and statistics in Rhode Island, relating to the village of Lonsdale.

The CHAIRMAN. Whatever is in your brief will be given consideration by the committee.

The brief filed by Mr. McDonald is as follows:

MR. CHAIRMAN AND GENTLEMEN OF THE COMMITTEE:

I come before you to-day without any private interests to serve. I come from a State that produces great quantities of cotton goods, and therefore employs a great many mill operatives. I was born in the State and have passed most of my life and know a good deal about it and am familiar with industrial conditions there. From early boyhood until a few years ago I worked in the cotton mills of Rhode Island in various capacities, and am familiar with the mill operatives and the conditions under which they work and live. All my life I have been battling in favor of the proposition that those people whose labor creates the wealth of the world should enjoy a decent percentage of the fruits of their labor. It is because of that proposition I am here to-day asking that the tariff upon cotton goods be materially lowered, to the end that the great mass of the people be relieved of the tremendous burden of taxation which the present tariff law places upon them.

Theoretically the Government is organized for the purpose of promoting the general welfare and using its tremendous powers solely with that end in view. The power to legislate must be inherent in every government, otherwise there could be no government. The power to legislate is the power to tax, which carries with it the power to compel contributions to defray public expenses.

The tremendous taxing power which the control of government gives has made it a great prize to be contended for. Realizing this, individuals or groups of individuals of greater wealth and intelligence than the great mass of the people have generally succeeded in getting control of government and have legislated in behalf of their private interests rather than for the public good. The small, well-organized private interests have always been more powerful in legislation than the large, unorganized general interest of the community as a whole, and we therefore have these constantly recurring contests over tariffs and other forms of taxation.

We see a perfect illustration of this principle in the hearings which this committee has held during this month. Past legislation has conferred upon certain interests the power to tax the public for their private profit, and now, when that power is threatened, in a limited way, they flock here in droves to protest against any interference with their special privileges.

Thus it has been since governments were first instituted among men, and thus it will continue to be until mankind is sufficiently enlightened to make special privilege legislation impossible.

The committee has selected this day for the consideration of the cotton schedule, and to that I will confine myself. The cotton manufacturers come here and ask you

PARAGRAPHS 315-320—COTTON CLOTH.

that the present tariff law be not interfered with, on the ground that it is necessary to protect American labor against the cheap labor of foreign countries. That the operatives in our cotton mills are in any degree benefited by a tariff upon cotton goods, I deny; that their wages are higher, because of the tariff, I also deny; and therefore take issue with the manufacturers who are here to-day.

We are constantly having our attention called to comparison of wages in this country and Europe which show how much larger the weekly wage is here than it is there in corresponding industries, and that such difference is due wholly to the tariff. I will say right here, that the amount of wages received in a week is one thing, while the rate of wages is another. If our operatives get more money per week than do the foreign operatives, it is because they do more work, that is, turn off a greater product in a given time.

A perfect illustration of this point is going on in one of our Rhode Island mills to-day. In the mill referred to, there are two different kinds of looms, the ordinary plain loom and the automatic Draper loom. A weaver runs 10 of the plain looms, while 20 of the Draper looms are run by one weaver. Both kinds of looms are turning off exactly the same kind of cloth in every particular, yet the weaver on the plain looms is paid 72 cents a cut, while the weaver on the Draper looms is paid but 35 cents per cut. At the end of the week, the weaver on the Draper looms has to his credit a little more than double the number of cuts than has the weaver on the ordinary loom, and therefore each draws approximately the same amount of wages each week, while the rate of wages of the weaver on the ordinary loom is more than double that of the weaver on the Draper looms.

In comparing the wages of our operatives with those of Europe, it is not the amount of wages received each week that should be compared, but the quantity of work done for the wages received.

So, if the committee wants to get an accurate basis upon which to compare wages here and in Europe, it should get a price list showing the amount paid per unit of product there, and compare it with a price list here based upon the same unit of product; that is, the price per yard per pound, etc.

To compare the weekly income of a weaver running 4 looms in England with a weaver running 20 Draper looms here is nonsensical, absurd, and unfair, yet that is what is constantly being done.

The report of the British tariff commission of 1905 says: "Though wages in the United States are higher in some branches of the cotton trade, the labor cost is probably cheaper."

The same report also says: "In England 3 men per 1,000 spindles is sufficient; in Russia 16.6 are required; though the weekly wages of the Englishman is much greater, his work is much cheaper. In the better class of works in Moscow and Vladimir, 10 to 12 persons per 1,900 spindles were employed. In the finer processes four to six workers per self-actor are needed in Russia, in England but two or three. In general, the operatives in Russia and England is as two to one, a ratio which also exists in the weaving industry. In Vladimir one man attends two looms, in England from four to six." I would like to see the expression on the face of a Rhode Island manufacturer if he were asked to employ as many men on a pair of mules as are required in England.

The whole argument of the high protectionists is based upon the assumption that we can not compete with Europe, because it costs more to manufacture goods here than it does in Europe, and that the difference in cost is wholly the difference in the cost of labor. It may cost more to manufacture here than it does in Europe, but I deny that the greater cost is due to a higher rate of wages paid here. As a matter of fact, we do compete with Europe in the world's markets, as is shown by the fact that we exported last year more than \$40,000,000 worth of cotton goods.

The following extracts are all taken from the report of the British tariff commission which was published in 1905. This commission studied the cotton goods situation in all the countries of the world:

The difficulties of the trade are caused by the increased productivity of all countries and the growth of competition in all markets.

The United States is in all ways qualified to compete with us on equal terms. (Par. 133.)

In foreign and colonial markets competition is aggressive and successful. The United States of America disposes of large quantities of piece goods in Canada. (Par. 136.)

In regard to heavy cottons, the low wages, long hours, and the absence of age limits in the Southern States of America, is said to be a disadvantage to us, and the United

PARAGRAPHS 315-320—COTTON CLOTH.

States sends large quantities to China cheaper than they can be sent from England. (Par. 139.)

(It seems the English are complaining of the low wages in the United States.)

Boot and shoe linings are imported from the United States at prices which, in this country (England) do little more than cover the cost of yarn and 25 per cent of the cost of labor. The export of boot and shoe linings to Australia has declined through American competition. There is a growing competition here from the United States in cotton drills for boot linings which are imported below British cost. (Par. 141.)

Though United States wages are higher in some branches of the cotton trade, their labor cost is probably cheaper. (Par. 155.)

The operator works shorter hours to-day than he has ever done, and when a mill is in full time he can get to-day, although the hours are shorter, as big a wage as he ever got at the maximum hours and the maximum rate of wages before. As a matter of fact, in our trade they are paid by the piece and have been for 60 or 70 years, which has, I think, been the salvation of our trade, but there are limits to the advantage of it. I can give an instance. They are satisfied with a certain wage. If a weaver gets 24 shillings, she suits herself to get that and no more, and no less, though other weavers and she herself could get 26 shillings.

They will not take more than four looms. We would like to give them six looms, and they would get 27 shillings at a less rate, but the trade union will not allow that. (Testimony of Mr. Frederick Boyne. Par. 355.)

(26 shillings per week is equal to about \$6 in our money. Six dollars per week for four looms means \$1.50 per week for each loom. One dollar and a half per week per loom is more than 50 per cent above what is received by thousands of weavers in our mills.)

When the Northrup loom is used, the worker gets a good deal more wages, but I think they are getting too much. The amount they earn is actually above what any other weaver is getting. (Not in America.) Here the labor leaders are using every means in their power to prevent the extension of this loom. One girl can manage 20 of these if very efficient. Most female weavers in Lancashire now can only manage four looms. (Testimony of F. B. Roon. Par. 402.)

Yes; there is a very considerable and growing competition in cotton drills for boot linings imported into the country from the United States of America, at prices below the cost of similar goods manufactured in this country. This also applies to cotton ducks used for the same purpose. (Testimony of Mochin & King. Par. 624.)

One important element which makes it cost more to manufacture cotton here than it does in England is the much greater first cost of the plant.

Mr. Frederick Boyne, in his testimony before the British tariff commission, in paragraph 336, says: "If you take a mill in Oldham to-day you can build this for 25 shillings a spindle, or £125,000—that is, about \$6.25 per spindle. To build a similar mill in this country would cost not less than \$15, or about two and a half times as much. The extra cost of the mill here is due to the tariff taxes which are levied upon the material and machinery which enter into the building and equipment of the mill. After the mill is in operation the cost of keeping it in repair and the cost of most of the supplies necessary to run it, outside of the raw cotton, are increased by the tariff upon the material and supplies, and are, therefore, as far as the extra cost is concerned, an extra charge upon the mill that has no relation at all to the cost of labor."

There is another matter bearing upon the solicitude which the cotton-mill men have for the welfare of the American workmen.

On October 22, 1911, the following advertisement appeared in the Providence Journal:

"Mr. Underwood said that if his Democratic wool tariff becomes a law \$40,000,000 of the woolen goods now made in this country would be imported.

"Mr. Harrison Benn says that if that wool bill becomes a law his mill in Rhode Island will be closed, and that the goods made here will be made in England and imported. Some 12 years ago Mr. Benn came from England and built with English capital a mill at Greystone, R. I. Mr. Benn is making exactly the same goods with exactly the same machinery and out of exactly the same material in this country as in England. He says that the wages paid in his mill at Greystone, R. I., are more than double the wages he pays in England. Do you think it would be a good thing for Rhode Island to have the plant at Greystone closed?" (Tariff Publicity League.)

I herewith incorporate as a part of my brief the record of the United States Circuit Court in Rhode Island, which shows that the Joseph Benn & Sons Co., of Greystone, R. I., was sued upon eight different cases for importing contract labor in violation of the United States law. Upon all the cases judgment was conferred and fines aggregating \$4,000 were paid by the aforesaid company. The record shows that Mr. Harrison Benn was one of the agents charged with making the contracts, and that one of

PARAGRAPHS 315-320—COTTON CLOTH.

the persons contracted for was a girl 12 years of age, who could not legally work in Rhode Island after she came here.

A strike for higher wages has just been settled by the Benn Co. by granting an increase of 7 per cent. I do not know whether or not the strikers pleaded the tariff privilege of the Benn Co.

The President of the United States of America to the marshal of the United States for the district of Rhode Island or to his deputy, greeting.

We command you to summon The Joseph Benn & Sons (Inc.), a corporation created under the laws of the State of Rhode Island, and located and doing business in the town of Smithfield in said State.

To answer the complaint of the United States of America, at our circuit court next to be holden at Providence, within and for said district, on the fourth Tuesday (25th) day of May (1909) now next ensuing, in an action of debt for a penalty accruing to the United States, for that the said defendant caused to be brought into the said United States one Edwin S. James Smith, an alien, in violation of the immigration laws of the Congress of the United States, as by declaration to be filed in court will be fully set forth, to the damage of the plaintiff, as the plaintiff says, fifteen hundred (\$1,500) dollars.

Hereof fail not, and make true return of this writ, with your doings thereon.

Witness, the honorable Melville Weston Fuller, our Chief Justice, at said Providence, this 28th day of December, in the year one thousand nine hundred and eight.

WILLIAM P. CROSS, *Clerk*.

UNITED STATES OF AMERICA,
District of Rhode Island:

At North Providence, in said district, this 29th day of December, A. D. 1908, I made service of the within writ by leaving a true and attested copy thereof, in the hands and possession of Sidney Crowther, agent and superintendent of said defendant company, in their office at Greystone, R. I.

CHARLES C. NEWHALL,
Deputy United States Marshal.

Circuit Court of the United States, District of Rhode Island.

The United States of America *v.* Joseph Benn & Sons Co. (Inc.). Law No. 2890.

ORDER.

It being made to appear to this court that the facts upon which the above-entitled cause and seven other causes, pending in this court, all entitled "United States of America *v.* Joseph Benn & Sons Co. (Inc.);" have been investigated by the Department of Commerce and Labor, and by the Department of Justice, and that the defendant in said cause has offered to pay in compromise of said suits the sum of \$4,000, and that acceptance of said offer of compromise has been recommended by the Secretary of Commerce and Labor, and that the United States attorney has been by the Attorney General of the United States instructed to compromise said causes for that amount, the defendant company paying any costs that may have been incurred in said cases:

It is ordered, the parties assenting thereto, that judgment in each of said causes be entered for the sum of \$500 and costs in each suit to be taxed by the clerk.

Assented to. Costs taxed at \$44.37.

WILLIAM P. CROSS, *Clerk*.

CHARLES A. WILSON, *United States Attorney.*
C. M. VAN SLYCK, *Defendant's Attorney.*

Entered June 5, 1909. Arthur L. Brown, J.

This English company, that is so solicitous for the protection of American labor against the cheap pauper labor of Europe, pleads guilty to the charge of violating a United States statute, which forbids the importation of foreign contract labor, and pays the sum of \$4,000 and costs in settlement of the judgment against him. I find by the records that one of the laborers illegally contracted for a girl 12 years old, whose employment at all in the Rhode Island mill would be in violation of our State law

All of the above cases can be found in the records of the circuit court of the United States, and are numbered from 2890, 2891, 2892, 2893, 2894, 2498, 2499, 2501.

If wages are higher here than in Europe it must be due to the greater effectiveness of our labor; that is, our laborers turn off much more work per head. A moment's reflection will show that this must be so, as labor or the wages of labor is paid out of

PARAGRAPHS 315-320—COTTON CLOTH.

the workmen's product. The weaver is paid for weaving out of the cloth he weaves, and the spinner out of the yarn he spins. If the production is low the wage must be low, otherwise no manufacturing could be done. The entire product of a hand-loom weaver would not pay the wages of a weaver running 24 Draper looms, but the hand-loom weaver must get his wages, whatever they be, out of the small amount of cloth he produces. This principle applies to all forms of industry, and is a complete explanation of the fact that our workmen get more wages each week than those of other countries. They get more wages because they turn off a larger product, that is to say, they do more work. That this is so is generally conceded by those who have looked into the matter.

The producing power of the individual has increased enormously during the past 25 years, yet the workmen have reaped very little advantage from it. In fact, the cotton-mill operatives of to-day are not as well off as they were 40 years ago, when the cost of living is considered. Increased power to produce ought to bring increased returns to the workmen, but this is not to, except in a very limited degree.

In a book entitled "Tops," published by the Arlington Mills, of Lawrence, Mass., of which William Whitman, of whom, no doubt, you have heard, is treasurer, I find the following statement:

"Ten years ago in all our worsted spinning mills one man tended one comb. At the present time that same man will easily tend two combs on the same quality of stock, and the production of each comb is more than double what it was. To state the matter mathematically, there has been an increase of from four to five times in the product which comes from one man's labor, due wholly to improvements in the machinery which he attends. The speed of worsted spindles has been gradually increased from 5,000 or 6,000 revolutions per minute, and the methods by which this increased speed has been secured are such as to insure a more perfect uniformity in the quality of the yarn. The advance, in connection with improved methods, of putting up and dressing warps, so that the ends do not come down so often, enable one weaver to attend six looms to-day as easily as he could two looms 10 years ago."

Here we have expert testimony as to the tremendous increase in the productive power of labor, but no corresponding increase in wages or decrease in the price of worsted cloth.

It is an awful indictment of our civilization and intelligence when the power to produce wealth has increased manyfold, that the workmen who produce it receive so little of it.

A great deal is said about the high wages paid by American cotton manufacturers. Well, let us see by inspecting a few official figures upon that subject.

Number of cotton-mill operatives in Nation: 1909, 378,880; 1899, 302,861; increase, 76,019, or 24 per cent.

Primary horsepower used: 1909, 1,296,517; 1899, 795,834; increase, 500,683, or 62 per cent.

Capital invested: 1909, \$822,238,000; 1899, \$467,240,000; increase, \$354,998,000, or 75+ per cent.

Salaries as distinguished from wages: 1909, \$14,412,000; 1899, \$7,350,000; increase, \$7,062,000, or 96+ per cent.

Value added by manufacture, that is, by labor exclusive of material: 1909, \$257,383,000; 1899, \$162,648,000; increase, \$94,735,000, or 58+ per cent.

Average wages paid per operative: 1909, \$350.71; 1899, \$286.24; increase, \$64.47, or 22+ per cent.

To recapitulate the increase in 10 years: Number of operatives, 24 per cent; horsepower used, 62 per cent; capital invested, 75 per cent; salaries, 96 per cent; value added by labor, 58 per cent; wages, 22 per cent.

The above is very illuminating and shows pretty clearly how the operatives are getting a constantly decreasing wage measured in the value of their labor, as shown in the product.

The following facts were taken from several State reports of labor statistics:

[Annual report of the secretary of internal affairs of Pennsylvania, 1910, p. 349.]

Average number employed.....	12, 130
Total wages paid.....	\$51, 999. 04
Average yearly wages of each employee.....	\$428. 43
Number of office help and managers.....	490
Total salaries paid to office help and managers.....	\$691, 359
Average yearly salaries paid to each of the office help and managers.....	\$1, 410
Average value of product of each employee.....	\$2, 782. 42
Percentage of wages to product.....	15. 3

PARAGRAPHS 315-320—COTTON CLOTH.

[Report of Massachusetts Statistics of Labor, 1909, p. 47.]

Price for weaving a cut of print cloth in Fall River:

	Cents.
February, 1884	18.50
May, 1908	19.66

Between those dates there were various fluctuations in price with an average price of 18.98 cents.

Average wages paid in New Jersey, \$322.70.

There is another fact in relation to these three large crops which should have special significance to the farmers of the South.

Notwithstanding the comparatively good price which the mills paid for cotton, they made good dividends from its manufacture into cotton goods. Speaking of the season of 1906 and 1907, a sample of three big seasons, Ellison & Co., the famous cotton experts, write:

"The past season has been one of ceaseless activity among mills. That it has been profitable is shown by the payments of dividends from 20 to 50 per cent and in addition bonuses of 20 to 50 per cent of normal value."

Serial No. 27, issued by the department of agriculture and industries of Alabama, page 15, 1907.

The following extract taken from the Cotton and Wool Reporter of January 2, 1913, shows that the Dartmouth mill of New Bedford paid 368 per cent in dividends in 11 years:

"Dividends on the common stock have been paid as follows: 1901, 12 per cent; 1902 to 1904, inclusive, 8 per cent; 1905, 20 per cent; 1906, 26 per cent; 1907 and 1908, 66 per cent; 1909, 12 per cent, and an extra stock dividend of 100 per cent; 1910 and 1911, 16 per cent."

To pay an average of over 33 per cent in dividends each year for a period of 11 years is proof of a most prosperous condition, and also proves the wisdom of New Bedford in abandoning the hazardous and nonprotected whaling industry, and putting their money into an industry where the dividends are guaranteed by the Government by the imposition of a tariff upon goods which the manufacturers have to sell and maintaining free trade in labor, which they have to buy. It is not upon record that the Dartmouth mill corporation made any dividends to the operatives over and above the market price of wages which were paid. An incident of this kind ought to convince the American workman that the foreign labor which competes with them is not the labor which stays in Europe and there does its work, but is the foreign labor that transports itself over to this country and stands at the mill gates here and bids for the American workman's job. And remember, there is no tariff upon foreign workmen who come here to compete with American labor.

Labor cost per spindle in United States, 1900, showing the difference in labor effectiveness in different sections of the country.

	Number of spindles to each wage earner.	Labor cost per spindle.
<i>New England States.</i>		
Maine.....	61.32	\$5.15

United States as a whole.....	68.80	4.48
New England States.....	79.18	4.31
Middle States.....	47.28	6.92
Southern States.....	44.09	4.07

The following extract taken from American Cotton and Wool Reporter of March 21, 1912, illustrates the difference shown in the above figure:

"Labor in textile manufacturing is 50 per cent more effective in some of the seaboard points and hill towns of New England, and in the piedmont section of the Southern States than in any interior section of the Middle or Far West, or at most points upon the Pacific coast. However, the American Wool and Cotton Reporter has long held a favorable opinion of the possibility that textile manufacturing might be more successfully established in Oregon and Washington than in any part of the United States outside of New England. Our far Northwestern States have certainly no lack of moisture."

Compare the wages of the nonprotected industries with the wages of cotton-mill operatives, as shown by the report of the commissioner of industrial statistics of Rhode Island for 1908:

	Per week.
Farm laborers.....	\$9-\$10
Salesmen.....	5- 20
Garden laborers.....	9- 12
Seamstresses.....	6- 25
Painters.....	15- 18
Masons.....	22- 24
Paper hangers.....	12- 22
Washerwomen.....	9- 12

WAGES IN COTTON MILLS.

Pickers.....	7.70
Mule spinners.....	12.92
Warpers.....	10.10
Weavers.....	10.38

Average yearly wages of men in Rhode Island cotton mills, \$459.

Average yearly wages of women in Rhode Island cotton mills, \$356.

"By their fruits ye shall know them" is of universal application.

The fruit of 50 years of high protection of the cotton industry has been to make the cotton-mill operative one of the most poorly paid classes of labor in the country, a result that must inevitably follow the application of the protective idea as carried out in this country.

The cotton manufacturers claim that wages are higher here than they are abroad, and therefore they must have a protective tariff to meet the difference in wages. In view of the fact that the workers in the protected industries have to sell their labor in a free-trade market and don't even seem to reap any advantages from the protective system, I would suggest (subject to its constitutionality) the following plan:

Let the manufacturers, if their claim be true that wages are higher here than in Europe, find out just what the difference in wages is, and let the Government pay the difference to the workmen direct, who would then really get the benefit of protection,

PARAGRAPHS 315-320—COTTON CLOTH.

and the manufacturers would be placed upon equal terms with his European competitor.

This at least would be a cheaper way of meeting the cost of protection than our present method of letting the manufacturers collect the tariff tax without being obliged to report to the Government the amount collected.

I wish to file as part of my brief that part of the report of the commissioner of industrial statistics of Rhode Island for 1912, relating to the village of Lonsdale.

EDITOR FIBER AND FABRIC:

In answer to a subscriber's question how to find the cost of 36-inch 68x72-4.70 sheetings, using 28s warp and 36 filling, from the bale of cotton to the finished cloth. Below is the method from which I have obtained good results. This method has been figured out on a basis of 39,936 spindles and 1,000 automatic looms and the necessary machinery required to produce 40,500 pounds of finished cloth, which would be 190,350 yards, or 3,807 cuts of 50 yards each, with a 95 per cent loom product for a 54-hour week, 40-inch loom running 160 pick per minute. If we produce 40,500 pounds of finished cloth, it will require 48,600 pounds of cotton to be opened per week on account of a 20 per cent loss from the bale to the finished cloth, which will also raise the price of cotton, say, from 13.5 cents to 15 cents. So as to be on the sure side, the writer figures the cost of each department by the production of the loom, a weaver running 20 looms each, and making a weekly wage of \$11.50 or 15 cents a cut.

CARDING MACHINERY REQUIRED.

BRIEF OF CALIFORNIA COTTON MILLS CO., OAKLAND, CAL.,
RELATING TO THE REVISION OF SCHEDULES I AND J.

To the Ways and Means Committee, House of Representatives, Washington, D. C.:

The California Cotton Mills Co., located in Oakland, Cal., was established in 1883, to manufacture a variety of goods made from raw cotton, flax, hemp, and jute. The cotton and hemp are of domestic growth and secured in the United States, the flax imported from Russia, and the jute from Calcutta, India. These mills have been operated continuously since they were started and manufacture a great variety of textile articles, amongst which are cotton and flax towels and toweling, damask, duck, flax and cotton crash, cotton, jute, hemp and flax twines, rope and cordage, and large quantities of jute burlaps and jute yarns. These goods are sold largely on the Pacific slope, the Hawaiian Islands, and the Philippines. The mills give steady employment to fully 700 workpeople, who are paid good wages. The capital stock of this company is \$2,000,000, owned by about 250 stockholders, some of whom are employees in the mills. The profits of this industry have run, during the 28 years of its existence, between 4 and 8 per cent per annum. During the years 1893, 1894, and 1895 the mills made little or no profit.

Raw cotton can be landed at the mills at very little less than the cost of freight to land the same raw material at the mills of European manufacturing centers. In some cases it can be landed for less at the European mills than at mills in some parts of the United States, the freight rate by steamers being low. Raw flax, hemp, and jute may cost a little more in the United States than the laid down cost at European textile manufacturing centers.

The increased cost of manufacturing textile goods in the United States, compared with European countries, arises principally from the higher wages paid and from certain fixed charges other than wages that fall upon these industries in this country, such as insurance, taxes, light, and power and the cost of dyestuffs and chemicals, all of which are important elements in the cost of manufacturing the finished products. The author of this brief and protest, made under the direction of the officers of this company, has worked in European manufacturing countries over 20 years before coming to America and is in close contact with business in the old world, and can therefore state positively facts based on personal observation and practical experience.

Municipal, county, and State taxes in the United States where manufacturing establishments are operated are often twice as high as in most European States. Our

PARAGRAPHS 315-320—COTTON CLOTH.

systems of municipal, county, and State governments are very complicated and expensive, and all textile manufactories have to bear their share of the general burden of civil government.

The insurance rates on all textile industries in the Old World are much lower than insurance rates in the United States. In England, for example, insurance can be effected for 50 cents on 100 pounds sterling value covered by insurance.

Wages are the great item to be considered in the cost of manufacturing; therefore in any reduction of the tariff wages will be the principal thing that will have to meet the crisis of a reduction of the protective tariff. The inventive genius of the highest order which has been at work perfecting the operations of machinery is now fast being applied by every civilized country—even in Japan (where the lowest paid textile operatives in the world are busy at work flooding the Chinese and Indian markets, in competition with England, and even China and India themselves), the most advanced and improved textile machinery is being installed and operated.

The tariff commission formed by the United States Government, which made a report containing much interesting matter, was in many cases far from correct in its statements of wages paid in foreign countries and the cost of production of goods treated in that report, as stated by the commission, were in many cases misleading. We do not deem it necessary in this instance to cumber our brief with confusing figures as to the class of labor here and work and wages paid in various countries referred to in the following statement, but a general average will be found in this tabulated statement, showing the wages paid in those countries named. The figures given are based on a nine-hour day, six days a week, or fifty-four hours working time.

The different countries may be fairly computed as follows:

Wages paid for a 54-hour working week.

	United States.	Great Britain.	France.	Germany.	Switzerland.	India.	Japan.
Textile machinists.....	\$16.50	\$8.75	\$6.50	\$6.00	\$5.50	\$3.10	\$2.75
Cotton spinners.....	12.50	6.20	3.95	3.80	3.50	2.75	2.10
Cotton weavers.....	13.50	7.20	4.10	4.00	4.00	3.00	2.75

In other classes of workers there would be about the same difference as shown here but they would be immaterial and too numerous to mention.

In view of these figures, which speak for themselves, we deem it proper to state here that to reduce the present tariff on textile fabrics and structures would necessitate a reduction of wages of those employed in the textile industries. We protest most strongly against any change being made in the present tariff rates, as it would lead in many cases to stoppage of the mills and bring ruin to the manufacturer and destitution to the workers. We therefore pray your honorable body to make no reduction of the present tariff on these goods.

In some branches of textile manufacture of cotton, hemp, flax, and jute the present tariff does not cover the difference in cost of production and the result is that a very large amount of foreign goods find a ready market in the United States, in competition with the domestic manufactured goods. Over half the importations into this country at the present time come in free and any increase over the \$800,000,000 worth of free imports must impoverish the manufacturing interest of the United States.

Respectfully,

CALIFORNIA COTTON MILLS Co.,
By WM. RUTHERFORD, *Superintendent.*

BRIEF SUBMITTED BY ANDREW G. PIERCE, JR., OF NEW BEDFORD.

The attention of the committee is respectfully called to the dominating phase of House bill No. 25034 in its treatment of the particular class of goods referred to in the following data:

House bill No. 25034 and several other previous tariff bills have based the value of cotton goods solely upon the fineness of the yarn used in their manufacture, without any reference to one other important factor which must be considered.

There should be two distinct bases for determining the values of cotton goods for the purpose of fixing the necessary tariff upon them, and these bases must be reckoned with

PARAGRAPHS 315-320—COTTON CLOTH.

in framing any tariff schedule. To use the one classification dealing solely with the fineness of the yarn is not sufficient, for such classification ignores the fact that many fancy and lighter weaves of cloth may be made of coarse or medium yarns, while many simpler weaves may be made of finer yarns. To adjust the difference between the cost of producing cloth under these conditions requires a recognition of both bases for computation of value, viz, the fineness of the yarn and the cost of producing finished cloth irrespective of the fineness of the yarn.

Taking as an illustration a list of nearly 30 different combinations of warp and filling made into cloth of varying widths, very striking inconsistencies are shown in the return to the manufacturer, if a tariff schedule should be adopted based entirely upon the lines proposed under House bill No. 25034. Two average cases may be cited: A 40-inch, 88 by 80 with a 60's warp and 100's filling, would show a profit to the manufacturer of one-fourth of a cent per yard. Exactly the same yarns made under the same specifications but woven into a 54-inch piece of cloth would show a loss to the manufacturer of one-fourth of a cent per yard. And it should be noted that the finer the goods, the greater the discrepancies possible under methods proposed by House bill No. 25034.

A reduction of 3 to 5 per cent in the present high selling price in England, under such a law as proposed, would mean a loss to every manufacturer of all combed yarn goods.

THE MANUFACTURE OF FINE COTTON GOODS IN THE UNITED STATES, WHETHER IT BE CARRIED ON IN NEW ENGLAND OR THE SOUTH, HAS ITS STRONGEST COMPETITION FROM THE SPINNING MILLS IN LANCASHIRE, ENGLAND.

Every expense entering into the production of fine cloth in the Lancashire district is very much less than similar expenses in the United States.

The cost of mill construction is about 60 per cent of that for similar buildings in the United States.

The cost of labor is only a little over one-half.

The cost of all raw material (excepting cotton) and supplies entering into the manufacture keeps very closely to the same percentages.

Comparing the earnings of two of the most important fine cotton districts of England with the earnings of the most important fine goods section of the United States, the following figures are of interest:

One hundred spinning mills, Oldham district: Share capital, \$2 per spindle; share capital mortgages and loans, \$3.31 per spindle; average earnings per spindle, 30 cents; average earnings on share capital, 15½ per cent; average earnings on share capital and mortgages, 9 per cent. New Bedford cloth mills: Share capital, \$13 per spindle; share capital and bonds, \$14 per spindle.

Considering the earnings for 1912, most of the New Bedford cloth mills lost money, and several earned only about 2 per cent on share capital. Because of the difference in costs, earnings of 30 cents a spindle give Oldham 15½ per cent on capital, while earnings of 30 cents a spindle would give New Bedford only 2.3 per cent on capital, or, in other words, the same earnings per spindle give Oldham \$6.60 against \$1 for New Bedford.

While it is true that exports on cotton goods have increased from year to year, it is only in the coarser grades where it is possible for the United States to compete with the markets of the world, and these exports represent goods produced at a cost where labor represents less than one-third of the net cost. Where the higher percentage of labor prevails (reaching in some of the finer goods to over 60 per cent of the total cost), it would be impossible for such goods to be produced and sold in this country in competition with foreign countries without duties equal to those which now prevail.

Again, considering the duty in its relation to the fineness of the yarn, it should be made clear that in ply yarns the single strand must always be reckoned. Otherwise, cloth containing two ply 98's, for example, could be imported at the duty for cloth containing yarn not exceeding No. 50's, while cloth containing No. 51 yarn would call for the higher duty in excess of 50's. In the same way cloth containing three ply of any number less than 150 would pay less than cloth containing No. 51.

Ordinary cotton cloth should be described as "plain or twilled cloth, not requiring over six harnesses to produce and with only one kind of yarn in the warp and one kind of yarn in the weft and with only one color in the warp and weft."

Fancy cotton cloth should be described as "containing figures or effects produced by yarns of different colors or counts, or by various weaving devices, known as Dobby, Jacquard, box loom, Lappet, Leno, Swivel, etc."

Any tariff law which may be framed should make a sharp distinction between ordinary cotton cloth and fancy cotton cloth, for the duty which protects one sufficiently

PARAGRAPHS 315-320—COTTON CLOTH.

to allow a continuance of its manufacture in this country would be disastrous to the other with its larger labor cost. Under the present law, imports of cotton cloth have been almost entirely of a fancy character. To lower the present duty upon this grade of goods would mean that they would be made a broad where labor is so much cheaper.

MANUFACTURERS OF FINE COTTON GOODS IN THE UNITED STATES HAVE NOT REALIZED AND ARE NOT SECURING AT THE PRESENT TIME IMPROPER PROFITS

The cotton business of the country is capitalized on a lower basis in proportion to the value of its product than is any other one of the great businesses of the country.

The earnings of the fine goods' mills in particular, centered largely as they are in New Bedford, Mass., show a return upon an investment at \$15 a spindle of 5.89 per cent per year for the last 10 years.

If the replacement value at a recognized standard of \$20 per spindle were to be taken into account as a basis for these earnings, the return would average only 4.42 per cent for this same period.

The cotton manufacturing business is distributed among many different concerns, no one concern having more than 2 per cent of the spindles or product of the country. Less than half a dozen concerns have over 500,000 spindles each, and the average number of spindles is less than 30,000 to each manufacturing concern engaged in the business.

The keenest kind of competition marks all branches of the cotton manufacturing in the United States at the present time; a competition which has not only kept prices of goods at the lowest possible level consistent with a fair return on money invested, but which has led to a constant growth in the business, not only in New England where it had its earliest start, but in the South where growth has been most marked in recent years.

Notwithstanding the increased cost of all raw material entering into cotton manufacture, the increased cost of labor, which is between 50 and 60 per cent of the total cost of most finished goods in which the yarns ranging above 50's are used, and many other upward trends in all costs, the prices realized by the cotton manufacturer for his goods show practically no change in the last 20 years for standard goods.

FACTORS OPERATING TO-DAY STILL FURTHER ADD A BURDEN TO THE MANUFACTURING BUSINESS AND SHOULD BE CAREFULLY CONSIDERED IN CONNECTION WITH ANY PROPOSED CHANGE IN TARIFF RATES.

Laws providing for workmen's compensation, for better conditions among the laboring people, for shorter working hours, for increasing safeguards to protect health and improve physical and material conditions, have all added greatly to the cost of manufacturing, which must include increased taxes and increased charges to pay for a share in these benefits.

IN CLOSING.

In framing any tariff bill designed to change the present rates of duty upon fine cotton goods, care should be taken to so fix rates that it is made perfectly clear, not only what the fineness of yarn is which is used as a basis for computation, but also the great difference in the cost of labor required to produce both the yarn and the fabric. For example, it costs nearly seven times as much per pound to spin 120's yarn as it does to spin No. 30's yarn—the additional cost being entirely for labor; hence the yarn in a fabric made of 120's yarn would cost practically seven times as much per pound as the yarn in a fabric made of No. 30's.

But this is not enough. Care should be taken also to recognize not only the difference in the cost of labor as represented in the pay envelope of the operative abroad and the operative in the United States, but it should recognize the average relative cost of labor as applied to any particular grade of yarn produced, as shown by statistics covering the percentage of labor cost in American mills and in English mills. These figures are shown to be in favor of the English mills by practically 70 per cent; yarn No. 36 in American mills, according to the commissioner's report, showing a percentage of labor of 20.71, the same yarn in English mills 12.10.

American manufacturers of fine cotton goods recognize that there may be some inequalities that require adjustment, and some conditions connected with the imposing of duties upon cotton goods that may require changes.

They submit that their capital invested is less than present replacement value.

That the rate of dividends paid averages lower than the dividends paid in any other of the great American industries.

That there is no monopoly in any branch of their business.

PARAGRAPHS 315-320—COTTON CLOTH.

That widespread competition has led to great growth of the business under existing laws.

That wages for employees have steadily increased.

That working conditions have shown constant change for the better.

That any change that shows any marked reduction from present rates of duty can not fail to seriously injure a great national business employing nearly half a million operatives and furnishing means of livelihood indirectly to twice as many more.

If the adjustment such as has been proposed in recent tariff agitations shall take place, three courses will be left open to the manufacturer of fine cotton goods: He may close his mills, which would be the last step that any patriotic American business man would take; he may buy his yarn from the importers and weave goods with patented American machinery and meet, with slight profit, the keen competition of foreign manufacturers; or, he may shift his entire equipment into a coarse goods manufactory and run his risk with the other manufacturers of goods where the labor cost is reduced to the minimum, in competition with the mills of the world and in the markets of the world.

BRIEF OF WALTER H. LANGSHAW ON COTTON SCHEDULE.

NEW BEDFORD, MASS., *January 27, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Committee on Ways and Means, Washington, D. C.

DEAR SIR: In accordance with the understanding of the committee, I respectfully submit the following statements offered as arguments in favor of the position I take in the matter, which is that there should be a moderate, not a radical, reduction in the cotton schedule, and that the tariff should be specific; certainly not entirely on an ad valorem basis. Naturally desiring that what I may have to say on the subject shall have your serious, and I trust your favorable, consideration, I deem it only fitting to make brief mention of my experience, and quote extracts from statements made at different periods as evidence that I am not a "standpatter," and have for years favored a moderate reduction of the tariff.

I am now president and general manager of the Dartmouth Manufacturing Corporation, of New Bedford. I was engaged as superintendent at the time of its incorporation in 1895. Previous to that time I had been employed as a workman and in charge of various departments inside of the mill for about 25 years. I am also president and managing director of the Bristol Manufacturing Corporation since 1907. I have lived in New England nearly 50 years.

Extract from statement in October, 1904: "I believe that protection is absolutely necessary for the development of industries in which skilled labor is required in quantity.

"It behooves those who are financially interested in our industries to give these questions their serious consideration and become identified with conservative people who favor moderate reduction, and thus be in a position to defend their interests rather than stand pat until the day comes when the people will rise, and, without any regard for financial interest, support those for office who will make radical changes that will result in a serious marking down of values in the industries in this country.

"On the other hand, a moderate reduction of the whole tariff on all articles (including even cotton goods), with special attention to those articles which the past has demonstrated can be exported and sold in competition with the product of other countries, and on articles that but a small amount of labor is given employment, compared with the total tax on the consumer, would reduce the cost of manufacturing and would enable mills on coarse fabrics to export more freely, and this would relieve us of the accumulation of goods, which is just as detrimental to the manufacturing interests and to its employees as if the goods were imported.

"The lowering of valuations that takes place through reduction of the tariff is what deters many from advocating a reduction or supporting a body in favor of it, but the benefits that will accrue to the industry are permanent, and are therefore more important; and the marking-down process is one which every business man has to do from time to time on various commodities. The essential feature is that reduction of the tariff must be moderate."

Extract from statement in 1909: "I am not a standpatter, and my views do not accord with many of my contemporaries. I believe that a moderate reduction intelligently applied would be beneficial rather than detrimental to the industrial and commercial development of this country, and as a cotton manufacturer I am ready to stand my share of the reduction.

PARAGRAPHS 315-320—COTTON CLOTH.

"I know of no fabric manufactured in New Bedford, figured on the lowest scale of wages that has existed since the passing of the Dingley bill, that can be manufactured at anything near the same cost as abroad."

Extract from statement in 1910: "I believe that the tariff is a moral issue. The impression that prevails at large that it is a game of graft, that its manipulations have produced the largest fortunes known in modern times, has corrupted the moral fiber of citizenship in this country."

I have examined the rates of duty on cotton yarns and cloths as proposed by Mr. Lewis W. Parker, and while I approve of the average reduction and appreciate the broad and able way in which he has treated this subject, and the courtesy he extended to me personally as one interested in fine fancy goods, I do feel that there is still opportunity for making further divisions in the classes of fabrics, but there was not time to go into details.

Where there is one duty covering a large range of numbers of yarns, whether of yarns or cloth, unless there is more division the duty is not equitable; and, furthermore, I believe that on the finer end there should be a trifle more duty. This is particularly so where the fine yarns are used in complicated fabrics of medium and fine count, and especially so on leno weaves and jacquard work.

Any schedule which does not give the same proportionate protection to different kinds of fabrics and different processes will result in changes and competition that will finally demoralize the entire industry, as those mills which are shut out by importations, whether in the North or in the South, will turn their efforts to that which shows the least loss, and all this changing is contrary to economics and increases the cost. One of the troubles we have to contend with now is the multitude of variety attempted in each mill. Under a fair and equitable tariff it will be possible in the future to arrange mills to adapt themselves to a less variety of goods and reduce the cost and improve our quality.

The schedule presented by Mr. Parker was on an ad valorem basis, which, I understand, was because of a feeling that a plan on any other basis would not receive favorable consideration. Be this as it may, I wish to state most emphatically that I am opposed to a plan that is entirely on an ad valorem basis. It does not in any sense meet the requirements of the situation. The duty should be specific.

Assuming that it is the intention of the incoming administration to make a tariff for revenue, there is something due to the people who have been obliged to adjust their affairs on the protective tariff, distorted or not as the case may be. Eliminating this feature, however, for the purpose of argument, and considering it on a basis of a tariff for revenue, the ad valorem basis would not meet the situation, as under extremely high-priced cotton the rate of duty per yard would be extremely high and would be practically prohibitive and result in promotion of new mills. On an exceptionally low price of cotton the duty would be much less, and as all other items of cost would remain the same, importations would take place and curtailment would necessarily follow in some form or other, which would result in a loss to laborers and investors, and if this condition followed extremely high cotton, an already bad condition would be made worse because of the increased production by new mills promoted in the prohibitive high-cotton period.

The subject is an intricate one and requires a scientific schedule that will admit the different features to be adjusted to a nicety instead of a general lumping up of the whole on one general basis. There is a multitude of fancy fabrics that have been made and many more to be made in the future. In many instances a fabric is a separate proposition so far as the cost and the process of manufacturing is concerned, and while it would be impossible to make a tariff bill to cover every design, it is possible in a specific tariff to make a duty per yard on various classes that would meet the requirements.

There is a large amount of money and a large number of people involved, about 2 per cent of our population. There should be no haste; time should be given for the working out of a plan to meet the requirements of the situation. There has been too much bungling in the past, and the general reduction as embodied in Mr. Parker's recommendation can be worked out on a satisfactory specific basis. There are practical and trustworthy men who can be depended upon to render assistance in working out a satisfactory plan, and one which will show beyond question that the duty is lower than the Payne-Aldrich and the Dingley bills.

I do not agree with the opinion expressed that our labor is as efficient as that in English mills. They can produce a better quality and a larger quantity per spindle or loom than is done in this country. There are communities in England in which families for a number of generations have been employed in the business, and it is fair to assume that they are certainly up to the average intelligence of our operatives.

PARAGRAPHS 315-320—COTTON CLOTH.

It has been stated that because of the large number of automatic looms that are run by one weaver that we have an advantage. This should not be considered in the adjustment of the tariff. I understand that there is an invention in Europe, which is being tried out, on which a weaver can operate more looms than are now being operated by the weavers on automatic looms in this country. I can not vouch for the truth of this, but it is of no consequence. The main point is that it is perfectly safe to assume that any invention that has proved satisfactory will finally be universally adopted. Nearly all of our machinery is either made or remodeled after the English machinery, which is a good indorsement as to their judgment, and it is fair to assume that they will be among the first to adopt any new machine or process that may, beyond question, prove to be successful.

One very important feature that should be borne in mind, particularly if revenue is a factor, is that the cotton-manufacturing industry has paid 45 per cent duty into the United States Treasury for a portion of its equipment or its equivalent to the domestic manufacturer, and after doing this requires a large sum for working capital.

What industry is there in the United States that employs such a large number of people that returns such a small average percentage on the capital in the form of stock or on the actual money required to conduct the business. If there is such an industry, I would like to know what it is.

The effect of a radical reduction in the tariff on machinery will not offset a radical reduction in goods, because those who have already paid duty will ultimately have to face competition from those who will be able to erect mills at a lower cost.

The brief submitted by a lawyer who refers to Dartmouth Manufacturing Corporation dividends, which was published in the newspapers, is of a type that should not receive serious consideration. He has nothing at stake, either as a laborer or an investor. He possesses little, if any, knowledge of the subject from actual experience, and the matter is too important, and the time of legislative bodies too valuable to be given to those who have only second-hand information. If he believes that large salaries, or large profits in occasional instances, should be rendered impossible by legislation, I would suggest that there is ample room for him to confine his efforts to regulating the matter of charges in his own profession.

There has been considerable printed about the Dartmouth profits and dividends. They have been mentioned in Congress, and have been accompanied by word pictures of the poor operatives, by Congressmen representing districts where wages and conditions in shops were so much below the standard of the mills in New Bedford that they would not be tolerated in Massachusetts.

The following are the facts: The Dartmouth Manufacturing Corporation was incorporated in 1895. It was started in 1896, and the first dividend was paid in 1899; practically three years without dividends. For about two years under the high and raised duties, so-called protective, in the Payne-Aldrich bill, it has not earned its dividend net and the last two years has averaged from 20 to 25 per cent curtailment, and is now curtailing to the extent of 25 per cent, because there is not business enough at prices to return a dividend. The total dividends, or sum paid to the stockholders, plus the surplus—in other words, the total earnings for the 16 years—shows an average of less than 10 per cent on the money required to conduct the business, and this is probably one of the most successful mills in the country. How has this extraordinarily large profit in the cotton business affected the consumer? The result is surprising.

During the period of 16 years it has manufactured about 325,000,000 yards. Making allowance for the yarn sold, it would bring the total product equal to 350,000,000 yards. The total amount paid by the Dartmouth Manufacturing Corporation in dividends is equal to eight-tenths of 1 cent per yard. This covers the period of 16 years, and is about 3 cents in a shirt and other garments in proportion.

Some of the most profitable business for the Dartmouth Manufacturing Corporation has been that on which they expended considerable money for the purpose of manufacturing goods which were imported, and that they were able to do this business was because they ultimately were able to undersell the importer, which surely indicates that the manufacturer at least has done his part toward reducing the cost to the consumer. In this connection, I do not think it unreasonable to assume that the activity on the part of importers may be due to the application of this feature by manufacturers.

It can easily be proved that cotton mills are not overcapitalized. The instances of large profits are so small in number that it is easy to attribute them to the matter of personal equation or some other feature which has no more to do with the tariff than have the profits in various kinds of business, or for that matter, in professions.

PARAGRAPHS 315-320—COTTON CLOTH.

There have been large profits made in the early history of the fine goods mills. At that time there was little competition and the mills were able to secure nearly the full margin of difference that existed between the cost to manufacture goods here and the price for which they could be imported.

That the tariff was high enough to enable them to make large profits was probably the reason why many were induced to build new mills. To-day it is a settled question that we can manufacture fine cotton goods, although it must be borne in mind that the field for skilled labor for the manufacturing of fine and special cotton goods is not as good as that abroad.

That we have been reasonably successful has induced the promotion of many mills, more than is required for our home consumption. This has resulted in the prices being regulated according to home consumption, and prevailing prices have been below cost, and in some instances very much below the price for which similar goods can be imported, showing conclusively that the prevailing prices of cotton goods has not been regulated by the importing prices. On this class of merchandise a moderate reduction could be made as well as on many coarse fabrics.

As to the tariff affecting the price to the consumer, evidence can easily be secured that the consumer pays more profit on imported fabric than for domestic. Much of this is of a kind which is manufactured in small quantities and would not be profitable for manufacturers here to undertake, particularly as the immigration laws are in favor of unskilled labor and discriminate against skilled labor. These fabrics are of a kind worn by those who are able to gratify their taste, and therefore a good kind from which to secure a revenue.

As evidence that the prevailing price of gray goods to mills has not been adjusted to the importing price is the fact of the stock of standard goods on hand in many instances by many mills, and that the prices are so much below cost that about 25 per cent of the looms have not been operated for nearly two years in New Bedford.

The profit per yard to the mill manufacturing gray goods is small, even in the case of Dartmouth. If it was all profit, and interest on money required in the business was eliminated, it would only be three-fourths of 1 cent per yard. There is more variation than this, even as much as 2 and 3 cents per yard in the price to the mill on lines of goods which are sold to the consumer at one general price.

I have seen a large variety of cuttings advertised and sold by one concern at the price of 25 cents. These cuttings would, in the gray, have varied in price probably from 7 to 12 cents. The difference in the finish would not vary over 1 cent, leaving a variation of 4 cents per yard. On this system I fail to see how the small fraction of a cent per yard to the mill is going to be of much benefit to the consumer.

The net earnings of the Dartmouth for the period mentioned was approximately about 10 per cent on the volume of business done, and note this is a successful mill. Taking this mill even as representing the general run of mills, any unreasonable reduction of the tariff that forces the mill to sell at a 10 per cent less price will eliminate all earnings on capital and interest for borrowed money, and will affect the gray price less than 1 cent per yard.

With the variation in gray goods of 3, 4, and 5 cents per yard sold at one price, how is the consumer going to benefit, even after the cotton manufacturer has given up all idea of interest on any of the money required?

Further, if a tariff is constructed simply with the idea of collecting the revenue, how much is to be collected? It is clearly shown that 10 per cent is all there is in the most profitable mill in the country, so if the mills have, as has been charged, been regulating the price of their gray product to that of the importing price, a reduction equivalent to a 10 per cent of our output would take away all interest on the money, savings banks under those conditions at 4 per cent would certainly prove attractive.

On the other hand, if a 10 to 25 per cent reduction from the present rate does not ruin the industry and result in demoralization, which I do not think it will do if properly worked out, is it not good evidence that the cotton industry has been placed in a false position before the public, and is it not the duty of Congress to consider these facts, and treat the question on broad business lines, that they may deal justly with one of the chief industries of the United States, one that pays a revenue into the United States Treasury for its equipment to do business; one that employs such a large number of people, and in which are concerned many small investors?

Yours, very truly,

WALTER H. LANGSHAW,
*President and Managing Director Dartmouth Manufacturing Corporation and
 Bristol Manufacturing Corporation, of New Bedford, Mass.*

PARAGRAPHS 315-320—COTTON CLOTH.

ARGUMENTS IN FAVOR OF AD VALOREM RATES.

NEW YORK, *February 8, 1913.*

HON. OSCAR W. UNDERWOOD,
Washington, D. C.

MY DEAR SIR: Regarding the hearings you have been giving on the tariff question and referring to the prospective reduction which you have promised, I would like to bring a few points to your notice which might be helpful to you.

In the first place, you are of course aware that the present tariff schedule on cottons is a most complicated affair, and could only be written by an expert manufacturer in his own interests. I may tell you that the biggest jobbers in this country with whom we do business never attempt to try and find which schedule a given cloth comes under. We have to find this out before calling on them, by ascertaining the square yards to the pound, the threads per square inch, and valuation per square yard, and whether the cloth is mercerized or not.

Take, for example, article 318 in the old tariff, which covers cotton cloths exceeding 200 threads and not exceeding 300 threads to the square inch. The various figures contained in the side columns are misleading and we have not got a single cloth to which the duty therein applies.

Any cloth with 200 threads will exceed $3\frac{1}{2}$ square yards to the pound. The minimum duty is therefore 7 cents per square yard, and if mercerized another cent for mercerizing.

As an example, a cheap printed sleeve lining 40 inches wide, costing 6d. in England, counting 202 threads per square inch, if mercerized, enters the United States at 7 cents and 1 cent per square yard, or $8\frac{1}{2}$ cents per linear yard, which is an excessive duty on 12-cent goods.

The valuation at the end of each article is the clever joker which applies the duty, also the 1 cent per square yard for mercerizing only allows domestic manufacturers to charge an excessive price for this process, the cost of which is $\frac{3}{4}$ d. in England on the finest goods. This 1 cent puts cloths into a higher schedule, as it increases the square yard valuation simply because the mercerizing is already charged for in England.

I could give you many glaring instances where this 1 cent is the means of making the same cloth cost $3\frac{1}{2}$ cents per yard more to land here than if it was unmercerized.

Also, on cheap pocketings, cloths only counting 108 threads, the duty is excessive. We have such a cloth, 30 inches wide, that costs $6\frac{3}{4}$ d. for white and 7d. for dyed shades. Being mercerized, the duty is $6\frac{1}{4}$ cents and 1 cent on white and 7 cents and 1 cent on dyed; 8 cents per square yard on goods only costing 14 cents in England. These prices are the highest level our prices have ever touched.

Also, we weave silk stripes into these sateen sleeve linings, but our trade has been ruined because a monopoly has been created on this side through the prohibitive duty, which as a minimum is 8 cents per square yard and 30 per cent ad valorem, while the better qualities pay the exorbitant duty of \$1.25 per pound, and they only have a small percentage of silk in them. I think a 30 per cent duty without the 8 cents per square yard would be a reasonable tariff; in fact, it would then be too high, as the domestic manufacturers can compete in these goods and also in ordinary cotton goods with any manufacturers in the world, and a good illustration of this is the fact that they can sell cotton goods in foreign markets.

I could show you some interesting figures regarding prohibitive duties and low wages paid by domestic cotton manufacturers, but I know that you already are likely to be overdone with statistics, although I fear they may be all on the one side.

An ad valorem duty would be a much fairer duty, as any man on the street would know at once what the tariff was on cotton goods, or anything else for that matter, and you have the extra safeguard of having all invoices sworn to before a United States consul in England, and also we furnish your consul with the market prices on the day of shipment, and this does away with the theory of undervaluation, where any reputable firm is concerned.

I might say that Mr. Rogers, one of our directors from London, is at present in New York, and we would like to see you together for a short interview, either in Washington or in this city, if you are likely to be in New York within the next week or two. I think we could give you some valuable information which would be on a very fair basis, as our ideas of a tariff are that the American manufacturer should positively have a reasonable protection, but not a monopoly, which exists at present and which kills any outside competition, and at the same time enables them to get inflated prices, which are just under what our goods would enter after paying the excessive duty.

PARAGRAPH 315-320—COTTON CLOTH.

Also, I might add that we have done continuous business here for over 60 years, and we have yet to hear of the first complaint or charge against us with respect to the customs. I think you will agree that this is a good record. Also, our goods are well known and we only expect to get business from the class of trade that want imported goods.

We are quite aware of the fact that the domestic man will always get the big volume of business, and we feel that he could get it to-day with half of the present tariff. I think you will agree that this is a fair and conservative estimate.

I might add that even to-day some of the requisitions of the United States Government call for Ferguson's linings.

In conclusion, to illustrate how well they can make goods in this country and from my knowledge of domestic goods, I could take a range of qualities from the lowest to the best and do a mighty fine business with them in foreign markets that I know, against the world's competition.

Awaiting the favor of your reply, I remain, dear sir,
Yours, respectfully,

ROBT. B. SCOTT.

DECEMBER 5, 1912.

HON. ANDREW J. PETERS,
Washington, D. C.

DEAR MR. PETERS: IN ANY revision of the tariff that may be made by the next Congress, it is the universal prayer of business men and customhouse officials that, regardless of such relatively high or low duties as may be adopted, radical change be made from the present complicated and ambiguous rates to something simple and understandable.

It is an entirely warrantable belief that the blind rates of duty embraced in that amazing piece of legislation called the Payne-Aldrich tariff bill were conceived by our Republican friends not only for the purpose of beneficent protection to needy manufacturers like William Whitman, of Lawrence, but to give employment to a very worthy class of specialists called tariff lawyers; for no layman or, indeed, no customhouse official can at all times interpret correctly the different rates contained in the existing tariff schedules. They are a mass of ambiguities and contradictions which trip very frequently even the Board of United States Appraisers.

As a concrete illustration of the complication of the present cotton schedule and the great difficulty of giving it a correct interpretation, here are three samples inclosed of cotton cretonnes. These samples are marked "A," "B," and "C." A costs 7½ pence, sterling, rate of duty 8 cents per square yard; B costs 9½ pence, sterling, rate of duty 9 cents per square yard; C costs 17 pence, sterling, rate of duty 35 per cent ad valorem.

These goods being practically all one class, the inequity and inconsistency of these rates will be immediately appreciated when it is pointed out that the two inferior grades figure out about 50 per cent ad valorem as against 35 per cent on the better grade; moreover, we are never sure of having the same rate applied twice on the same grade of goods, there being several instances in our experience where two importations of one grade have been liquidated at different rates. There is no redress; indeed, life is too short to seek redress at a United States customhouse. In my opinion, to remedy all such incongruities, uniform ad valorem rates should be substituted so far as practicable, not only on cotton goods, but on all other textiles, the silk and woolen schedules of the present tariff being open to exactly the same criticism.

GEO. S. HARRINGTON.

NEW YORK, *February 17, 1913.*

HON. OSCAR W. UNDERWOOD,
*Chairman of the Ways and Means Committee,
House of Representatives, Washington, D. C.*

DEAR SIR: We are in receipt this morning from our Bradford office of the inclosed letter.

This letter was evidently written after seeing the cotton schedules proposed by Mr. Parker. The gentleman who wrote this letter is a man who has lived in Bradford all his life and has been with us for 54 years. I only tell you this to show you he must have had a fair amount of experience. As he says, it will be a difficult proposition if the final tariff bill is worked out on the lines proposed by Mr. Parker.

You are perfectly welcome to keep this letter if it is of any service to you whatever.
Yours, very truly,

FRED. BUTTERFIELD & Co. (INC.),
P. B. WORRALL, *President.*

PARAGRAPH 321—CLOTH, FILLED OR COATED.BRADFORD, ENGLAND, *February 6, 1913.*MESSRS. FRED. BUTTERFIELD & CO. (INC.), *New York.*

DEAR SIR: Your letter by *Campania* to hand dated January 28. We are amazed to read in Mr. C. A. Worrall's letter that there is some talk as to basing the new American tariff on cottons on the counts of yarn.

Anything more complicated could not be imagined. For instance, a cotton fancy cloth may contain four to five different counts of yarn; again, if a cotton cloth is composed of artificial silk and cotton, the artificial silk has no count. It is made anything it turns up, and they will guarantee nothing. This thread is simply composed of a lot of fibers, which may be anything. Again, there are two-fold yarns, and what they would call these we do not know, and again, you may have a thick Egyptian yarn that is worth a lot more than a fine count American yarn, and the Egyptian yarn would pay the least duty.

Another thing is, that a lot of makers will refuse to give us this information, as they consider it part of their secret, and we have no doubt at all we shall have great difficulty in getting the counts of yarn that our various cotton cloths are made from. In fact, the whole thing would be so muddling that we can not imagine for one moment that such a tariff could come into force.

For instance, every style of Woodrows chiffon lisse might contain different counts of yarn, while the ground cloth would be the same in every instance. The fancy yarns that decorate the cloth are nearly all different, and it means that it will be necessary for us to give you the composition of each and every style, numbering some 40 different styles. In face of such a tariff, every different style we buy in chiffon lisse may pay a different duty.

We have written to all our makers for the information, and do not expect to get it without a good deal of trouble, and even then we would not be surprised if some of the makers absolutely refuse to give it to us.

We still hope to see a straight ad valorem duty imposed on the cotton goods, as this is certainly the most satisfactory way from our way of looking at it. Then always the best and most expensive cloths pay the most duty. This is the only way that this can be accomplished on cotton goods.

Very truly, yours,

FRED. BUTTERFIELD & CO. (INC.).
F. I. DENISON.**PARAGRAPH 321.**

Cloth, composed of cotton or other vegetable fiber and silk, whether known as silk-striped sleeve linings, silk stripes, or otherwise, of which cotton or other vegetable fiber is the component material of chief value, eight cents per square yard and thirty per centum ad valorem: *Provided*, That no such cloth shall pay a less rate of duty than fifty per centum ad valorem. Cotton cloth filled or coated, all oilcloths (except silk oilcloths and oilcloths for floors), and cotton window Hollands, three cents per square yard and twenty per centum ad valorem; tracing cloth, five cents per square yard and twenty per centum ad valorem.

CLOTH, FILLED OR COATED.**BRIEF OF LYON BROS. & CO., BALTIMORE, MD.**BALTIMORE, MD., *January 22, 1913.*

Hon. OSCAR W. UNDERWOOD,
*Chairman Committee on Ways and Means,
House of Representatives, Washington, D. C.*

SIR: Permit me to call your attention to paragraph No. 321 of the present tariff, relating to certain cotton goods, reading as follows:

"Cloth, composed of cotton or other vegetable fiber and silk, whether known as silk-striped sleeve linings, silk stripes, or otherwise, of which cotton or other vegetable fiber is the component material of chief value, eight cents per square yard and thirty per centum ad valorem: *Provided*, That no such cloth shall pay a less rate of duty than fifty per centum ad valorem. Cotton cloth filled or coated, all oilcloths (except silk oilcloths and oilcloths for floors), and cotton window Hollands, three cents per square yard and twenty per centum ad valorem; tracing cloth, five cents per square yard and twenty per centum ad valorem."

PARAGRAPH 321—CLOTH, FILLED OR COATED.

I respectfully ask the honorable Committee on Ways and Means to change the latter portion of this paragraph so as to read as follows:

"Cotton cloth filled or coated, all oilcloths (except silk oilcloths and oilcloths for floors), and cotton window Hollands, fifteen per centum ad valorem."

The present duty of 3 cents per square yard and 20 per cent ad valorem on cotton shade goods is most excessive and therefore brings in little revenue to the Government, the amount of duty collected in the 12 months ending June 30, 1912, being only \$153,885.86, as shown by department statistics.

It amounts to an ad valorem rate of 49 to 50 per cent on the class of goods I import, samples of which are attached herewith. On table oilcloths the tariff is prohibitive, few or none being imported and no revenue to the Government follows.

This tariff benefits a few privileged persons at the expense of the public, and more especially the poorer classes, and for which there is no reasonable excuse.

Cotton cloth is certainly cheaper here than abroad and runs from 4 to 5 cents per square yard, as the market fluctuates. Domestic manufacturers pay less for varnish, rosin, turpentine, etc., than do foreign makers. These domestic makers have been exporting their goods—notably to Canada—to the extent of about \$100,000 in the fiscal year ending June 30, 1912, in spite of the fact that on such goods imported into Canada from the United States the duty is 30 per cent, against a duty of 20 per cent on the same class of goods coming from the mother country—England.

In spite of this handicap of 10 per cent American makers have been able to sell \$100,000 worth of goods in competition with English makers on what might be called their own ground and, furthermore, statistics show in the same period they have sold about \$52,000 worth of their goods right in England.

The fact that these domestic makers can sell their goods in Great Britain and on the Continent is in itself proof that they can produce their goods as cheap as any maker on the other side; that they can and do compete with foreign makers right in their own homes. In proof of this, see table of exports herewith attached, furnished by Department of Commerce and Labor, showing destination of said exports.

These exports in the 12 months ending June 30, 1912, amounted to \$541,436, while in the 5 months following June, i. e., July, August, September, October, November, 1912, the exports of the same goods were \$284,429, which is at the rate of \$682,632 per year, and it is very safe to say in a few months they will reach the \$1,000,000 mark.

One of the prominent makers in this country has in the last few years been advertising in trade papers that his goods have a steady and growing demand in England and her dependencies; that a considerable shipment had previously been made to Holland and to Argentina, and practically the same situation existed in Australia, and that his goods are the subject of numerous inquiries from abroad.

The English and the German manufacturers are not easily beaten on their own ground, but improved machinery and new and efficient methods of American makers have reduced the cost of production, enabling them to sell in any part of the world, as they do not hesitate to claim in their advertisements. The exports tell the tale and confirm their claim.

They can and do find profitable outlets in all parts of the world.

The present tariff has enabled domestic manufacturers to prosper greatly by selling their goods at home at high prices, with the aid of the Government backing they have heretofore received and are now receiving.

The duty asked for of 15 per cent ad valorem will give the Government a much greater revenue than heretofore, will relieve consumers (and especially those of narrow means) of the burden they are now carrying, and at the same time will give domestic makers all the protection they can reasonably ask, although their exports show and conclusively prove that they need none at all.

Yours, respectfully,

WM. A. LYON,
Trading as Lyon Bros. & Co.

BRIEF OF STANDARD OILCLOTH CO., NEW YORK CITY.

NEW YORK, February 7, 1913.

HON. O. W. UNDERWOOD,
*Chairman Ways and Means Committee,
 House of Representatives, Washington, D. C.*

DEAR SIR: We respectfully desire to call your attention to a few facts with regard to the industry known as the light-weight oilcloth industry—in other words, oilcloth manufactured on a cotton base (not silk oilcloth or oilcloth for floors) as designated in paragraph 319 of the cotton schedule of the Payne bill. We would suggest that the classification as shown in paragraph 5 in the cotton schedule of the Underwood bill, introduced at the last session of Congress, be changed in wording so as to separate cotton window hollandes from oilcloth, from the fact that there is such a great difference in the value of the products. We inclose two samples—one of cotton window hollandes, Exhibit B, and one of oilcloth manufactured on a cotton base, Exhibit A. The market value of each is given, from which it will be noticed there is a great discrepancy in the price. Light-weight oilcloths (not silk oilcloth or oilcloth for floors) are manufactured for various purposes. A large percentage of the product is in imitation of leathers; therefore it would seem that this class of goods belongs to “waterproof cloth composed of cotton or other vegetable fiber, whether composed in part of india rubber or otherwise,” and not to the cotton window hollandes. We

PARAGRAPH 321—CLOTH, FILLED OR COATED.

therefore would respectfully suggest that this change in classification be made so that paragraph 5 in the Underwood bill as presented at the last session of Congress would show three different families: (1) Silk-stripe sleeve linings, silk stripes, etc.; (2) cotton window hollands; (3) Oilcloth (not silk oilcloth or oilcloth for floors), waterproof cloth composed of cotton or other vegetable fiber whether composed in part of india rubber or otherwise. This change would place the articles which come in competition together, for oilcloth does not compete with cotton window hollands but does compete with rubber-coated cloth and other imitations of leather.

Our suggestion in no way alters the intent but simplifies and segregates the different families so that the classification would be clearer and more distinct, and at the same time obviate trouble as between the manufacturers of the different articles mentioned at such time when hearings, public or otherwise, may be given for the purpose of determining the amount of protection which should be afforded.

Oilcloth (not silk oilcloth or oilcloth for floors).—The competition that would have to be met by the American manufacturer of lightweight oilcloth would be principally that of the German and English manufacturer. The keenest competition no doubt would be from the Englishman. The largest amount of lightweight oilcloth imported into the United States at this time is known as American leather cloth, manufactured by a firm that some years ago moved their plant from Newark, N. J., to England. Among the English manufacturer's advantages over the American manufacturer may be enumerated the following:

Labor.—The Englishman has not only cheaper labor—from 33½ per cent to 40 per cent less than the American manufacturer—but he also has more skilled labor from the fact that an English workman is a permanent employee. He does not drift from one place to another; he remains on the job permanently and therefore naturally is more skillful.

Cotton cloth.—About 50 per cent of the value of oilcloth manufactured on a cotton base is represented in the value of the cotton cloth. The advantage of the Englishman in manufacturing cotton cloth is admitted. The English manufacturer of oilcloth has his own looms and manufactures his own cotton cloth. As he uses it for his own purposes, he is able to manufacture, by the use of size and other adulterants, in a manner that very materially reduces his cost as compared with American cotton cloths now manufactured. He is also able, by virtue of the above facts, to manufacture a good piece of oilcloth at a much less cost of the cotton fabric as compared with the American product. We call your attention to the fact that even were it possible to secure abroad the cotton cloth for the manufacture of oilcloth such as is used in England, the duty on the cotton cloth to be imported would prohibit its use unless an adequate protection was afforded the finished American product in oilcloth.

Linseed oil.—Linseed oil is another chief ingredient in the manufacture of oilcloth. The American manufacturer is dependent upon the flax grown in the United States, for there is a duty on flaxseed and a tariff of 15 cents per gallon on linseed oil. Flaxseed is grown in the Northwestern States. A severe drought in the summer or an early frost in the fall has resulted in reducing the crop 50 per cent, and the price of linseed oil has increased from 40 cents to \$1 per gallon in a comparatively few months by virtue of a short American crop. Therefore, the American manufacturer assumes considerable risk in the purchase of his oil, whereas a failure of the crop in the United States does not affect the English manufacturer, who has no duty to pay and who draws from India, Argentine, Russia, and other flax-producing countries. It is also an assured fact that what is known as Calcutta oil, or oil crushed from Indian seed, is far superior in quality to the American oil. This gives the Englishman another added advantage. With the protection on flaxseed and linseed oil, the American manufacturer of oilcloth would be seriously handicapped unless his product received adequate protection.

China clay.—China clay is used extensively in the manufacture of lightweight oilcloth. This is all imported from England and has a duty of \$2.50 per ton, equivalent to the ad valorem duty of 36.97 per cent. The Englishman has his own clay that costs him very much less than the American. He has the advantage of using the finer grades, whereas the American manufacturer has to take what is sent him.

Export trade.—The amount of exports in lightweight oilcloth is not great. Less than 5 per cent of this company's business is export trade.

Such goods as are exported are largely specialties which, in many instances, are not manufactured by the Englishman and the German. Were it possible to meet the foreign cost, it would still be difficult to export lightweight oilcloth, for with the exception of a very few countries there is a tariff against the American product. Here, again, the Englishman has an advantage, for he is afforded a preferential tariff. For instance, 20 per cent with France, 10 per cent with Canada, and 5 per cent with

PARAGRAPH 321—CLOTH, FILLED OR COATED.

Australia. His goods are carried on English bottoms to all parts of the world. Another great advantage in his favor. Not only in freight-carrying facilities but in banking facilities he has the advantage. The American manufacturer has not yet studied the questions entering into export business as carefully as he should, and it will take some little time and considerable effort to put him on the same level as the manufacturers of Germany and England who have not only been studying the question but have been profitably exporting for many years.

Competition in the United States.—There is probably no industry in which competition is more severe in the United States than that of the products represented under clause 3 of our suggested classification—

“Oilcloth (not silk oilcloth or oilcloth for floors), waterproof cloth composed of cotton or other vegetable fiber whether composed in part of india rubber or otherwise.”

Under this classification there are 29 oilcloth (not silk oilcloth or oilcloth for floors) manufacturers and finishers and 26 manufacturers of rubber cloth and artificial leather cloths, making a total of 55 manufacturers in the country who come in direct competition under this classification. The nature of this competition has kept down the retail prices—for instance, in the face of much higher raw materials, the price of light-weight oilcloth has not advanced to the general public and it is sold to the consumer to-day at the same price it was sold 10 years ago. If lightweight oilcloth was imported, even in large quantities from abroad, in our opinion the price to the consumer would be no less, for the profit afforded the distributors of this product would not in any instance be less than it now is.

Protection.—Under the Dingley bill light-weight oilcloth was afforded the same protection as floorcloths and linoleums. In this respect the Dingley bill was badly framed, for the protection was about 118 per cent. This unnecessary and unreasonable protection, however, did not result in an increased price of oilcloth, for the competition in America under the Dingley bill was just as keen as it is under the Payne bill. In the Payne bill light-weight oilcloths were taken out of the jute schedule and put in the cotton schedule and the duty of 3 cents per square yard specific and 20 per cent ad valorem was afforded, which gave the industry a protection of from 45 per cent to 50 per cent. The 25 per cent ad valorem duty as proposed in the Underwood bill before the last session of Congress, in our opinion, is not ample to cover the difference between the foreign and domestic cost of oilcloth. A duty sufficient to equalize the relative difference in actual cost as between the American and English manufacturers could probably be a little less than the 50 per cent protection which is now afforded, but it would seem that there are other factors that enter into the case and that the rate to be fixed should not be based wholly upon the difference in actual cost. A reduction in the duty, even though slight, would no doubt result in a largely increased importation of oilcloth, a fair revenue for the Government, and a continuance of the industry in the United States on a basis that would be competitive and not prohibitive. All other things being equal, the industry should receive no more protection than the average American industry, for it should be willing to take its chances with the rest; but by virtue of the fact that many of its raw materials have a duty against them, and that its labor is much higher than foreign labor, the industry is not quite in the position of some others where these handicaps do not obtain.

We append a list of the raw materials used in the manufacture of light-weight oilcloth, giving the duty on each with the equivalent ad valorem rate.

Attention is called to the fact that on china clay alone for the year ending June, 1912, the Government received an income of \$2.50 per ton, or \$593,414.61.

Respectfully, yours,

STANDARD OILCLOTH Co.,
ALVIN HUNSICKER,
Vice President and General Manager.

TRACING CLOTH.

BRIEF OF EDWARD L. LOVEJOY, OF PROVIDENCE, R. I., REPRESENTING PALMER CO.

PROVIDENCE, R. I., *January 21, 1913.*

Hon. OSCAR W. UNDERWOOD,
Chairman Ways and Means Committee,
House of Representatives, Washington, D. C.

SIR: The undersigned respectfully enters its protest against a continuance of the existing tariff on tracing cloth. The provision of the Payne-Aldrich bill in reference to this product is contained in paragraph 321, Schedule I, of the existing law, and is as follows: "Tracing cloth, 5 cents per square yard and 20 per cent ad valorem."

This provision was not a reduction downward, but, on the contrary, a very substantial increase in the tariff duty upon this article. It is confidently asserted that the present rate of duty on tracing cloth is unreasonably excessive, even if viewed as purely a protective feature. Since its enactment the law has neither helped nor increased the business of manufacturing tracing cloth in this country, which business at best, after years of trial, can be said to be hardly more than an experiment, and as there seems to be no evidence that the law has ever nurtured and protected an infant industry, it is clear that its maintenance has resulted in a hardship to the consumer of this product. It is certain that the great bulk of tracing cloth used in the United States is of foreign make and now subject to this excessive duty. It has been claimed by eminent chemists that atmospheric conditions here are such as to render it practically impossible to produce a good quality of tracing cloth. However this may be, the fact is incontrovertible that no concern has as yet been able to produce tracing cloth that is comparable with the foreign article. The claim is also made that the process of converting the cotton cloth into tracing cloth is a secret one, and, judging from any American product yet produced, it would seem that the secret has not yet been discovered here. As the very great bulk of tracing cloth used in the United States is of foreign manufacture, it can hardly be successfully contended that a tariff thereon is other than a burden to the consumer here, and that if justified at all, can be so only upon the theory that the revenue derived therefrom is considerable and is also necessary for the Government.

PARAGRAPH 322—HANDKERCHIEFS.

The receipts of the Government for the year ending June 30, 1912, upon importations of this product were \$181,768.55, not, indeed, a colossal sum, the receipt of which or the loss of which would appreciably affect the Treasury of the United States.

The attention of your honorable body is furthermore called to the fact that the United States Government is itself a large consumer of tracing cloth, and by reason of the present law must pay an excessive price for the same. With a lower duty, it is confidently believed, a much larger amount of tracing cloth would be used in the United States. There are known to be a number of recognized uses to which it could be and doubtless would be put but for the present well-high prohibitive price therefor.

It is also believed that such probable increased importation would more than compensate for any reduction made in the present tariff duty. There is a very apparent injustice in the present law, it would seem, further, in that the specific duty of 5 cents per square yard is imposed upon the lower-grade and lower-priced article as well as upon a higher-grade and much higher-priced article.

The present rate of duty, we believe, is clearly unreasonably high and burdensome to the home consumer of this article. If it is deemed wise to have any tariff at all on this product, the rate should be no more than would represent the difference in cost of the manufacture here and abroad. An absolute comparison of this matter is rendered difficult for the obvious reason that comparatively little tracing cloth is produced in this country, and that, too, of a quality inferior to the imported article. That this is true would seem to be well supported by the fact that the Government drafting rooms of the District of Columbia for this very year specified three imported makes of tracing cloth and no American product, although the price for the latter was much lower.

It is submitted that if your honorable body deems any tariff whatever on this product justifiable, the present law should be so amended as to eliminate the 5 cents per square yard specific duty and to impose a 20 per cent ad valorem duty, which would be all that a full measure of justice and fair dealing could reasonably demand.

Respectfully submitted.

PALMER CO.,
By EDWARD T. LOVEJOY.

PARAGRAPH 322.

Handkerchiefs or mufflers composed of cotton, whether in the piece or otherwise and whether finished or unfinished, if not hemmed, or hemmed only, shall pay the same rate of duty on the cloth contained therein as is imposed on cotton cloth of the same description, weight, and count of threads to the square inch; but such handkerchiefs or mufflers shall not pay a less rate of duty than forty-five per centum ad valorem. If such handkerchiefs or mufflers are hemstitched, or imitation hemstitched, or revered, or have drawn threads, they shall pay a duty of ten per centum ad valorem in addition to the duty hereinbefore prescribed, and in no case less than fifty-five per centum ad valorem; if such handkerchiefs or mufflers are embroidered in any manner, whether with an initial letter, monogram, or otherwise, by hand or machinery, or are tamboured, appliquéd, or trimmed wholly or in part with lace or with tucking or insertion, they shall not pay a less rate of duty than sixty per centum ad valorem.

HANDKERCHIEFS.**TESTIMONY OF JAMES L. GERRY, NEW YORK CITY, ON THE SUBJECT OF COTTON HANDKERCHIEFS.**

Mr. GERRY. Mr. Chairman and gentlemen, I appear here as the counsel for the domestic manufacturers of handkerchiefs, and the few remarks I have to make on this subject are simply preliminary to the statement which Mr. Martin Herrmann, the following witness, will make, he being the manufacturer whom we brought down here to answer questions in regard to the technical proposition connected with the manufacture.

Mr. DIXON. Does this subject cover cotton, linen, and silk, or just cotton?

PARAGRAPH 322—HANDKERCHIEFS.

Mr. GERRY. We are paying no particular attention to silk, but some of our remarks will be addressed to the linen proposition, which as we think is very difficult to separate from the cotton manufacture of handkerchiefs.

The CHAIRMAN. They are separated in Schedule I and Schedule J, I think.

Mr. GERRY. Quite true, and it is my purpose to file a supplementary statement on linen handkerchiefs.

Primarily our purpose is to preserve as far as it is possible the present protection on cotton handkerchiefs. Cotton handkerchiefs, or handkerchiefs broadly, are made in various styles, ladies' handkerchiefs being ordinarily from 12 to 15 inches square and men's from 18 to 23 inches square, and when they are brought in in the piece they admit of three ladies' handkerchiefs being cut from the breadth of the cloth and two of the men's handkerchiefs being cut from the breadth of the cloth. After being bleached the cloth is cut and the edges trimmed, and then they are folded, ironed, and boxed. But there are other handkerchiefs which are made complete as such on the loom and there are various additions made to the cost in the way of hemming, hemstitching, revering, tambouring, etc.; the revered handkerchiefs being those which are ornamented with drawn work; the tamboured, those which are embroidered by means of a hoop or frame, or with embroidery machines, and appliquéd handkerchiefs, are those which have the decoration sewed on to the fabric.

With regard to the tariff provisions as they exist at the present time, we have a situation in which the cotton cloth is dutiable on the basis of the countable threads, and the handkerchiefs have a protection in addition, of course, to the amount of work that is added to the cloth. That is, if not hemmed, or hemmed only, they pay the countable rates, but not less than 45 per cent ad valorem; if hemstitched, or imitation hemstitched, or revered, or have drawn threads, the differential is increased 10 per cent, so that the duty becomes the cloth rate plus 10 per cent, but not less than 35 per cent ad valorem. If they are decorated with an initial or monogram they pay 60 per cent.

One of the reasons why I am here is to call your attention to the fact that the paragraph in the tariff acts since 1890 on up, and perhaps even before that, have been more or less complicated, and in fact we have to-day in the tariff act the phrase "embroidered in any manner, whether with the initial letter, monogram, or otherwise, by hand or machinery." Each one of those several words have been included in the tariff of to-day by reason of some litigation, some case which in the minds of Congress necessitated the addition of those words. For instance, when it came to the question of what embroidered meant, as used in the act of 1894, it was to determine whether it was a commercial word or merely a descriptive word, and the courts finally decided that the word "embroidered," as applied to handkerchiefs, indicated ornamentation, and therefore handkerchiefs with the initials on them were not embroidered handkerchiefs.

Now we come down to the question of hemstitched and embroidered, and there the courts finally held that unless the handkerchief was both hemstitched and embroidered, it would not be subject to the rate of duty prescribed.

PARAGRAPH 322—HANDKERCHIEFS.

I call these facts to the attention of the committee with the idea of having them bear in mind the fact that a change in this language is liable to defeat even such a measure of duty as this committee may be willing to accord to the manufacturers.

The CHAIRMAN. You are contending, then, for the maintenance of the present language in reference to handkerchiefs?

Mr. GERRY. So far as it is possible to maintain the present language, which, so to speak, has been through the fire and more or less clarified as to what its meaning is. So far as possible we would like to maintain the present language.

With regard to the duty on cotton cloth itself, we are not particularly interested. We are purchasers of cotton cloth made in this country and it is our raw material for the manufacture of handkerchiefs. Ordinarily it might be assumed that if the rate of duty on the cotton cloth is a certain amount, a differential would not necessarily have to be put into this act, by reason of the fact that the increased value would cover that. I want to say something in regard to that fact. What we contend is, with respect to handkerchiefs, that it is absolutely necessary to preserve as far as possible the duty in order to keep us in business.

In the proposed Underwood bill, under paragraph 6, there is a provision for the assessment of a duty of 30 per cent ad valorem. In paragraph 6, the provision is made, for handkerchiefs and mufflers composed of cotton, whether in the piece or otherwise, or whether finished or unfinished, at 30 per cent ad valorem. In paragraph 3 we find a provision for cotton cloth, the maximum duty being 30 per cent ad valorem. The result is that if that language were allowed to remain we would be open to the proposition that the cotton cloth would pay the same rate of duty that some grades of our very finely finished handkerchiefs would pay.

The CHAIRMAN. That is not true, because when you go to apply an ad valorem rate your ad valorem rate adjusts itself.

Mr. GERRY. It would with respect to cotton cloth where the manufacture abroad and the amount of cost of labor and all that kind of thing was the same as in this country.

The CHAIRMAN. You may be right or you may be wrong, but I want to get it straight. Take a piece of cotton cloth, of which the ordinary cotton handkerchief is made. Take any grade that you want to, and what is the value of that cotton cloth in that particular handkerchief?

Mr. GERRY. It ranges all the way—

The CHAIRMAN (interposing). Select one.

Mr. GERRY. Well, we will say 10 cents a yard.

The CHAIRMAN. Ten cents a yard for the cotton cloth in the handkerchief?

Mr. GERRY. Yes, sir.

The CHAIRMAN. I am talking about import price now. Take that same handkerchief with 10 cents worth of cotton and what is it worth at the customhouse—the import price?

Mr. GERRY. If you add 50 per cent of labor to that—of course, these are merely suppositious figures—

The CHAIRMAN. I understand.

PARAGRAPH 322—HANDKERCHIEFS.

Mr. GERRY. If you add 50 per cent labor you would have 15 cents.

The CHAIRMAN. Fifteen cents and the additional profit that the foreign manufacturer makes.

Mr. GERRY. If you add that same cost of cotton cloth and the labor in this country was 200 per cent instead of 50 per cent—

The CHAIRMAN. Just a moment. You asserted that the 30 per cent tax on cotton cloth and the 30 per cent tax on handkerchiefs would practically give no protection; that there would be no difference in the rate incidentally. Would not the import price of the cotton handkerchiefs be at least double the cost of the cloth that was in it when it came in? I am talking about the imported price now. If you had the same cloth that is in this handkerchief and you import it, would not the handkerchief itself be at least double the cost of the cloth?

Mr. GERRY. I doubt it. As to the specific proposition as to the increase of value by virtue of the labor that is put on it, that is one of the propositions that I want Mr. Herrmann to speak about.

The CHAIRMAN. I want to call your attention to the fact that even if it only increased half, if the labor was only increased half, on that additional labor you would have a 30 per cent incidental protection, because the rate would go up on the 10-cent piece of cloth. On the 10-cent piece of cloth the rate would be $3\frac{1}{2}$ cents on the handkerchief made of the same cloth. You are right, it would increase it to 15 cents and the difference would become 5 cents, so that the handkerchief would have the difference in rate of $3\frac{1}{2}$ and 5 cents or $1\frac{1}{2}$ cents on the handkerchief.

Mr. GERRY. But that is not sufficient to compensate.

The CHAIRMAN. I am not talking about it being sufficient to compensate. You are stating the proposition that they are at the same rate.

Mr. GERRY. It is quite evident, Mr. Underwood, that if you have a flat ad valorem rate on an article manufactured from your raw material abroad, it is increased in value; that there is a certain amount of additional protection as a result of that ad valorem rate. That is unquestionably true. My point simply is that the amount of protection granted by that 30 per cent is not sufficient to compensate for the difference in cost of manufacture as between England and this country. I want to call the attention of the committee to the question of labor cost, and on that subject to an inquiry that was made by the British Parliament with regard to the labor situation in and around Belfast, and I shall ask permission to submit this newspaper clipping, which is one cut from the Northern Whig, a paper published in Belfast, of the issue of December 12, 1912.

Succinctly the statement made is that there are thousands of what are called outworkers in Ireland, perhaps as many as there are employed in the regular factories there. I understand that the number is put at about 22,000, and the investigation made has demonstrated the proposition that these laborers over there get as low as a penny an hour, and that the situation is such that the committee, according to this report, is satisfied that the outworker is indispensable in certain processes. I am referring now to the question of decorated

PARAGRAPH 322—HANDKERCHIEFS.

handkerchiefs and embroidered handkerchiefs and all that sort of thing.

The committee is satisfied that outwork is indispensable on the whole. Certain processes are carried on exclusively as home industries, and in the case of hand embroidery in rural Ulster to convert it into a factory industry would involve nothing short of a revolution in the trade. These outworkers have no kind of organization, and no standard rate of pay for the various making-up processes could be said to exist. Some kinds are paid better than others, and the contention by others that competition by firms for this class of labor was sufficient to insure a fair wage was not established for the most part. A table is given of investigated cases in Belfast, showing that in the more important processes, such as thread drawing, thread clipping, fancy sewing, and embroidery, as low as a penny per hour and under was paid in the majority of instances furnished by the three persons intrusted with the inquiry.

We have figures from the Bureau of Statistics, in a publication which is called Bulletin No. 15, showing the equivalent ad valorem all the way through with respect to the importations for the year ending June 30, 1912. Taking the handkerchief industry as an entirety, the situation, so far as I have been able to develop it from those figures, shows that there are approximately between \$4,000,000 and \$5,000,000 worth of handkerchiefs imported.

Mr. KITCHIN. Four or five million dollars worth of what?

Mr. GERRY. Handkerchiefs.

Mr. KITCHIN. That are imported?

Mr. GERRY. Yes.

Mr. KITCHIN. Do you mean last year?

Mr. GERRY. Yes, sir.

Mr. HULL. Do you mean cotton handkerchiefs?

Mr. GERRY. I mean both cotton and linen handkerchiefs.

Mr. KITCHIN. We are talking about cotton now.

Mr. GERRY. The statement I made in my opening was to the effect that I would state this in connection with both, for the reason that it is difficult to separate the importations. As a matter of fact, they are not separated in the Bureau of Statistics' report.

Mr. KITCHIN. They are separated in the customhouse receipts.

Mr. GERRY. I beg your pardon, they are not.

Mr. KITCHIN. The total handkerchiefs and mufflers last year were \$382,997 worth.

Mr. GERRY. This statement in this publication is on page 14; but if you will turn over the page to page 20 and look down the line under the head of laces, embroideries, etc., your particular attention being called to the item "All other articles, including napkins, made in part of lace or imitation of lace, lace neck ruffings, and ruchings"—I will not read all of it. But the fact is, my own personal knowledge of the customhouse in New York is such that I can say affirmatively that there are a large number of handkerchiefs included in this \$37,000,000—

The CHAIRMAN (interposing). Those that are included in that paragraph come in as lace handkerchiefs. They are not the plain, ordinary handkerchiefs that we are dealing with here. There are no cotton lace handkerchiefs, are there?

PARAGRAPH 322—HANDKERCHIEFS.

Mr. GERRY. Oh, yes; that is just the point. This \$37,000,000 is in the cotton schedule.

The CHAIRMAN. That relates practically to all lace handkerchiefs, does it not?

Mr. GERRY. If you are going to preserve each original article, there are embroidered handkerchiefs and there are a whole lot of lace handkerchiefs in that class. Speaking broadly of the importation of handkerchiefs, including linen handkerchiefs, cotton embroidery, and cotton lace handkerchiefs, you would have a situation that there are between \$4,000,000 and \$5,000,000 worth of handkerchiefs imported.

The CHAIRMAN. Here is the proposition before the committee, and if you can help us on it, we will be glad to have you do so. Although there is a heavy importation of high-grade lace handkerchiefs, I see no reason why we should not derive a revenue out of it, because a lace handkerchief highly embroidered is undoubtedly a luxury, and there is no reason why we should not cut the rate on the lowergrade handkerchiefs, where there are none coming in.

Mr. GERRY. Mr. Herrmann may be willing to make a concession on that proposition. I am talking distinctly on the proposition of these high-grade handkerchiefs of which we have the importations and concerning which, as I say, the labor in this country is much in excess of the labor abroad, and the present rate, as far as possible, should be maintained because we have importations of \$4,500,000 with a 60 per cent duty, or a landed cost of \$7,000,000, and I should say that the domestic production of handkerchiefs in this country is something in excess of \$10,000,000.

The CHAIRMAN. Mr. Gerry, you may be correct, but the figures that we have do not show that. On page 146 of this handbook, the value of imports of handkerchiefs for 1910, coming in under this schedule, was \$453,000; the next year, 1911, it is \$492,000; in the next year, 1912, \$392,000. I am not sure about it, but I think that other proposition comes in under the linen schedule and under lace handkerchiefs.

Mr. HULL. I would like to call your attention to this statement of the tariff board's finding, showing that the importation of handkerchiefs and mufflers in 1911 was valued at \$442,947.05, and approximately nine-tenths of the imports consisted of embroidered or trimmed handkerchiefs, which paid a duty of 60 per cent under Schedule J, although made of cotton.

Mr. GERRY. That is quite right. The situation is as I say. It is very difficult to differentiate these propositions. These two paragraphs overlap. You have got handkerchiefs, embroidered handkerchiefs or laces, and when you get the Bureau of Statistics' returns, here is a long invoice, maybe 20 or 30 pages long, with various articles written in it, and when that gets down to the so-called Bureau of Statistics in the collector's office it is almost impossible for him to segregate those items, by reason of the fact that he has not the merchandise before him. As I am advised by my clients that to the best of their judgment there is a large quantity of handkerchiefs imported in this \$37,000,000 item which would come within the cotton schedule.

Mr. KITCHIN. Of course the handkerchiefs, the chief value of which is lace, would come under the 70 per cent duty clause?

PARAGRAPH 322—HANDKERCHIEFS.

Mr. GERRY. Yes, sir.

Mr. KITCHIN. You are speaking of those kinds of handkerchiefs, are you?

Mr. GERRY. As far as I can ascertain according to the tariff board report, which is quoted frequently here, there are not a great many of those handkerchiefs imported.

Mr. KITCHIN. It says that during the last fiscal year they amount to less than one-tenth of 1 per cent of the total value imported. So that the correct amount of cotton handkerchiefs imported is what the chairman indicated a moment ago, was it not?

The CHAIRMAN. Last year it amounted to \$382,997 in value.

Mr. HILL. From your experience, as head of the Customs Division of the Treasury Department, let me ask you, would it not be possible to itemize these basket clauses in the importation records a good deal more than they are, and without much expense?

Mr. GERRY. It has been a matter of great embarrassment to the Treasury Department. I am speaking now, of course, in the past. That has been a source of great inconvenience, and, as a matter of fact, I had a number of conversations with Mr. Austin in the hope that we might get some more details with regard to the returns. It is unquestionably true that the information with regard to cotton handkerchiefs is thoroughly inadequate according to these returns at the present time.

Mr. KITCHIN. What is the annual output of cotton handkerchiefs in this country, in dollars?

Mr. GERRY. I am not in a position to answer that question. Mr. Herrmann, the next witness, will answer that. Roundly, the production of handkerchiefs, both cotton and linen, I think, would be about \$10,000,000.

Mr. KITCHIN. How much do you suppose would come under this paragraph—that is, cotton handkerchiefs?

Mr. GERRY. I am unable to say.

Mr. KITCHIN. Are the greater proportion of handkerchiefs that are produced embroidered handkerchiefs or plain hemstitched?

Mr. GERRY. The situation is, with regard to the manufacture of handkerchiefs, that the manufacturers here are up against what is called and what has been referred to frequently as set prices. The vast majority of handkerchiefs manufactured are the 5 and 10 cent handkerchiefs. Of the 5-cent handkerchiefs it would amount to about 43 per cent and of the 10-cent handkerchiefs 27 per cent.

Mr. KITCHIN. About 43 per cent of the handkerchiefs that are consumed are what are called 5-cent handkerchiefs?

Mr. GERRY. Yes.

Mr. KITCHIN. You mean that is the retail price?

Mr. GERRY. Yes, sir; that is the retail price.

Mr. KITCHIN. And about how much are the 10-cent handkerchiefs?

Mr. GERRY. Twenty-seven per cent. Those are approximations.

Mr. KITCHIN. They are certainly not embroidered handkerchiefs?

Mr. GERRY. Oh, yes.

Mr. KITCHIN. Are they embroidered handkerchiefs?

Mr. GERRY. You said "embroidered," did you not?

Mr. KITCHIN. Yes.

PARAGRAPH 322—HANDKERCHIEFS.

Mr. GERRY. Yes, sir; they are embroidered; a great many of them, but not all of them.

Mr. KITCHIN. What proportion would you suppose of cotton handkerchiefs are embroidered in this country and used and consumed?

Mr. GERRY. I could not answer that question.

Mr. KITCHIN. The other gentleman can answer that?

Mr. GERRY. Yes, sir.

Mr. LONGWORTH. Under Schedule J, it shows that the imports last year were two and a quarter millions.

Mr. GERRY. Yes, on which the duty was \$1,700,000.

Mr. LONGWORTH. Do you think some of those are cotton handkerchiefs, as a matter of fact?

Mr. GERRY. I am taking the position of treating all the handkerchiefs alike, on the theory that absolutely the same condition that applies to embroidered and hemstitched and drawn work and all that, which is done on the linen handkerchiefs in Ulster County, Ireland, also attaches to the cotton proposition—the same people do the same work.

Mr. LONGWORTH. Have we any of that system of what you call "outwork" in this country?

Mr. GERRY. Not that I know of.

Mr. LONGWORTH. What is that system? Do they simply go to the factory and get their material?

Mr. GERRY. They are furnished their material and take it home to work on at times when they can find it convenient to work, when they have not something else to do. That is the situation that we found existed in a great many districts with regard to a great many different things.

Mr. LONGWORTH. And they get 2 cents an hour for that work?

Mr. GERRY. Yes, sir.

That is all I have to say.

The newspaper clipping referred to by Mr. Gerry follows:

THE IRISH LINEN INDUSTRY—CONDITIONS OF EMPLOYMENT—QUESTION OF OUTWORKERS—HOME OFFICE COMMITTEE'S REPORT AND RECOMMENDATIONS.

There was issued last night in the form of a bluebook the report and recommendations of the committee of inquiry appointed by Mr. Winston Churchill when home secretary last year into the conditions of employment in the linen and other making-up trades of the North of Ireland.

The committee consisted of Sir Ernest F. G. Hatch, Bart. (chairman); Mr. W. S. Cohen, formerly an officer of the board of trade; and Mrs. L. Deane-Streathfield, formerly one of His Majesty's inspectors of factories; and the terms of reference were:

"To inquire into conditions of employment in the making-up of articles of linen, cotton, and similar fabrics, including the processes of embroidery and thread drawing and other incidental processes, in Belfast, Londonderry, and other places in the North of Ireland, with special regard to hygienic conditions of working, rates, and method of payment, and earnings, and to report thereon."

The committee, after opening their inquiry in London and taking evidence from two officers of the Belfast Corporation—Miss J. Agnew and Mr. W. J. Sefton—and also from Mrs. J. M. Baxter and Miss M. Galway, the latter general secretary of the Women's Textile Operatives' Association of Ireland, as to the conditions governing 500 outworkers in the making-up trades of Belfast, proceeded to Belfast. There they examined Dr. H. W. Bailie, medical superintendent officer of health, and 17 employers and 32 workers in the trades concerned, besides visiting certain factories and homes of outworkers. Witnesses were also heard at Lurgan and Londonderry, and evidence was taken from district factory inspectors from Ulster, inspectors under the Irish Local

PARAGRAPH 322—HANDKERCHIEFS.

Government Board and Department of Agriculture and Technical Instruction, and numerous other witnesses.

The committee met 33 times, heard 91 witnesses, and secured answers in writing to specific questions from 105 medical officers. There were several postponements of the inquiry for considerable periods, owing partly to an apprehension on the part of workers that they would endanger their employment by giving evidence, and the committee, who were appointed in July of last year, having at length satisfied themselves as to the prevalence of low wages, approached the employers for an effective remedy.

RECOMMENDATIONS AND SUGGESTIONS.

The committee eventually made the following recommendations and suggestions:

(1) That the provisions of the trade boards act be applied to the processes of hand embroidery (flowering and sprigging), fancy sewing (openwork embroidery and drawn thread work), thread drawing, thread clipping, top sewing, scalloping, nickeling, paring, and the stitching by machines of aprons, pinafores, and blouses in the North of Ireland, provided that the act is similarly applied in other parts of the United Kingdom where competition with the north of Ireland exists in these processes.

(2) That work distributed to outworkers through agents be marked with the rate of pay by the firms before being sent out.

(3) That action be taken by the firms to remedy the objections attendant on the employment of shopkeepers as agents, preferably in the direction of replacing such agents by salaried employees, directly responsible to the firms.

(4) That outworkers should by means of further legislation be accorded the full protection provided by the truck acts.

(5) That the local authorities in the north of Ireland in whose districts making up is done should be careful to obtain from employers and agents the prescribed lists of their outworkers, which should then be placed at the disposal of the medical and sanitary officers by those authorities.

(6) That heads of firms should take all possible steps to insure that work is not taken out from their factories which could occupy the workers after the termination of the legal period of employment.

(7) That urban local authorities should strictly enforce the provisions of the employment of children act in their districts.

THOUSANDS OF OUTWORKERS "INDISPENSABLE."

In their report leading up to above conclusions the committee say on the question of outworkers that, though the total number is unknown, it is probably in excess of the factory and workshop employees, who reached in 1907 about 22,000. They are satisfied that outwork is indispensable on the whole. Certain processes are carried on exclusively as home industries, and in the case of hand embroidery in rural Ulster to convert it into a factory industry would involve nothing short of a revolution in the trade.

Evidence given by Miss Galway and Miss Rodgers, secretary to the Textile Operatives' Association, showed that, whilst it was of convenience to the employer, it was of the highest importance to the worker, either as a means of supplementing the husband's wages or providing means where the husband was out of work, or where there was a widow with children. About a million of money, it was elicited, was annually paid to workers in the Ulster cottage embroidery industry, and the committee considered that any measures resulting in considerable reduction of the work given out would entail considerable suffering.

RATES OF PAY, "UNDOUBTEDLY LOW EMPLOYMENT."

The committee investigating the causes of low earnings for outwork confined their investigations principally to Belfast, where the outworkers have no kind of organization and where no standard rate of pay for the various making-up processes could be said to exist. Some firms paid considerably better than others, and the contention by others that competition by firms for this class of labor was sufficient to insure a fair wage was not established for the most part. A table is given of "investigated cases" in Belfast, showing that in the more important processes, such as thread-drawing, thread-clipping, fancy sewing, and embroidery, as low as a penny per hour and under was paid in the majority of instances furnished by the three persons intrusted with inquiries. Many Belfast employers disputing the normality of the rates thus disclosed, certain tests were carried out before the committee independently with

PARAGRAPH 322—HANDKERCHIEFS.

workers chosen by the employers, the work being identical with that referred to in some of the cases in the evidence, the result being that in the opinion of the committee cases of undoubtedly low employment to outworkers in certain branches of the making-up trade were proved. The tests were conducted under conditions arranged by the employers with skilled workers, some of whom worked at a speed which they would not have been able to maintain during their ordinary employment. Even in these circumstances the rates per hour fell conspicuously below what the employers had cited as being within the earning power of fair average workers, and most came within the lower ranges of the rates given in the table of investigated cases.

THE REMEDY—EMPLOYERS FAVOR TRADES BOARD ACT.

In seeking a remedy the committee found the employers as a whole were not unfavorable to the application of the trade-boards act to some of the processes, the chief objections expressed seeming to arise from a want of familiarity with its provisions, and at a special meeting of Belfast employers, at which a desire was voiced that the workers should receive as high pay as the class of work would justify, and there was stated to be no wish to oppose the remedy provided the employers were not placed at an undue disadvantage in the matter of competition, a resolution was passed in favor of the act applying generally to the north of Ireland.

A similar assurance was received from Lurgan employers, and the committee did not further extend their inquiries. No complaints were received as affecting the Londonderry trades.

PAYMENT IN GOODS—TRUCK-SYSTEM EVILS.

The system prevailing among shopkeepers acting as agents of firms in the embroidery districts of rural Ulster of paying the wages of outworkers wholly or partly in goods instead of cash lends itself to abuse. Frequently the goods are overpriced, and at other times on the understanding that the debt can be paid off by further outwork the worker is induced to take more goods than she can afford. In addition to recommending the protection of the truck acts the committee urge upon the employers concerned action with a view to abolition of such agents and the appointment instead of agents paid by salary and directly responsible to the firms.

HYGIENIC CONDITIONS—COUNTRY SHORTCOMINGS.

The committee find that in the towns the hygienic and sanitary conditions of the making-up factories and workshops are on the whole fairly satisfactory, but that in the country the sanitary accommodation is frequently open to objection. As regards Belfast, Londonderry, and the other principal centers of trade, the committee are satisfied that the condition of the outworkers' homes compares very favorably with those of other classes of the general population, and that the making-up work is by no means incompatible with a well-ordered home. The committee were impressed with the industry and intelligence of the workers who appeared before them.

Reporting on the North of Ireland generally, the medical officers of health with a few exceptions agreed that the conditions were very satisfactory. Only in one instance, which occurred some years ago, had the communication of disease from one place to another been attributable to infection conveyed through outwork.

EMPLOYMENT OF CHILDREN—LENIENT EDUCATION LAWS.

The committee describe this as a painful feature incidental to outwork. How far it is necessary for children to supplement their parents' earnings and how far the task is imposed upon them by the parents' improvidence it is impossible to say, but there was abundant evidence that the children were employed until very late at night, chiefly in thread drawing and clipping, and their sleep seriously curtailed. The fact that Belfast children thus occupied did not apparently attend school less frequently than other children is ascribed as partly due to the lenient requirements of the Irish education laws. The attention of the authorities is drawn to the obligation of adopting and adhering to certain provisions under the employment-of-children act.

HAND EMBROIDERY—WORK FOR THE DEPARTMENT.

In reference to the alleged falling off in the demand for Ulster hand work, due partly to competition from Switzerland, Japan, and Belgium, and partly in some instances to unsatisfactory work turned out by the Ulster embroiderers, the committee say they

PARAGRAPH 322—HANDKERCHIEFS.

can well understand that slovenly or commonplace Irish hand embroidery can not be expected to retain a place in the market beside the productions of machinery or of careful foreign needlewomen. But they add it is unlikely that a demand could ever be wanting for beautiful and distinctive hand work from Ireland. To ensure a constant supply of the best work it is necessary not only to give sufficient wages, but to train the workers, and the committee trust that the Department of Agriculture and Technical Instruction for Ireland will be able to extend their system of embroidery classes as widely as possible.

The CHAIRMAN. The next witness is Mr. M. C. Herrmann.

TESTIMONY OF M. C. HERRMANN, NEW YORK, ON THE SUBJECT OF COTTON HANDKERCHIEFS.

Mr. HERRMANN. Our entire brief has been drawn up on the assumption that it is not the intention of Congress to make any changes that will necessitate a cut in wages, and all our figures that appear in the brief are based on that.

The CHAIRMAN. We will assume that there is not going to be any cut in wages. We would like to discuss the question from the standpoint of importation and domestic consumption, where we will get a reasonable amount of competition.

Mr. HERRMANN. I would like to discuss it with you that way.

It is almost impossible for us to give you exact figures. Mr. Gerry has dug out possible importations of \$4,000,000 worth of embroidered handkerchiefs under the embroidered schedule. I am positive that the figures of \$440,000 as submitted by the Tariff Board are perfectly ridiculous, because I know of individual concerns that are importing from \$150,000 to \$200,000 worth. It is simply a question of common sense on which we base our figures of \$2,000,000, because I know pretty well the amount of business these importers do.

Of course, there are not many plain cotton handkerchiefs imported. We can buy our cotton cloth up to a certain extent cheaper here than we can abroad. That in itself, under the present tariff, has excluded plain cotton handkerchiefs.

The CHAIRMAN. You can buy your cotton cloth out of which the handkerchief is made cheaper in America than you can abroad?

Mr. HERRMANN. On the low end. Of course, when it comes to the better goods there is a dividing line. When you get to the finer goods then there is a difference in favor of the European markets.

The CHAIRMAN. This clause in the bill in relation to handkerchiefs, section 322 of the Payne Act, "Handkerchiefs or mufflers, composed of cotton, whether in the piece or otherwise, and whether finished or unfinished." That simply covers the plain cotton handkerchief, does it not, and the embroidered and lace handkerchiefs come in under a different paragraph?

Mr. HERRMANN. In the old bill you leave out any mention of embroidered at all, and we understood that was simply to cover the whole thing.

Mr. KITCHIN. What you want are two classifications and a distinction made between the embroidered handkerchiefs and the plain hemstitched handkerchiefs.

Mr. HERRMANN. There is no question about the fact that the duty on plain cotton handkerchiefs is unnecessarily high.

PARAGRAPH 322—HANDKERCHIEFS.

Mr. KITCHIN. And it is practically prohibitive?

Mr. HERRMANN. Yes.

Mr. KITCHIN. On plain, hemmed or hemstitched?

Mr. HERRMANN. Absolutely.

Mr. KITCHIN. The only competition you have is in what are called embroidered handkerchiefs?

Mr. HERRMANN. Yes, sir.

Mr. KITCHIN. And nine-tenths of the imports coming in under the embroidered class pay a duty of 60 per cent.

Mr. HERRMANN. Yes, sir.

Mr. KITCHIN. You want us to make a classification so as to make a distinction between embroidered and plain or hemmed or hemstitched?

Mr. HERRMANN. Yes, sir.

The CHAIRMAN. We appeared to have followed out the Payne bill in our classification in this bill, which was passed last year. We followed the language of section 6 of this bill, which is similar to section 322 that I just read. You say that covers plain handkerchiefs and there are practically no importations of those plain cotton handkerchiefs?

Mr. HERRMANN. Practically none. We do not claim that there is an importation.

The CHAIRMAN. Then, is there any reason why we should not cut this rate from 50 to 30 per cent?

Mr. HERRMANN. I think it is too large a cut. I think it would put us at an undue disadvantage.

The CHAIRMAN. Tell us why. What reason have you for that? If there are no importations under the 50 per cent rate, tell us why a reduction from 50 to 30 per cent would be too great a cut. Have you any figures or anything to base that on?

Mr. HERRMANN. Yes, sir; I can give you all the figures you want. There is a difference in the cost of our labor of fully 100 per cent. That in itself is possibly a good argument.

Mr. PALMER. How much is that offset by the cheaper price of cotton cloth in this country?

Mr. HERRMANN. I was just going to explain that. The low-end cotton handkerchief at the beginning will not be affected. I do not believe they could be imported at a 30 per cent duty on account of that very difference. The better goods, the 10-cent goods, would come in at once, because they could undersell us.

Mr. PALMER. So that the 30 per cent rate on the cheaper articles would still be prohibitive, in spite of the difference in the cost of labor?

Mr. HERRMANN. Absolutely, on the cheaper handkerchiefs. In the cheaper handkerchiefs the element of cloth counts considerably more than in the better handkerchiefs.

Mr. PALMER. About what rate would you say would be fairly competitive? That is to say, considering the difference in the cost of labor to the advantage of the foreign manufacturer, and the difference in the cost of material to your advantage; about what rate would put you on an even footing?

Mr. HERRMANN. On the cheap stuff?

Mr. PALMER. Yes.

PARAGRAPH 322—HANDKERCHIEFS.

Mr. HERRMANN. Why, I should say about 25 per cent on the very cheap stuff.

Mr. PALMER. That would equalize the difference in cost?

Mr. HERRMANN. You would have to bring in a specific rate to get what you want.

Mr. PALMER. Why?

Mr. HERRMANN. Because 25 per cent will be absolutely ruinous and ridiculous on the better goods.

Mr. PALMER. But if we make two classifications, if we divided them as to value, and make a rate of 25 per cent on the cheaper article and a little higher rate on the other article, would not that answer?

Mr. HERRMANN. Yes; I suppose you might do that.

Mr. PALMER. What point as to value of the handkerchief would be the proper dividing line for such classifications?

Mr. HERRMANN. That would have to be worked out. It would be a pretty complicated thing.

Mr. PALMER. I am trying to work it out now with you.

Mr. HERRMANN. I can give you figures on that in writing.

Mr. PALMER. We would be very glad to have you include that in your brief. The duty on the higher-priced handkerchiefs at the present time amounts to 60 per cent?

Mr. HERRMANN. On the embroidered handkerchiefs only.

Mr. PALMER. What proportion of embroidered handkerchiefs consumed in this country come in from abroad now?

Mr. HERRMANN. That I would not be able to tell you.

Mr. PALMER. You said there were considerable importations.

Mr. HERRMANN. The importations are very large; yes, sir.

Mr. PALMER. What is the total domestic production?

Mr. HERRMANN. As near as I can figure on that, there are about \$10,000,000 worth of handkerchiefs made in this country.

Mr. PALMER. Ten million dollars worth of handkerchiefs of all kinds?

Mr. HERRMANN. Yes, sir.

Mr. PALMER. What proportion of those are the kind in which there is competition from abroad at the present time? Half of them?

Mr. HERRMANN. I am under oath and I do not like to make a stab at a thing that I am not sure of.

Mr. PALMER. You are a manufacturer, are you not?

Mr. HERRMANN. Yes, sir.

Mr. PALMER. I want your best judgment. You certainly know more about it than we could be expected to know.

Mr. HERRMANN. I do not think anybody can give you a straight answer on that. We are a peculiar industry. There is no cooperation. We are all cut up and we are all competitors; and in order to tell you that, I would have to know a great deal more about my competitor's business than I do know. In my own particular business I can tell you.

Mr. PALMER. Take your own particular business.

Mr. HERRMANN. I think 50 per cent of the stuff we make comes in competition with the other side.

Mr. PALMER. If that proportion prevails throughout the country, the American production of high-class articles in which there is foreign competition would amount to about \$5,000,000?

PARAGRAPH 322—HANDKERCHIEFS.

Mr. HERRMANN. I believe so.

Mr. PALMER. The imports amount to about \$400,000?

Mr. HERRMANN. No; the imports, I think, amount to about \$5,000,000. Those are the embroidered handkerchiefs we were just talking about.

Mr. PALMER. How many million?

Mr. HERRMANN. About five million.

Mr. PALMER. Are they embroidered cotton handkerchiefs?

Mr. HERRMANN. Linen and cotton. The whole thing is mixed up.

Mr. PALMER. Do you mean to say that the Government is dead wrong about it when they say only \$400,000 worth were brought in?

Mr. HERRMANN. I am not afraid to do that. The subject can not be considered as just cotton handkerchiefs alone.

Mr. KITCHIN. You are mistaken about that. The Tariff Board looked into that and reported them, and they stated that there was not over one-tenth of 1 per cent of what they call lace handkerchiefs which you say come in in such great quantities under that paragraph and to which Mr. Longworth called your attention awhile ago—only one-tenth of 1 per cent. The Tariff Board separated them.

Mr. HERRMANN. I maintain that those figures are not right.

Mr. KITCHIN. I am now giving you the figures both from the Department of Commerce and Labor, and the Tariff Board figures, and they went into this matter.

Mr. HERRMANN. Will you allow me to state my experience with the Tariff Board?

Mr. KITCHIN. Yes; I would like to know that.

Mr. HERRMANN. We corresponded with the Tariff Board and told them that we were ready to place all of our figures at their disposal. We were visited by a representative to whom we gave samples, and that is all we have ever heard of it.

Mr. KITCHIN. I want to ask you about these plain handkerchiefs or hemstitched handkerchiefs, and I want you to think about it. Don't you know that we produce, or you manufacturers produce plain handkerchiefs and the hemstitched handkerchiefs—not the embroidered handkerchiefs, but those I named—cheaper than any other people in the world?

Mr. HERRMANN. No, we do not.

Mr. KITCHIN. None of them come in.

Mr. HERRMANN. That is because the duty is prohibitive. But we do not do that. I do maintain that we give extremely good value to the consumer.

Mr. KITCHIN. There is no competition here in America between these plain and hemstitched handkerchiefs.

Mr. HERRMANN. Yes, there is—

Mr. KITCHIN (interposing). You are all in a trust?

Mr. HERRMANN. No, and no idea of it.

Mr. KITCHIN. You have been in business several years competing with one another, have you?

Mr. HERRMANN. I have been for 20 years.

Mr. KITCHIN. Has not this competition between the different American manufacturers reduced prices?

Mr. HERRMANN. Yes, sir; certainly.

PARAGRAPH 322—HANDKERCHIEFS.

Mr. KITCHIN. Do you not claim that the American consumer gets as cheap a handkerchief of a cheap grade as any other consumer in the world?

Mr. HERRMANN. The wholesale price, I believe, is almost as cheap.

Mr. KITCHIN. That is what we are talking about. That is your price. It is as cheap here as anywhere in the world on plain handkerchiefs; not on these embroidered handkerchiefs——

Mr. HERRMANN. No; I do not admit that.

Mr. KITCHIN. I am asking you?

Mr. HERRMANN. And I tell you; no.

Mr. KITCHIN. You are making a handkerchief with just a monogram or letter on it?

Mr. HERRMANN. Yes.

Mr. KITCHIN. And up until a few years ago they came in under the plain and hemstitched handkerchiefs, did they not?

Mr. HERRMANN. Yes.

Mr. KITCHIN. You had a lawsuit about that, didn't you?

Mr. HERRMANN. That was about 15 years ago.

Mr. KITCHIN. That was in 1890. The courts held that that was not embroidered, and then you handkerchief men came down and got Congress to put in the word "monogram" in that section, and the duty was thereby increased to 60 per cent as embroidered handkerchiefs, did they not?

Mr. HERRMANN. I believe we did.

Mr. KITCHIN. So these plain common handkerchiefs that sold at the department stores for 5 cents apiece, if they have a letter on them, pay a duty of 60 per cent. I asked you if any of those handkerchiefs come in at all now?

Mr. HERRMANN. Yes.

Mr. KITCHIN. Have you ever seen imported a plain handkerchief retailing at 5 cents with a monogram on it since the act of 1897?

Mr. HERRMANN. Yes, sir; lots of them. I know of one particular concern that imported 10,000 dozens of them last year.

Mr. KITCHIN. With just one letter on it?

Mr. HERRMANN. Yes; with just one letter on it. I can give you evidence to that effect.

Mr. KITCHIN. I would like to know the name of that concern. My understanding is that there has not been a single one, or practically none since then. What was the name of that man who brought 10,000 dozens of plain handkerchiefs with only a letter embroidered on them, which, of course, under the changed law of 1897 had to pay a duty of 60 per cent instead of a duty of 45 per cent?

Mr. HERRMANN. Do you want the name of that concern?

Mr. KITCHIN. Yes.

Mr. HERRMANN. Stein & Co., 275 Church Street, New York. That was their address until the first of the year. They have moved since then. You can get them at 31 Thomas Street now. I can give you further importations of those handkerchiefs——

Mr. KITCHIN (interposing). Do you understand what kind of handkerchiefs I am talking about?

Mr. HERRMANN. Yes; I know exactly what kind of handkerchiefs you are talking about. I know that three years ago Marshall Field

PARAGRAPH 322—HANDKERCHIEFS.

& Co. imported 25,000 or 30,000 dozen of the 5-cent initialed handkerchiefs.

Mr. PALMER. Is this 5-cent initialed handkerchief that you speak of a higher grade of handkerchief?

Mr. HERRMANN. No; that is a very cheap grade of handkerchief.

Mr. PALMER. I thought you told that with reference to the cheap grade of handkerchief there were no importations.

Mr. HERRMANN. Plain hemstitched handkerchiefs.

Mr. PALMER. What is that?

Mr. HERRMANN. There are practically no importations of plain hemstitched handkerchiefs.

Mr. PALMER. Plain hemstitched handkerchiefs?

Mr. HERRMANN. Yes.

Mr. PALMER. But when it is embroidered, even if it is a cheap handkerchief, you say they are imported?

Mr. HERRMANN. They are not all imported.

Mr. PALMER. I understand; but there are importations?

Mr. HERRMANN. They were hand embroidered, and they probably had that done for a couple of cents a dozen.

Mr. PALMER. Now, coming back to what we were talking about before Mr. Kitchin took you into this embroidery excursion. The Tariff Board says that in 1900 the importation of this class of handkerchief amounted to \$472,000 and in 1909, \$300,000; in 1910, \$453,000, and in 1911, \$492,000, and the Department of Commerce and Labor says that in 1912 they amounted to \$334,000. Do you tell us that that in reality is only 10 per cent of the actual importation of handkerchiefs; that there are \$5,000,000 worth imported?

Mr. HERRMANN. I think there are fully \$5,000,000 worth.

Mr. PALMER. Of these cotton handkerchiefs?

Mr. HERRMANN. No; of all kinds of handkerchiefs. You see they are all interwoven. In the handkerchief business we have a very peculiar condition. There are only a few prices at which handkerchiefs can be sold—5 cents, 10 cents, 12½ cents, 25 cents, and 50 cents, possibly. It makes no difference to the consumer whether it is a linen handkerchief or a cotton handkerchief, or to the distributor if it is a 5-cent article or a 10-cent article. In considering this subject I am trying to consider the subject as a whole and am trying to tell you everything I know about it.

Mr. PALMER. Do you make all kinds of handkerchiefs?

Mr. HERRMANN. Yes.

Mr. PALMER. When you told me a little while ago that 50 per cent of your production was of the kind imported you referred not alone to cotton handkerchiefs?

Mr. HERRMANN. I referred to embroidered handkerchiefs and hemstitched handkerchiefs.

Mr. PALMER. Of all kinds?

Mr. HERRMANN. Yes.

Mr. PALMER. According to your statement, if you are correct, the imports amounted to about 100 per cent of the domestic production?

Mr. HERRMANN. No; about 50 per cent of the domestic production.

Mr. PALMER. You told me a little while ago that the domestic production of all kinds of handkerchiefs was \$10,000,000?

PARAGRAPH 322—HANDKERCHIEFS.

Mr. HERRMANN. Yes.

Mr. PALMER. And that half of these were these higher-priced finer articles?

Mr. HERRMANN. No; I did not claim that for the balance of the trade.

Mr. PALMER. Well, as to your concern?

Mr. HERRMANN. Yes; but we are a larger factor in the embroidered trade than almost any other domestic manufacturer.

Mr. PALMER. In the embroidered trade?

Mr. HERRMANN. Yes.

Mr. PALMER. So that that proportion of 50 per cent of embroidered handkerchiefs does not run through all the balance of the country?

Mr. HERRMANN. I do not think so.

Mr. PALMER. If you are correct as to your figures of importation, and the cheaper handkerchiefs are not imported but only the embroidered ones, the imports amount to more than 100 per cent of the domestic production, do they not?

Mr. HERRMANN. I believe they do.

Mr. PALMER. And you say that you have been building up a business and doing a business here of perhaps four or five million dollars in those articles with foreign competition of over 100 per cent?

Mr. HERRMANN. We certainly have. Your figures are slightly wrong. We have been successfully competing with the foreign article up to a certain point, but there comes a dividing line where we can not compete. When the element of labor is so very much more than the element of raw material—

Mr. PALMER (interposing). You have been reasonably successful in the business?

Mr. HERRMANN. Yes, sir.

Mr. PALMER. And under the Payne tariff law you have been making all the profits that you are fairly entitled to as an honest return on capital invested, I suppose?

Mr. HERRMANN. And no more.

Mr. PALMER. But you have been making that much, and you have nothing to complain about?

Mr. HERRMANN. We have nothing to complain about.

Mr. PALMER. And this you were doing despite the fact that, so far as embroidered handkerchiefs were concerned, the foreign competition was more than 100 per cent?

Mr. HERRMANN. But they started where we stopped.

Mr. PALMER. Give us a rate on the cheaper handkerchiefs which will give you about the same competition. What would that be?

Mr. HERRMANN. Even with the best intentions, I can not do that without figuring it out. I will figure it out and send you the figures and show you just exactly how I arrived at them.

Mr. PALMER. Give us a rate which in your judgment will give you the same kind of competition in the cheaper handkerchiefs which you have in the high-priced handkerchiefs, in the manufacture of which you say you have been prosperous and have earned all that you are fairly entitled to, on the capital invested.

Mr. HERRMANN. I think that is fair. In other words, you want me to give you a rate which allow the handkerchief from abroad to be landed at the same price at which we produce them.

PARAGRAPH 322—HANDKERCHIEFS.

Mr. PALMER. Just a figure that will allow equal competition.

Mr. HERRMANN. Yes. We do not want anything else.

Mr. PALMER. A figure, which in your judgment will amount to as much competition as you now have in the higher class articles.

Mr. HERRMANN. Yes, sir.

The CHAIRMAN. And when you submit those figures you could also make suggestions to the committee about this reclassification of this paragraph, and we will be very glad to consider those suggestions.

Mr. HERRMANN. That is in Mr. Gerry's brief.

Mr. KITCHIN. Do you think it really fair and right to put the monogrammed handkerchiefs into this clause with the embroidered handkerchiefs?

Mr. HERRMANN. I do.

Mr. KITCHIN. And make that plain handkerchief, with nothing but a simple initial on it, pay 60 per cent instead of 45 per cent?

Mr. HERRMANN. If the bulk of the initialed handkerchiefs that were sold had nothing but the plain letter on them, I would agree with you.

Mr. KITCHIN. I am talking about the plain, hemmed, or hem-stitched handkerchiefs, with nothing but just a monogram on them.

Mr. HERRMANN. You perhaps do not know that the bulk of the initialed handkerchiefs that come in now are just as elaborately embroidered—

Mr. KITCHIN. If they were embroidered, they would have another classification.

Mr. HERRMANN. But how are you going to distinguish?

Mr. KITCHIN. The word "monogram" was left out of the law in 1890, and had been up to that time. The court held that monogrammed handkerchiefs were not embroidered handkerchiefs and they could come in under the 45-cent rate. Then they changed the law and put after the word "embroidered" the word "monogram." What I am asking you is do you not think if we left out the word "monogram" and not mention it at all that that would be fair?

Mr. HERRMANN. I do not think that would be fair. Just a moment, and I will show you why.

Mr. Herrmann thereupon exhibited various samples of handkerchiefs to the committee.

The CHAIRMAN. Let us get along, gentlemen.

Mr. HERRMANN. All right.

Mr. LONGWORTH. Can the average man tell the difference between a cotton and a linen handkerchief?

Mr. HERRMANN. I do not believe he can. I could, of course.

Mr. LONGWORTH. Yes; but even you would have some difficulty sometimes.

Mr. HERRMANN. I could feel it in the dark. I would not have to look at it, but could tell it from the feel.

Mr. LONGWORTH. It practically takes an expert to distinguish between a cotton handkerchief and a linen handkerchief.

Mr. HERRMANN. There is a whole lot in the name "linen." There is a whole lot in the name "imported." The name "imported" is worth about 7½ per cent.

PARAGRAPH 322—HANDKERCHIEFS.

Mr. HARRISON. Mr. Herrmann, there seems to be a great deal of confusion as to the exact amount of imported handkerchiefs in the American market, and I have listened very attentively to your testimony and that of the gentleman who preceded you, and I am unable to see how such a confusion arises. Now, is it possible that there is a large amount of handkerchiefs in all markets which are sold as imported but which are really of domestic manufacture?

Mr. HERRMANN. It is not done by us.

Mr. HARRISON. Well, I am not insinuating that it is, but we had on the stand this morning a manufacturer of gingham from Fitchburg, who admitted that he understood in the trade that his American-made gingham were taken by the jobbers and the marks removed from them, and that they were sold as Scotch gingham; and it occurred to me in listening to your testimony that part of this confusion might arise from the fact that what we suppose to be imported handkerchiefs in our market are those of domestic make and treated in the same way as his goods are treated.

Mr. HERRMANN. You are perfectly right in saying that there are domestic handkerchiefs sold as imported. Undoubtedly there are.

Mr. HARRISON. Well, that is natural. I can understand that.

Mr. HERRMANN. But there is a difference of opinion on the statistics.

Mr. HULL. Mr. Harrison, on the reduced schedule you will find about two and a quarter million dollars' worth of handkerchiefs of a different kind from those it has been testified were imported in the last year.

Mr. HARRISON. Are those linen handkerchiefs?

Mr. HULL. Well, they are a mixture of linen and cotton, but they came in under the reduced schedules. That is supposed to be a component element—

Mr. HERRMANN. Yes; they all hang together. They are all so mixed in at these fixed prices that it is impossible to separate them.

Mr. HARRISON. I think it is a responsibility upon this committee to correct this confusion, if we can.

The CHAIRMAN. Have you anything further to say, Mr. Herrmann?

Mr. HERRMANN. I would like to put in evidence and just give you a word of explanation as to this price list. It will show that at the fixed retail prices—and these, by the way, are our regular wholesale prices, which can be verified—there is a difference between the top and bottom of the value that we give at the price of somewhere between 25 and 30 per cent, depending, of course, on the individual requirements of profit of the distributors. The line between a 5-cent handkerchief and a 10-cent handkerchief laps very closely, and the lowest 10-cent handkerchief and the best value in a 5-cent handkerchief are almost the same, as you will find by examining the samples.

I thought that possibly that information would interest you.

I thank you.

PARAGRAPH 322—HANDKERCHIEFS.

Mr. Herrmann, at a later date, submitted the following paper:

HERRMAN, AUKAM & Co.,
NEW YORK, February 24, 1913.

HON. OSCAR W. UNDERWOOD,
Chairman Ways and Means Committee, House of Representatives.

SIR: In reference to the request made by Mr. A. Mitchell Palmer, when Mr. Milton C. Herrmann (representing the domestic manufacturers of handkerchiefs) was before your committee at the time of the hearings on this subject, that facts and figures be submitted upon which to form a draft of the schedule on hemstitched cotton handkerchiefs, I desire to bring to your attention the following facts, viz:

Speaking of my own firm, Herrmann, Aukam & Co., after more than 30 years' experience in the manufacture of handkerchiefs, with all the knowledge that such an experience would naturally furnish, it is demonstrable that even at the present time the overhead expenses of the manufacturing plant and warehouse amount to 18 per cent; and, as to the correctness of this figure—although I have no desire to publish the fact to my competitors—I am quite willing to furnish the committee with a verification from the certified public accountants who have examined the books and accounts from time to time.

This figure of 18 per cent overhead has been applied to the cost of raw material, plus manufacturing labor, in order to get at the figures of gross cost of production in each instance. Our entire business and the disposal of our product is actually based upon these figures. In order to establish a basis of comparison and to determine the percentage of overhead expenses to which a foreign manufacturer would be subjected we have built up an imaginary foreign business on the basis of our business here, taking into consideration the fact that the sales to the rest of the world would at least equal the sales to the United States and using as factors raw material cost, labor cost, clerk hire, and all other incidental expenses—a knowledge of which we have obtained not only from our own Belfast house, but from independent factories, all of which information has been confirmed by further independent quotations and correspondence and by men now in our employ who have been working for many years in foreign factories. We have in every instance employed as a basis for our figures the very highest rates, as it was our intention to reproduce an organization built up on the same first-class lines on which we endeavor to conduct ours.

The method which we used in building up the foreign business mentioned above is as follows: We found out exactly how many dozen of plain hemstitched cotton handkerchiefs we sold and delivered for a period of 12 months. This quantity of dozens we reduced to yards, and extended the yardage so obtained at our known figure of a mean range of foreign-cloth prices for that given period. We then made up a pay roll of all piece-work operations. We furthermore figured the cost of boxes and ribbons for tying the goods, and the sum total of these various items doubled has made up one part of the figures against which we put the sum total obtained as described above for overhead expense. In apportioning the foreign overhead expense we have used our own expense figures for such items as insurance, etc., and have in no instance reduced same without specific knowledge that such reduction was legitimate. Had we tried to make the overhead as low as possible, we could have put down figures considerably less than we have used.

Since the determination of this figure of 9½ per cent, the correctness of our calculation has been absolutely confirmed from an outside source, to which fact you will remember I called your attention.

With 18 per cent overhead here, as compared with 9½ per cent abroad, I have figured the cost per dozen of cotton handkerchiefs based upon the value of domestic cloth and labor at the same period of time, August, 1911, at which time the cotton-cloth market was in a normal condition. In making this comparison we have added 5 per cent to the foreign cost, which covers 2½ per cent profit and 2½ per cent for landing expenses, and the ad valorem duty of 30 per cent, 40 per cent, and 45 per cent have been applied to the foreign cost, plus 2½ per cent only; but the landing costs are likewise included in the figure furnished as to the landing cost of the foreign goods. With respect to the domestic goods, we have likewise included 2½ per cent profit.

Assuming, therefore, the correctness of our overhead figures, for which we are more than willing to vouch, and using the labor-cost and cloth-cost figures, for which we have proof, the results developed are as follows:

PARAGRAPH 322—HANDKERCHIEFS.

These figures will show that the handkerchiefs made of low-count, relatively heavy cloths are excluded at almost any rate on account of the advantage possessed by the American manufacturers in being able to buy these cloths as cheap, if not more cheaply, than in Europe. This condition, however, works no injury to the consumer, as the domestic competition in these lines has brought down the price of the finished article to such an extent that no domestic manufacturer is able to sell this range at a net profit, and competition with Europe, if same were possible, would have absolutely no effect, as far as the consumer is concerned, and we would respectfully suggest that you do not consider this class of goods in determining the rates.

The keen competition in the low end of the line is brought about by the desire of all of us to appear to sell our popular-priced goods cheaply. These are all of the kinds

PARAGRAPH 322—HANDKERCHIEFS.

retailed at 5 cents each. Naturally we must to an extent average our profit on the 10-cent range, and this is the very class you are putting in jeopardy.

We desire to call your attention to the fact that, in view of the highly competitive character of this industry as a whole there is absolute justification for a rate higher than these figures would show as an average. On linen, silk, and embroidered handkerchiefs the importations are at present very large and constantly increasing, and it has already been brought to the attention of your committee that the total importation amounts to at least one-half the domestic output, and as this importation exists under the present rates, these would therefore appear to be more than fairly competitive. There is another fact which should be called to the attention of the committee, viz: That the industry brings a revenue to the Government of a larger amount than it is credited with or appears on the surface, for the reason that a very great proportion of the linen imported is used for handkerchiefs, so that on the approximated value of the domestic output of \$10,000,000 a large tax on the raw material is included.

In view of the already large importation, we respectfully request that the tariff be so drawn as to leave to this market the control of the plain cotton handkerchief business.

A domestic monopoly is impossible for the reason that anyone owning a single machine can become a manufacturer. Again, the very best cotton cloths are used and the consumer gets extremely good value for his money, and a change in the market resulting from a new tariff would largely, if not absolutely, tend to the benefit of the distributor, rather than to the manufacturer on the one hand or to the consumer on the other. The distributor to-day has both manufacturer and consumer at his mercy. It is true that the cost of cotton cloth in this country is a favorable element in the manufacture of some styles of cotton handkerchiefs, but the absence of exports of even these few grades proves that the foreign manufacturer has the market of the world at his disposal. He is free to combine and get his profit from other countries and dump his surplus in this market at prices, which, with a low rate of duty, would close up every handkerchief factory in the country without benefit to anyone.

If a large part of the staple business is taken away from the American manufacturer, his purchases of raw material will decrease, and his overhead expense will naturally increase, with the perfectly evident result that this business, which, as a whole, is highly competitive with Europe at the present time, will be wrecked and the entire market handed over to the foreigner. As has been shown, the methods of sale abroad, as compared with those in vogue here, are decidedly in favor of the foreigner. Almost all of the large buyers of handkerchiefs prefer to purchase in the Belfast market; they are perfectly human, and a free trip to Europe, with all that this entails, makes the purchase of goods in a foreign market very attractive. There is also, on the part of the retailer, a distinct prejudice in favor of the word "imported" as an advertising feature. An American manufacturer is expected to carry a large stock, maintain an expensive selling organization, and the carrying charges and consequent loss of interest, insurance, and depreciation in value by change of markets, are all charged to the manufacturer here, whereas abroad the goods are manufactured, sold, and shipped without any of these expenses attached.

The establishments here are very large and the entire organization must be maintained throughout the year, whereas abroad none of this is true, inasmuch as a six weeks' trip to this country of a foreign sales agent can and will dispose of that proportion of his goods which he has to sell in the American market. We are making this statement with an absolute knowledge of the condition; and can give as an instance the fact that the largest manufacturer of handkerchiefs in Belfast has no selling office or agency of any kind in this country, and takes care of his American business in just this way.

The writer fully realizes the high purpose of yourself and your associates in drafting this tariff bill, and wishes to put himself personally on record as thoroughly approving of your methods. I understand that you are drawing a tariff bill with the good of the consumer entirely in view. I also understand that you do not wish to draw a bill that will take away from said consumer any of his present purchasing power. It is perfectly plain that we have no right to come before you and ask your help in maintaining a condition in our industry which will, in any way, work to the disadvantage of the people of the United States. We do not feel that this is the case since our industry is already highly competitive. An inspection of the samples left by the writer will prove to you that the handkerchiefs which are made here are of good quality, attractive, and durable, and that our wholesale prices are reasonable. Any difference in value that may be found in different distributors' hands is due entirely to a variation in their demand for profit. Most of them insist on 57 per cent on the cost price as a minimum. A large part get more—almost none get less. A slight reduction in their

PARAGRAPH 322—HANDKERCHIEFS.

profit would make a big difference in the value given to the consumer at the fixed prices. Over this we have absolutely no control, and we fear this can not be helped by legislation one way or the other. The textile business is of such a nature that the goods can not be distributed direct to the consumer under present conditions.

We, therefore, ask you, in your deliberations, after satisfying yourself of the justice of our claims, to reassure yourself that the consumer is in no way being injured by the continuance of our business existence, and, if you have so decided, to draw a tariff which shall be both a consumer's and a producer's tariff, and not one which will further strengthen the already great tyranny of the distributor at the manufacturer's expense.

Respectfully,

MILTON C. HERRMANN.

BRIEF OF HANDKERCHIEF MANUFACTURERS.

GENTLEMEN: The following statement is made in behalf of the manufacturers of the United States of handkerchiefs made from cotton whose names are hereto attached and who are interested in paragraph 322 of the act of August 5, 1909, which is as follows:

"322. Handkerchiefs or mufflers composed of cotton, whether in the piece or otherwise and whether finished or unfinished, if not hemmed, or hemmed only, shall pay the same rate of duty on the cloth contained therein as is imposed on cotton cloth of the same description, weight, and count of threads to the square inch; but such handkerchiefs or mufflers shall not pay a less rate of duty than 45 per cent ad valorem. If such handkerchiefs or mufflers are hemstitched, or imitation hemstitched, or revered, or have drawn threads, they shall pay a duty of 10 per cent ad valorem in addition to the duty hereinbefore prescribed, and in no case less than 55 per cent ad valorem; if such handkerchiefs or mufflers are embroidered in any manner, whether with an initial letter, monogram, or otherwise, by hand or machinery, or are tamboured, appliquéed, or trimmed wholly or in part with lace with tucking or insertion, they shall not pay a less rate of duty than 60 per cent ad valorem."

Primarily our purpose is to preserve the present rate of duty and the several differentials provided for in that paragraph.

Handkerchiefs of cotton are made in various styles and sizes, ladies' handkerchiefs being ordinarily from 12 to 15 inches square, and men's from 18 to 23 inches square. Plain handkerchiefs are made from cloth, woven ordinarily so as to be able to cut three ladies' handkerchiefs and two men's from one breadth. After being bleached the cloth is cut and the edges hemmed. The handkerchiefs are then folded, ironed, boxed and cased. Handkerchiefs are also made in the loom and include hemstitched, as well as those with corded or ribbed borders and, in addition, such as are printed, mercerized, embroidered, or trimmed with lace. Revered handkerchiefs are those ornamented with drawnwork; tamboured, those embroidered by means of a hoop or frame or with a certain stitch produced by embroidery machines; and appliquéed handkerchiefs are those having the decorative material applied to or sewed on the fabric. Mufflers are large kerchiefs used ordinarily to protect the throat.

TARIFF PROVISIONS.

Cotton handkerchiefs, whether in piece as woven or cut apart, finished or unfinished, pay the same duty as cotton cloth of the same description, weights, and thread count, plus a differential according to the amount of labor or are more advanced in condition and consequently represent a greater manufacturing outlay. Thus, "if not hemmed or hemmed only," they pay the countable cotton rates, but not less than 45 per cent ad valorem; "if hemstitched, or imitation hemstitched, or revered, or have drawn threads," the differential is increased 10 per cent, so that the duty becomes the cloth rate plus 10 per cent but not less than 55 per cent ad valorem; if "embroidered in any manner, whether with an initial letter, monogram, or otherwise, by hand or machinery, or are tamboured, appliquéed, or trimmed wholly or in part with lace or with tucking or insertion," the differential increases 15 per cent, but is only added to the minimum rate, which would give 60 per cent. During the fiscal year of 1911 something less than 1½ per cent of all the cotton handkerchiefs and mufflers imported paid duty at the rate of 45 per cent. During the same period, of the hemstitched handkerchiefs imported, approximately 4 per cent were subject to the cotton cloth rates, plus 10 per cent, and the remaining 96 per cent were subject to 55 per cent ad valorem. There is a further class coming under the provisions of paragraph 350, if composed wholly or in chief

PARAGRAPH 322—HANDKERCHIEFS.

value of laces, embroideries, edgings, insertings, etc., made on the lever or Gotherough machine, which pay 70 per cent duty, but the quantity of these goods imported is insignificant.

LITIGATION IN REGARD TO HANDKERCHIEFS.

It is not desirable or necessary to take up the time of this committee with an accurate and detailed statement of the litigation respecting the interpretation of the various provisions of the several tariff acts with regard to handkerchiefs. It will suffice to say that it seems to have been difficult to adopt any phraseology which was not susceptible to construction or possibly to misconstruction. For instance, the phrase "embroidered in any manner, whether with an initial letter, monogram, or otherwise, by hand or machinery," had each of its several parts added to it by reason of some litigation with respect to the subject of handkerchiefs. Thus the court had to settle that the term "embroidered," as used in the act of 1894, was not commercial but descriptive. Embroidered initials on handkerchiefs were held not to make the handkerchiefs "embroidered handkerchiefs," according to the common and ordinary understanding, the court holding that in common parlance the term "embroidery" as applied to a handkerchief indicated ornamentation; whereas an initial was merely a mark of identification.

Again, there was a provision in the act of 1890 for "hemstitched and embroidered handkerchiefs" at 60 per cent ad valorem. It was undoubtedly the intention of Congress that hemstitched handkerchiefs, as well as embroidered handkerchiefs, should be liable to duty at 60 per cent; but this resulted in a decision to the effect that only such handkerchiefs as were both hemstitched and embroidered were dutiable at 60 per cent.

Even under the present act (par. 322) the question has arisen as to handkerchiefs having drawn threads, which you will note are covered also by paragraph 349, which relates to handkerchiefs from which the threads have been drawn, cut, or punched to produce open work. An importation of drawnwork handkerchiefs was classified by the collector in San Francisco at 60 per cent ad valorem under this provision, and it was held, in view of the fact that there were two *eo nomine* designations for this class of merchandise and that ordinarily the higher rate would apply, they were not subject to the provisions of paragraph 349, because that paragraph had included in it "not elsewhere specially provided for."

Attention is drawn to the danger of altering the phraseology of a paragraph which, in its very nature, must be to some extent intricate and complicated, because, even if in the wisdom of this committee the rate should be left as it is and the wording changed, the chances are that the American manufacturers of this merchandise would lose the protection that Congress sought to give them the benefit of.

COTTON CLOTH.

It is not our intention to enter into any discussion with respect to the merits or demerits of the present act in its provisions covering cotton cloth; but a consideration of this subject would seem to justify the impression that as compared with England, perhaps the largest manufacturer of cotton cloth outside of America, the price to the consumer is not so much a matter of tariff as it is a question of "set prices" and the very much greater cost of distribution in America as compared with England. Whatever the duty may be on cotton cloth, so far as the manufacturers of handkerchiefs are concerned, they are absolutely indifferent, except in so far as the reduction of duty beyond a reasonable and proper line would result in the destruction of the cotton-milling industry here and in this manner destroy or impair the market for the manufacturers of cotton handkerchiefs. The interest, therefore, that the manufacturers of cotton handkerchiefs have in the duty on cotton cloth is only by indirection, and they would have the same interest in any other matter that might tend to impair the purchasing power of the public. At the same time the fact is that, as manufacturers of cotton handkerchiefs, whose raw material is the cotton cloth, we have to say that the price of cotton cloth in this country is very fair.

PROPOSED LEGISLATION.

In the Underwood bill provision was made in paragraph 16 for the assessment of duty at 30 per cent ad valorem on all articles made from cotton cloth, whether finished or unfinished, and on all manufactures of cotton of which cotton is the component material of chief value. In paragraph 6 provision is made for handkerchiefs

PARAGRAPH 322—HANDKERCHIEFS.

or mufflers composed of cotton, whether in the piece or otherwise, and whether finished or unfinished; and in paragraph 3 we find a provision for cotton cloths, the maximum duty being 30 per cent ad valorem. Hence, a situation is produced whereby the cotton cloth and the handkerchief in the piece and the finished handkerchief and the embroidered handkerchief and the handkerchief with appliqué and lace edgings all pay the same rate of duty. The first answer to this proposition would appear to be that this ad valorem preserves the relation by reason of the increased value of these several articles, but that is just where the fallacy of this whole situation comes in. So far as we are concerned all of the statements made by the Tariff Board with respect to the values here and abroad of cotton cloth may be and doubtless are entirely true and correct; and that the mill cost of cotton cloth in England is practically as great as the mill cost of cotton cloth in this country; and that the selling price of the manufacturer of cotton cloth in England is substantially the same as the selling price of cotton cloth from the mill in this country. But if this fact be accepted as fundamentally true, it is a perfectly self-evident proposition that the revision downward of the present bill for the purpose of securing revenue will be of little or no avail, and it is doubtful whether such revision downward will adversely affect the American manufacturer of cotton cloth; but when it comes to the question of the manufacturer of handkerchiefs in this country from cotton cloth, such a reduction will unquestionably and inevitably put him out of business.

This statement is predicated upon the fact, which can be substantiated, that the labor cost in this country ranges from 50 to 200 per cent more than the labor cost in England. With respect to plain cotton handkerchiefs, the labor cost in this country is 50 to 70 per cent higher than it is in England; but on embroidered handkerchiefs the labor cost here ranges from 100 to 200 per cent more. For instance, on ladies' plain handkerchiefs, retailing at 5 cents, where the element of labor cost comes in to the smallest extent, the foreign labor cost per dozen is $6\frac{1}{2}$ cents and the domestic cost is $11\frac{1}{2}$ cents. On men's plain handkerchiefs, retailing for 10 cents, the foreign cost of labor per dozen is $8\frac{1}{2}$ cents; the domestic labor cost is 15 cents. On ladies' embroidered handkerchiefs, retailing at $12\frac{1}{2}$ cents, the foreign labor cost is 22 cents per dozen and the domestic labor cost is 44 cents. On a cheaper embroidered handkerchief, retailing for 10 cents, the foreign labor cost is 8.9 cents per dozen, as against a domestic labor cost of 17.2 cents per dozen. On a standard cloth, such as 76 by 72, converted into embroidered handkerchiefs, the actual labor expended costs one and a half times as much more than the value of the cloth itself. In this present instance the cost of the cloth would be 9.8 cents, as against a labor cost of 14.37 cents. This cloth is used in a handkerchief retailing for 5 cents.

Some word of explanation might be offered as to the reason for this being true, and the manufacturers have prepared and will be pleased to file more detailed information with respect to labor cost, both here and abroad; but, broadly, the facts are that the expense of doing business, the interest on the capital invested, the wages paid, the cost of distributing the goods, all make it impossible to compete with the form of manufacture indulged in abroad. A foreigner could come in here for the period of five or six weeks at the expense of \$10 per day and book a tremendous quantity of orders, and thereafter his expense of upkeep would be practically nil; the work would be distributed among house workers, and the subsequent operations of folding, boxing, and so on, could be done very much cheaper there than here, whereas under the American system all of the overhead expenses continue throughout the year.

It is, therefore, evident, and the particular point upon which we desire to lay the greatest stress is, that a preservation of the present differential as between a cotton cloth and the embroidered handkerchief would not be adequate to meet this situation at all; and to dispense with all differentials, as is provided for in the proposed Underwood bill, is simply legislating the manufacture of handkerchiefs in this country out of existence. This statement is neither impassioned nor exaggerated. If, as stated before, the cost of cotton cloth is practically the same here and abroad, but the cost of labor for making hemstitched handkerchiefs is one-half, one-third, or one-fourth of what it is in this country to produce the same goods, then, obviously, a 30 per cent protection on handkerchiefs, even if cotton cloth were free, would absolutely destroy the business of the American manufacturer and a foreigner could undersell him in this market on every handkerchief that was made.

An interesting subject for consideration in connection with the handkerchief trade is the fact that somewhere between 40 and 45 per cent of the handkerchiefs sold in this country is the so-called 5-cent handkerchief, and between 25 and 30 per cent is the 10-cent handkerchief. It must be borne in mind that the prices for handkerchiefs range at 1, 2, 3, 5, 10, $12\frac{1}{2}$, and 25 cents. Of the 1-cent handkerchief there is 3 to 4 per cent sold. Of the 2-cent some 8 to 9 per cent, of the 3-cent about 4 per cent, of the $12\frac{1}{2}$ -

PARAGRAPH 324—SHIRTS.

cent something less than 10 per cent. and of the 25-cent approximately 13 per cent. Hence, it will be noted that practically 70 per cent of the handkerchiefs sold in this country are of the 5 and 10 cent class and that by far the largest portion is the 5-cent class. These handkerchiefs are sold under the system established in this country of what is known as "set prices," and the whole gamut of manufacturers—yarn, cloth, and the subsequent manufacture of cloth into handkerchiefs—is all predicated upon the absolutely vital fact that this handkerchief is to be sold for 5 cents. The whole system of set prices is undoubtedly thoroughly familiar to the various members of this committee and is set forth in some detail in the report of the Tariff Board.

So far as the manufacture of cotton handkerchiefs is concerned, the fact is that whereas the trade in this country is absolutely fixed in its determination to have a 5-cent handkerchief and a 10-cent handkerchief, and that these two grades constitute 70 to 75 per cent of the bulk of the business, a reduction from the present rates of duty to the duty proposed in the Underwood bill would bodily transfer this business to the English manufacturer.

At the present time the finest grades of cotton cloth made in this country are used in the plain 5 and 10 cent handkerchiefs that are being sold and there never was a time in the history of the handkerchief business when the consuming public were getting any better values for their money than at the present time. The question arises whether a reduction in the duties is going to benefit the American public. And right here let us say that this result will not be secured, for the reason that when the domestic manufacturer shall have been put out of business the foreigner will control the market and the American public will unquestionably not receive the value for his nickel and his dime that he is getting at the present time.

Very respectfully submitted.

Howland & Wheaton Co. (F. S. Whedon); Samsy Mfg. Co. (F. S. Whedon); Newark Embroidering Works (per H. Bonermann, Prop.); The International Hkf. Mfg. Co. (Charles T. Garthe, Treas.); The Acheson Harder Co. (James Harder, jr., Secretary); Herrmann Auslam Co. (Milton C. Herrmann, President); Heller & Long (by Louis Long); E. Heller & Bro. (per Carl Heller); H. Rosenthal & Co. (by Harry Rosenthal, Prest.); Phillips & Hyman (by A. M. Phillips); Hessel, Rains & Co. (by S. E. Rains).

PARAGRAPH 323.

In addition to the duty or duties imposed upon cotton cloth by the various provisions of this section, there shall be paid the following cumulative duties, the intent of this paragraph being to add such duty or duties to those to which the cotton cloth would be liable if the provisions of this paragraph did not exist, namely: On all cotton cloth in which other than the ordinary warp and filling threads are used to form a figure or fancy effect, whether known as lappets or otherwise, one cent per square yard if valued at not more than seven cents per square yard, and two cents per square yard if valued at more than seven cents per square yard; on all cotton cloth mercerized or subjected to any similar process, one cent per square yard.

PARAGRAPH 324.

Clothing, ready-made, and articles of wearing apparel of every description, composed of cotton or other vegetable fiber, or of which cotton or other vegetable fiber is the component material of chief value, made up or manufactured, wholly or in part, by the tailor, seamstress, or manufacturer, and not otherwise provided for in this section, fifty per centum ad valorem.

SHIRTS.

TESTIMONY OF W. N. ELLS, REPRESENTING THE SHIRT MANUFACTURING INDUSTRY.

The witness was duly sworn by the chairman.

Mr. ELLS. Mr. Chairman and gentlemen, I am here representing the shirt manufacturing industry, and especially that branch of it which has to do with what we call the higher grade shirt; that is, shirts which retail at \$1 and upwards each.

PARAGRAPH 324—SHIRTS.

This shirt industry, as a whole, according to the last census, is composed of about 800 different establishments.

Mr. FORDNEY. Pardon me; in what paragraph of the schedule are your goods?

Mr. ELLS. Paragraph 324, Schedule I.

According to the census report, there is a capital investment of \$44,000,000, with an output of \$82,000,000.

I would like to say at the outset that we are not here in any sense as obstructionists; that we recognize the desire of this committee to know the facts, and to do that which shall be good for all parties concerned, so far as it is possible. We are most happy to give you every item of information we can. Knowing the situation thoroughly in our industry, we have nothing whatever to conceal in any way. We appreciate the courtesy given us to come here and tell you what we may.

This industry, as I stated, has about 800 different manufacturing establishments. There is absolutely a free competition among them all. There is in no sense a trade agreement or anything which might in any way restrict the competition, and that competition has become exceedingly keen.

Mr. HULL. You are just discussing shirts?

Mr. ELLS. Just the shirt portion of it; yes, sir.

Mr. HARRISON. Not the collars and cuffs?

Mr. ELLS. No, sir; they come under another schedule. I understand there is a hearing scheduled for Friday on that.

Mr. HARRISON. Cotton collars and cuffs come under this schedule.

Mr. ELLS. I understand they are scheduled for hearing on Friday.

I am not sure if there has been placed in your hands copies of brief, but I have here at this moment corrected copies, which I would like to hand you, because the first one, being gotten out hurriedly, was found to contain a few typographical errors.

Twenty years ago this business was acknowledged as exceedingly prosperous.

Mr. HARRISON. These goods come in under a 50 per cent tariff now?

Mr. ELLS. Yes, sir, with cotton wearing apparel. Shirts are not specifically and separately mentioned.

Mr. HARRISON. But the customs-house officers, sustained by the Treasury Department, put them under that classification?

Mr. ELLS. Yes, sir; they all come in under that heading.

There has been a great change in the condition of the industry within the past 10 years, I may say. The competition before that time among the manufacturers was absolutely unrestricted and keen, but a few years ago, comparatively, there came a new development in the prevalence of the so-called soft-cuff shirt, which has become now a very prominent article of manufacture. The old business, the so-called laundered cuff business, required extensive plants, very large investments, etc. As you will notice, the investment is, from the census report, \$44,000,000, against an output of \$82,000,000, showing a very large investment in proportion to the output. It required a class of labor that took time to educate, and altogether had certain conditions which do not exist at all under the present state of affairs with soft-cuff shirts so much to the front.

PARAGRAPH 324—SHIRTS.

It became possible, with the introduction of this shirt, for manufacturers in large number to start in the manufacturing industry of these soft shirts. They do not require the same class of labor. There are vast numbers of them sold, and the manufacturers of these other grades of shirts found themselves confronted with a double condition: First, that the volume of their own particular product was reduced by the inroads made by the soft-cuff product; and, second, that in order to maintain it they were compelled to introduce this new branch of the industry, and to do it against the competition of those who had, we perhaps may say, no factories, or at least a very small factory overhead expense, whose investments were small, who may employ a different class of labor, and who do, as a matter of fact, to-day continually offer for sale their product at prices at which the old-time manufacturers in many quarters can not make them. That is particularly true of the city where I live, Troy.

Mr. KITCHIN. You say the annual output of the shirt industry in this country is \$82,000,000?

Mr. ELLS. \$82,000,000, according to the last census.

Mr. KITCHIN. Do you have any idea how much, in dollars and cents, is imported?

Mr. ELLS. We do not know, because the shirts are not specially classified.

Mr. KITCHIN. I know that, but they are classified under "wearing apparel."

Mr. ELLS. We know there were imported last year—

Mr. KITCHIN (interposing). A very small part of the imports under that section of "wearing apparel" was shirts, was it not?

Mr. ELLS. We do not know how much. We know there are a good many shirts imported. We know the total imports last year were \$3,600,000.

Mr. KITCHIN. No; it is \$1,871,000. This includes wearing apparel of all kinds made out of cotton imported under the paragraph being discussed.

Mr. ELLS. \$3,600,000 are the figures we have.

Mr. KITCHIN. \$1,871,000 in 1912.

Mr. HARRISON. Do you export any shirts?

Mr. ELLS. There probably is an occasional manufacturer who may sell a few shirts abroad. It has no significance and amounts to nothing.

Mr. HARRISON. I am referring now not only to your own factory, but to the \$82,000,000 of production in the United States. What part of that is sent abroad?

Mr. ELLS. My understanding is it would be so small it would be absolutely insignificant.

Mr. KITCHIN. Is it not a fact that much less than 10 per cent of this total amount of imports under this section was shirts?

Mr. ELLS. I do not think so. I have no means of determining, because the customhouse department does not give us the figures separately.

Mr. HARRISON. I call your attention to the growth in our export trade of cotton clothing exclusive of knit goods. In 1910 it was

PARAGRAPH 324—SHIRTS.

\$4,549,000; in 1911 it was \$5,538,000; in 1912 it was \$7,919,000. What proportion of that do you suppose was shirts?

Mr. ELLS. I am not able to answer that question, but from what I know of the shirt industry I think there is very, very little export.

Mr. HARRISON. Do you not believe that far more shirts made here are exported than foreign shirts are imported into the United States?

Mr. ELLS. No, sir; I do not think so. That is my own opinion only, for what it may be worth.

Referring to your question as to the amount of imports, according to the figures we have of imports last year, they were 50 per cent more than they were in the largest year under the 40 per cent duty, which obtained about 10 years ago, and they have increased materially within the past few years; that is, the total imports under that clause. We have ocular demonstration of that, and the gentleman who follows me will show you some of the details of it—of shirts that are now being brought into this country at prices at which it is impossible for us to make them, to say nothing of selling them.

I notice in this connection that the total exports of shirts from Japan, according to the consular report—that does not say imports to the United States, because we do not know where they went—in the last three years have increased 550 per cent. The average price of their shirts per dozen in the same period has decreased 22 per cent.

Mr. HILL. Are there any American manufacturers that have establishments in Japan?

Mr. ELLS. I have never heard of one.

Mr. FORDNEY. I am told by ex-Congressman McKinlay, of California, that while in Japan an American consul was showing him around and showed him four different cotton factories, in which the American consul told him Marshall Field & Co., of Chicago, were interested. I made that statement publicly, and I received a letter from Marshall Field & Co., asking me if I had made that statement, and where I got my information. I wrote back and asked, after relating the story, whether or not it was true, and I never got any reply from them.

I will tell you what I have here, and I am helping you now, because I believe as you do. I have an American consular report on wages paid in shirt factories in Japan, as follows: Women, \$5 or \$6 per month; men, from \$7 to \$10 per month; and they pay \$3 out of that for their board. That is your strongest competition, the difference in the cost of labor abroad and here, is it not?

Mr. ELLS. Yes, sir; I am very glad to get those figures.

Mr. FORDNEY. And on that cost is what you want protection?

Mr. ELLS. Yes, sir; that is the large part of it.

Mr. KITCHIN. Do you not know as a fact that there has not been \$10,000 worth of shirts imported from Japan in the last 10 years to this country? They do not come from Japan, and Brother Fordney knows they do not come from Japan. Do not let him mar your testimony with any such thing as that.

Mr. FORDNEY. Let me tell the gentleman from North Carolina (Mr. Kitchin) I do not know anything of the kind about what he is talking about.

Mr. KITCHIN. You ought to know it.

PARAGRAPH 324—SHIRTS.

Another thing, not 10 per cent of the amount of imports under this paragraph is shirts, and instead of the importation in that paragraph increasing, as you seem to think, it has been decreasing for the last four years. In 1908 it was over \$4,000,000, and it has dwindled down until in the last year it was \$1,871,000, and as said before, not 10 per cent is shirts. I can't understand how you shirt manufacturers can resist a reduction of the tariff when you have a monopoly of the home market; that out of every \$500 worth consumed here you sell \$499 worth and the foreigner only \$1.

Mr. ELLS. In 1908, according to the figures we have, the imports were \$3,321,000.

Mr. KITCHIN. I am taking the figures from our Government report, \$4,185,000. But go ahead and give yours.

Mr. ELLS. In 1909 they amounted to \$1,564,000. In 1910 they were \$1,138,000. In 1911 they were \$3,983,000. In 1912 they were \$3,635,000.

Mr. KITCHIN. You are just mistaken over a million dollars in 1912. In that year it was \$1,871,000.

Mr. HILL. Here [indicating] is the last published statement. This is June, 1912.

Mr. KITCHIN. You have the one that does not specify, but includes many other articles. You have not the right one.

Mr. HILL. You do not know whether I have or not.

Mr. KITCHIN. I have the one that particularizes right on this schedule. It is \$1,871,477.20, to be accurate.

Mr. FORDNEY. The statistics furnished by the committee, under paragraph 324, the paragraph about which you are talking, shows importations in 1910 were \$1,890,000; in 1911, \$1,931,000; in 1912, \$1,914,000; estimated importations under the proposed bill by our Democratic friends, \$3,646,600.

According to their own opinion the estimated imports under the rates which they propose will almost double. Do you believe that would in any way affect this American institution?

Mr. ELLS. I do not think, if it would stop there, that we would have to worry; but I do not think it would stop there.

Mr. LONGWORTH. The only trouble about Mr. Kitchin's figures is that he was reading from exports and not imports; otherwise his statements were correct.

Mr. KITCHIN. You know that what you are reading from—I have just looked at it—is under a general clause, "All other clothing," and those are statistics of imports and exports of a general nature, without particularizing, for the last three years. What I am reading from is the summary of imports by the department which specifies under each paragraph of the tariff. This document is issued monthly and then once a year and gives the data for the year ended June 30, 1912, particularizing this section. The amount they give you, Mr. Ells, is under different sections, two, or three, or four, or five paragraphs, apparently. The section I am reading is exactly that section you are talking about, section 324. You come under that section, do you not?

Mr. ELLS. I think so.

Mr. KITCHIN. Certainly; you know it.

Within the last year we only imported, of all that class of goods under paragraph 324, \$1,871,479, and exported under the same clause

PARAGRAPH 324—SHIRTS.

over \$7,000,000, and I am sure much less than 10 per cent was shirts.

Mr. ELLS. The point simply is in this statement regarding imports, assuming the figures are correct, that they are increasing, and this duty is not a prohibitive duty. It does not keep the people from importing.

Mr. KITCHIN. I will tell you what I wish you would do. Upon investigation a year ago I could find very little imports of shirts. I wish you would try to find out how many shirts, in dollars and cents, were imported last year, and put it in your brief. See if you can find that out.

Mr. ELLS. Can we get that from the customs authorities?

Mr. KITCHIN. They will help you the best they can. I doubt whether they can give you anything very definite. A year ago they were able to find very little, and they thought a very small percentage of the imports under this paragraph was shirts—not enough to attract any attention.

Mr. FORDNEY. The point I want to make is that under the Payne tariff law the importations have not materially increased, showing that the law is effective, and is holding down the importations, and therefore protecting domestic industries.

Under the proposed bill, as proposed by our Democratic friends, they admit that the rate they propose will materially increase, or, rather, almost double the importations of these articles. Therefore, if that be true, then the production of these goods in this country must decrease?

Mr. ELLS. Yes, sir.

Mr. FORDNEY. If an increased importation comes in, that is true?

Mr. ELLS. Yes, sir.

Mr. FORDNEY. Such a changed condition would injure the American industry, would it not?

Mr. ELLS. Beyond all question.

Mr. FORDNEY. And you could only reach and combat with that competition by lowering the cost of your production?

Mr. ELLS. Yes, sir.

Mr. FORDNEY. And as labor enters more largely into the cost of production than any one other item, the labor itself must suffer?

Mr. ELLS. Yes, sir.

Mr. HARRISON. If Mr. Fordney has concluded his testimony in your behalf, it is my duty to inform you that your time has expired.

Mr. ELLS. But I have not had time to talk at all. I have come 400 miles across the country to talk to you for 15 minutes.

Mr. HARRISON. I recognize the committee has occupied most of your time. You have occupied the stand, however, for nearly 20 minutes; so if you have any sentence to conclude, I suggest you do so and we will call the next witness.

Mr. FORDNEY. I am sure the witness will certify to the statements made by Mr. Fordney.

Mr. HARRISON. Mr. Ells, if you will proceed for five minutes, I am sure the committee will be glad to hear your argument.

Mr. ELLS. In the first place, we have a shirt here which I will say nothing about, but to which I will just call the attention of the committee.

PARAGRAPH 324—SHIRTS.

Second, in the matter of labor, we find our average rate of labor, as compared with labor abroad, is something like this: We are paying \$9.62 per week to those who are operating our factories, our wage earners. In England the average is \$3.75 to \$4 per week. In Germany the average is \$2.14 to \$2.42, and in Japan the average is from \$1.77 to \$2.44.

We have a schedule here which I will not attempt to read, of the individual kinds of operators. I will ask if we may have the privilege of filing some of this matter with you in the near future?

The CHAIRMAN. You may do so.

Mr. ELLS. The rate of wages in Troy has increased in 20 years 30 per cent. In five years it has increased 15 per cent.

We have another condition which is very important, having a bearing on wages, and that is that we have to run a certain limited number of hours; that we have to have certain definite conditions in our factories. Gov. Sulzer, of New York State, where many factories are located, just now has had a hearing of the labor leaders, who have asked the abolishment of female labor and all things of that kind, with which we have to contend.

We claim there is a better product offered at a given price on shirts to-day than ever before in the history of the industry. I point to the shirt sales in evidence on Pennsylvania Avenue and everywhere else to-day. Twice a year these shirt sales are in progress, which come out of the profits of both the retailers and very largely the manufacturers, showing that the consumer certainly does not require anything further to make the competition broad enough and keen enough to give him the advantage of a proper garment at a proper price. There is no necessity for anything of that sort.

There are many other things I would like to say, but in deference to the chairman I want to conclude as quickly as I can.

First, we believe, sir, that the present rate of duty is not a prohibitive rate. That is evident.

We believe it should be maintained; that if it is not maintained, the shirt manufacturers, who, to-day and for several years past, by reason of these conditions which have grown up have had a very hard time, and who, if my information is correct, and I believe it to be correct, are barely holding their own in very many cases, will be driven out of business entirely. It will be a great hardship and it will be impossible for us to go ahead. We know that we can not compete with anything like the foreign labor prices nor the prices at which the foreign product is now being brought into this country.

This one shirt which I now hold in my hand has been bought within a week, being imported from Japan, at a price that lays it down here at \$31.88, and the best cost we have been able to figure on it, without any allowance for profit or for selling expenses, is \$34.46, or \$2.50 more.

We also beg leave to suggest that whatever the duty may be, the plan which is now adopted in Canada of requiring certification with every import that the prices at which the import is named are no less than the prices in the home country for home consumption, should be put upon the invoice.

The CHAIRMAN. In other words, you favor a dumping clause?

Mr. ELLS. Yes, sir.

PARAGRAPH 324—SHIRTS.

The CHAIRMAN. You do not think the dumping clause would work any injury to your industry by reason of some other countries adopting it in the nature of reprisal, do you?

Mr. ELLS. No, sir; there is not enough goes out of the country.

The CHAIRMAN. Your time has expired.

Mr. Ells's brief is as follows:

BRIEF OF SHIRT MANUFACTURERS.

COMMITTEE ON WAYS AND MEANS,
House of Representatives.

GENTLEMEN: The undersigned, a committee representing a substantial part of the shirt-manufacturing industry, present the following brief in regard to the tariff rates specified in paragraph 324 of Schedule I of the tariff act of 1909, which provides for the "imposition of an ad valorem duty of 50 per cent upon clothing, ready-made, and articles of wearing apparel of every description, composed of cotton or other vegetable fiber, or of which cotton or other vegetable fiber is the component material of chief value" (this being the paragraph under which manufactured shirts are dutiable).

This committee represents substantially that part of the industry which manufactures laundered shirts, retailing at prices ranging from \$1 upward.

We recommend that no material change be made in the rate of duty imposed by the aforesaid section, and for the following reasons:

The entire shirt industry, according to the Thirteenth Federal Census, represents an investment of upward of \$44,000,000, comprised in 770 different manufacturing establishments spread over the entire United States, employing upward of 48,000 wage earners and turning out a product of the value of upward of \$92,000,000 per annum.

The committee represents a very substantial part of that industry in respect to capital investment, number of wage earners, and volume of product.

Our industry is upon a decidedly competitive basis. There is no combination, trust, monopoly, or association of any kind among these manufacturers, and if this brief is in part unsatisfactory as to statistics it is attributable to the fact that no organization exists among these manufacturers whose plants are widespread over the entire country, and therefore it is impossible to secure such statistics, more particularly since the committee which presents this brief was appointed at a meeting held only two weeks prior to this hearing.

Point I.—The industry is upon a highly competitive basis.

For the information of your committee we have secured the data contained in Schedule A hereto annexed and made a part of this brief, from manufacturers whose product we deem representative of our industry. It shows the cost of production of a typical grade of shirt most extensively sold to the consumer. It gives the net selling prices thereof, as well as the profit realized thereon. A perusal of that schedule must necessarily convince your committee that any industry, the operations of which are so widely distributed and comprising 800 plants, each under separate and independent management and control, must result in the keenest sort of competition. In fact, so active and severe is this competition that during the last 10 years the quality of the product has been materially advanced while the price has remained stationary.

The business is now meeting foreign competition; and the latest statistics, especially of increases in importations, indicate this fact.

The industry is one readily susceptible to increase of competition, because it is feasible for men with small capital to engage therein, since neither extensive premises nor complicated machinery are requisite for turning out the product, which is evidenced by the large increase in the number of manufacturers.

In our second point we shall advert to the vast discrepancy in the cost of labor in this industry here and abroad. With this reference in mind, we draw attention to the fact that this lower cost of production abroad has thrown upon the American market a quantity of shirts, which is not a mere matter of apprehension for the future, but an actual present condition, demonstrated by the enormous growth of importations during the last three years. During the fiscal year ending June 30, 1910, the total imports of cotton wearing apparel dutiable under paragraph 324, amounted to \$1,838,356; in 1911, these figures were more than doubled, the imports amounting to \$3,983,030; and in 1912 they were \$3,635,393. Not all of these importations were shirts, and unfor-

PARAGRAPH 324—SHIRTS.

unately there is no way of telling just how much of them represent shirts, because the Government statisticians do not segregate the different kinds of merchandise. We have good reason to know, however, that a part of this great increase must be due to the large importations of men's shirts, for, during the last two years, we have encountered vast quantities of foreign-made shirts displayed for sale in the dry goods and department stores. In view of the desirability and necessity of furnishing your honorable committee with precise figures, it is particularly unfortunate that we can give only the totals for the paragraph (excluding corsets), but inasmuch as the Government does not separately report the importations of shirts, and inasmuch further as there is no central association or bureau in our trade to aid us in securing these quotations, there is no way in which we can segregate them.

At the present time the competition in men's shirts comes from Austria, England, France, Germany, and Japan. Data showing the exportations from those countries to the United States are not available, but through the courtesy of the Japanese consul general in New York, we have secured some general statistics taken from the report of the treasury department of Japan, which have a great, and for the American shirt manufacturer, a sinister significance.

These figures indicate a tremendous growth in the export of shirts manufactured in Japan, and they are as follows:

1910.....	dozen shirts..	1,391
1911.....	do.....	2,117
1912.....	do.....	7,601

These figures in themselves, of course, would not represent a very extensive inroad upon the shirt industry in this country, but they are exceptionally significant for they show that the manufacture and exportation of these shirts from Japan increased nearly 600 per cent in three years. Incidentally, it may be well to refer to the fact that from the same country, and according to the same report, the exportation of collars and cuffs increased 150 per cent during the same period.

If this progression be possible in a country where the industry is practically in its infancy, what are the domestic manufacturers to anticipate in the event of a reduction of the duty, but a tremendous influx of shirts from foreign countries where the industry is already well established, and from Japan, where it is making such great strides?

Competition by the domestic manufacturers with exportations of that type would be utterly impossible, and could only be met by reductions of wages so radical and sweeping in character, as to be practically out of the question. It must be equally plain that in view of the part that machinery plays in the production of these shirts, and in view of the deftness of the foreign workers, any reduction in the duties on cotton cloths would not justify a substantial reduction in the duty on manufactured shirts.

We do not wish to be understood as objecting altogether to foreign competition, nor as seeking a tariff which would eliminate it. On the contrary, we welcome competition from foreign countries, and are getting it now in increasing quantities, but we must be kept upon a parity with the foreign manufacturer in the cost of production.

For the convenience of your committee we append hereto Schedule B, a table showing the importations of cotton wearing apparel such as are dutiable under the present paragraph 324 from 1894 to 1912.

It is probably needless to remind your committee that the cotton cloth, pearl buttons, and kindred materials, which are constituent parts of a manufactured shirt, are more cheaply procured in the countries named, quality for quality, than in the United States.

The domestic consumer has always shown a tendency to give preference in his purchases to articles of apparel stamped or marked "imported," probably on the groundless belief that such a mark implies superiority in quality, and this human weakness would be a decided factor in favor of the foreign manufacturer in the sale of his merchandise. The domestic competition in the last five years has placed the industry on such a basis that, taken as a whole, and with but few exceptions, it has not been remunerative.

Point II.—The difference in the cost of labor to the domestic and the foreign manufacturer is one that can only be equalized by the maintenance of the present tariff.

In the matter of original equipment—that is, the purchase or leasing of factory sites and the construction and equipment of factory buildings—there is entailed upon the domestic manufacturer a far greater investment than upon the foreign manufacturer, and this overhead expense is being increased from year to year, owing to the enactment of various State laws designed to improve the conditions of labor, with which we are only too pleased to comply, since in most of our institutions these

PARAGRAPH 324—SHIRTS.

changes have been voluntarily made for the express purpose of improving the working conditions of the wage earners.

We are subjected to stringent laws regulating child labor and the hours of employment of women (of which we make no complaint), but they constitute, nevertheless, a considerable financial burden upon the American employer.

Furthermore, the foreign countries named have the advantage of an apprenticeship system, whereby they are enabled to secure the services of apprentices practically free, while in America apprentices, who are called "learners," are paid in a proportion equivalent to the payment received by skilled operatives.

Conceding as we do the greater efficiency of American labor, yet in the manufacture of shirts it does not make up the inequality which we shall exhibit by our tables, for the same machinery is used abroad and here, and the deftness in this class of work of English, German, and Japanese work people is well established.

We therefore seek to impress upon your committee the necessity for preserving the equation representing the difference in the cost of labor.

The average cost of labor which enters into the manufacture of a shirt represents 40 per cent of the total cost thereof. So that it will be observed that labor is the largest constituent item in the determination of cost. Therefore, in attempting to adjust the tariff upon a competitive basis for the purpose and with the intent that the American and the foreign manufacturer shall be placed upon a parity in the domestic market we must take this equation into consideration.

The character of labor employed in this industry may well be described as almost entirely "skilled labor," and the following table represents a comparison of the rate of wages paid to operatives in this industry in America and in competitive countries:

Weekly rate of wages: America, \$9.62; England, \$3.75 to \$4; Germany, \$2.14 to \$2.42; Japan, \$1.77 to \$2.44.

NOTE.—The averages both here and abroad include male and female labor. The American average shows an increase of nearly 20 per cent in the last decade. The Japanese average includes cost of maintenance.

A report submitted by the board of trades to the British House of Commons shows that the average weekly wage for those working full time in the "shirt, blouse, under-clothing, etc., industry" during the last pay week in September, 1906, was as follows:

	s.	d.
Men (all occupations).....	29	10
Boys (all occupations).....	8	9
Women:		
Cutters.....	14	11
Machine sewers—		
Hand or foot.....	14	7
Power.....	13	1
Hand sewers.....	12	2
Starchers and ironers.....	11	5
Boxers and wrappers up.....	11	8

This makes the average rate of all these classes of employees in the United Kingdom at the period named 14 shillings 2 pence per week, equivalent to \$3.42. While the Board of Trades Labor Gazette, December, 1912, shows that returns from shirt and collar manufactories in England, Scotland, and Ireland, employing 6,313 workmen in factories (in addition to out-workers), and paying £4,277 in wages in the week ending November 23, represented a decrease of 1.1 per cent in the amount of wages paid compared with the month previous, and of 2.7 per cent compared with a year ago—their tabulation being as follows:

Number employed.	Nov. 23, 1912.	Increase on month ago.	Increase on year ago.
6,313	0.4	+0.4	+0.7
£4,277	-0.7	-1.9

This shows an average wage not considering out-workers, of \$3.30 per operative.

Even more significant, and may we say, appalling, is the account of the Japanese industry of shirt and collar making for export, reported by Consul General Thomas Sammons, of Yokohama, in the Daily Consular and Trade Reports, No. 26, of January 31, 1912, which we herewith set forth in full:

PARAGRAPH 324—SHIRTS.

"The manufacture of shirts in Japan for export is increasing and is considered to be very profitable. A good quality of shirts made to order sells at from \$16 to \$20 a dozen. Quantities of material are imported for the purpose of manufacturing shirts for the export trade, utilizing Japan's cheap labor. Rebates of the import duties on the raw materials are granted on such manufactures. In some instances foreign made shirt materials are very cleverly imitated in Japan.

"Male Japanese shirt and collar makers, including cutters, are paid \$7.50 to \$10 per month, while female workers receive \$5 to \$6 per month. Food and lodging are also provided, the estimated cost being \$2 to \$3 per month. It is assumed that each person consumes during the year 1 koku or about 5 bushels of rice. A koku of rice at prevailing high prices, is worth about \$12. The cost of the other food furnished is estimated at twice that of rice.

"In addition to board and lodging furnished to the shirt and collar makers who are employed in the factories, a daily free bath is provided, and a religious service is customarily arranged for once a month, this being followed by an entertainment of some kind, frequently including a moving-picture exhibition.

"HOURS OF LABOR—CHILD LABOR.

"These laborers work about 57 hours each week, with an average of three holidays in each month, usually the 1st, 15th, and 28th, in addition to the usual national holidays, 10 or 12 each year. Thus, without ceasing to work on Sundays, these shirt and collar makers have about 50 holidays during the year. The average working day is 9½ or 10 hours, from 8 in the morning to 6.30 or 7 in the evening; 30 to 45 minutes are allowed for luncheon, with an additional half-hour for the serving of tea in the afternoon.

"Under the new factory laws of Japan, children who are employed in factories must have had 6 year's schooling. It is estimated, therefore, that with the school age beginning at 6 or 7, children would not be admitted, under this law, to factories before the age of 12 or 14. However, in the shirt and collar industry much piecework is turned over to families rather than to individual workers. While it is estimated that the earnings of a family engaged in this work will amount to between 35 cents and \$1 per day, it is practically impossible to secure definite information showing how much piecework is done for a certain sum of money. Most of the shirt manufacturers regard data of this kind as trade secrets.

"As the shirt and collar makers in Japan are paid a higher scale of wages than cotton-mill employees, the manufacturers have no difficulty in securing all the help they require."

With a rapidity of growth in this industry which is possible only in such countries as Japan, where labor is ridiculously cheap, and with the industry well entrenched in the other foreign countries, where it has been longer established, domestic manufacturers in the face of a substantial reduction in the tariff will be compelled to face an attack which they are not prepared to meet, and which, in fact, they can not meet, except as the result of a stringent reduction in the wages paid to their operatives—a measure both inequitable and impossible, and visiting upon their employees the evil results which might flow from their choice of the other alternative, namely, a shutting down of the factories engaged in this industry.

If, therefore, your committee were to reduce the duty upon raw materials which enter into the manufacture of these articles, and if we disregard entirely the increased cost of equipment and of general overhead charges, and selling expenses in the United States, as hereinbefore referred to, nevertheless, the American manufacturer can not be placed upon a basis of equality of competition with the foreign manufacturer, because of his utter inability to secure labor, the chief component cost of shirt manufacture, at an equivalent price, unless the tariff upon the manufactured article is maintained at substantially its present rate.

The reduction of the tariff upon the raw material and the substantial maintenance of the tariff upon the manufactured article would probably enable the domestic manufacturers in such cases where they are justified, either in increasing the quality of the product furnished to the consumer by using the imported material when it is better than the domestic and procurable at the same price, or in reducing the price of the manufactured article to the consumer, by whatever sum may be saved as a result of the competition in raw materials, but the labor equation will forever remain.

In spite of the fluctuations in the prices of raw material, and in fact the gradual increase in the prices thereof, and the rather steady increase in the cost of labor and other expenses, the fact remains that both wholesale and retail prices of our article have not advanced, and that the consumer is to-day receiving greater value for his money than ever before in the history of the industry.

PARAGRAPH 324—SHIRTS.

We therefore respectfully urge upon your committee the careful and serious consideration of these conditions before any effort is made to adjust the tariff upon what we believe to be the basis that you are considering, namely, a competitive one.

All the competitive countries named, with the exception of England, maintain, as against the United States, a tariff against our manufactured article equivalent to the one which we seek to have continued as against them, more especially so when the difference in wages to which we have adverted are made a part of the calculation.

Appended hereto, marked "Schedule C," is a tabulation showing that the present rate of duty maintains the requisite equality based on variations in the wage scale.

Point III.—As to the administrative features of the proposed legislation.

We respectfully recommend that in the proposed law some provision be made so that importations of shirts as such may be segregated from other articles of wearing apparel dutiable at the same rate.

We also respectfully suggest that your committee recommend the adoption of a provision similar to that demanded under the Canadian tariff, which requires an importer to certify, among other things, "that the invoice contains a true and full statement showing the prices actually paid or to be paid for the goods, the actual quantity thereof, and all charges thereon; that the said invoice also exhibits the fair market value of said goods at the time and place of their direct exportation to Canada, and as when sold at the same time and place in like quantity and condition for home consumption in the principal markets of the country whence exported directly to Canada, without any discount or deduction for cash, or on account of any drawback or bounty, or on account of any royalty actually payable thereon, or payable thereon when sold for home consumption, but not payable when exported, or on account of the exportation thereof or for any special consideration whatever."

LASTLY.

We are convinced that any material reduction in the duty on manufactured shirts will undoubtedly result in a tremendous increase in importations and an injury to the domestic industry from which it can not possibly recover without a readjustment of the wage scale. That an invitation of this character will so greatly overrun the domestic market with the foreign product as to leave the American manufacturer upon a noncompetitive basis, and that the most immediate and ultimate sufferers from such a condition of affairs will be the wage earners, who are at present the highest paid operatives of their type in the world and apparently content and satisfied with both their working conditions and their scale of wages.

GEORGE S. BROWN,
Chairman.

JULES C. LEVI,
WALTER M. STEPPACHER,
NAT JACOBSON,
EDWARD H. BETTS,

Committee.

FEINER & MAASS, *Counsel.*

SCHEDULE A.

This schedule is a composite, showing actual results attained by four representative manufacturers: Earl & Wilson, Troy, N. Y.; Walter M. Steppacher & Bro., Philadelphia, Pa.; Hall, Hartwell & Co., Troy, N. Y.; Manhattan Shirt Co., Paterson and Passaic, N. J.

The books of each of these concerns are open of access to the committee for the purpose of verifying these figures.

The results herein shown are, with slight variances, typical throughout the industry.

The illustration chosen applies to a shirt which retails to the consumer at \$1.50, which, by reason of the greater quantity consumed, is the fairest illustration.

PARAGRAPH 324—SHIRTS.

	Cost of production per dozen shirts.	Net price per dozen at which these shirts are sold by the manufacturer to the dealer.
Manufacturer A.....	\$12.56	\$12.69
Manufacturer B.....	12.37	13.00
Manufacturer C.....	11.95	12.50
Manufacturer D.....	11.23	12.00
	4/48.11	4/50.19

Average cost per dozen shirts.....	\$12.03
Average selling price per dozen shirts.....	12.54
Cost.....	12.03
Selling price.....	12.54
Average profit per dozen shirts.....	.51+

In order to make the illustration one of general application, three of the houses chosen sell directly to the retail dealer, while the fourth sells to the jobber, and in the last-named instance there has been added to the cost the jobber's expense, and the selling price given is the jobber's net selling price.

SCHEDULE B.

Year.	Rate of duty.	Value.	Year.	Rate of duty.	Value.
	<i>Per cent.</i>			<i>Per cent.</i>	
1895.....	50	\$1,324,856	1903.....	50	\$1,536,834
1895.....	50	395,183	1904.....	50	1,616,861
1895.....	40	2,051,520	1905.....	50	1,435,456
1896.....	40	2,491,017	1906.....	50	1,703,836
1897.....	40	2,469,093	1907.....	50	2,766,144
1898.....	40	249,908	1908.....	50	3,321,321
1898.....	50	546,744	1909.....	50	1,564,392
1899.....	50	622,012	1910.....	50	1,838,356
1900.....	50	746,525	1911.....	50	3,983,030
1901.....	50	802,687	1912.....	50	3,635,393
1902.....	50	1,020,735			

SCHEDULE C.

Using as an illustration the same type of shirt made by the same four concerns mentioned in Schedule A, the labor cost compared with the total cost of production is as follows:

	In the case of a shirt of which the selling price is \$13 per dozen, the analysis of cost is as follows:	In the case of a shirt of which the selling price is \$12.69 per dozen, the analysis of cost is as follows:	In the case of a shirt of which the selling price is \$11 per dozen, the analysis of cost is as follows:	In the case of a shirt selling at \$7.83 per dozen to the jobber, the analysis of cost is as follows:
Labor.....	\$4.50	\$4.41	\$4.91	\$2.94
Material.....	4.12	4.50	4.56	3.40
Overhead.....	1.80	1.28	2.48	.78
Other materials.....				.71
	10.42	10.19	11.95	7.83
Percentage of labor cost.....	43+	43+	41+	38+

PARAGRAPH 324—SHIRTS.

Showing the average labor cost in these four factories to be about 41 per cent, and these illustrations may be considered typical of the industry.

Under such circumstances, the cost of labor per dozen shirts as between this country and the foreign countries, as shown by the table on page 7 of our brief, would indicate that, as against Japan, the cost of domestic labor is almost four times as great; as against Germany, over three times; and as against England, almost twice as great.

Earnings per week in shirt manufacturing industry.

	England (female).	United States (male).
Cutters.....	\$3. 58	\$15 to \$18. 00
Machine sewers.....	3. 32	10. 00
Starchers and ironers.....	2. 74	12. 00
Boxers and wrappers.....	2. 80	10. 91

With the exception of the cutters, all of the above operatives are female in the case of both countries.

The figures given above for England are taken from a report submitted by the board of trades to the British House of Commons, and shows the average weekly wages for those working full time in the shirt, blouse, underclothing, etc., industry during the last pay week in September, 1906.

The figures for the United States are taken from the average earnings at the present time of employees in several representative factories in Troy, N. Y.

**TESTIMONY OF GEORGE S. BROWN, SHIRT MANUFACTURER,
NEW YORK CITY.**

Mr. BROWN. Mr. Chairman and gentlemen, Mr. Ells has covered a large part of what we have to offer to you, and I will be brief in what I have to say about these various shirts.

He did omit one important fact, and that is, that there are 48,000 operatives employed in the shirt industry who as a rule are employed at a very remunerative wage; they are seldom out of employment; they are always cared for by their employers. As a rule, they spend nearly all of their lives in the factory, unless for some reason they happen to get married or on account of something of that kind. But they look upon it as their home. In the first concern I was in in Norwalk the employees were always looked after just as if they were one of the family. I just simply mention this to show you the consideration that shirt operatives will receive all over the country from their employers.

In the second place something was said about the production of Japanese shirts. Here are some figures: In June, 1910, there were 1,631; in 1911, 2,117; and in 1912, 7,601. It seems to us that Japan, in the face of the 50 per cent tariff—

Mr. KITCHIN. What are those shirts worth? What is the import price?

Mr. BROWN. Japanese shirts?

Mr. KITCHIN. Yes; negligee shirts.

Mr. BROWN. That they import here?

Mr. KITCHIN. Yes; the import price.

Mr. BROWN. I have several samples.

Mr. KITCHIN. You said there were over 7,000 dozen?

Mr. BROWN. I said 7,601 dozen last year.

PARAGRAPH 324—SHIRTS.

Mr. KITCHIN. How much a dozen; the import price?

Mr. BROWN. Unfortunately all of the importations of cotton fabrics and silk fabrics, cloth particularly, are not segregated in any report.

Mr. KITCHIN. About how much do you think they would be worth a dozen on the average?

Mr. BROWN. I would simply be guessing.

Mr. KITCHIN. Suppose you try a guess.

Mr. BROWN. If you will let me just show you these shirts, I will try a guess. Most Yankees can guess, they say.

Here is a shirt bought from a company in New York, which is delivered here at \$40 a dozen. It is a very high-grade article and exceedingly well made. There isn't a shirt made in this country with such needlework on it as there is on this shirt. I have been in the business all my life and I know whereof I speak.

The nearest shirt we can make to this—it was figured on by one of our very best manufacturers—would cost \$39.30 for just the labor alone, and not including the other charges.

Mr. KITCHIN. Is that a cotton shirt?

Mr. BROWN. It is a silk shirt. Most of these shirts that are imported are silk shirts.

Mr. KITCHIN. That does not come under this schedule at all.

Mr. BROWN. It is pretty hard to differentiate between silk and cotton. They are all shirts.

Mr. KITCHIN. That does not come under this schedule; that comes under the silk schedule.

Mr. BROWN. They are not separate. These all come in under wearing apparel.

Mr. KITCHIN. They do not come in under that section.

Mr. BROWN. We are informed so, sir.

The CHAIRMAN. I am not sure, but I think you are mistaken about that.

Mr. BROWN. Of course, we have to bow to your judgment in the matter.

The CHAIRMAN. Under the decisions of the Treasury Department, they are bound to classify any article coming in by its material of chief value. I had a gentleman come to see me about the question of umbrellas. He said they were putting more cotton in umbrellas than they had silk. The Treasury Department changed the classification on them for that reason. It seems to me that the silk shirts could not possibly come under this section, but would come under a different schedule.

Mr. BROWN. We have gone to considerable trouble and expense in trying to satisfy the committee with such evidence that we could bring, and from our investigation that is all we have been able to find out.

After a conference with my associate I want to say that I am wrong, Mr. Chairman, and I apologize. They do come in separate, but we did not care to ask for two hearings. I can tell you all about this in five minutes' time and be through with it.

May I proceed?

The CHAIRMAN. Yes; you may proceed. I wanted to get it straight. I did not think they could possibly come in under this

PARAGRAPH 324—SHIRTS.

cotton schedule. And under the other schedule, of course, you get a very much higher rate?

Mr. BROWN. Yes; 60 per cent. If they can bring these shirts in here under a 60 per cent tariff and sell them right under our noses for less than we can produce them for, what can they do if the tariff is lowered?

Here is another shirt at \$26.50. The very best figures that we could make that shirt for here would be \$28.75.

Here is an English shirt. This was purchased at retail from Hope Bros. in London for 85 cents.

The CHAIRMAN. Is that silk or cotton?

Mr. BROWN. That is cotton. We could not figure on producing that for less than \$10.15, without figuring in any overhead charges.

Mr. FORDNEY. That retails over there for 85 cents?

Mr. BROWN. Yes, sir.

The CHAIRMAN. When you say you could not produce that for less than \$10.15, you mean per dozen?

Mr. BROWN. Yes; per dozen.

The CHAIRMAN. That particular shirt retails for 85 cents?

Mr. BROWN. Yes, sir; it retails for 85 cents; 3s. and 6d. in London.

The CHAIRMAN. What would be the wholesale price?

Mr. BROWN. We do not know.

The CHAIRMAN. What is the price at which it came through the Treasury Department?

Mr. BROWN. We could not tell you. We bought this shirt at retail.

The CHAIRMAN. If you can not give us those figures accurately they are of no value. I would suggest that you file a supplemental brief and we will be glad to consider that.

Mr. BROWN. Here is a shirt bought in London at retail which retails for \$1.32½. The wholesale price over there is \$11 a dozen. We could not make it over here for less than \$19.55 a dozen, without adding anything for overhead charges.

Mr. KITCHIN. Will you let me see that shirt?

The witness handed the shirt in question to Mr. Kitchin.

Mr. HALL. What would be the retail price of a shirt like that?

Mr. BROWN. That is the finest pique. It costs us here \$1.15 a yard; look at the cuffs, the fine linen in the cuffs.

The CHAIRMAN. Of course the retail price would not be of much benefit to the committee—

Mr. BROWN (interrupting). The wholesale price is \$11. The fact is that it is the difference in wages that we have to contend with. There is no question about that. We have figures here in our brief, which we submit and you can prove that to your own satisfaction.

Here is a shirt which has the price marked on it. You gentlemen can take those up at your leisure. Here is still another Japanese shirt.

With your permission I would like to read a letter in relation—

Mr. LONGWORTH (interposing). Are not those prices given in yens and not in dollars?

Mr. BROWN. No; these are bought in New York City from a Japanese concern that have agents there. This is the price at which they are landed in New York City. I might say also that they are

PARAGRAPH 324—SHIRTS.

sending their representatives out with these shirts. I have personally seen in New York City, in four of the largest stores, shirts from Austria and shirts from Japan, just within the last year or so. They are coming over here. Of course they haven't come to any extent as yet, but if the duty is reduced we will not be able to compete with them unless the labor goes down.

Mr. LONGWORTH. I have bought better shirts than that in Japan myself for \$1 apiece. The highest priced shirts were \$1.25.

Mr. BROWN. That is additional proof that we are not talking without reason.

May I read this letter?

The CHAIRMAN. Yes.

Mr. BROWN (reading):

Here in Paris, wages are running from 75 centimes a day up to 3 francs and 50 centimes a day and only very skillful workers may earn a little more, but it is said to be very scarce that a woman gets more than 4 francs a day of 10 hours' working.

Out in the country conditions are still worse, and I think that the maximum wages paid per day certainly do not exceed 2 francs. I personally know that in southern France, in the environs of Dax, 1 franc and 25 centimes or even 1 franc per day are considered as very good wages.

Of course I do not pretend that those data are absolutely positive, but they may serve as a pretty reliable basis for your purposes.

I thank you.

BRIEF OF C. EDGAR SUTPHEN CO., NEWARK, N. J.

NEWARK, N. J., *January 15, 1913.*

DEAR SIR: As you know, there is now an ad valorem duty of 50 per cent on imported shirts, the condition of which has been since the Dingley tariff bill went into effect. Under the operation of this bill the shirt manufacturers of this country have been able to increase their business and pay better prices to the help, very much to the advantage of the employees. As things are now, judging from what knowledge we can obtain, hardly a fair return is being received on the amount of capital invested. Even with the duty as it stands now we are having quite a strong competition from Austria, Germany, France, Japan, etc., and we are told that the importation of shirts from Japan alone has increased over 600 per cent in about three years. Within a few months the trade was pretty nearly deluged with shipments of shirts from Austria with a label, "Made in Austria for So and So." This foreign label is very catchy and seems to be exceedingly attractive to a large number of buyers.

The tariff as it stands now is not at all unreasonable and any reduction would very materially injure the business in general. We hope that the presentation of these few facts will be sufficient excuse for claiming your interest and help in preventing any change in the tariff as it now stands on these goods.

We are, very truly, yours,

C. EDGAR SUTPHEN Co.

HON. EUGENE KINKEAD,
Washington, D. C.

LADIES' GLOVES.

BRIEF OF NEW YORK IMPORTERS OF COTTON GLOVES.

NEW YORK, *January 31, 1913.*

HON. OSCAR W. UNDERWOOD,
Chairman of the Ways and Means Committee,
Washington, D. C.

SIR: It is understood here that strong efforts are being made by interested parties to put ladies' cotton gloves, now paying 50 per cent ad valorem duty into the same classification with men's and boys' cotton gloves, namely, 40 per cent ad valorem plus 50 cents per dozen, making a total of over 100 per cent ad valorem.

PARAGRAPH 325—VELVETS, CORDUROYS, ETC.

We wish to draw your attention to this fact: It would work considerable hardship on the consumer and would mean, instead of a reduction of the tariff as promised and intended, an enormous increase.

Men's and boys' cotton gloves should occupy the same classification as they did in all tariff laws except the present one, which was under the wearing apparel schedule, and paid duty of 50 per cent ad valorem. They were taken out of this schedule to satisfy one interested party.

Respectfully submitted by the undersigned importers of cotton gloves:

JAMES H. DUNHAM & Co.,
Per WM. A. LITTLE, *President*.
MILLS & GIBBS.

PARAGRAPH 325.

Plushes, velvets, velveteens, corduroys, and all pile fabrics, cut or uncut, whether or not the pile covers the entire surface; any of the foregoing composed of cotton or other vegetable fiber, except flax, not bleached, dyed, colored, stained, painted, or printed, nine cents per square yard and twenty-five per centum ad valorem; if bleached, dyed, colored, stained, painted, or printed, twelve cents per square yard and twenty-five per centum ad valorem: Provided, That corduroys composed of cotton or other vegetable fiber, weighing seven ounces or over per square yard, shall pay a duty of eighteen cents per square yard and twenty-five per centum ad valorem: Provided further, That manufactures or articles in any form including such as are commonly known as bias dress facings or skirt bindings, made or cut from plushes, velvets, velveteens, corduroys, or other pile fabrics composed of cotton or other vegetable fiber, shall be subject to the foregoing rates of duty and in addition thereto ten per centum ad valorem: Provided further, That none of the articles or fabrics provided for in this paragraph shall pay a less rate of duty than forty-seven and one-half per centum ad valorem.

VELVETS, CORDUROYS, ETC.

BRIEF SUBMITTED BY BROOKSIDE MILLS, KNOXVILLE, TENN.

The COMMITTEE ON WAYS AND MEANS,

House of Representatives, Washington, D. C.:

Inclosed please find herewith a brief which we desire to submit for the consideration of your honorable body concerning Schedule I, cotton manufactures, and respectfully request that it be given careful consideration by the members of the committee.

We have the honor to be, gentlemen,

Very respectfully,

BROOKSIDE MILLS,
JAMES MAYNARD, *President*.

BROOKSIDE MILLS, *Knoxville, Tenn.*

To the COMMITTEE ON WAYS AND MEANS,

House of Representatives:

We respectfully refer to Schedule I, paragraph 325, of the tariff act of 1909, covering "Plushes, velvets, velveteens, and all pile fabrics, composed of cotton," and beg to advise that we are manufacturers of corduroys and velveteens.

Corduroys.—We take the liberty of petitioning your honorable body that the duty on corduroys be fixed at 50 per cent ad valorem. This would be quite a marked reduction in the rate now in effect, but we believe would be sufficient to enable us to compete with similar goods of foreign manufacture.

Velveteens.—We also respectfully petition that the duty now in effect on these goods, being the equivalent of 60 to 70 per cent ad valorem, be allowed to remain in force. This we consider absolutely necessary to enable the industry in this country to remain in existence. We base our belief upon the figures of the Tariff Board and refer to sample No. 91, which represents a quality sold largely in the United States, and which is covered by a duty of 61.31 per cent, as stated in Table 137, opposite page 9, No. 445 in the report of the Tariff Board.

The cost in the United States of sample No. 91 is given on page 444, Table 136, as 25.27 cents per linear yard, while the English producers' selling price of similar cloth is given as 19.97 cents.

PARAGRAPH 325—VELVETS, CORDUROYS, ETC.

Since 1911 there has been an increase in cost in all manufacturing, due to various causes, that would doubtless add at least 5 per cent to the cost of this velveteen. Also the item of interest on investment, mentioned on page 8, is omitted in figuring the costs, which would add at least another 5 per cent to the cost, thus making the total cost of sample 91 in the United States 27.80 cents per yard.

On referring to page 567, paragraph 2, of the Tariff Board report, it would show that there was an unusual demand for velveteens during the year 1911. It is therefore safe to assume that under ordinary conditions the English selling price on this style would not be over 18 cents per yard, and it will therefore be seen that if the duty were reduced even to 50 per cent it would make it possible under ordinary conditions to import the English goods into this country at 27 cents per yard. The American mill, with a cost of 27.80 cents per yard, would be forced to give up this industry.

Reasons for high comparative costs.—The reason why pile fabrics cost so much more in this country than in England is due to the fact that they are subjected to a third process which does not enter into the finishing of any other cotton goods that we know of. This is the cutting process which follows the manufacture of the cloth. This cutting process is all labor and is entirely distinct from the dyeing and finishing, which is the final process. The expense of this process is of course greater in velveteens than in corduroys, owing to the finer nature of the goods themselves. All the labor required in all the processes on both corduroys and velveteens must be of a very high order.

The industry in general.—Under the present tariff system, we find that the duties paid on pile fabrics coming into the United States increased from about \$900,000, for the year ending June 30, 1907, to about \$1,800,000 for the year ending June 30, 1911, and we should judge that the pile fabrics imported into the United States in 1911 would be about one-third of the total amount used, which would indicate that under the present tariff the mills of this country are in active competition with foreign goods.

Method of levying duty.—Owing to the nature of the pile fabrics there are great possibilities for undervaluation without detection, and for this reason we should prefer specific duties that would be equivalent to the ad valorem duties recommended above, but we merely suggest this as our preference.

Brookside Mills, Knoxville, Tenn.—We started on the manufacture of corduroys and velveteens in a small way about 10 years ago. We have had many trying experiences, and several times have considered the advisability of giving the business up altogether, owing to the extreme difficulty in manufacturing them. But in the last two or three years our operatives have become accustomed to these goods; they are more skillful in manufacturing them, and we have recently arranged to enlarge the mill with the intention of increasing our production of pile fabrics. It would therefore be a great hardship to us to be forced to discontinue their manufacture altogether.

We submit the above believing that, for the reasons stated, pile fabrics should be given special consideration at the hands of your honorable body, and we would ask that this brief be placed on file as a part of the records of the committee.

Very respectfully,

BROOKSIDE MILLS,
JAMES MAYNARD, *President*.

BRIEF OF THE CROMPTON CO., OF PROVIDENCE, R. I., ON
PLUSHES, VELVETS, VELVETEENS, ETC.

WASHINGTON, D. C., *January 21, 1913.*

To the honorable OSCAR W. UNDERWOOD,
Chairman Committee on Ways and Means.

DEAR SIR: The undersigned cotton manufacturers, dyers, and finishers, respectfully beg leave to submit the following data in support of their contention that no decrease should be made in duties upon cotton velvets and velveteens below those levied under the present law, Schedule I, paragraph 325.

In the report of the Tariff Board transmitted to the Senate and House of Representatives by the President of the United States March 26, 1912, read and referred to the Committee on Ways and Means of the House of Representatives, volume 1, page 124, Table 59, it is stated that in 1911 the average duty on all pile fabrics, plushes, velvets, velveteens, cords, etc., was the equivalent of 55.32 per cent ad valorem.

Since these figures are the basis commonly used by advocates of a uniform duty of 30 per cent ad valorem, the duty recommended in the Underwood bill, it ought

PARAGRAPH 325—VELVETS, CORDUROYS, ETC.

plainly to be understood that the bulk of the velveteens made in the United States is now receiving a protection, not of 55.32 per cent, but of 60 per cent to 70 per cent, and that the particular grade and quality of velveteen investigated by the Tariff Board (sample No. 91 and one of the most extensively sold qualities in the United States) is protected by a duty of 61.31 per cent (see Table 137 opposite p. 445 of the report of the Tariff Board).

A velveteen is a fabric made from yarns difficult to produce, is hard to weave, and subsequently goes through the various processes of cutting, dressing, dyeing, and finishing, all of which require great skill and experience on the part of the workmen employed and the foreman in charge.

An abundance of data might easily be presented to prove that with a tariff of 30 per cent, the velveteen industry in the United States would have to go out of business, but no more convincing proof of this can be adduced than is to be found in the report of the Tariff Board itself to the various pages of which reference will be hereafter made. This report shows that sample No. 91, the velveteen investigated, cost to produce in 1911 (p. 444, Table 136) 25.27 cents per linear yard in the United States, while the English producers' selling price of similar cloth is 19.97 cents. Taking these figures as a basis, and adding a 30 per cent duty to the English selling price (19.97 plus 5.99) makes a price of 25.96 cents to be paid by the American jobber, or but sixty-nine-one hundredths of 1 cent more than the cost to manufacture to the American producer—a margin insufficient to allow him to continue in business.

That the American producer is at an even worse disadvantage than this is obvious for the following reasons, viz:

On page 8, the item of interest on investments, though mentioned, is entirely omitted in figuring costs. This item ought certainly to be taken into account, since in the United States (p. 8) the cost of mill buildings is 40 per cent greater, equipment of a spinning mill 70 per cent, and of a weaving mill 50 per cent greater than in England. If this item of interest be included, it will not be unreasonable to add 5 per cent to the cost to the American producer.

The Tariff Board investigations were made during 1911. On page 567, paragraph 2, it is shown that during the two years ending 1911 there was, owing to the then prevailing fashions, an abnormal demand for velveteens. Although in the United States, to insure the minimum of overhead charges, all the departments of velveteen manufacturing are usually conducted in a single plant, in England each of four operations must pay a profit to four separate organizations often widely distributed and entailing considerable expense for transportation and rehandling of goods. Considering that each of these four processes must make a profit, it is quite proper to assume that the sum of these profits amounts to at least 10 per cent under normal conditions, and amounted to not less than 20 per cent in 1911, since no one is keener or knows better how to take advantage of an abnormal demand than the English producers. On the above hypothesis the velveteen referred to in Table 136 (p. 444) should be bought under the usual conditions of the trade for 10 per cent less than quoted by the board.

Also, since the data of 1911 have been prepared, not only have the wages of northern textile mills been increased enough to add 5 per cent to the cost of velveteens, but the hours of labor in many States have been reduced by legislative action.

Therefore, to show the situation as it actually exists to-day, the figures quoted by the Tariff Board should be amended by increasing by 10 per cent (25.27 plus 2.53=27.80 cents) the cost to produce in the United States of the velveteen investigated, 5 per cent to allow for the item of interest plus 5 per cent for the increase in wages, and by decreasing by 10 per cent (19.97 less 2=17.97 cents) the English producers' selling price. Such a comparison makes it plain that were the duty to be reduced even to 50 per cent ad valorem (17.97 plus 8.99=26.96 cents) the American manufacturer would have more than an active competition from abroad.

Furthermore, the quality of velveteen considered by the Tariff Board is one of the lowest grades made and used in the United States to-day, and while we have just shown that any duty under 50 per cent ad valorem on the low grades will legislate the industry of making them out of existence, the situation on medium and high grade goods, in which the labor cost is far greater, is even more desperate. As evidence of this, on such goods, even with to-day's duties, the American manufacturer has strong competition from abroad, so much so that the very high grades are to-day almost entirely imported.

Respectfully submitted,

CROMPTON CO.,
F. E. RICHMOND, 2d,
Treasurer.

PARAGRAPH 325—VELVETS, CORDUROYS, ETC.

BRIEF ON CORDUROYS, VELVETS, ETC.

NEW YORK, *January 20, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee, House of Representatives.

HONORED SIR: We, manufacturers, dyers, and finishers of cotton corduroys, velvets and velveteens, respectfully petition that no decrease be made in the duties levied under Schedule I, paragraph 325, of the tariff act of 1909: "Plushes, velvets, velveteens, and corduroys and all pile fabrics—composed of cotton."

REASONS

First. That it is a comparatively new industry in this country, the first plant having been started in a small way about 20 years ago, and it is only during the past 10 or 12 years that these goods have been manufactured in this country extensively. At present the total domestic product does not exceed \$7,000,000 per annum.

Second. That it is a most difficult fabric to manufacture, requiring 62 processes from the raw material to the finished article, and our labor costs are 40 to 50 per cent of the gross costs, whereas if the same yarns were woven into a plain cotton sheeting, the labor costs would only be about 18 to 20 per cent of the gross costs. In other words, the total wages in manufacturing a pound of pile fabrics would be \$0.1809. If woven into an ordinary piece of gray sheeting, the wages would only be \$0.0530 per pound.

Third. That the wages paid in this country are more than double those abroad, and in many cases three times as much. The cost of one of the principal operations is 2 cents per yard abroad against 6 to 7 cents paid for similar work in the United States.

Fourth. That these goods have been manufactured abroad for several generations. We not only have to compete with their lower wage scale, but the greatest competition, to our mind, is their more efficient help, due to the fact that the benefits they have derived from the experience of several hundred years have been handed down from father to son. This applies especially to the dyeing and finishing processes, which are quite a feature in all pile fabrics. It also applies, to a considerable extent, to the weaving, spinning, and other processes.

At the beginning it was necessary to import dyers, finishers, cutters, etc., from Germany and England, and it has been a slow process of training help and building up an organization to manufacture pile fabrics in this country.

Fifth. Under the present tariff bill it is a competitive industry, the competition with foreign countries being shown by the increase in the value of imports from \$1,142,304.80 in 1907 to \$1,814,815 in 1911 and \$2,274,449.50 in 1912. Fully 33½ per cent of all cotton pile fabrics used in this country to-day are imported. In addition to this the home competition is very keen, as is shown by the fact that in almost every year some classes of these goods are sold at or below cost, and the earnings to the mills engaged in their manufacture for the past 14 years have been considerably less than a legitimate return on the money invested.

During the past 10 years the wages in the United States have been increased about 20 per cent and the hours of labor have been shortened, in most of the mills engaged in this industry, from 60 to 54 hours per week.

Sincerely, yours,

The New York Mills; New York Mills, Oneida County, N. Y., by W. P. White, treasurer; Brookford Mills (Inc.), Brookford, N. C., by H. J. Holbrook, treasurer; Aragon Mills, Aragon, Ga., E. M. Coughlin, assistant treasurer.

BRIEF OF THE WARWICK MILLS, CENTERVILLE, R. I.

BOSTON, MASS., *January 18, 1913.*

THE COMMITTEE ON WAYS AND MEANS,

House of Representatives:

We respectfully refer to Schedule I, paragraph 325, of the tariff act of 1909, covering plushes, velvets, velveteens, and all pile fabrics composed of cotton, and would ask that this brief be placed on file as a part of the records of your committee. We beg to advise that we have recently purchased equipment at the Warwick Mills, located at Centerville, R. I., and have now started the manufacture of velveteens, and we take the liberty of petitioning that no reduction be made in the tariff now existing on velveteens. It is our belief that if the present tariff is reduced we shall either be

PARAGRAPH 325—VELVETS, CORDUROYS, ETC.

obliged to reduce materially the wage scale now in effect or give up their manufacture altogether. Our belief is founded on the report of the Tariff Board, and we beg to refer to the detail of sample 91, which appears on Table 137, opposite page 445, in the report of the Tariff Board, and which is covered by a duty of 61.3 per cent. The cost in the United States of sample 91, as given on page 444, Table 136, is 25.27 per linear yard. This report was made out in 1911. Since that time there has been an increase in wages of 10 per cent, which, together with interest charges which we notice as mentioned on page 8 were not figured in this cost, would make the cloth in this country cost to-day at least 10 per cent more than it did in 1911, or 27.80 per yard. We also note on page 444, Table 136, that the English producer's selling price of a similar cloth in 1911 is given as 19.97, and on page 567, paragraph 2, of the Tariff Board report, it was shown that there was an unusual demand for velveteens during the year 1911. Under ordinary conditions, therefore, the English selling price would probably be about 10 per cent less than this, or not over 18 cents per yard. It will therefore be seen that under ordinary conditions the present duty, namely, 61.31, is absolutely necessary to allow the mill in the United States, with its much higher cost, to compete with the English style.

The reason why these goods made in the United States cost so much more than similar goods made in England is on account of the cutting process which is necessary for pile fabrics. This process is all labor. It, as well as all the other processes employed in the manufacture of pile fabrics, requires skilled operatives of a high order.

In our opinion the importation of pile fabrics into the United States amounts to from 30 to 35 per cent of the entire quantity sold in this country, and it will therefore be seen that under the present tariff American mills are in active competition with foreign goods, and statistics will show that the amount of foreign goods imported has increased materially during the last few years.

For the reasons given above we believe that pile fabrics should enjoy special consideration by your honorable body.

WARWICK MILLS,
By CHARLES O. RICHARDSON,
Treasurer.

(Mill located Centerville, R. I.)

BRIEF OF F. A. FLATHER, OF THE BOOTT MILLS, BOSTON, MASS.

BOSTON, MASS., *January 24, 1913.*

THE COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

Schedule I, Paragraph 325, of the Tariff Act of 1909, covering "Plushes, velvets, velveteens, and all pile fabrics composed of cotton * * *."

GENTLEMEN: As manufacturers we are interested in velveteens and corduroys.

Corduroys.—We ask your honorable committee to fix a duty on corduroys at not less than 50 per cent ad valorem. Fifty per cent ad valorem would be a substantial reduction in the present rate.

Velveteens.—The present duty on velveteens is the equivalent of 60 to 70 per cent ad valorem. We have been connected with the manufacture of velveteens for about two years, but, as we have not yet succeeded in getting a new dollar for an old one, we would respectfully ask you to allow the present duty of 60 to 70 per cent to remain in force.

We beg to refer to the Tariff Board's sample No. 91. This represents a velveteen which is at present protected by a duty of 61.31 per cent (see Table 137, opposite p. 445 in the Tariff Board's report).

On page 444, Table 136, in the Tariff Board's report, the cost in the United States of sample No. 91 is given as 25.27 cents per lineal yard in comparison with the English selling price of 19.97 cents.

Since the Tariff Board made its report the cost of manufacturing in Massachusetts has been increased by a reduction of two hours in the working week, and a flat increase in wages of 10 per cent. This amounts, we find, to about 1.89 cents per yard. If to this we add interest on the investment, which was omitted in the Tariff Board's report (see p. 8), and which amounts to 0.75 cents per yard, it results in a total cost of 27.91 cents per yard for manufacturing sample No. 91 in Massachusetts to-day.

PARAGRAPH 325—VELVETS, CORDUROYS, ETC.

Paragraph 2, page 567, of the Tariff Board's report, shows that there was a large demand for velveteens during 1911. It seems fair to assume, therefore, that the English selling price might, during a less active demand, be radically less than the 1911 price of 19.97 cents, say, 18 cents or under.

If you should reduce the duty on velveteens, it would be a very serious thing for us.

Skilled labor is the chief requirement in the manufacture of velveteens and corduroys.—We would respectfully ask you to give velveteens and corduroys special attention, because they are pile fabrics and never should be confounded with the enormous variety of cotton goods, such as are simply bleached, dyed, printed, etc. Pile fabrics are relatively more costly in England than are other fabrics; and, again, such fabrics are relatively more costly to produce in this country than in England, for two reasons. They have to be free from defects (that is, practically perfect) in the cloth preparatory to cutting, and the cutting is principally high-class labor. Perfection is hard to attain, and labor is expensive. This is important in corduroys and more important in velveteens.

Relative importance of the industry.—The manufacture of velveteens and corduroys is carried on in the South, New York, and in New England. It is small compared with other cotton manufacturing, but relatively large in the proportion of skilled labor employed.

Pile fabrics.—Pile fabrics as a whole, coming into the United States for the year preceding June 30, 1907, paid duties amounting to \$900,000, and for the year preceding June 30, 1911, paid duties amounting to \$1,800,000. It is said that one-third of the consumption of pile fabrics in the United States was imported, and, as we know, there was plenty of competition. It seems fair to consider the industry more important from a labor standpoint than as a revenue producer, and we beg you to consider the matter from this standpoint.

Specific vs. ad valorem duties.—We feel that in cut or uncut velveteens and corduroys there is opportunity for deception in valuation, and we should prefer specific duties that would be equivalent to the ad valorem duties recommended above.

We have spent a large amount of money for special equipment and to develop the necessary amount of skill among our employees, who had to be educated for this work. It would be a serious financial loss to us and to our employees if we were forced to curtail or discontinue the manufacture of velveteens and corduroys.

We would ask that this brief be placed on file as a part of your committee's records.

Respectfully yours,

J. A. FLATHER, *Treasurer.*

BRIEF ON VELVETEENS, BY HERBERT LYMAN, REPRESENTING MERRIMACK MANUFACTURING CO., LOWELL, MASS.

BOSTON, MASS., *January 27, 1913.*

The WAYS AND MEANS COMMITTEE,

House of Representatives, Washington, D. C.

DEAR SIR: I refer to Schedule I, paragraph 325, of the tariff act of 1909, covering plushes, velvets, velveteens, corduroys, and all pile fabrics composed of cotton.

The Coheco Manufacturing Co. during the year 1909 sought a customer for their velveteen business, with which they had been unsuccessful. We bought this part of their business, to add to our other pile fabrics business, on condition that the agreement would not be binding if the tariff was revised downward in the Payne-Aldrich bill.

In 1892 the Cotton Velvet Manufacturing Co. of America was incorporated under the laws of Massachusetts to manufacture velveteens. Among the incorporators were leading manufacturers both in this country and abroad, but on account of the lowering of the tariff under the Wilson bill this business was not started. The Wilson bill gave 40 per cent ad valorem duty on gray pile fabrics, and 47½ per cent on bleached, dyed, or finished pile fabrics, these rates being 10 and 17½ per cent in excess of what was proposed in the Underwood bill of last year. It was not in accordance with the best judgment of these incorporators—some of whom have been in the manufacturing business for over 40 years—to risk making velveteens in the United States under the Wilson bill.

We respectfully petition that the rate on pile fabrics be substantially the same as in the present law, for which we give four separate reasons:

PARAGRAPH 325—VELVETS, CORDUROYS, ETC.

(a) Goods imported under this paragraph can be classed as a whole as luxuries. Actually over 40 per cent of the goods imported during the year 1911 were better grades than can be made in this country, and in my opinion the finer qualities of velvets and velveteens will continue to be imported even under a considerably higher tariff.

(b) The mills manufacturing these grades of goods in this country to-day are making small profits, in fact, most of them are not paying dividends.

(c) The cost of labor in manufacturing this grade of goods is two to three times that of similar fabrics made abroad, where the manufacture of pile fabrics is a trade in itself, and steady work is found for several generations of families employed in these industries, while in this country textile employment is a stepping-stone to other industries. Our textile mills have commonly been called the "schooling grounds of the country."

(d) The imports of pile fabrics under the present law have increased, and fully 25 per cent of all cotton pile fabrics used in this country were imported during 1911 and 1912, showing a highly competitive condition.

We believe that a specific and ad valorem duty is the only proper scientific way to frame the tariff on pile fabrics:

(1) Because the business in this country has been built up on that method, and a sudden change would be dangerous;

(2) Because it is almost impossible to prevent undervaluations on an ad valorem basis, especially of pile fabrics, which are so easily deceptive;

(3) Because the labor costs of various grades are not proportionate to the value.

We understand that your committee will under no conditions consider a specific duty, and in the spirit of desiring to assist in framing a tariff on an absolutely ad valorem basis—which would be approximately fair and income-producing—we recommend the following rates:

	Per cent.
Corduroys, in the gray, uncut.....	40
Corduroys, cut, dyed, or finished (see Exhibit A, par. No. 1).....	50
Velveteens and other pile fabrics, in the gray, uncut (see Exhibit A, par. No. 2).....	50
Velveteens and other pile fabrics, cut, dyed, or finished (see Exhibit A, par. No. 2).....	60

In presenting these suggestions we have recommended a reduction in corduroys, both in the gray and finished state, as very few of them are at present imported. We have also recommended a reduction in uncut velveteens. We have asked for what might appear a slight advance on the finished velveteens, of which we estimate more than 50 per cent of the consumption of this country is imported. In effect, however, the ad valorem basis would mean a reduction of the duty on lower grade merchandise, which comes in more direct competition with our mill, and increase the duty on higher grade merchandise, which is little made in this country, and on merchandise which is an extreme luxury.

We have made a difference of 10 per cent in the gray over the finished products. This is greater than the difference between gray and finished products of most other classes of cotton goods, due to the fact that there are several extra processes in the handling of pile fabrics, for which it is only fair that we should ask recognition.

The Daily Consular and Trade Reports, No. 22, dated January 27, 1913, states that the five leading velveteen makers in Germany have formed a syndicate, a thing which is contrary to the policies in this country. In conditions of this kind surplus merchandise is often disposed of abroad. We strongly urge, therefore, that in your tariff bill you include: First, an effective dumping clause; second, publicity of invoice such as would prevent undervaluation.

Any further information that I can get for the Ways and Means Committee will be gladly supplied.

Very truly, yours,

MERRIMACK MANUFACTURING CO.,
HERBERT LYMAN, *Treasurer*.

EXHIBIT A.

Corduroys, whether or not the pile covers the entire surface, composed of cotton or other vegetable fiber, except flax, not cut, bleached, dyed, colored, stained, painted, or printed, 40 per centum ad valorem; if cut, bleached, dyed, colored, stained, painted, or printed, 50 per centum ad valorem; provided that manufactures or articles in any form, including such as are commonly known as bias dress facings, or skirt bindings,

PARAGRAPH 326—UPHOLSTERY GOODS.

made or cut from corduroys, composed of cotton or other vegetable fiber, shall be subject to the foregoing rates of duty and in addition thereto 10 per centum ad valorem.

Plushes, velvets, velveteens, and all pile fabrics, except corduroys, whether or not the pile covers the entire surface; any of the foregoing composed of cotton or other vegetable fiber, except flax, not cut, bleached, dyed, colored, stained, painted, or printed, 50 per centum ad valorem; if cut, bleached, dyed, colored, stained, painted, or printed, 60 per centum ad valorem; provided that manufactures or articles in any form, including such as are commonly known as bias dress facings, or skirt bindings, made or cut from plushes, velvets, or velveteens, composed of cotton or other vegetable fiber, shall be subject to the foregoing rates of duty and in addition thereto 10 per centum ad valorem.

PARAGRAPH 326.

Curtains, table covers, and all articles manufactured of cotton chenille, or of which cotton chenille is the component material of chief value, tapestries, and other Jacquard figured upholstery goods, weighing over six ounces per square yard, composed wholly or in chief value of cotton or other vegetable fiber; any of the foregoing, in the piece or otherwise, fifty per centum ad valorem.

UPHOLSTERY GOODS.

TESTIMONY OF THEODORE F. MILLER, REPRESENTING THE STEAD & MILLER CO., THE ORINOKA MILLS, AND ROBERT LEWIS & CO., PHILADELPHIA.

Mr. MILLER. Mr. Chairman and gentlemen, I represent the Jacquard upholstery goods manufacturers of Philadelphia, and on their behalf would like to ask that the duty of 50 per cent imposed on these goods by the tariff act of 1909, paragraph 326, be retained at that rate for the reason that a lower rate of duty would be disastrous to the business. These goods are not actual necessities, but are to a certain extent luxuries and are very costly to produce, owing to the skill required of the workmen and to the great cost of cards and designs, which have to be changed frequently.

This industry in France, Germany, and Belgium is an old one and firmly established and protected by tariffs, and with their low rates of wages can be manufactured much cheaper than we can make them here.

Previous to 1909 our industry was very much depressed and several of the larger firms retired from business. Since the duty of 50 per cent was imposed our business has improved, and while there has been no increase in the number of looms, the employees have had much steadier employment and increased wages.

The duty of 50 per cent is not prohibitive, as the importations under this paragraph in 1909 were \$5,000, which in 1911 had increased to \$363,000, and as an evidence of this we submit a sample imported in 1912, at a landed cost, duty and charges paid, of 67 $\frac{3}{4}$ cents. Our costs are given in detail in our brief, and show a net cost of 73 cents.

Witness here exhibited samples of goods to the committee.

The more labor cost put on the goods the greater the cost and the larger the difference between the importing price and our cost. All of these goods could be made here, if it were not for the difference in labor. We make much commoner goods, and on the commoner goods the duty is sufficient for us to compete, but if we make nothing but the common goods our looms would soon flood the market. If

PARAGRAPH 326—UPHOLSTERY GOODS.

you should reduce the duty, it would allow the common goods to be imported and would completely destroy our industry.

I would like to show you some of the commoner goods that we make, and also the imported goods that come in under the same rate of duty that we can not make because of the high labor cost and the high cost of cards and designs. This [exhibiting article] is part of a couch cover, and it is figured, but in observing it you will find that the labor cost is not so great on it because it has not the number of threads used in the warp or the filling that the finer goods have.

The CHAIRMAN. Is that imported?

Mr. MILLER. No, sir; it is domestic. It is an entirely domestic fabric of a cheaper grade.

These are some goods that are made by the Philadelphia mills [exhibiting articles]; but these come in under a different schedule. This has a percentage of wool in it and comes in under the wool schedule. This [exhibiting article] has a chief value in silk and comes in under the silk schedule.

The CHAIRMAN. Those are imported goods?

Mr. MILLER. No; these are domestic goods. This would come in under Schedule K [exhibiting article].

I would like to show you the possibilities there are in our business and the goods that we could make if the conditions were the same as they are in France, Germany, or Belgium.

This [exhibiting article] is what I consider the highest art in the manufacture of tapestries, and these goods come in under a 50 per cent duty. We can not make them here; we could not make them here if the duty was 200 per cent, because of the great cost of cards and designs. We have the machinery and we probably have the skill to make this kind of goods, but the cost of designing and the cost of preparing the loom to make the goods is too high. The cards and designs would cost at least \$2,500, and to prepare the loom to make these goods would cost as much more.

Mr. HULL. What is the import price on that?

Mr. MILLER. I could not tell you that. It was sold in France for \$6. By paying the 50 per cent duty that would be \$9 to import. This was bought in one of the jobbing houses in New York and cost \$15. Even if we made it, we haven't got a large enough market. The other countries have the market and we would be restricted to our own market.

The CHAIRMAN. What is the percentage of labor cost in that piece of Jacquard goods which you have just shown?

Mr. MILLER. The large sample?

The CHAIRMAN. That piece right there [indicating piece of goods].

Mr. MILLER. If that were made here I would figure the labor cost at 95 per cent.

The CHAIRMAN. Is the labor cost at that percentage abroad?

Mr. MILLER. No; it is not so much as that.

The CHAIRMAN. How much would it be abroad?

Mr. MILLER. I could hardly tell you. I think I figured up the cost on the first sample I submitted, and it weighed 1 pound to the yard.

The CHAIRMAN. You heard Mr. Parker testify and heard him submit a schedule yesterday on jacquards?

PARAGRAPH 326—UPHOLSTERY GOODS.

Mr. MILLER. Yes, sir.

The CHAIRMAN. What do you say about that schedule?

Mr. MILLER. This is an entirely different proposition.

The CHAIRMAN. He did not refer to the jacquards that you are talking about?

Mr. MILLER. No; he referred to jacquards, which are very small machines. This jacquard would require 25,000 cards to make.

The CHAIRMAN. The jacquards he was testifying about do not come in under the same classification as the one you are talking about?

Mr. MILLER. No, sir.

The CHAIRMAN. Which paragraph are you referring to?

Mr. MILLER. Paragraph 326.

The CHAIRMAN. That paragraph relates to curtains, table covers, and all other articles manufactured of cotton chenille, or of which cotton chenille is the component material of chief value, tapestries, and other jacquard figured upholstery goods, weighing over 6 ounces per square yard, composed wholly or in chief value of cotton or other vegetable fiber; any of the foregoing, in the piece or otherwise, 50 per cent ad valorem.

What other articles come in under that paragraph besides these classes of jacquards to which you refer?

Mr. MILLER. Table covers, curtains, couch covers, and all jacquard fabrics used for upholstery purposes.

The CHAIRMAN. What do you estimate to be the amount of American consumption of that particular article?

Mr. MILLER. I estimate that in 1912 the goods manufactured by the American mills coming under this paragraph would be between two and three million dollars.

The CHAIRMAN. I notice that the total importations for 1912 under the paragraph were \$353,000.

Mr. MILLER. Yes, sir.

The CHAIRMAN. There are a number of other items in the paragraph besides that class of work. There must be a block somewhere in that schedule.

Mr. MILLER. I do not think there is. I do not think anything comes in except our class of work, and the better goods that come in that we can not begin to make.

The CHAIRMAN. In the lower grades of this jacquard work under the present rate of duty there are no importations at all, are there? Do not all the importations come in of these higher grades of work?

Mr. MILLER. I think not; no, sir. Here is something that we make quite extensively. This is imported at 5 cents a yard less than we can make it.

I want to say, Mr. Chairman, that one of these pieces was imported by one of the firms in this business and a gentleman in the firm gave me the cost to import, and I was absolutely surprised. I thought that anything with as low a cost of labor as this has in our industry could not possibly be imported from the other side. I had heard from our salesmen that there were quite a number of these lower classes of goods being imported, and they wrote on from Chicago and from San Francisco and from several other points that these imported goods were being sold at much less than we could afford to sell them. In the brief which we have submitted we show the cost

PARAGRAPH 326—UPHOLSTERY GOODS.

of importation and then we show the cost in detail of the manufacturing of these goods in America. We should make all of these lower classes of goods.

The CHAIRMAN. I would like to see you make most of them, Mr. Miller. My desire is to allow some importation all along the line. Of course these goods are a luxury, and we do not object to levying a heavy rate on a luxury; but the luxuries will not produce any tax to the Government unless they come through the customhouse. I think there is a portion of this paragraph in which there is a block. In other words, there is a portion of it on which the rate is prohibitory, and the Government receives no revenue from those goods. If you could make any suggestions in your brief or in a letter, which would make a differential where we could allow some of these lower classes of goods—

Mr. MILLER (interrupting). Mr. Chairman, I do not see how that can be done, because if the duty is less than 50 per cent, it allows all of the goods, down to the very lowest nearly, to come in, and simply blocks our industry.

The CHAIRMAN. Here is a paragraph that contains curtains, table covers, and all other articles manufactured of cotton chenille or of which cotton chenille is the component material of chief value, and other jacquard figured upholstered goods. Of that particular line of goods the American consumption is \$3,000,000. I think the total importations of only \$350,000 on the entire paragraph clearly shows that we are not getting the revenue as to that paragraph that we ought to have. I do not want a duty here that is going to seriously injure the business, but we want to open up this paragraph and find out where the block is, if we can find out, and allow some reasonable importation.

Mr. MILLER. That is one-sixth—

The CHAIRMAN (interposing). Yes; but does that all apply to your schedule?

Mr. MILLER. It does, every bit of it.

The CHAIRMAN. Do you not think that on the other things in this schedule, on curtains, table covers, and so on, that the present duty is prohibitory?

Mr. MILLER. No, sir.

The CHAIRMAN. It must be if all the importations apply to your Jacquard goods only.

Mr. MILLER. We are making an awful lot of low-priced goods and we have been able to do that on account of the 50 per cent duty. If the duty is reduced and you cut us out of the low-priced goods, we are practically done for.

The CHAIRMAN. We do not want to cut you out of the low-priced goods, Mr. Miller. You do not seem to understand. I am satisfied, or at least it looks that way to me, that there must be a good many of the goods covered by this schedule that are not imported at all. What we are endeavoring to do is to get some reasonable importations all along the line. I recognize what you say, that in these high-class goods a 50 per cent rate is probably a very good revenue rate, but there are undoubtedly some goods in this paragraph where we have an absolute block; there must be. What I would like to do

PARAGRAPH 326—UPHOLSTERY GOODS.

is to relieve that block, and I would be glad to have you help me, if you will.

Mr. MILLER. I would if I could, Mr. Chairman.

Mr. KITCHIN. How much of that tapestry and upholstery and that class of goods are imported into this country?

Mr. MILLER. To answer that question I would like to say that there are a great many other goods used for upholstery purposes. For instance, those chairs you are sitting on are covered with leather; they are upholstered in leather.

Mr. KITCHIN. In 1910 the tariff board looked into that question of tapestry and upholstery especially, excluding damask table cloths and other things that the Jacquard machine makes, and they found that only \$235,000 worth came in in 1910 of tapestries and upholstery of that class.

Mr. MILLER. Yes, sir; under that schedule.

Mr. KITCHIN. While the production of that class of goods was \$4,700,000 and some odd thousand dollars.

Mr. MILLER. You must remember this, and that is that there is only one class of goods made by the Philadelphia manufacturer that comes in under this schedule. As I mentioned a moment ago, there are a good many importations that come in under the wool schedule because they have a percentage of wool in them; there is another large class of goods coming into this country under the silk schedule.

Mr. HULL. I noticed in the bill worked out and offered by the Republicans on this schedule, and which they insist conforms to the report of the Tariff Board, they fix a rate on your product of 40 per cent. You do not agree with that conclusion, do you?

Mr. MILLER. I think there are some of the commoner goods that we make that could come in under 40 per cent duty, but it would cut us down and absolutely prevent us from making that class of goods. These classes of goods are coming into fashion again. Upholstery goods are fashionable just the same as ladies' dress goods, only not to the same extent. The fashion for several years has been to use leather or imitations of leather, such as pantasote, velours, and plushes, which come in under a different schedule. Now the fashion has changed back to these goods, and there is no doubt in my mind that if you will give us a 50 per cent duty that you will have almost as much revenue as you would have under a 35 per cent duty, and it would enable us to live. If you cut the rate to 35 per cent, you will simply cause us to close our mills.

The CHAIRMAN. Of course as to the jacquards that come in under the woolen schedule we will take those up at the proper time. We are now considering this particular paragraph in reference to the cotton schedule.

Mr. Kitchin has called my attention to a statement here in the Tariff Board report on Schedule I, page 128, which is as follows:

As tapestries and other jacquard figured upholstered goods are included with the imports of chenille of 1910 and 1911, no comparison can be made between these and earlier years. Imports, however, for 1911 show an increase of more than \$125,000 over that of the previous year, an increase of more than 50 per cent.

Production and imports compared.—The production of tapestries and jacquard figured upholstered goods are much in excess of the imports. The census of 1910 reported the production of these commodities at \$4,723,907. For the corresponding period the imports were only \$235,138, or approximately 5 per cent.

PARAGRAPH 326—UPHOLSTERY GOODS.

You see, if the jacquard goods amounted to \$4,700,000 and the total imports amounted to \$235,000, and the total imports under the schedule for everything were only \$350,000, it is evident that in this paragraph there is a prohibitive rate somewhere, and of course we are going to try to find it out, and will be glad for you to help us do it. It may be, and I think you are right, that in these high-grade goods there is a considerable amount imported.

Mr. MILLER. I will help you if I can. I want to say this, that the Tariff Board did not come near our factory, and our factory is one of the largest. From all that I can learn, the Tariff Board visited two factories, the Orinoka Mill and a concern called the Vigilant Mills. The Vigilant Mills is a concern run by a firm of manufacturers on the other side, who have established a branch in America. In addition to that, the Tariff Board took the total production of the American mills. As a matter of fact, as I stated before, more than one-half of the production of the American mills is of articles that do not come under this paragraph; so that the \$4,000,000 worth of manufactures by American upholstery mills would be cut almost in half.

The CHAIRMAN. But the tariff board was referring to this Schedule I and this paragraph, Mr. Miller.

Mr. MILLER. I understand, but in making up their estimates from the two mills that they visited, they took the total production of those mills.

The CHAIRMAN. Oh, no; these are the census figures. They are quoting from the census figures, Mr. Miller, on this paragraph in Schedule I.

Mr. MILLER. Yes; but the production of American mills under that paragraph was not \$4,000,000, but it was a little over two million, so that makes 10 per cent of the goods coming in instead of 5.

Mr. McCALL. That does not include articles coming in under the woolen schedule.

Mr. MILLER. No; it does not include articles coming in under the woolen schedule and coming in under the silk schedule.

The CHAIRMAN. We are not discussing those schedules.

Mr. MILLER. But I have to, Mr. Chairman, when I talk about the production of the American mills.

The CHAIRMAN. I am trying to call your attention to the fact that the Tariff Board has segregated the jacquards in cotton goods under this paragraph from the balance of the jacquards, and has simply given us the figures relating to this paragraph.

Mr. MILLER. That is imported?

The CHAIRMAN. No; the production.

Mr. MILLER. They could not do that. It would be absolutely impossible for any mill to state it.

The CHAIRMAN. They say they have.

Mr. MILLER. Then they are mistaken. Mr. Chairman, here is a class of goods that is made extensively in all the mills in Philadelphia [exhibiting sample] and which does not come in under paragraph 326.

The CHAIRMAN. Mr. Miller, I think those very high-grade jacquards that you have here this morning are luxuries of the highest class. A 50 per cent rate would not be so very high if it does not stop

PARAGRAPH 326—UPHOLSTERY GOODS.

importation. But so far as my mind is made up now—and I am giving this to you for your guidance, if you want to help us—it looks to me like there are certain articles in this paragraph on which the rate is prohibitive. Now, if we can separate those articles and if you can show us how to separate this paragraph so that we can get those higher grade luxuries separated from the other luxuries in the paragraph, so that there will be a reasonable importation all along the line, we will be very glad to have your help.

Mr. MILLER. I wish I could do it. I wish I knew how I could do it. Nothing would suit me better than to do that.

The CHAIRMAN. There is no classification that would differentiate these different classes of goods.

Mr. MILLER. I think it would be very troublesome to the custom-houses.

The CHAIRMAN. I will be glad if you will think over it and submit any suggestion to us. We will be very glad to have your suggestion.

Mr. MILLER. That is all, and I thank you.

DOMESTIC MANUFACTURERS' BRIEF IN THE MATTER OF THE REVISION OF SECTION 326 OF THE TARIFF ACT OF 1909.

The undersigned, on behalf of American manufacturers of cotton upholstery fabrics, present the following facts in support of their contention that the duty imposed by the above section should not be lowered.

In considering this subject it should be kept clearly in mind that these fabrics are not in any sense necessities, but are produced for a discriminating trade that shows marked preference for exclusive and original designs. The present duty has not excluded the foreign fabrics, for in 1909 the importation of chenille fabrics amounted to \$5,332, while in 1911 the importation of chenille and tapestry amounted to \$363,639. However, in comparing these figures it should be remembered that prior to the tariff act of 1909 "tapestries and other jacquard figured upholstery goods," which have almost entirely replaced chenille, were not included in this paragraph, but were entered as cotton cloth.

The weaving of cotton tapestries is an industry entirely separate and distinct from that of producing ordinary cotton cloths, which are woven and marketed in large quantities, as compared with tapestries, the production of which requires special facilities, involving high labor cost. The many different and elaborate patterns are woven, as a rule, in comparatively small quantities. Competition, domestic and foreign, requires new styles twice each year, which necessitates the making of costly new designs and jacquard cards, resulting in a heavy initial cost of production.

This industry will in time provide work for graduates of American technical schools of design, but to-day most of the tapestry designs are drawn abroad by men who are not only artists but who have a technical knowledge of the construction of upholstery fabrics, and these designs when imported into this country pay a duty of 15 per cent when on plain paper (par. 470, Schedule N), 35 per cent when on ruled paper, and an additional duty of 35 per cent on the jacquard cards (par. 415, Schedule M).

In the continental countries, especially France, Germany, and Belgium, the industry is an old one, firmly established and protected by tariffs, and the manufacturers enjoy many facilities not possessed by the American manufacturers. "Consequently a large part of the trade in tapestries is in foreign cloths," as stated in the Report of the Tariff Board on Cotton Manufactures, volume 2, page 567.

The condition of the upholstery industry previous to the enactment of the present tariff law was shown in a brief submitted to the Committee on Ways and Means on December 1, 1908, a copy of which is hereunto annexed, and while the manufacturers were not granted all that they asked for, the inclusion of jacquard-figured upholstery goods, in paragraph 326 of the present act, is slowly but surely improving the condition of the industry without decreasing the imports.

In 1909 the number of establishments had decreased from 270 in 1899 to 230, and the number of wage earners from 5,098 to 4,067. In 1899 the total value of cotton tapestries (piece goods and curtains), silk tapestries and upholsteries, wool upholstery goods and sundries manufactured in the United States amounted to \$8,428,162,

PARAGRAPH 326—UPHOLSTERY GOODS.

which had fallen off to \$7,093,057 in 1909 (see bulletin, Manufactures, United States Census, 1910), showing conclusively that although the country was prosperous and underlying conditions good, this industry did not share in the normal growth shown by other lines, not for the reason that less upholstery fabrics were used by the increased population of the country, but simply because the domestic manufacturer could not compete with the foreign producer under the duties imposed prior to the act of 1909.

The close of the year 1912 shows more hands employed at better wages and shorter hours than ever before in this industry, and if the present duty is not disturbed the improvement begun will in all likelihood continue.

The duty of 50 per cent ad valorem on cotton tapestries is neither prohibitive nor excessive, and in some cases does not even cover the difference between which goods can be imported to and manufactured in this country. As evidence of this we submit a sample of tapestry, marked "Exhibit A, No. 2982," from Mellerio, Fossé, Vandier & Cie., of Paris, two pieces of which were imported and passed through the New York customhouse in October, 1912, and doubtless a larger quantity could have been bought at a lower price, resulting also in a reduction of the freight, foreign and customhouse charges. However, the actual cost landed in the port of New York was as follows:

	Francs.	
100.90 meters, at 2.45 francs, less 5 per cent and 1 per cent, equals.....	232.50	
Case and packing.....	5.35	
	<hr/>	
Total.....	237.85	
	<hr/>	
237.85 francs, at 19.3 cents, equals.....	\$45.90	
Duty, at 50 per cent ad valorem.....	23.00	
Freight.....	1.69	
Foreign charges, insurance, and customhouse charges.....	3.72	
	<hr/>	
Landed cost, 100.90 meters.....		74.31

100.90 meters equals 100 $\frac{1}{3}$ yards. Landed cost per yard, 67 $\frac{3}{8}$ cents, net.

The cost at the mills of a like design of same quality produced in the United States in October, 1912 (the cost would be greater now as yarns have risen in value since then), would be 73 cents per yard net without the selling expense added. This cost of 73 cents is made up as follows:

Warp 4,608 ends 1/24's:		
27 $\frac{1}{2}$ pounds, at.....	\$0.22	
Dyeing.....	.05	
Warping.....	.03	
	<hr/>	
		.30

	. 41
	\$1. 00
100 yards.....	73. 00
1 yard (net).....	. 73

Cost with selling expenses added 87.6 cents.

These goods are sold to the trade by domestic manufacturers on terms of 6 per cent 10 days, 60 days extra; equivalent to 7 per cent 10 days, or 6 per cent for cash within 70 days from date of shipment, and this discount is included in the selling expenses.

In 32 patterns of domestic tapestry examined by the Tariff Board the average cost per yard of production was found to be \$1.0325, and the average mill selling price \$1.1636. (See Table 141, p. 459, vol. 2, Report of the Tariff Board on Schedule I.) The foregoing figures make it quite clear that a reduction in the duty would be extremely harmful to the domestic industry.

The committee's attention is called to the error made in the American selling price of the Tariff Board's sample No. 93, cotton tapestry, which is improperly given as \$1.50 instead of \$1 in the fourth table printed on page 10833 of the Congressional Record of August 2, 1912; the correct price appears at page 567, volume 2, of the board's report on cotton manufactures.

The meaning of the term "upholstery goods" was legally defined in the case of *Bing v. United States*, Treasury Decisions No. 32365, by the United States Court of Customs Appeals, which approved and applied the Standard Dictionary definition of the term as "(1) Goods or material used in upholstery. (2) Textile decoration of an apartment."

As this decision sets aside all doubt as to what is meant by the term "upholstery goods," below is given a list of many kinds of these goods which are not covered by paragraph 326.

1. FABRICS MADE ON JACQUARD LOOMS.

- (a) Tapestries and other jacquard upholstery goods weighing less than 6 ounces per square yard.
- (b) Tapestries and other jacquard upholstery goods made wholly or in part of wool.
- (c) Tapestries and other jacquard upholstery goods of which silk is the chief value.

2. UPHOLSTERY FABRICS MADE ON LOOMS WITHOUT THE JACQUARD MACHINE.

- (a) Repts.
- (b) Plain weaves.
- (c) Fancy weaves.
- (d) Cloths with small patterns.
- (e) Cretonnes and other printed upholstery goods.

Included in the above list are many fabrics that greatly exceed in value the imported goods that come in under paragraph 326, and this goes to show how mistaken was the Tariff Commission in their report on cotton manufactures, page 128, in comparing the value of the fabrics imported and classed under paragraph 326 with the value of upholstery goods manufactured in the United States, given in the United States Census Report for 1910, which sum total included all the different varieties above specified, together with upholstery sundries, and was not by any means confined to tapestries and other jacquard figured upholstery goods of over 6 ounces to the square yard composed of cotton or other vegetable fiber.

Much upholstery is imported and quite properly classed as countable cotton and as manufactures of flax, silk, and wool. They pay duty as such and are not classed as upholstery, but bunched with other manufactures of cotton, flax, wool, and silk, and can not be separated in the customhouse reports of imports.

We would respectfully ask that upholstery goods be specified as such in each textile schedule.

By the United States Census of 1910, it appears that \$1,689,000 in annual wages are paid to wage earners in this industry. Now, conceding that the foregoing facts and figures are true, why should the livelihood of all these wage earners not to say anything

PARAGRAPH 326—UPHOLSTERY GOODS.

of the capital invested, be needlessly jeopardized by a reduction of the tariff now existing, to a point equal to or below that which it has been already demonstrated is insufficient to allow the American manufacturer to successfully compete with the foreigner, and especially in view of the fact that these fabrics are luxuries upon which the American consumer of the imported article can well afford and should pay a sufficient duty to the Government.

Respectfully submitted.

IN THE MATTER OF THE REVISION OF PARAGRAPH 316 OF THE TARIFF ACT OF 1897.

BRIEF FOR MANUFACTURERS.

The undersigned represent domestic manufacturers of upholstery fabrics of various kinds, including furniture coverings, hangings, curtains, couch covers, table covers, etc.

CONDITION OF THE INDUSTRY.

This is an industry which if allowed a reasonable protection would easily employ over 10,000 hands.

Until 1903 imported cotton upholstery goods paid a duty of 45 per cent ad valorem under paragraph 322 of the present tariff act as manufactures of cotton. The importers contested this classification and claimed that such goods were dutiable according to the number of threads per square inch, weight, and value, as provided in paragraphs 304 to 309, known as the countable cotton clauses. In this claim they prevailed (G. A. 5319—T. D. 24352 and decisions therein cited), since which time these goods have entered the commerce of this country on the same basis as ordinary colored cotton fabrics.

That upholstery fabrics are essentially different from ordinary cotton cloths and were not in the contemplation of Congress in drafting the countable cotton clauses is evidenced by the goods themselves which require the attendance of an operator at every single loom, whereas in weaving the ordinary cotton cloth one operator attends to as many as 24 looms.

The effect of this ruling of the courts is that the highest duty imposed on these goods is 40 per cent ad valorem and the lowest 30 per cent ad valorem. The domestic industry is demoralized, thousands of hands being deprived of employment and considerable capital wasted.

The largest manufacturing concern in this line was Hoyle, Harrison & Kay, of Philadelphia, who operated over 300 looms and employed 1,000 persons. They have been obliged to discontinue their operations.

Within the present year, the Oldham Mills of Philadelphia, operating 150 looms, chiefly on the finer grades of goods, have closed for the same reason. This fine plant, less than 10 years old, is for sale, so far without a purchaser.

The Whitbridge Mills of Philadelphia have stopped making upholstery fabrics.

The Matred Mills of Philadelphia, manufacturers of medium and cheap goods, about a year ago discontinued.

We can enumerate many smaller concerns that have quit the manufacturing business, some having kept on to the point of bankruptcy.

That these conditions are not attributable to business depression is clearly shown by a steady growth in importations of these goods,

PARAGRAPH 326—UPHOLSTERY GOODS.

There are in Philadelphia to-day 3,300 looms for the weaving of upholstery fabrics. Since 1903 not more than 1,100 have been producing their usual capacity.

COST OF LABOR AND MATERIALS.

Reference to the official statistics in point will show that wages in this country in this industry are three times as great as abroad.

The American manufacturer does not spin the yarn he uses, for the reason that he employs too wide a variety of yarns upon which there is a protective duty as high or nearly as high as on the finished product.

The business is one of ever-changing style, and the manufacturers are obliged twice each year to prepare new patterns. Sketches, designs, jacquard cards, and the making of new samples all form heavy items of expense here over what they cost abroad where the industry is an old one and very generally distributed.

These facts are well brought out by an examination with respect to an average specimen of upholstery fabric submitted, marked "Exhibit A." This particular fabric represents a large part of the kind of upholstery goods imported. It is pattern No. 3952, from Defrennes Duplony Freres, of Roubaix, France. Under the decisions of the courts before referred to, is now admitted at 40 per cent ad valorem, under paragraph 307. Statement follows:

100 meters, at 3.10 francs, less 10 and 2 per cent.....	francs..	273.40
		273.40
273.40 francs, market value, equals.....		\$53.61
Duty, at 40 per cent ad valorem.....		21.20
Freight.....		2.43
Foreign charges and insurance.....		1.22
Customhouse charges.....		1.50

Landed cost, 100 meters..... 79.96

One hundred meters equals 109½ yards.

Landed cost per yard, 73½ cents.

The cost at the mills of a like fabric produced here in the United States would be 81½ cents per yard.

FOREIGN PROTECTION.

The American manufacturer of these goods has no export business to sustain it. He finds in every continental country of any importance an impassable tariff wall. Germany may be selected as an example (see Kelly's Customs Tariffs of the World, edition of 1908). In Belgium, where these goods can be manufactured very cheaply, the producers find it impossible to export to France on account of the prohibitive French duties thereon.

Since the continental countries have seen fit to protect this industry in their own territory by the imposition of prohibitive duties, no sound reason can be urged why Congress should not profit by their example and save the business from its present stagnation.

PROPOSED PROVISION.

Paragraph 316 of the Dingley Act reads:

"Curtains, table covers, and all articles manufactured of cotton chenille or of which cotton chenille is the component material of chief value, 50 per cent ad valorem."

This paragraph was enacted originally in 1890, a time when chenille was largely employed in upholstery. Since that period chenille has practically disappeared from the industry. It has been replaced by these cotton tapestries, upon which we ask the same measure of protection. We propose the following to replace the present paragraph:

"Curtains, table covers, couch covers, cushion covers and tops, window, door, and wall hangings or draperies, portières, tapestry panels and borders, lambrequins, fabrics and tapestries for furniture covering, hangings, and decorative purposes, and all textile upholstery fabrics, in the piece or otherwise, manufactured of cotton or other vegetable fiber, or of cotton chenille, or of which cotton or other vegetable fiber or cotton chenille is the component material of chief value, 50 per cent ad valorem."

This provision, if enacted, would do no more than allow a fair basis of competition between the domestic and the foreign manufacturer. It would benefit the consumer by allowing the domestic mills to compete with the imported fabrics. It would

PARAGRAPHS 327-328—HOSIERY.

enlarge the revenues of the Government, since it would not prevent importation and would yield duties upon a luxurious article in some fair ratio to its value. Many of these goods are novelties made possible by improvements in the art of weaving since the present tariff was enacted. It was never contemplated that fabrics of their intricate character, simulating closely as they do the handwork of earlier times, should be grouped with gingham, muslins, shirtings, and the like.

Dated, Washington, D. C., December 1, 1908.

KAMMERLOHR & DUFFY,
of New York.

PARAGRAPH 327.

Stockings, hose and half hose, made on knitting machines or frames, composed of cotton or other vegetable fiber, and not otherwise specially provided for in this section, thirty per centum ad valorem.

PARAGRAPH 328.

Stockings, hose and half hose, selvedged, fashioned, narrowed, or shaped wholly or in part by knitting machines or frames, or knit by hand, including such as are commercially known as seamless stockings, hose and half hose, and clocked stockings, hose and half hose, all of the above composed of cotton or other vegetable fiber, finished or unfinished, valued at not more than one dollar per dozen pairs, seventy cents per dozen pairs; valued at more than one dollar per dozen pairs, and not more than one dollar and fifty cents per dozen pairs, eighty-five cents per dozen pairs; valued at more than one dollar and fifty cents per dozen pairs, and not more than two dollars per dozen pairs, ninety cents per dozen pairs; valued at more than two dollars per dozen pairs, and not more than three dollars per dozen pairs, one dollar and twenty cents per dozen pairs; valued at more than three dollars per dozen pairs, and not more than five dollars per dozen pairs, two dollars per dozen pairs; and in addition thereto, upon all the foregoing, fifteen per centum ad valorem; valued at more than five dollars per dozen pairs, fifty-five per centum ad valorem. Men's and boys' cotton gloves, knitted or woven, valued at not more than six dollars per dozen pairs, fifty cents per dozen pairs and forty per centum ad valorem; valued at more than six dollars per dozen pairs, fifty per centum ad valorem.

HOSIERY.

BRIEF OF GLOBE KNITTING CO., NORRISTOWN, PA.

GLOBE KNITTING MILLS,
Norristown, Pa., January 8, 1913.

Hon. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

DEAR SIR: May we impress upon you the danger of adverse legislation regarding the duties on hosiery, in which, as manufacturers, employing some 600 people, we are vitally interested, and in the manufacture of which the question of labor and labor cost are the most important items?

In this industry there is no trust or combination of interests; in fact, we hardly see, under existing conditions, how there could be. It is one in which the entire country is interested—North, South, East, and West, and possibly in no industry are there so many small concerns. The greatest competition for the American manufacturer is the German-made goods. Under the present tariff hosiery has never been cheaper for the consumer, nor has there been offered such a good stocking at the prevailing popular prices as during the past two years. A lowering of the duties would not result in lower prices to the consumer, but we feel sure that it would result in

PARAGRAPHS 327-328—HOSIERY.

increased business for the German manufacturer and the consequent crippling and utter demoralization for the domestic manufacturer to a great extent.

Might we ask your careful consideration to the facts and figures which will be presented to you and your committee bearing on our industry, and that you will give careful thought to any legislation which will not alone be injurious to the many who have invested their capital in the manufacture of this article, but to the hundreds of thousands of men and women who are dependent upon it for their living? If the German-made goods come in freely, it means that much less work for them.

Summing the whole matter up in actual facts, according to figures furnished me—

The average yearly importation of hosiery into the United States for 12 years, 1898 to 1909, inclusive, was 48,513,196 pairs.

The average yearly importation of hosiery into the United States for the last three years was 37,823,100 pairs.

A reduction of duty means increased importation or a lowering of wages in proportion to the reduction of duty.

The reduction of duty without increased importation means less revenue for the Government.

Greater importation means not only the lowering of the wages of our working people, but the nonemployment of the same, as every pair of stockings imported takes the place of a pair made at home.

Yours, respectfully,

JOS. S. RAMBO, *President.*

PROTEST OF SWEETWATER (TENN.) HOSIERY MILLS.

SWEETWATER, TENN., *January 11, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

DEAR SIR: Knowing that the present Congress intends to revise the tariff downward, we desire to enter our protest against any intended tariff reduction on hosiery.

The hosiery and knitting-mill business is far different from other lines of manufactured products, for the reason that there is absolutely no trust in the hosiery business, nor can there be. There is in all probability five or six hundred different hosiery mills in the United States, and are all competitors with one another, and if they are forced to compete further with cheap foreign labor by a reduction of the tariff quite a number of them will be eliminated, which will create a trust, but the trust will be on the other side of the waters.

We feel satisfied that the Democratic Party does not intend to go to extremes on this measure, yet if the consumer is to receive any benefit at all extreme measures will have to be resorted to. Hosiery prices are not made by the manufacturers, but by the jobbers. In other words, the jobbers fix a price for a certain article to be jobbed so it can be retailed at a stated price.

A reduction of 10 per cent on hosiery will not affect the consumer, nor will a 20 per cent reduction affect the price to the consumer, but it will affect the manufacturer. A reduction of 10 per cent on a hose which retails at \$3 per dozen and which has a tariff duty of \$1 will reduce the cost to the jobber 10 cents per dozen, but that article will not sell for less than 25 cents, so the consumer will receive no benefit thereby, but will entail a loss of 10 cents to home manufacturers or labor will have to suffer to that extent.

If the reduction in the tariff is to benefit the consumer and help reduce the high cost of living, we fear it will not produce satisfactory results, and other measures besides tampering with the tariff will be necessary if this end is ever attained.

Trusting we have made ourselves clear and hoping the committee will be satisfied to let the tariff on hosiery alone, we are,

Yours, truly,

SWEETWATER HOSIERY MILLS,
By JOHN M. JONES, *Secretary and Treasurer.*

PARAGRAPHS 327-328—HOSIERY.

STATEMENT SUBMITTED BY MAY HOSIERY MILLS, NASHVILLE, TENN.

NASHVILLE, TENN., *January 17, 1913.*

Hon. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

DEAR SIR: In considering cotton schedule, we beg to call your attention to these very important facts:

American industry and ingenuity have shown greater progress in this line of work than any other, and the increase in manufacturing has more than doubled in the last 10 years.

In this line of business there are no trusts, for the reason people with a very limited capital are able to buy machines and enter into business as manufacturers of hosiery and underwear.

There is the keenest competition between manufacturers, there are no combinations, no trade agreements, and the success of every mill depends upon the production, as by large production we reduce overhead expense.

The help are well paid, averaging \$1.25 throughout the mill, some earning as high as \$2.50 a day, while European knitters, doing the same work, earn 30 to 40 cents a day.

The net profits of a mill are very small per dozen, our average profit being one-half cent per pair, or one-fourth cent a stocking, totaling 6 cents a dozen, throughout the mill.

The purchasing public are getting more for their money to-day than ever before, as they get a better stocking for 15 cents than they got formerly for 25 cents, and a 25-cent grade is better than they formerly got for 50 cents, so in this case protection has worked to the advantage of the consumer.

There are only two classes who demand lower tariff on hosiery and underwear; one is the importer, who has been compelled to job American-made goods; the other is the foreign manufacturer.

As before stated, labor is well paid; and, should you disturb the conditions that are now existing in this line of manufacturing, it will cause us to reduce our price of labor, and, should we do this, our employees will not be able to live with the high price of necessities. Whatever percentage you reduce on the tariff the foreign manufacturer will add to that price, so as to be just a little lower in price than the American manufacturer.

The writer of this letter and all of the stockholders of this concern are Democrats, and we believe that if the Democratic Party reduce the tariff, they will not reduce the cost of living but will reduce the amount of earnings and cause widespread disaster and suffering not only to the manufacturers but to the wage earners, and before a few years have passed you will have the pleasure of entertaining at Washington another Coxey's army of the unemployed.

Truly, yours,

MAY HOSIERY MILLS,
Per JULIUS MARTIN.

BRIEF OF JOHN S. LAWRENCE, REPRESENTING THE IPSWICH MILLS AND MIDDLESEX CO., RECOMMENDING AN IMPROVED TARIFF ON HOSIERY.

BOSTON, MASS., *January 20, 1913.*

The WAYS AND MEANS COMMITTEE,

House of Representatives, Washington, D. C.

DEAR SIR: A 40-per cent ad valorem duty on hosiery, as in last year's bill, would, in my opinion, protect the labor of the finer grades of seamless hosiery, provided it is confined to seamless hosiery worth more than \$1 per dozen, but if extended to full-fashioned or cheap seamless hosiery, figures show it would also cripple the seamless business.

Three years ago I was in Washington advocating the separation of full-fashioned from seamless stockings, products of two entirely different methods of manufacture, leaving the rate on full-fashioned substantially where it was under the Dingley bill, but lowering the rate on seamless goods.

Every manufacturer and distributor knows there is a big difference between full-fashioned and seamless hosiery. The Tariff Board clearly shows (see Exhibit A) that the average labor cost is 86 cents on full-fashioned and 27 cents on ladies' seamless stockings per dozen, seamless half-hose being about 10 cents more, or 37 cents.

PARAGRAPHS 327-328—HOSIERY.

It is impossible to protect hosiery labor accurately or give a maximum revenue on an ad valorem basis, because it costs substantially the same to knit a pair of stockings, the difference in quality being almost wholly made up of the yarn poured into the machines. The percentage of labor cost to the total cost of seamless hose varies from 50 per cent on cheap good to 10 per cent on semisilks. Nor is it known what duty you will decide upon for yarns and silk, which should be properly compensated for in the hosiery tariff.

In so much as labor is such a varying proportion of the cost of stockings, it is absolutely necessary to also subdivide seamless and full-fashioned goods. At first this may seem complicated, but you must remember that this industry has been built, quite properly I believe, on specific and ad valorem duties. To turn now to a flat ad valorem basis would greatly overprotect some manufacturers and close others, particularly those located in the South and West. Under proper publicity of invoice a subdivision of duties applying to seamless and full-fashioned hosiery would not be unreasonably difficult to enforce and collect.

I therefore recommend to you the following ad valorem rates:

	Per cent.
On stockings not otherwise specially provided for.....	20
On seamless stockings valued at \$1 or less.....	50
More than \$1 and not over \$2.....	40
More than \$2.....	30
On full-fashioned stockings valued at \$1 or less.....	80
More than \$1 and not over \$2.....	70
More than \$2 and not over \$3.....	60
More than \$3.....	50

By this schedule cut-feet goods remain at the Underwood rate of last year, seamless goods are cut about 50 per cent from the present rates, and on such hosiery when labor is highest I have placed the rate at 50 per cent and draded it to 30 per cent, this latter rate being 10 per cent below that suggested by the Underwood bill of last year. While I have left the full-fashioned rate substantially at 10 per cent less than the present Payne rate, starting at 80 per cent on goods in competition with foreign values of less than \$1, on which I understand labor and depreciation are about 80 per cent of the cost, and reducing to 50 per cent on higher-priced hosiery in which labor forms a smaller part of the cost. By this method of classification I believe you can establish on an ad valorem basis of revenue to some extent the advantages of specific rates.

Under both the Dingley and Payne-Aldrich laws there have been no imports of seamless hosiery. The imports consisted almost entirely of full-fashioned goods, as if the laws applied to full-fashioned only and seamless was prohibited.

It appears that prior to 1908 during the Dingley law approximately one-half of the full-fashioned goods consumed in this country were imported, and in the last year under the Payne-Aldrich bill from one-third to one-quarter of the consumption of full-fashioned goods were imported. I believe under my suggested schedule 33 per cent of the consumption in this country would be imported.

Full-fashioned hose are wholly a luxury. They are mostly sold at more than 25 cents per pair and are bought by those who properly can contribute something toward the expense of the Government.

Seamless hosiery was invented and developed entirely by American ingenuity, and mills thus making stockings employ many thousands of operatives. This method of manufacture continues to vastly improve, and we are making very desirable goods; in fact, no one need wear anything better. We have greatly reduced the laboring man's hosiery bill. Possibly you yourself know that for 25 cents you can get a semisilk stocking, and that 12½ cents a pair at retail is all that one need pay for an excellent serviceable article that no one, however wealthy, need be ashamed of. (I have 12½ cent stockings on now and usually wear them.) I inclose samples of these goods. We can only continue this good work and improve the efficiency and pay of our labor by a reasonable tariff.

We want our fellow citizens to feel, and they are growing to feel, that "Made in America" is worth more than "Made in Germany," although up to a few years ago we were constantly asked to stamp on goods "Made in Germany."

Under the schedule which I suggested (see Exhibit B) you would, in my opinion, (1) Protect hosiery labor (there are over 2,000 plants located in almost every State of the Union); (2) lower the tariff, (3) produce a greater revenue from hosiery (paid by those who can best afford it) than any other previous tariff, or any other rates that

PARAGRAPHS 327-328—HOSIERY.

could be suggested, and (4) continue the improvement and development of the cheap stocking value.

Respectfully submitted.

IPSWICH MILLS,
MIDDLESEX CO.,
By JOHN S. LAWRENCE.

EXHIBIT A.—Average labor cost of ladies' full-fashioned and seamless hosiery.

[Compiled from Tables 184 and 189 on pp. 611 and 621 of the Report of the Tariff Board on Schedule I (Doc. 643, H. R.), 62d Cong.]

	Number of samples.	Average yarn cost.	Average labor cost.	Labor cost to yarn.
Full-fashioned.....	50	\$0.551	\$0.861	<i>Per cent.</i> 61
Seamless.....	55	.486	.2669	35

EXHIBIT B.—Suggested wording for hosiery tariff.

Stockings, hose, and half-hose, made on knitting machines or frames, composed of cotton or other vegetable fiber, and not otherwise specially provided for in this section, 20 per centum ad valorem.

Stockings, hose, and half-hose, selvaged, fashioned, narrowed, or shaped wholly or in part by knitting machines or frames, or knit by hand, including such as are commercially known as seamless stockings, hose or half-hose, but excluding such as are commercially known as full-fashioned stockings, hose, or half-hose, and clocked stockings, hose, and half-hose, on all of the above, composed of cotton or other vegetable fiber, finished or unfinished, valued at not more than \$1 per dozen pairs, 50 per centum ad valorem; valued at more than \$1 per dozen pairs, and not more than \$2 per dozen pairs, 40 per centum ad valorem; valued at more than \$2 per dozen pairs, 30 per centum ad valorem.

Stockings, hose, and half-hose, such as are commercially known as full-fashioned stockings, hose, and half-hose, and clocked stockings, hose, and half-hose, on all of the above, composed of cotton or other vegetable fiber, finished or unfinished, valued at not more than \$1 per dozen pairs, 80 per centum ad valorem; valued at more than \$1 per dozen pairs, and not more than \$2 per dozen pairs, 70 per centum ad valorem; valued at more than \$2 per dozen pairs, 50 per centum ad valorem.

BRIEF OF THE RICHMOND HOSIERY MILLS, ROSSVILLE, GA.

ROSSVILLE, GA., February 14, 1913.

Hon. OSCAR W. UNDERWOOD,
Chairman House Ways and Means Committee,
Capitol Building, Washington, D. C.

DEAR MR. UNDERWOOD: As I outlined to you in my personal conversation on Monday my very strong reasons and my very conscientious reasons for not reducing the present schedules on hosiery, I will refrain from going into those reasons that will lengthen this letter.

I merely want to call your attention to the fact that hosiery is already on a competitive basis owing to the fact that the hosiery schedule produced you nearly \$2,200,000 last year. And I request of you to take under earnest consideration the condition of the hosiery business and how it would be affected when making your new schedule, and I trust you will find it consistent with your views not to reduce us over 5 per cent, and furthermore, owing to the great difficulty in arriving at exact valuation of goods in hosiery owing to different methods of finish, dye, packing, and yarn, that the present specific and ad valorem rate be allowed to stand in order to minimize under-valuation.

Furthermore, as you requested my ideas on an additional paragraph covering the cheaper goods, I would suggest having a paragraph read as follows:

"Stockings, hose, and half-hose, selvaged, fashioned, narrowed, or shaped wholly or in part by knitting machines or frames, or knit by hand, including such as is com-

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

mercially known as a seamless stocking, hose, or half-hose, and clocked stockings, both hose and half-hose, all of the above composed of cotton or other vegetable fiber, finished or unfinished, valued at not more than 60 cents per dozen pairs, 50 cents per dozen pairs, etc."

I have taken the liberty to rewrite section 28 of the present tariff act of 1909, as found on page 41 in the copy sent out by the Government Printing Office in 1909, and am attaching it herewith for your earnest consideration.

I have tried truly, conscientiously, and frankly in rewriting this schedule to submit you one that will not wipe out our business, but at the same time put it on an even more competitive basis than at present. The custom revenues on hosiery speak for themselves, as showing how competitive our basis of tariff is now, and I trust you will give earnest consideration to the schedule I am submitting.

If there are any other points that you desire to know or any of your committee desire to know, it will give me pleasure to comply with any request, and come to Washington at any time, as it is my desire to cooperate with your honorable committee in every way possible.

In submitting this schedule, I beg to state I am representing five mills with which I am connected as general manager, namely, the Richmond Hosiery Mills, Rossville, Ga.; Chattanooga Knitting Mills, Chattanooga, Tenn.; the Rockwood Mills, Rockwood, Tenn.; the Magnet Knitting Mills, Clinton, Tenn.; and the Harriman Hosiery Mills, at Harriman, Tenn., all making a line of seamless hosiery including men's, women's, and children's and infant's goods, that sell from 10 cents to 25 cents retail. If you desire samples of these numbers submitted with the cost of same, I shall be very pleased to submit same to you.

Very respectfully submitted.

RICHMOND HOSEIERY MILLS,
Per G. ANDREWS,
Vice President and Treasurer.

The following is my proposed revision of the hosiery schedule as stated in the first portion of this letter:

Paragraph 327: Stockings, hose, and half hose, made on knitting machines or frames, composed of cotton or other vegetable fiber, and not otherwise specially provided for in this section, 30 per cent ad valorem.

Paragraph 328: Stockings, hose, and half hose, selvedged, fashioned, narrowed, or shaped wholly or in part by knitting machines or frames, or knit by hand, including such as are commercially known as seamless stockings, hose, or half hose, all of the above composed of cotton or other vegetable fiber, finished or unfinished, valued at not more than 60 cents per dozen pairs, 50 cents per dozen pairs; valued at more than 60 cents per dozen pairs and not more than \$1 per dozen pairs, 65 cents per dozen pairs; valued at more than \$1 per dozen pairs and not more than \$1.50 per dozen pairs, 80 cents per dozen pairs; valued at more than \$1.50 per dozen pairs and not more than \$2 per dozen pairs, 85 cents per dozen pairs; valued at more than \$2 per dozen pairs and not more than \$3 per dozen pairs, \$1.15 per dozen pairs; valued at more than \$3 per dozen pairs and not more than \$5 per dozen pairs, \$1.90 per dozen pairs. In addition thereto on all the foregoing, 15 per cent ad valorem. Valued at more than \$5 per dozen pairs, 50 per cent ad valorem.

Men's and boys' cotton gloves, knitted or woven, valued at not more than \$6 per dozen pairs, 50 cents per dozen pairs and 40 per cent ad valorem; valued at more than \$6 per dozen pairs, 60 per cent ad valorem.

MEN'S AND BOYS' GLOVES.**TESTIMONY OF JOHN H. FEDDEN, OF NEW YORK CITY.**

The witness was duly sworn by the chairman.

Mr. FEDDEN. Mr. Chairman, Mr. Ormsby has yielded his 10 minutes to me.

The CHAIRMAN. That is, Mr. C. C. Ormsby?

Mr. FEDDEN. Yes, sir.

The CHAIRMAN. Is Mr. Ormsby present?

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

Mr. FEDDEN. No, sir; he has written me a letter to that effect.

The CHAIRMAN. Very well; we will recognize you for 20 minutes. We will strike Mr. Ormsby's name off the list.

Mr. FEDDEN. The subject which I desire to discuss, Mr. Chairman and gentlemen of the committee, is men's and boys' cotton gloves.

Men's and boys' cotton gloves, similar to the samples we show, are made by us, and are assessed under the present law at 50 cents per dozen specific duty and 40 per cent ad valorem duty under paragraph 328.

The importations and revenue for the fiscal years ended June, 1910, 1911, and 1912, are as follows:

1910: 148,965.92 dozens; value, \$122,760; duties, \$123,586.98; equivalent ad valorem, 100.67.

1911: 153,258.58 dozens; value, \$165,840; duties, \$142,965.25; equivalent ad valorem, 86.21.

1912: 86,886.77 dozens; value, \$88,362.78; duties, \$78,788.45; equivalent ad valorem, 89.16.

These are the correct figures of importations, as the Government statistics contained some errors which the Department of Commerce and Labor has acknowledged in a letter to me, of date November 17, 1912, reading as follows:

DEPARTMENT OF COMMERCE AND LABOR,
BUREAU OF FOREIGN AND DOMESTIC COMMERCE,
Washington, November 29, 1912.

Mr. JOHN H. FEDDEN,
4283-4285 Park Avenue, New York, N. Y.

SIR: Replying to your favor of the 13th instant, relative to men's cotton gloves valued over \$6 per dozen pairs, I beg to say that, upon correspondence with the different ports, I find all the gloves returned as above were women's gloves.

The fact that the rate of duty in both cases is the same is the reason for the error in the returns to this bureau.

I desire to express my thanks to you for calling my attention to this matter, since there was no reason before the bureau to question the returns.

Respectfully,

A. H. BALDWIN, *Chief of Bureau.*

With reference to the rate of duty in the former tariffs, men's and boys' cotton gloves were never specifically provided for in any previous tariffs and were assessed as "cotton wearing apparel," paying the following rates:

Under the Dingley bill the rate was 50 per cent.

Under the Wilson bill the rate was 40 per cent.

Under the McKinley bill the rate was 50 per cent.

The Underwood bill, H. R. 12812, gave the rate on men's and boys' cotton gloves at 35 per cent ad valorem.

This is an infant industry. This is a real infant industry. It is a real blue-eyed baby. It is not the kind that usually comes before you leaning on a cane. It is a real infant industry.

Before the enactment of the Payne-Aldrich law, men's and boys' gloves similar to those we make paid 50 per cent duty and were all imported. There was no industry in this country on these men's and boys' gloves.

We realize that the present duty is abnormally high, and did all we could to prevent it from becoming a law. The Government, however, decided against our ideas, and the bill became a law, the

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

immediate reason being that all the gloves for the United States Army were imported from Germany and England. The Government therefore, in our opinion, entered into a quasi contract to protect this infant industry, and we started our factory in July, 1910.

The President-elect, in his speeches before the election, declared all excessive duties were against the interests of the American public, but he realized that many of our industries had been built on this basis and that this fact would have to be taken into consideration in revising the duties.

We are in complete sympathy with all of this, and are willing to meet the spirit of the country and of justice by a reduction of two-sixths of our duties, and are willing to see a further reduction of one-sixth three years after. This would reduce the duty within six years after the industry has started to one-half the duty on which it began.

For the first eight months after we started manufacturing we lost half of the capital invested; due to the fact that this was a new industry which necessitated the training and educating of help who spoiled considerable quantities of our product.

The Underwood bill placed the duty on men's and boys' cotton gloves at 35 per cent. This would be reducing the duty 75 per cent on an industry that could not exist under a 50 per cent tariff and was not in existence three years ago.

With reference to the rate on ladies' cotton gloves, the identical goods—and by "identical goods" I mean the same goods except they are made so they will fit a woman's hand instead of a man's hand—which we make in men's and boys' gloves are all imported in the case of ladies' gloves, as ladies' gloves pay a duty under paragraph 324 at 50 per cent as "cotton wearing apparel."

We fear that the Underwood cotton bill is the one on which this committee will base the coming cotton bill, but we do know that if this 35 per cent rate is applied it will wipe out the industry before it is on its feet. As absolute proof of this, we state we have tried to manufacture ladies' cotton gloves in this country, which are protected by a 50 per cent duty, but we have been unsuccessful and can not at the present time make them as cheaply as they can be imported from Germany. If, on the other hand, the industry is allowed to exist for a number of years, we do know that we will be able to put this industry on its feet in this country so it can exist with a normal tariff.

When we insist on the same exact work that is done in Germany, our help is about equally as productive as the German help. Some of our operators may be a little quicker, but this is counterbalanced by the fact that in Germany they have a longer working day.

I would explain to you that everything is done on the sewing machine after the cutting, and the sewing machine runs about so fast. There is such a thing as speeding up the machine, but we do not allow it because that interferes with the fineness and the exactness of the output.

Then, too, the help of Germany is paid, as nearly as we can find out, one-third per unit of labor of what we pay our operators in this country. I would explain that it may be in the course of several years we can get that unit of labor down a little bit as we get more experienced people. We have to-day about 100 operators, perhaps a few less than 100. I suppose we have had 500 in all in the last

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

two and one-half years. Probably one out of five is adapted for the kind of work we have to give them.

The only way we can overcome this great handicap—but it can be overcome—is by applying ideas to our product that are better than those in vogue in Germany. We refer, of course, to better and more automatic machinery. This machinery, however, does not exist to-day except in the minds of those men who are trying to put this industry on its feet in this country. It is hardly reasonable or fair to expect them to do within three years what Germany has not been able to do in over a century.

I would like to show you just what I mean by that. [Sample cotton gloves were here distributed to the members of the committee by the witness.]

The cloth from which this glove [indicating] is made comes in great rolls. It is made on a circular machine, a great big machine similar to underwear machines, and the machines work automatically. One man can watch a great many machines, and all he does is to watch them. He does not touch them with his hand at all except to start the machine and stop the machine.

On the other hand, when we get this cloth we have to cut it; that is, we cut it according to the shape of the hand. We cut out a piece for the thumb. We cut out these forgets, as we call them, which are inserted between the fingers. Then we have to put these points on the outside of the glove. We have to sew these one at a time. Then we have to insert the thumb, and go around that, sewing up the thumb first. Then we insert these forgets. Then we sew the glove together, and then sew the welt on top. Everyone of these operations is separate. We sew it on the inside, and then we turn it around on the outside. Then we form it and put it on cardboard, and sew each glove together, so it will not lose its shape. We put bands and tape around it and put a label on the box and box them up and ship them out.

All the man does who makes the raw material is to start his yarn in the automatic machine and it is done up automatically.

The Democratic cotton bill proposes 30 per cent protection on cotton cloth, which is our raw material, and proposes 35 per cent on our finished product. I am not absolutely certain of my facts, but I estimate that the labor in our finished product is at least 10 times the labor in our raw material, yet we get only one-sixth more protection than the cotton cloth from which our gloves are made, which is much too small a differential.

Mr. HARRISON. You stated the rates proposed for men's cotton gloves in the Underwood bill at 35 per cent ad valorem, and the rates proposed on raw material actually manufactured was 30 per cent, and you think the differential is too small?

Mr. FEDDEN. Very much too small.

Mr. HARRISON. What proportion of your finished product is the value of the cotton cloth?

Mr. FEDDEN. Mr. Harrison, the cotton cloth is not our only raw material.

Mr. HARRISON. But dealing with that subject by itself, is it one-third?

Mr. FEDDEN. Oh, no; not nearly so much.

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

Mr. HARRISON. How much is it?

Mr. FEDDEN. It is about one-fourth.

Mr. HARRISON. Then the amount of tax in proportion to the amount of tax on your finished product is one-fourth of 30 per cent, or 7½ per cent of the whole laid on your raw material, which makes the differential larger than seemed to you at first?

Mr. FEDDEN. The whole thing is this, that we can buy the raw material in this country, or can produce it in this country, almost as cheaply as in Europe, because labor is the big element of cost of any manufactured product in this country, and there is practically no labor in our raw material, so we can produce that in this country about as cheaply as in Europe, but not quite.

Mr. PALMER. Do the cotton cloth manufacturers agree with you in that statement?

Mr. FEDDEN. I know I have bought some in Germany and I have bought some in this country, and the difference is not to be considered at all.

Mr. HILL. What is this cloth called? What is the commercial name of this material?

Mr. FEDDEN. It would be circular cotton cloth, cotton cloth made on circular machines.

Mr. HILL. It is not knitted cloth?

Mr. FEDDEN. Yes, sir; it is knitted on knitting machines, but on automatic knitting machines.

When I said that we want a chance to put this industry on its feet, I had in mind something like this. I do not exactly like to disclose all the things I am working on to put this industry on its feet, because some of my friends are here present at this time; but one of the things which thus far I have been unsuccessful in has been this:

You will notice on every glove there are three rows of embroidery which we call points. These points do not run parallel. They widen as they go to the fingers. In Germany and in this country everybody making them sews those points on singly. I myself have had one of the best mechanics that I could find in this country working on that problem for nearly a year—I should say about eight months—to get a machine that will allow us to make these points all three at once. If we can succeed in that, and I think we will, that operation will be conducted in this country as cheaply as it is in Europe. But we have to get things like that or they will beat us and keep beating us, and we will never get up to them. I have four or five other things in the same way on which I am working. If we can get those, it will be a great help, of course, but I am sure it will take three or four or five years to do it.

Mr. DIXON. How many factories in the United States manufacture these gloves?

Mr. FEDDEN. There were none three years ago. I think there are about 10 or 12 now. Several of them have started out, and even with this tariff could not exist, but have gone out of business.

Mr. DIXON. What is the total American output?

Mr. FEDDEN. I can only give an estimate. I should say the total American output to-day is in the neighborhood of 200,000 dozen, and we import 100,000 dozen under the present tariff. We have not entirely put them out of business, even with this tariff.

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

We offered to have the Tariff Board go over our books, and received a letter in reply that the item would shortly be taken up, but it was never looked into. They told me they had not had time to take up our industry, as it was a new one and still a small one, and they would so report, but such report does not exist in the recent Tariff Board report on cottons.

We suggest an immediate reduction of two-sixths the present duty, and a further reduction of one-sixth three years later, and suggest the following paragraph in place of the last part of paragraph 328:

Men's and boys' cotton gloves, $33\frac{1}{2}$ cents per dozen and $26\frac{2}{3}$ per cent ad valorem. Three years after the passage of this act the following is to take the place of the foregoing: Men's and boys' cotton gloves, 25 cents per dozen and 20 per cent ad valorem.

That would mean an immediate reduction of two-sixths of the present duties, and a further reduction of one-sixth, or it would reduce the present Payne-Aldrich duties one-half in about five or six years after the industry was begun in this country.

Mr. PALMER. What is the import price per dozen to-day?

Mr. FEDDEN. What do you mean by import price—plus the duty?

Mr. PALMER. No; without the duty.

Mr. FEDDEN. The gloves can be purchased in Germany for 40 cents a dozen and up to about \$1.25 a dozen. There are some exceptions to that. There may be some few produced better, but as a general statement that is the range in which they come through the custom-house.

Mr. PALMER. You are suggesting that within three years the duty on the cheaper classes of gloves shall be about 75 per cent?

Mr. FEDDEN. That would be about right, instead of 160 per cent as it is at present.

I know that does not sound exactly right, but I did not agree with it either.

Mr. KITCHIN. The Payne-Aldrich act, by increasing the tariff on cotton gloves, put about 200 per cent on many classes of gloves, especially the cheaper gloves, and actually increased the tariff on them more than 100 per cent?

Mr. FEDDEN. Yes, sir.

Mr. KITCHIN. Between 200 and 300 per cent?

Mr. FEDDEN. Yes, sir; on some of them.

Mr. KITCHIN. On these cheaper gloves you are speaking of?

Mr. FEDDEN. On these cheaper gloves it did; yes, sir.

Mr. KITCHIN. That was another illustration of a revision downward. What is the import price of this type of glove [indicating]?

Mr. FEDDEN. The import price of the No. 1 glove is about 41 cents a dozen, with all the labor that I have outlined.

Mr. KITCHIN. None of this kind of gloves came in, because the tariff was so high they were excluded?

Mr. FEDDEN. Before the tariff they were not made in this country. They all came in.

Mr. KITCHIN. Since the Payne tariff, all gloves 60 cents and under a dozen, import price, have been excluded, have they not?

Mr. FEDDEN. I should not say all, but I suppose about 90 per cent.

Mr. KITCHIN. The gloves that came in last year averaged \$1.03 a dozen, exclusive of the duty.

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

Mr. FEDDEN. I have looked over those figures, and I can not understand them. I believe there must be a mistake in those figures.

Mr. KITCHIN. They had to value those gloves at the customhouse, because they had a specific and ad valorem duty, and therefore they had to value the gloves to get the ad valorem duty.

Mr. FEDDEN. I think there is some mistake in the statistical department. I am not sure of it, but it seems to me the value of the gloves that were imported was not as high as the Government gives.

Mr. KITCHIN. You make different colored gloves do you not?

Mr. FEDDEN. We make that glove [indicating] in four or five different colors; yes, sir.

Mr. KITCHIN. What would that glove sell for wholesale?

Mr. FEDDEN. We sell them for about \$1 a dozen.

Mr. KITCHIN. And you think they can be sold in Germany for how much?

Mr. FEDDEN. They are sold in Germany for 40 cents a dozen, and did sell in this country, under our previous tariffs, at about 75 cents a dozen to the trade. They will very shortly sell around that figure again. I do not mean exactly 75 cents, but they have been going down.

I would just like to explain to you that we are not in quite as bad a condition as the figures of these gentlemen would seem to indicate. We tried first to import gloves, and could not import them because the prices they gave us plus this duty robbed us of our market, so to speak. We could not sell them to the people. The next thing we did was to try to make them, and I sold that glove there [indicating] at \$1.10 when we began. They cost us \$2 a dozen to make. We were in business four months, and they cost us \$1.50 a dozen to make. We were in business six months, and they cost us about \$1.25. I am giving you general figures; I am not sure within 5 cents. We were in business a year before we broke even on them. We were in business about a year before we could say, "There is a dozen going out on which we made 6 cents."

Mr. KITCHIN. Did you appear before the committee in 1909?

Mr. FEDDEN. I did not, sir.

Mr. KITCHIN. Do you know what manufacturers of these gloves or this class of gloves did appear?

Mr. FEDDEN. That was prior to the Payne-Aldrich bill?

Mr. KITCHIN. At the time the Payne-Aldrich bill was under consideration.

Mr. FEDDEN. There was only one firm that appeared, I think. There was one firm that was instrumental in making this class of gloves, and to-day even with the duty we have, they have almost had to go out of business.

Mr. KITCHIN. That concern suggested this present rate of duty, did they not?

Mr. FEDDEN. I believe they did.

Mr. KITCHIN. And it was so written in the law according to their suggestion?

Mr. FEDDEN. I think they even asked for the same duty to apply on ladies' gloves, but it did not, and consequently we imported the ladies' gloves.

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

Our cost of production has gone down practically since we began the manufacture of these goods. We have to-day got it down almost as fine as it can go until we apply automatic machinery on which I am working, and I think we can do it. I do not think they can do it in Germany. They do it there the same as their grandfathers did, and I think we can catch up with them if we get a chance to exist a few years.

Mr. KITCHIN. How long will it take you, as an infant industry, to get "grown up"? What is your best judgment on that?

Mr. FEDDEN. Our cost is going down a little bit all the time. We can see it reduce a little bit every couple of months. We get onto some new way of doing this, and we can have one operator in some way do what two did a year ago, and it is slowly working down, but it is surely working down. The Underwood bill will not work it down. It will work it out.

Mr. PALMER. You will be satisfied with a 75 per cent duty three years from now?

Mr. FEDDEN. Yes, sir.

Mr. FORDNEY. If that will be adequate protection at that time you will be satisfied with it, and if not, you will not be satisfied with it?

Mr. FEDDEN. I am willing to take the chance, if you gentlemen are.

Mr. FORDNEY. I will take a chance with you.

Mr. HILL. When did you start this industry?

Mr. FEDDEN. In 1910.

Mr. HILL. You started it after the adoption of the Payne bill?

Mr. FEDDEN. Yes, sir.

Mr. HILL. Was not the business in operation in the United States prior to that time?

Mr. FEDDEN. Not prior to the Payne-Aldrich law; no, sir.

Mr. HILL. No cotton gloves were made then?

Mr. FEDDEN. No cotton gloves of the kind that formerly had been imported.

Mr. HILL. At what are these gloves valued which you have shown here, import price?

Mr. FEDDEN. Is it marked No. 1?

Mr. HILL. Yes; No. 1.

Mr. FEDDEN. Between 40 and 43 cents.

Mr. HILL. A pair or a dozen?

Mr. FEDDEN. A dozen. You can buy them retail for 10 to 12½ cents a pair.

Mr. HILL. What do you sell them for?

Mr. FEDDEN. I sell them for \$1 a dozen. I say they retail for 10 cents a pair, or 12½ cents.

Mr. McCALL. What was the retail price before the Payne-Aldrich bill?

Mr. FEDDEN. Ten to twelve and a half cents a pair.

Mr. McCALL. About the same as now?

Mr. FEDDEN. About the same; almost the same.

Mr. McCALL. That is, there is always a difference?

Mr. FEDDEN. You might go in one store and pay 10 cents, and go across the street and pay 12½ cents, and walk up to the corner and pay 15 cents. The prices have gone up some.

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

Mr. McCALL. Are there any other factories in this country besides yours?

Mr. FEDDEN. Yes, sir; about 9 or 10. I think ours is the largest.

Mr. HILL. All started since 1909?

Mr. FEDDEN. Yes, sir.

Mr. McCALL. And you have competition in selling?

Mr. FEDDEN. Yes, sir.

I just want to tell you another thing. The first year, my firm—I am not referring to my firm that manufactures these gloves, but my firm of O'Callahan & Fedden, in New York—sold these goods without one cent of charges for selling expense. Mr. O'Callahan, who is not interested in the manufacturing end, said, "We have got to give them a chance to get on their feet; we will sell the goods for nothing;" and they did. They put their own work in the entire year and did not draw out five cents for drawing account.

Mr. KITCHIN. You think a duty as low as 50 or 60 per cent would destroy your industry?

Mr. FEDDEN. I am absolutely certain it would.

Mr. KITCHIN. Do you remember reading the bill prepared by the gentlemen on our left and unanimously endorsed and recommended by them, introduced as a substitute for the Underwood bill during the last session?

Mr. FEDDEN. I did not read it, Mr. Kitchin.

Mr. KITCHIN. That bill, it is said, was in conformity with the Tariff Board's report, and also on Mr. Taft's recommendation, and that cut it down to 50 per cent; so, even the substitute bill which these gentlemen prepared for the Underwood bill, it would destroy your industry, would it not?

Mr. FEDDEN. Yes, sir; if they put on a 50 or 60 per cent tariff.

Mr. KITCHIN. Their substitute was 50 per cent.

Mr. FEDDEN. The Tariff Board never looked into it. I asked them to do so, and went before the Tariff Board. They said we were too small to bother with.

Mr. KITCHIN. The gentleman over there who prepared the bill evidently looked into it, if the Tariff Board did not.

Mr. FEDDEN. I do not think he did, sir.

Mr. HILL. The gentleman is mistaken; he did look into it, and read the correspondence.

Mr. KITCHIN. My friend Hill here prepared that schedule; in fact, he prepared most of the substitute bill in conformity with the Tariff Board report.

Mr. FEDDEN. With all respect to Mr. Hill, I would like to say if he looked into it and came to the conclusion a 50 per cent duty would protect the industry, Mr. Hill was mistaken in his results.

Mr. HILL. You have stated here since you have been on the stand that there is practically no difference between that product in this country and in Germany.

Mr. FEDDEN. As to the raw product.

Mr. HILL. Then you do not want to deduct from your duty on the finished product the duty which the gentleman from New York referred to as being an offset of the raw product? Have you made that difference in your calculation?

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

Mr. FEDDEN. I do not believe it would affect it in any way at all, sir. I have not calculated that way; no, sir.

Mr. HILL. Suppose you made that raw product, according to your own testimony, at the same rate the German makes it, without any difference in price, it would affect, would it not, the cost of your gloves? The gentleman that prepared the bill, to which the gentleman (Mr. Kitchin) referred, did go carefully into the matter.

Mr. KITCHIN. Let him answer your question and give us some information on this matter.

Mr. FEDDEN. I do not know what the question is.

Mr. KITCHIN. He asked you a question, and without giving you an opportunity to answer it went on with his own statement.

Mr. HILL. You have stated you can produce that material in this country as cheaply as it can be produced in Germany. Would not that affect the price or the cost of your gloves?

Mr. FEDDEN. I am already figuring on what the raw material is to-day produced at, so any coming tariff bill would not affect the cost of my gloves any more than it affects them to-day. I have to figure on what the goods cost me to-day. I do not figure that a coming tariff bill will markedly affect the price. It might affect the raw material 1 or 2 cents, or make some little difference, but I do not think that is material.

Mr. HILL. Does the German use the circular machine at all?

Mr. FEDDEN. Yes, sir; he uses the same machine.

Mr. HILL. Generally?

Mr. FEDDEN. Entirely, on that class.

Mr. HILL. But does he use the circular machine in making cotton cloth for gloves as a general proposition?

Mr. FEDDEN. In making that kind, he must; yes, sir.

Mr. HILL. I want to say to the gentlemen that the gentleman from Connecticut (Mr. Hill) went into the question of gloves as carefully as he could, going over all the material published and unpublished before the Tariff Board, which the Tariff Board submitted to him, and that he made the rate of duty at 50 cents, admitting that it was a very close proposition indeed; and if any change had been made from that by the gentleman from Connecticut, he and the members of the Tariff Board with whom he consulted would have raised the duty rather than lower it. I fully agree with the gentleman [Mr. Fedden] that the rate of duty prescribed in the Democratic bill is absolutely destructive of the industry.

Mr. FEDDEN. May I ask if the Tariff Board gave you information as to the cost of gloves?

Mr. HILL. Oh, certainly they gave me all the information they had.

Mr. FEDDEN. I was told I was the only one that appeared before the Tariff Board on this question of gloves, and I did not give them any such information. I told them to come and look at the books, but they did not do so.

Mr. JAMES. Our friend Hill is apt to destroy your industry.

Mr. FORDNEY. When Mr. Hill wrote this bill, he must have been under the influence of the Democratic majority.

Mr. FEDDEN. I do not mean any disrespect to Mr. Hill.

Mr. HILL. I want to say that in the writing of this bill, by which I still stand, there is in it no expression of my individual views. It

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

was written just as nearly as it could be written in accordance with the reports and papers before the Tariff Board, which I believe to be absolutely reliable.

Mr. FEDDEN. I might make the suggestion, if we are trying to ascertain the real facts, that if the committee will appoint any firm of expert accountants in New York, I will pay for the accountants and pay all their expenses, if the committee will write a bill in accordance with the report of those accountants.

The CHAIRMAN. Permit me to ask one question. What is the amount of the consumption of this class of gloves in the United States?

Mr. FEDDEN. I estimate 300,000 dozen.

The CHAIRMAN. How many of them are produced in this country?

Mr. FEDDEN. I estimate 200,000 dozen.

The CHAIRMAN. This country makes two-thirds, and one-third is imported?

Mr. FEDDEN. Yes, sir.

Mr. FORDNEY. There was none of this class of goods made in this country prior to 1908, was there?

Mr. FEDDEN. No, sir.

Mr. FORDNEY. So the two-thirds production now sprang up under the existing tariff law?

Mr. FEDDEN. Yes, sir.

Mr. FORDNEY. May I ask how many people are employed in the production of this class of gloves in this country now?

Mr. FEDDEN. We employ just about 100.

Mr. FORDNEY. What proportion of the output did you make?

Mr. FEDDEN. I think we make about one-half of it; I think we do.

With reference to the phraseology of the last part of paragraph 328 of the present law, I desire to say this: The words "knitted or woven" should be omitted, as the importers contend that gloves in which the knitting or weaving is done into the cloth and not directly into the gloves are exempt from the classification mentioned in paragraph 328.

We also recommend that the following be inserted in the paragraph:

Any gloves which go into consumption for men or for boys shall be held as men's or boys' gloves under the provisions of this paragraph.

We are willing to work under any hardships where there exists a possibility of success, and the reductions we have outlined to the committee are radical ones, and are such as will hold the industry in check for some little time. They meet liberally the democratic spirit, yet will not wipe this industry out of existence.

I thank you, Mr. Chairman.

TESTIMONY OF A. V. VICTORIUS, OF NEW YORK CITY.

The witness was duly sworn by the chairman.

Mr. VICTORIUS. If the committee please, we are manufacturing cotton gloves—men's and boys', mostly men's.

Men's and boys' cotton gloves, manufactured abroad, can be purchased abroad at prices varying from 42 cents to 47 cents per dozen, and when imported under the present Payne-Aldrich law, are subject

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

to a duty of 50 cents per dozen, and 40 per cent ad valorem, amounting to from 16.8 cents per dozen to 19 cents per dozen, making an aggregate of from 66.8 cents per dozen to 68.8 cents per dozen duty.

It was not until this tariff went into effect that the manufacture of these gloves was started in the United States, and under the present law there are now about nine manufacturers engaged in the manufacture of these gloves, the largest employing about 100 people.

All these industries were started in reliance upon the present tariff.

The manufacturers were required to purchase considerable machinery and to practically start a school to educate the hands in the manufacture of these gloves. The preliminary stages of experiment and education caused a severe loss, extending in our case for a period considerably over a year, the labor cost alone per dozen for this period being considerably in excess of the price obtained for the finished product.

The material used in the manufacture of this glove is about one-sixth of the total cost and the remaining five-sixths is made up of labor employed in their manufacture, so that the cost of the labor and incidental expenses in proportion to the cost of material is in this glove 5 to 1 and in better gloves still more.

As the material used can be manufactured and sold cheaper in Germany than in the United States, the advantage abroad consists of both cheaper material and cheaper labor, but, as above indicated, the labor constitutes so great an item that the chief protection required is against the cheaper labor abroad.

In view of the fact that the labor has gradually become more expert and the experimental stages have been passed, we do not require as much protection as is provided under the present law, although had the protection been smaller it is likely that the industry would never have been started.

We are not opposed to a gradual reduction in the amount of the tariff, but the proposed reduction to a 35 per cent rate is so radical that, if enacted, it will immediately destroy the industry in this country.

Simply adding a duty of 35 per cent to the price of 42 to 47 cents abroad would bring the import price, duty paid, to from 56.7 cents up to 63.5 cents per dozen, and it would be utterly impossible, under the American standard, to compete against such prices.

We respectfully submit that if the 50 cents per dozen specific duty be reduced to 40 cents, and each year thereafter 5 cents per year be taken off until it reaches 25 cents per dozen, and if the 40 per cent ad valorem be reduced to 35 per cent ad valorem, the manufacturers may then be able to adjust matters so that they may continue in business. Any reduction more drastic than this will kill this industry and render the present machinery and plant utterly worthless. The logic of this is apparent when it is considered that the manufacturers have not yet had opportunity to make sufficient profits to cover any part of the cost of the machinery or any part of the expenses incurred in the initial stages above mentioned.

The manufacture of cotton gloves is carried on by independent manufacturers. They maintain sanitary, well lighted, well heated and ventilated plants. They pay standard wages and maintain

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

legal hours of employment. On the other hand, in Germany, these gloves are manufactured to a considerable extent in homes and on farms by women and children under conditions and hours of labor that American workers would not tolerate and at wages that the American worker could not possibly accept. As I understand it, girls and women work in this industry, working from 7 o'clock in the morning until 9 o'clock at night, in their homes and in the farmhouses, turning out the goods for which they get from 50 cents to \$1 a day.

To meet foreign competition attendant upon a heavy or sudden tariff reduction the American manufacturer would be forced either to greatly reduce wages or he would be driven out of business entirely. This would manifestly be unfair to the American worker who tediously learned the trade and to the American manufacturer who has spent several years to establish the business and invested thousands of dollars in machinery and development.

We are just getting under way. We have not had a chance to test out the business, and we simply can not exist if a radical reduction is made. We have not realized a cent for our machinery yet. My plant in particular has not even earned enough within this period, while we are educating the hands, for me to draw more than a very small drawing account. My drawing account was \$35 a week, and we have not begun to earn that yet.

When we started in business, we felt we were amply protected, but we found that it took the girls about four times as long to make these gloves as we figured, and it cost us \$1.60 per dozen for labor alone for gloves which we sold for \$1.10 a dozen.

We have gradually worked this thing down and studied it, and the girls have become very proficient, and we have it down to a basis where the proposition we make here of a reduction, and a gradual reduction for three years, will just about enable us to compete with the German manufacturer, and eventually we may be able to install some improved methods whereby we will be able to compete with them on the basis of a low rate of duty. At the present time we have our plant and our investment in our machinery, but it will all be worthless if the duty is taken off—absolutely worthless.

Mr. DIXON. Did you manufacturers get together and agree upon this, or is this your individual opinion?

Mr. VICTORIUS. This is my individual opinion.

Mr. DIXON. Forty cents?

Mr. VICTORIUS. It is now 50 cents a dozen and 40 per cent, and I suggest 40 cents a dozen and 35 per cent ad valorem and a reduction of 5 cents for each year until it is brought down to 25 cents a dozen plus 35 per cent ad valorem. This proposition as I make it will just put us on a competitive basis with Europe, and we hope, by improving our methods and machinery, to be able to get in a position where we can compete against Germany. We have accomplished a great deal in the past few years and hope to accomplish a great deal more. We can not accomplish it by reducing the price of our labor, because they will not work for less.

We established a school and engaged two instructors and had them there for eight months to instruct the girls to make these gloves. The girls never knew how to run a sewing machine until we educated them to do it. It is their trade now.

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

Here we are, gentlemen, at your mercy in this matter, entirely.

Mr. HULL. From which country in Europe does your competition come?

Mr. VICTORIUS. From Germany.

Mr. HULL. The business you represent manufactures ladies' gloves as well as men's gloves?

Mr. VICTORIUS. Just men's gloves. We can not manufacture ladies' gloves, because the duty on ladies' gloves is 50 per cent ad valorem, and we can not compete against that. It is impossible for us to manufacture now under any such duty. We have not made a dozen pairs of ladies' gloves on the 50 per cent duty basis. They sell them at about 42 cents a dozen at a profit in Europe, because they farm out these goods to women who are satisfied to make 25 cents a day. They gather them together after the women get through with them and take them into the factory and finish them up. They sell their goods over there at from 42 to 45 cents a dozen, and our labor alone is away in excess of that, to say nothing of material and rent and other incidental costs.

Mr. HULL. Back in 1908, when the hearings on the Payne bill were about to commence, it seems that some request was made to these different countries for such figures as they might be willing to furnish as to the cost of production. I notice that the chambers of commerce of two or three German cities furnished some figures on the question of gloves. Have you examined those figures?

Mr. VICTORIUS. I have never imported a dozen pairs of gloves. I started this industry after the tariff went on. I never imported and never was familiar with the industry. I was only encouraged to start in this business after the tariff was put on. It was a class of goods never made here before, and it has developed since. We started out by employing just a half a dozen hands, and now we have 50. There is another plant which employs 100, and I believe another plant employs 50. Among us all we probably have 400 or 500 hands employed. It has greatly developed. We do not know what we will be able to do. We think we can develop this into quite an industry if given an opportunity.

Mr. HULL. I will not carry the matter further with respect to your industry. These figures are quite general. I do not know whether they apply to your branch of the industry. They include ladies' gloves and other kinds of cotton gloves.

Mr. VICTORIUS. I think ladies' gloves might come under it. The cost of labor might be the same.

Mr. HULL. For instance, one chamber of commerce makes this comment on the brief filed by three firms here—the Niagara Silk Mills, the Clark Mills, and the Gloversville Textile Mills—on page 4506 of the hearings, in which they set out comparative figures. This chamber of commerce states that the cost of making cotton gloves is 30 per cent higher on the lower grades than given in this brief to which I have just referred, and they state an additional cost of more than 30 per cent exists on the higher grades. I was wondering which figures were more nearly correct?

Mr. VICTORIUS. They can not apply in our case, because it is an indisputable fact that you can buy goods finished there at anywhere

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

from 42 to 47 cents a dozen. That is the price that I have been impressed with, although I recently heard they have been sold as low as 40 cents a dozen.

Mr. HULL. Another chamber of commerce, at Dresden, Germany, stated the wages paid by German manufacturers to be from 40 to 47 cents—

Mr. VICTORIUS (interposing). That is a different kind of gloves.

Mr. HULL (continuing). While the American manufacturer in the Payne hearings reported them as 24 to 30 cents. The German chamber of commerce states another wage at \$1.10 to \$1.20, while the American manufacturer reported that wage to be 54 to 60 cents.

Mr. VICTORIUS. That is a different kind of gloves. That is a silk glove or possibly a leather glove. Does it say fabric glove? It must be a silk glove.

Mr. HULL. Probably so.

Mr. VICTORIUS. Our price for the finished article is less than \$1 now, or in the neighborhood of \$1 complete.

Mr. DIXON. Do you pay your employees by the day or by the piece?

Mr. VICTORIUS. Piecework. They are gradually earning more money, too, and we pay them while we are instructing them. We furnished the teachers and paid them while we were instructing them.

Mr. DIXON. Do you know how your competitors pay?

Mr. VICTORIUS. They pay piecework.

Mr. DIXON. In this country and abroad?

Mr. VICTORIUS. Abroad, I believe, it is piecework.

Mr. DIXON. Do you know what they pay as compared with what you pay?

Mr. VICTORIUS. I do not know what they pay. I do know it must be a great deal less, because the price of the finished product, with the material and their profit, is a great deal less than our labor alone, so that it is self-evident the labor is hardly one-third of ours.

These gloves are made by women and children in the farmhouses, as I have explained.

Mr. HULL. Where do you get your machinery?

Mr. VICTORIUS. We bought it here, a special machine built for our purpose.

Mr. HULL. What proportion of the cost of plant or factory is the cost of the machinery?

Mr. VICTORIUS. The proportion of the investment that we have in the machinery?

Mr. HULL. Yes; as compared to the amount invested in your entire plant or factory?

Mr. VICTORIUS. About 35 per cent of our investment is in machinery.

Mr. HULL. What is the tariff on the machinery you use?

Mr. VICTORIUS. I do not know. It is American machinery we are using. I am not familiar with that question. I was not in this business until the tariff was put on, and then I started up. I have never imported a dozen pairs of gloves.

Mr. FORDNEY. There is a higher rate of duty on men's gloves than on ladies' gloves, is there not?

Mr. VICTORIUS. There is.

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

Mr. FORDNEY. Has that high rate of duty increased the production of men's gloves in this country?

Mr. VICTORIUS. Yes; that created the industry.

Mr. FORDNEY. Has it changed the price to the consumer materially?

Mr. VICTORIUS. It has not. These goods retailed at 15 cents a pair 25 years ago, and they are retailing at 15 cents a pair to-day. There is no difference in price to the consumer; absolutely none.

Mr. FORDNEY. The production of ladies' gloves has not increased in this country?

Mr. VICTORIUS. I do not know of any being made.

Mr. FORDNEY. Because there is no change in the tariff rates?

Mr. VICTORIUS. That is correct.

Mr. FORDNEY. If the same rate of duty were given the manufacturer of ladies' gloves, do you believe the production would increase proportionately to that of men's gloves?

Mr. VICTORIUS. There is no question about that.

As I say, we are gradually getting our costs down. We are working under a great hardship, but we are gradually getting them down, and we do not need as much protection as is given us now; but we do need good protection for the time being.

Mr. FORDNEY. As you become more skilled in the industry, and as your labor becomes more educated in the industry, which means more skillful, you believe you can get along with less protection than now?

Mr. VICTORIUS. Yes, sir. I mentioned that we are satisfied with less than that now, and we are satisfied with a gradual reduction.

I want to state also that our labor earns pretty good money. Compared to what the girls working on sewing machines in other factories are making, I believe we pay our girls the same, if not more.

Mr. FORDNEY. Is your information to this effect, that the wages paid by you are much higher than the same class of labor gets in Europe?

Mr. VICTORIUS. Oh, very much more. I believe on one article alone one of our girls will earn \$12 a week, and they would not get more than \$3 a week in Germany.

Mr. FORDNEY. In order to maintain that high standard of living here, you need an amount of protection just to offset the difference in cost of labor here and abroad?

Mr. VICTORIUS. We do. We do not need as much protection as we have now, but we need enough protection so as to keep on an equitable competitive basis.

Mr. FORDNEY. The protection you are asking for is to protect your labor?

Mr. VICTORIUS. Exactly. Our labor is almost five-sixths of the gloves.

Mr. FORDNEY. Five-sixths of the cost of the gloves is labor?

Mr. VICTORIUS. Yes.

Mr. KITCHIN. What other manufacturing industry in this glove business was here in 1909?

Mr. VICTORIUS. There was not any at all.

Mr. KITCHIN. I thought the gentleman who spoke this morning, Mr. Fedden, said there was one.

Mr. VICTORIUS. I do not know of any.

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

Mr. FEDDEN. I said, Mr. Chairman, there was not any industry prior to 1909. We and everybody started afterwards.

Mr. HILL. Up to what figure, in value per dozen, do you make gloves?

Mr. VICTORIUS. Our gloves average about \$1 a dozen.

Mr. HILL. You do not make anything \$6 and over?

Mr. VICTORIUS. Oh, no; our goods average \$1 a dozen. Our profit is very small. The price we ask over the cost of our goods is very small indeed. We figure very close on our costs in fixing our price. We have not been able to work the thing out so as to get anything out of the machinery yet. We are just getting started in this country, as I say.

Mr. KITCHIN. What is the necessity for this paragraph with reference to gloves of \$6 and over?

Mr. VICTORIUS. I do not know. I am not familiar with that at all.

Mr. HULL. What is the difference, or is there any material difference, between the present import price of these gloves and the manufacturers' price here?

Mr. VICTORIUS. They are importing very few of these gloves now. The duty is now so high, and we have been able to reduce our price through improved methods, and we have also been compelled to reduce our price on account of competition, that they import very few of these gloves now.

Mr. HULL. Do you know the present import price?

Mr. VICTORIUS. I know that they cost, as I say, 42 to 47 cents a dozen in Germany. They will average 45 cents a dozen. The duty is 50 cents a dozen and 40 per cent.

Mr. HULL. My inquiry is whether you know what the import price of these gloves is when imported?

Mr. VICTORIUS. I know what they would be. There are very few imported. I am informed it is \$1.15, with the duty.

Mr. HULL. I wanted to see what the figures are without the duty.

Mr. VICTORIUS. They cost 45 cents a dozen in Germany, on an average.

Mr. HULL. They are imported at 45 cents a dozen, when imported at all?

Mr. VICTORIUS. Yes, but there are very few imported; hardly any at all.

Mr. CHAIRMAN. Your time has expired, Mr. Victorius.

BRIEF SUBMITTED BY W. B. CHANT & SON, PORT JERVIS, N. Y.

WASHINGTON, *January 22, 1913.*

HON. OSCAR W. UNDERWOOD,
*Chairman Committee on Ways and Means,
House of Representatives, Washington, D. C.*

DEAR MR. CHAIRMAN: I beg to submit the statement herewith from W. V. Chant & Son, of Port Jervis, N. Y., in my district, manufacturers of men's cotton gloves, and to request that their letter to you be included in full in the printed hearings under Schedule I, and that careful consideration be given the same when the cotton schedule is under consideration for revision.

With best wishes, very truly, yours,

THOS. W. BRADLEY,
Twentieth New York.

PARAGRAPH 328—MEN'S AND BOYS' GLOVES.

W. B. CHANT & SON,
Port Jervis, N. Y., January 10, 1913.

HON. O. W. UNDERWOOD,

Chairman Committee on Ways and Means, Washington, D. C.

DEAR SIR: The undersigned are manufacturers of men's cotton gloves such as are commonly used by undertakers, hotel waiters, military, and other marching organizations, lodges, etc. These gloves are made in white, black, and gray. We are also making gloves of a better quality which are sold under contract to the United States Government for use in the Army. As the cloth used in making gloves on the Army contract is not bought by the undersigned, we are unable to give you the exact cost on this glove. The greater part of our production, however, is on the cheaper gloves which are sold in the market for the uses given above.

These gloves are sold at varying prices, according to the color and make, for 75 to 83 cents, the cheaper gloves being white. They pass through the hands of a jobber and are generally sold by the retailer at 10 cents per pair.

We are informed that such gloves as these can be bought in Germany for export at a price of 1.60 marks, less 5 per cent discount. We give below a table showing the actual cost of these gloves made, here and the approximate cost of the same class of gloves made in Germany.

	Our cost.	Approximate foreign cost.
Cloth.....	\$0.19	\$0.16
Sewing cotton.....	.03	.02
Boxes, bands, etc.....	.04	.02
Labor.....	.40	.10
	.66	.30
Add 10 per cent overhead.....	.066	.03
	.726	.33
Prices obtained.....	.78	1.361
Profit.....	.054	.031

¹ 1.60 marks=38 cents, less 5 per cent=36.1 cents.

These gloves are dutiable under paragraph 328 of the tariff act of 1909, at 50 cents per dozen pairs and 40 per cent ad valorem. Prior to the passage of this act the duty on these gloves was 50 per cent ad valorem.

At that time no cotton gloves were manufactured in this country, but since then several small factories have been established and competition between them has reduced prices to a point where the profits are very small. While at the present time few of the better goods are made here, the factories engaged in making the cheaper goods will undoubtedly gradually take up the better gloves and additional employment for labor will be found in them.

We would strongly urge your attention to the fact that the retail price to the consumer before this present tariff law went into effect was the same as it is now, and to the further fact that except for the very lowest grade of men's gloves, nearly all cotton gloves are still being imported and are productive of a large revenue. We respectfully submit that if any reduction on the duty of these gloves is made it would be impossible for us to compete with the foreign goods and that such a reduction would not bring about any reduction in price to the consumer. We would especially call your attention to the difference in the labor cost in Germany and here. It is a well established fact that the labor cost on such manufactures in Germany is never more than one-fourth of our cost and is often as little as one-sixth of our cost. The cotton yarn of which the cloth used in these gloves is made is higher than the cloth used in Germany because of the duty on cotton yarn and the increased cost of labor.

We therefore respectfully urge that the present duty on these cotton gloves be retained, knowing that if this is not done, it will be absolutely impossible for us to continue making these gloves. This duty is not causing any hardship to the consumer because, as stated above, the price is the same now to the consumer as it was under the old rate of duty.

Respectfully submitted.

WILLIAM B. CHANT.
WM. H. CHANT.

PARAGRAPH 329—UNDERWEAR.

PARAGRAPH 329.

Shirts and drawers, pants, vests, union suits, combination suits, tights, sweaters, corset covers and all underwear of every description made wholly or in part on knitting machines or frames, or knit by hand, finished or unfinished, not including stockings, hose and half-hose, composed of cotton or other vegetable fiber, valued at not more than one dollar and fifty cents per dozen, sixty cents per dozen and fifteen per centum ad valorem; valued at more than one dollar and fifty cents per dozen and not more than three dollars per dozen, one dollar and ten cents per dozen, and in addition thereto fifteen per centum ad valorem; valued at more than three dollars per dozen and not more than five dollars per dozen, one dollar and fifty cents per dozen, and in addition thereto twenty-five per centum ad valorem; valued at more than five dollars per dozen and not more than seven dollars per dozen, one dollar and seventy-five cents per dozen, and in addition thereto thirty-five per centum ad valorem; valued at more than seven dollars per dozen and not more than fifteen dollars per dozen, two dollars and twenty-five cents per dozen, and in addition thereto thirty-five per centum ad valorem; valued above fifteen dollars per dozen, fifty per centum ad valorem.

UNDERWEAR.

BRIEF OF THE NATIONAL ASSOCIATION OF HOSIERY AND UNDERWEAR MANUFACTURERS.

JANUARY, 1913.

Hon. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

SIR: The cotton underwear manufacturers tariff committee of the National Association of Hosiery and Underwear Manufacturers, representing manufacturers engaged in the knitting industry in nearly every State in the Union, submit for the consideration of your committee some statements, which we trust will receive full and careful consideration.

The present tariff rates are exactly the same under the Payne law as they were under the Dingley law, there having been no change or increase of rates whatsoever, and we ask that the present rates shall remain unchanged.

Our business is one that can be engaged in by small manufacturers with limited means in almost any community.

There are about 800 concerns engaged in the manufacture of knitted cotton underwear scattered all over the United States doing a total business of over \$60,000,000. The amount of wages paid out by these 800 concerns represents fully 50 to 75 per cent of the total, or about \$35,000,000.

There has never been a trust or combination formed by manufacturers in our branch of the knitting industry for the purpose of controlling either selling price or output, and we do not believe that a trust, combination, or monopoly would be possible, owing to the small amount of money it takes to engage in the knitting business.

Furthermore, there is no American industry in which competition is so keen and returns from investment or enterprise so unsatisfactory; as a proof of this statement we can point to at least 125 failures in the knit-underwear business within recent years.

We enjoy no advantages on account of being nearer the source of our raw materials than foreign manufacturers, as cotton can be delivered as cheaply in Hamburg, Havre, or Barcelona as it can be delivered in the leading manufacturing cities of this country.

We enjoy no advantage owing to the use of special and more rapid machinery, inasmuch as the foreigners have adopted and are building the same class of knitting and sewing machinery that we use.

The present rate of duty is absolutely essential to the continued existence of manufacturers in our line. Any lowering of the rate would result eventually in the closing down of the mills of this country and throwing out of employment thousands of wage earners who receive compensation three to four times as great as the same class of employees receive in foreign countries and where the help are better trained and more settled.

Skilled sewing-machine operators in this country earn from \$1.50 to \$2.50 per day. Other classes of labor, such as winders, knitters, and general help, earn fully three to four times as much as similar classes of help in France, Germany, or Spain, and

PARAGRAPH 329--UNDERWEAR.

we know from the prices paid for knitted underwear sold in the West Indies and the Latin-American countries to the exclusion of American goods that if the tariff were lowered it would be possible to bring into the United States an unlimited quantity of goods which would undersell the cheapest of the American products.

The rates of duty should not be based alone upon the difference in labor costs of manufacturing and greater expense of doing business in this country as compared with foreign countries, but should also take into consideration the higher rates of interest, the greater cost of installation.

The cost of building and equipping a cotton underwear mill in the United States is fully 70 per cent greater than in Europe, therefore a mill constructed and equipped abroad with a capital of \$100,000 could not be duplicated in the United States for less than \$170,000. This would result in a corresponding reduction of general expense in favor of the foreign manufacturer.

The foundation of all these higher costs for construction, equipment, and maintenance lies in the higher wages paid to American artisans and laborers in the building, mechanical, and other trades and industries drawn upon by American manufacturers and are most important factors in the cost of production.

If the tariff should be reduced the jobber and retailer would give preference to foreign goods, but the consumer buying the foreign article would still pay the fixed retail selling price; thus there would be no advantage whatever to the consumer but a greater profit to the retailer.

At this point we wish to emphasize the fact that in spite of the increased cost of living the quality of our class of manufacture has steadily improved, but the fixed selling prices to the consumer for the past 20 years have remained the same.

The concerns engaged in this line of business use great quantities of cotton yarns, spun largely in the Southern and Eastern States; pearl buttons, cotton fabrics, bindings, cardboard, and many small wares from other sections of the United States, and these industries would likewise be adversely affected by the lowering of the present rate.

Furthermore, the American manufacturer would be compelled to curtail output as importations increase, and in a short while all these industries would be removed from this country to foreign countries.

Of course, we always have the alternative of reducing wages to offset the cheap labor, greater number of working hours, and lower standard of living which obtain in foreign countries, applying to our own as well as the collateral branches named; but we can not believe that it is the intention or desire of your committee to inflict such conditions upon our work people, and, as American citizens, we hope that such will not be done.

We urge upon you that a specific duty is absolutely necessary in fairness to our industry, in which there are so many grades and classifications of goods, and also for the reason that an exclusive ad valorem duty makes it possible for the foreign manufacturer to use our market as a dumping ground, disturbing conditions in this country, which a specific duty will prevent, and at the same time eliminate the opportunity for undervaluation.

In conclusion, we invite the closest investigation of our statements, and we stand ready to prove the facts which we have set forth.

Respectfully submitted.

PARAGRAPH 329—UNDERWEAR.

BRIEF OF THE AMERICAN HOSIERY CO., OF NEW BRITAIN,
CONN., REGARDING UNDERWEAR.

JANUARY 11, 1913.

HON. OSCAR W. UNDERWOOD,

Chairman Committee on Ways and Means, Washington, D. C.

GENTLEMEN: As the time allotted to the public hearings upon the textile schedules is so short in comparison with the many and varied interests involved, and as we are not to be directly represented at the hearings, we desire to file a brief statement for the consideration of your committee.

The American Hosiery Co. since 1868 has been engaged in the manufacture of a great variety of knit goods, comprising shirts and drawers, union suits, athletic shirts, knee drawers, pajamas, bathing suits, abdominal bands, knitted jackets, coat sweaters, ribbed vests, ribbed tights, corset covers, stockings, half hose, and socks, for men, women, children, and infants.

We make exclusively high-grade goods in a very extensive variety of weights, gauges, and sizes, using yarns of combed sea-island, Egyptian, Peruvian, and the best grades of American cotton, in lisle thread and mercerized; also cashmere, merino, worsted, reeled silk, spun silk, linen, and mixtures or combinations of silk and cotton, silk and wool, silk and merino, etc.

A large proportion of our underwear is "full-fashioned," in which the shape is imparted to the garment by the transference of stitches as the knitting proceeds, thus widening or narrowing the article to the desired form.

The machinery for the manufacture of these goods is very costly, and it requires a large expenditure of money to establish a plant, our own concern paying local taxes on \$1,000,000.

This expensive machinery also requires skilled workmen, and the "fashioning" process, whereby the perfection of form is obtained in the high-grade underwear which we manufacture, is a much slower method, and involves much more labor than the plan employed in the manufacture of the lower grades, when the garments are simply cut from circular cloth to the desired shape.

After the knitting is completed the subsequent processes of seaming (in which each loop or selvage stitch is taken separately), stitching, applying facings, waistbands, and other trimmings, with the careful workmanship required in goods of this character and quality, involves a great amount of detail and work which makes the item of "labor" a very large factor in the cost of the finished goods.

While the customs reports may show that the importation of the higher grades of knit underwear is not very large, it is because the demand is mainly from wealthy or well-to-do people, and may be classed among the "luxuries."

It is a fact, however, that the competition with the foreign manufacturer is extremely close, as they have the advantage of much lower priced labor.

Reliable official and unofficial reports, together with information from many sources, establish the fact that European wages in this industry are not more than 33 per cent of what is paid for the same work in this country.

We do not advocate excessive duties on any class of manufactured goods, but we earnestly contend that the American manufacturers should have sufficient protection to enable them to successfully meet the competition of European countries where much lower wages and inferior standards of living prevail.

We simply urge that the tariff on knit goods under schedules I and K should be sufficient to cover the increased cost of labor over that of competing countries which we now pay and which we ought to be able to continue to pay, so as to enable the knit-goods worker of the United States to maintain the American standard of living.

The margin of profit in this business is now very small, and we are confident in the opinion that a material reduction of the present tariff (as in the bill passed at the previous session of Congress) would be destructive of much of the knitting industry of this country, and would inevitably bring hardship and distress to many working people.

Respectfully submitted.

AMERICAN HOSIERY CO.

PARAGRAPH 329—UNDERWEAR.

MEN'S KNIT UNDERWEAR.

ELMIRA KNITTING MILLS,
 Elmira, N. Y., January 21, 1913.

COMMITTEE OF WAYS AND MEANS,
 House of Representatives, Washington, D. C.

GENTLEMEN: This letter is to give you our views in reference to reduction of tariff on knit goods, which matter is now before you.

We are manufacturers of men's knit underwear in Elmira, N. Y., since 1893. Since that time we have seen the prices of our goods, both winter and summer, fall, season by season, while our expenses constantly increase. Cotton was then 8½ cents; for years it has averaged 4 cents higher. Coal, once \$2 per ton, was \$2.60 last spring. Our labor has increased in value, the only exception in our expenses is the price of buttons, which has not advanced.

The cause of the falling price is American competition, which has steadily brought in heavier goods and better finish and packing, along with the lower prices. We have met this decline in value by increased production, and by building a mill in which we make all of our yarns, beginning with the raw cotton from the field.

Our profits, including both mills, do not average 1½ cents per garment, or 18 cents for a dozen shirts and drawers, equal to 6 per cent value of goods as sold. In our Government report for 1911, the last one complete, the profit was less than one-half this amount. This is not because of the small production, for our mill each year makes enough goods to furnish two suits of underwear to every man, woman, and child in the city of Buffalo.

We do not know the cost of producing such goods in foreign countries, but we do know that if any change is made in the tariff which will add that competition to the strong competition now existing here, our only recourse is to reduce the wages, and that would mean the closing of the mill until the lower wages would be acceptable.

Yours, respectfully,

CASPER G. DECKER.

KNIT VESTS AND SCHOOL BAGS.

HOUSE OF REPRESENTATIVES,
 Washington, D. C., January 17, 1913.

The COMMITTEE ON WAYS AND MEANS,
 House of Representatives, Washington, D. C.

GENTLEMEN: In the name of the Camden Knit Goods Co. (Inc.), of my city of Camden, N. J., I desire to submit the following facts and figures upon which this firm base an earnest request that the present tariff rates be not lowered:

"The records of the appraisers of the customhouse of New York show that the cheapest imported Swiss ribbed vests sell abroad at a wholesale price of 7.50 francs, or \$1.44, per dozen garments, to which a specific duty of 60 cents and an ad valorem duty of 15 per cent must be added, plus the landing charges, making a total cost of \$2.31 per dozen in the United States; this would be the price per dozen at which this garment would reach the importer.

"On goods of less value and which is the largest of our production there are no importations, since the margin of profit per dozen is small.

"Now, if only 6 per cent were taken off the duty, we could not compete with the foreign manufacturers on our goods which we sell up to \$1.50 per dozen, and, furthermore, could not operate our mill without attempting to cut the price of manufacturing from the help. This could not be done. We would be compelled to close up. Therefore we most earnestly request that the present tariff rates on these goods be maintained."

Regarding the tariff on school bags made from waterproof canvas, leather, and other cotton goods, etc., with straps attached, this firm state:

"We firmly believe the rates should be increased on this class of goods because of the enormous quantities of school bags coming here from foreign manufacturers, imported bags being sold at 25 cents to the consumer, a price which we could not attempt to make. Therefore we beg you to even ask to have the present duty on these goods increased."

Yours, very truly,

WM. J. BROWNING,
 Member Congress, First District of New Jersey.

PARAGRAPH 330—TIRE FABRICS.

PARAGRAPH 330.

Bone casings, garters, tire fabric or fabric suitable for use in pneumatic tires, suspenders and braces, and tubing, any of the foregoing made of cotton or other vegetable fiber, and india rubber, or of which cotton or other vegetable fiber is the component material of chief value, and not embroidered by hand or machinery, forty-five per centum ad valorem; spindle banding, woven, braided or twisted lamp, stove, or candle wicking made of cotton or other vegetable fiber, ten cents per pound and fifteen per centum ad valorem; loom harness, healds or collets made of cotton or other vegetable fiber, or of which cotton or other vegetable fiber is the component material of chief value, fifty cents per pound and twenty-five per centum ad valorem; boot, shoe, and corset lacings made of cotton or other vegetable fiber, twenty-five cents per pound and fifteen per centum ad valorem; labels, for garments or other articles, composed of cotton or other vegetable fiber, fifty cents per pound and thirty per centum ad valorem; belting for machinery made of cotton or other vegetable fiber and india rubber, or of which cotton or other vegetable fiber is the component material of chief value, thirty per centum ad valorem.

TIRE FABRICS.

TESTIMONY OF H. J. LYALL, OF THE BRIGHTON MILLS,
PASSAIC, N. J.

The witness was duly sworn by the chairman.

Mr. LYALL. If the committee please, I represent the Brighton Mills, of Passaic, N. J.

The remarks which I am about to present relate to tire fabrics, or fabric suitable for use in pneumatic tires, being included in section 330 of the tariff law of 1909.

The fabric used for automobile tires is made of a fine quality of sea-island or Egyptian yarn, which, in turn, is made of long staple, combed and carded, sea-island or Egyptian cotton. This is usually made up into a closely woven material to obtain as great tensible strength as possible. Extreme care must be employed not only to spin the yarn, but also to weave the fabric so that its strength shall be both as uniform and as great as it is possible to make it.

There are a dozen mills in this country keenly competing for this business, many of them, as in our case, making this by far their most important product. There is no trust, gentlemen's agreement, or agreement in restraint of trade in any form, and competition is amply strong to prevent excessive prices and keep profits down to a reasonable basis.

While the automobile business and, in consequence, the tire-fabric business has grown very rapidly during the last few years, the demand for tire fabrics has, however, never exceeded the ability of the mills of this country to supply it. There never has been a time when both we and, we believe, our competitors were not looking for more business and were not well able to take care of more business.

Prior to the Payne tariff law there was no specific provision in the tariff law covering this material, but when imported it was taxed under the provision for cotton duck and paid 35 per cent duty. Figures obtained from the auditor's department of the customhouse of the port of New York show that during two years prior to the passage of the tariff law of 1909 the following quantities of cotton duck were imported, and all of this material was for use in automo-

PARAGRAPH 330—TIRE FABRICS.

bile and heavy vehicle tires, except a negligible quantity of much lighter material imported to be made up into raincoats.

With reference to cotton duck imported into the port of New York for the year ending June 30, 1908, the importation was 461,799 square yards, or a monthly average of 38,483 square yards. For the year ended June 30, 1909, the importation was 925,132 square yards, or a monthly average of 77,094 square yards.

The monthly average for the year ended June 30, 1909, was an increasing one, being about 73,000 per month for the first six months of this period and over 81,000 per month for the last six months. The total production in the United States, as nearly as we are able to estimate from our own production and from our knowledge of the wants of the tire manufacturers supplied by our competitors, was, on the average, during the year ended June 30, 1909, about 225,000 square yards per month, so that the amount of this material imported at 35 per cent duty during the year ended June 30, 1909, averaged over 34 per cent of the amount of the American production and over 25 per cent of the total consumption.

These figures indicate, as is apparent, an increasing importation, which was seriously cutting into the business of the American manufacturers of these goods, and which, if it had continued, would have been disastrous to them. In these figures we have actual results obtained from a practical trial of a duty of 35 per cent, which are more convincing than any argument based on the estimated difference in cost of labor, plant, material, etc.

Thirty-five per cent duty means that at least one-quarter of the business will be done abroad, and how much more we can not say.

The conclusion, from these figures, of what less than 35 per cent duty would mean is simple but appalling to the manufacturers engaged in the business.

That the goods were not imported because of any superiority in the material or manufacture we know, because we were able to procure samples of these foreign-made goods and thoroughly tested them alongside our American product and found that ours were as good in every essential, and often better.

Our great handicap, of course, in the cost of producing these goods is the much higher priced labor. This is not compensated for by greater efficiency, since we practically have the same labor that is used in the foreign mills; moreover, our machinery is the same machinery; in fact, the most important part of it is imported. The amount of product is dependent upon the speed at which the machines are run, and we are able to run them no faster than our foreign competitors. The business of spinning yarns and weaving is an old one, and skilled help can be cheaply and readily obtained in foreign manufacturing centers. There are no advantages in the way of new inventions that we have, or could have, over our foreign competitors, any improvements in these days being almost immediately known and utilized the world over.

We understand that it has been stated that in the proposed tariff measure there is no desire or intention to injure American manufacturers in any way. We believe that the foregoing facts do positively indicate that this business will be injured seriously by a material reduction in the present duty.

PARAGRAPH 330—TIRE FABRICS.

Unless we lower the wages of our hands we can not manufacture any cheaper than we do. The possible reduced cost of other items under a general reduction of the tariff law will not affect us. The material, of course (cotton), will not be relatively any cheaper (i. e., relative to the foreign manufacture) and our investment will not change, so that labor is the only item by which any economy could be effected whereby foreign competition might be met.

We have not exported and we know of no exportation of these goods since back in 1893 or 1894, when they were a novelty and not manufactured abroad. As soon as the foreigners learned to manufacture them, we could not compete, and what little exportation there had been ceased entirely.

It should be further borne in mind that these goods are in the nature of a luxury, being entirely for use in making pneumatic tires for automobiles and bicycles, and therefore, aside from any question of protection to the American manufacturer, they should be rightly taxed with a comparatively heavy duty as luxuries.

If there is any further information we can furnish to assist in arriving at a just conclusion in reference to the duties on these goods, we will be glad to respond to a call.

The CHAIRMAN. How much do you say is the amount of the production in this country?

Mr. LYALL. In 1909 we figure that the American production was about 225,000 square yards per month.

The CHAIRMAN. With a value of how much?

Mr. LYALL. That varies considerably, but probably at that time was 50 or 60 cents a square yard, or possibly higher, according to the value of sea-island cotton.

The CHAIRMAN. Two hundred and twenty-five thousand square yards per month?

Mr. LYALL. Yes, sir.

The CHAIRMAN. And valued at 50 cents a square yard, you say?

Mr. LYALL. Yes, sir.

The CHAIRMAN. That would make something over \$100,000 per month in the value of the production?

Mr. LYALL. Considerably over; it has grown very materially.

The CHAIRMAN. \$100,000 a month would make \$1,200,000 per annum.

Mr. LYALL. It has grown considerably since that time.

The CHAIRMAN. About what is it now?

Mr. LYALL. I imagine last year it was probably in the neighborhood of \$11,000,000.

The CHAIRMAN. What is the amount of the importations?

Mr. LYALL. None.

The CHAIRMAN. You recognize it will have to be reduced?

Mr. LYALL. I presume so.

The CHAIRMAN. At what point do you estimate a reduction would bring about a reasonable amount of competition, because we can not get revenue even on a luxury without something comes in. We would like to have your estimate of what would bring about a cost so closely balanced as to allow a reasonable amount of competition.

Mr. LYALL. Of course, the past facts we have to go on are the importations that took place at 35 per cent. That was a growing

PARAGRAPH 330—SUSPENDERS, ETC.

situation. The last year of it was over twice what the previous year had been, and it amounted, as I say, to about 25 per cent of the total consumption. That looked fearful to us at the time. We began to get considerably afraid of it—it was cutting into our business. Of course, the Payne law put 45 per cent on it and that stopped the importations.

The CHAIRMAN. The difference between 35 and 45 per cent made a prohibitive tariff?

Mr. LYALL. It seemed to do so; yes, sir. I suggest we might try 40 per cent.

The CHAIRMAN. Your business was advancing at 45 per cent, was it not? You were still holding your own?

The CHAIRMAN. Your business was advanced at 35 per cent, was it not? You were still holding the market?

Mr. LYALL. We were still doing an increasing business, but at the same time the importations were increasing still faster.

The CHAIRMAN. Was that due to the fact that they were invading your territory or to the fact that developments of that line of industry were growing in the country?

Mr. LYALL. They were invading our territory. We lost some of our customers. Some people that we had sold goods to before—

The CHAIRMAN (interposing). I did not mean in that sense. Of course, if they were coming in they would have to take some of your customers. Were they taking part of your percentage of the business or were you holding your own in the percentage of the business?

Mr. LYALL. We were doing as much business as we did before, but the business was increasing so that we were not holding our proportion of the increase. You see, it has increased very rapidly with the increase of automobiles, and even faster than the automobiles, because the old automobiles need new tires.

I thank you.

SUSPENDERS, ETC.

BRIEF OF THE RUSSELL MANUFACTURING CO., MIDDLETOWN, CONN.

JANUARY 24, 1913.

The COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.:

In presenting this brief relative to Schedule I—cotton manufactures—I refer to sections 13 and 14, which particularly pertain to goods such as we (the Russell Manufacturing Co.) manufacture, namely, cotton belting, garter web, suspenders or braces, tubing and web or webbing, belting for machinery, Government cartridge belts, many kinds of elastic web, break banding, and cotton duck for Government use.

Our average weekly production is as follows:

	Yards.
Suspender web.....	300,000
Garter web.....	500,000
Nonelastic web.....	200,000
Machine belt.....	38,000
Break bands.....	10,000
Total.....	1,048,000

PARAGRAPH 330—CANDLE WICKING.

Also 350,000 dozen pairs of suspenders annually.

We also make a great quantity of olive drab cartridge belts and olive drab duck for the Government and a great many Army halters.

For this work we run 800 looms and about 10,000 spindles, employ between 1,100 and 1,200 hands, with a pay roll of over half a million.

On the above-described work we have been able to earn and pay the following dividends on a capitalization of \$900,000 during the past 12 years:

	Per cent.		Per cent.
1901.....	2	1907.....	4
1902.....	2	1908.....	5
1903.....	5	1909.....	6
1904.....	5	1910.....	6
1905.....	2	1911.....	6
1906.....	3	1912.....	4

An average of $4\frac{1}{3}$ per cent.

There is such hard and close competition between manufacturers in this country to keep ahead of those abroad in the same lines, that it would be impossible to run our factories if the tariff which is now 45 and 30 per cent on these goods was reduced to 25 and 15 per cent, respectively, as proposed in sections 13 and 14.

During the past year we had a strike on our hands, and if we should be compelled to make any reduction in wages it would cause another.

Our sales amounted to \$180,000 last year, out of which we were only able to pay a 4 per cent dividend.

The Russell Manufacturing Co. was established in 1834, and we have some employees who have been with us for many years, and it is for them and the 1,100 or 1,200 others whom we employ, rather than the stockholders, that I beg your honorable committee to consider most seriously before you reduce the tariff on goods mentioned in Schedule I, sections 13 and 14.

With this small profit we feel the competition which we fight against and which comes from foreign countries and causes such hard and close business conditions here at home.

With such a reduction as your bill proposes it will unquestionably accomplish nothing more than to close many of our mills and build up those abroad.

THE RUSSELL MANUFACTURING Co.,
Middletown, Conn.
 SAMUEL RUSSELL, Jr., *Vice President.*

CANDLE WICKING.

BRIEF SUBMITTED BY THE ATKINS & PEARCE MANUFACTURING CO., CINCINNATI, OHIO.

Candle wicking under paragraph 330, Payne Act of August 5, 1909.—Candle wicking is included in paragraph 330 of the Payne Act of August 5, 1909, which provides as follows, to wit:

“330. Bone casings, garters, tire fabric or fabric suitable for use in pneumatic tires suspenders and braces, and tubing, any of the foregoing made of cotton or other vegetable fiber and india rubber, or of which cotton or other vegetable fiber is the component material of chief value, and not embroidered by hand or machinery, 45 per cent ad valorem; spindle banding, woven, braided or twisted lamp, stove, or candle wicking made of cotton or other vegetable fiber, 10 cents per pound and 15 per cent ad valorem; loom harness, healds or collets made of cotton or other vegetable fiber, or of which cotton or other vegetable fiber is the component material of chief value, 50 cents per pound and 25 per cent ad valorem; boot, shoe, and corset lacings made of cotton or other vegetable fiber, 25 cents per pound and 15 per cent ad valorem; labels, for garments or other articles, composed of cotton or other vegetable fiber, 50 cents per pound and 30 per cent ad valorem; belting or machinery made of cotton or other vegetable fiber and india rubber, or of which cotton or other vegetable fiber is the component material of chief value, 30 per cent ad valorem.”

Paragraph 13 of Underwood House bill 25034.—Candle wicking is included in paragraph 13 of Underwood House bill 25034, which provides as follows, to wit:

PARAGRAPH 330—CANDLE WICKING.

"13. On bandings, beltings, bone casings, cords, garters, ribbons, tire fabric or fabric suitable for use in pneumatic tires, suspenders and braces, tapes, tubing, and webs or webbing, any of the foregoing made of cotton or other vegetable fiber, or of which cotton or other vegetable fiber is the component material of chief value, whether composed in part of india rubber or otherwise, and not embroidered by hand or machinery, spindle banding, woven, braided, or twisted, lamp, stove, or candle wicking made of cotton or other vegetable fiber, loom harness, healds, or collets made of cotton or other vegetable fiber, or of which cotton or other vegetable fiber is the component material of chief value, boot, shoe, and corset lacing made of cotton or other vegetable fiber, and labels, for garments or other articles, composed of cotton or other vegetable fiber, 25 per cent ad valorem; on belting for machinery made of cotton or other vegetable fiber and india rubber, or of which cotton or other vegetable fiber is the component material of chief value, 15 per cent ad valorem."

Candle wicking made of cotton should be classified by itself.—Candle wicking manufactured from cotton is to be distinguished from all other manufactures of cotton, as hereinafter more particularly set forth, and should be classified by itself and the present duty of 10 cents per pound and 15 per cent ad valorem retained thereon in substance even if not in form.

Candle wicking not trust-made goods.—Candle wicking is made from cotton by small factories with small capital and not made by any trust or combination of capital, and is sold on the market in free competition.

Candle wicking made at small factories.—Candle wicking is made at small factories, and the making of candle wicking requires high skill and its production is personally supervised by the heads of these small factories.

Candle wicking does not affect materially the cost of living.—But 110 pounds of candle wicking enters into the manufacture of a carload of candles of 36,000 pounds. As 4 candles make a pound, a carload of candles would contain 144,000 candles, and one pound of candle wicking enters into the manufacture of 1,125 candles. The value of candle wicking in 100 candles is but 3 cents.

Labor cost.—Seventy per cent of the cost of producing candle wicking from cotton is labor. Candle wicking is not made by automatic machines, as are numerous commodities produced from cotton.

Unit labor cost—American v. foreign labor.—From best information obtainable, it may be fairly estimated that the unit of labor cost in producing candle wicking in England, Belgium, and France (which countries are the present competitors in and exporters to American markets), is but 40 per cent of the same unit of cost in American factories.

No material transportation burden to foreign competitor.—Candle wicking per unit of use is so small in weight and shipments so small in volume that the freight charges thereon are comparatively insignificant, while in the case of heavier commodities moving in greater volume than candle wicking the freight charge is an important factor in meeting foreign competition, the freight charge on cotton wicking is practically negligible as a factor in meeting competition of the foreign manufacturer. In addition the import transportation charge, ocean and rail, to a point of American consumption is on an average lower than the domestic rail transportation charge from a point of American manufacture to a point of American consumption.

American excluded from foreign markets.—American producers of candle wicking have sought to extend their markets to foreign countries, particularly Central and South America and Mexico. After large expenditures to reach these foreign markets, the American manufacturer of candle wicking has given up this attempt (after very large expenditures) because it is impossible to compete in these foreign markets with candle wicking produced by other countries, particularly England, Belgium, and France. This is due largely to the fact that 70 per cent of the cost of producing candle wicking from cotton is labor, and the English, Belgian, and French unit of labor cost is but 40 per cent of the American unit. The American producer of candle wicking is therefore shut out of foreign markets for the reasons just stated.

THE QUERY PRESENTS ITSELF: SHALL AMERICAN PRODUCERS OF CANDLE WICKING BE ALSO SHUT OUT OF THEIR HOME MARKET BY THE SAME FOREIGN COMPETITION?

Candle wicking distinguished from all other commodities with which it is not classified.—Under paragraph 330 of the Payne Act of August 5, 1909, numerous items clearly distinguishable from cotton wicking inherently, industrially, and commercially bear a duty of 45 per cent ad valorem.

Under the same paragraph, 330, boot, shoe, and corset lacings are dutiable at 25 cents per pound and 15 per cent ad valorem, while candle wicking is dutiable only

PARAGRAPH 330—CANDLE WICKING.

at 10 cents per pound and 15 per cent ad valorem, while there is every reason inherently, industrially, and commercially why candle wicking should be rated higher than the items enumerated.

Under section 13 of the Underwood House bill 25034 all articles embraced in said paragraph 330 are grouped together at 25 per cent ad valorem. Such grouping is too general, and candle wicking ought to be excluded therefrom, because his commodity presents inherent physical, industrial, and commercial factors peculiar to itself.

Specific duties.—There are constant fluctuations in the price of the raw material which enters into the manufacture of candle wicking and as the basis of prices for candle wicking is based on the prices of raw materials and the weight of candle wicking is small and valuation is a constantly fluctuating factor, while weight remains constant, by assessing a duty made up of a combination of a specific duty and an ad valorem duty, the tariff on cotton wicking becomes fairly stable.

Reclassification of cotton wicking.—Taking normal market conditions of material and labor and the true valuations at ports of entry, the present duty on candle wicking of 10 cents per pound and 15 per cent ad valorem is the equivalent of 65 per cent ad valorem.

Under paragraph 13 of Underwood House bill 25034, reducing the duty to a flat 25 per cent ad valorem (with no specific duty), would permit candle wicking to be landed at New York and other ports where this commodity is sold at a price so much below the cost of American production as to render American manufacture impossible.

The lowest ad valorem duty needed on candle wicking is 65 per cent ad valorem, which is the breaking point, in order to meet foreign competition in our home market.

It is therefore suggested to strike out candle wicking made from cotton from section 13 of Underwood House bill 25034 and add thereto either one or the other of the following new paragraphs:

(a) First suggestion:

“13½. On candle wicking made of cotton or other vegetable fiber, 10 cents per pound and 15 per cent ad valorem.”

(b) Second suggestion:

“13½. On candle wicking made of cotton or other vegetable fiber 65 per cent ad valorem.”

Estimated increase of duties.—Under the present act candle wicking yields approximately \$6,000 per year, and the proposed act would yield \$9,000 per year, or an increase of only \$3,000 in revenue, with the effect of effacing the present American industry of candle wicking and wiping out the capital invested therein and driving a multitude of employees into other employments, and thus increasing competitive conditions of labor, with a tendency toward a lowering of the level of American wages.

Effect on American industry of producing candle wicking.—It is confidently asserted that to reduce the present duty on candle wicking produced from cotton will drive out of existence the American manufacturer of candle wicking and place the American market of candle wicking exclusively in the hands of foreign manufacturers.

In conclusion.—The industry of producing candle wicking from cotton is conducted by small manufacturers with small capital with the freest competition and entire absence of combination; it is produced under the personal supervision of the heads of the small factories and strongly contrasted with other cotton fabrics which are produced in large quantities by automatic machines; 110 pounds of candle wicking enter into 36,000 pounds of candles and but 3 cents worth of candle wicking are needed in the production of 100 candles; the price of candle wicking in no manner enters into the high cost of living; its tonnage is so small per unit that transportation charges are a negligible quantity in meeting foreign competition; foreign production has driven American candle wicking out of foreign markets and the American producer of candle wicking is limited in his activities to the American market; the unit of labor cost abroad is but 40 per cent of the unit of labor cost in its production in an American factory; to reduce the duty on candle wicking is to drive the American manufacturer out of his own domestic American market and throw that American market open to the foreign producer and destroy the American capital now invested in its production.

Candle wicking produced from cotton is in a class by itself and should form a separate section in Underwood House bill 25034, or any substitute therefor, as follows:

(a) First suggestion:

“13½. On candle wicking made of cotton or other vegetable fiber 10 cents per pound and 15 per cent ad valorem.”

PARAGRAPH 330—CORSET LACINGS, ETC:

(b) Second suggestion:

"13½. On candle wicking made of cotton or other vegetable fiber 65 per cent ad valorem."

Respectfully,

THE ATKINS & PEARCE MANUFACTURING CO.,
By FRANK P. ATKINS, *Vice President.*

CINCINNATI, OHIO, *January 22, 1913.*

CORSET LACINGS, ETC.

PROTEST AGAINST REDUCTION IN DUTY.

ANSONIA, CONN., *January 18, 1913.*

HON. EBENEZER J. HILL,
Washington, D. C.

DEAR SIR: We are manufacturers of various goods covered by the present tariff as follows:

Boot, shoe, and corset lacings, covered by Schedule I, paragraph 330, present duty on ad valorem basis about 65 per cent.

Webbings, covered by Schedule J, paragraph 349, 60 per cent ad valorem; Schedule K, paragraph 383, about 85 per cent ad valorem; and Schedule L, paragraph 401, 50 per cent ad valorem.

We understand that the new tariff bill will be along the lines of the so-called Underwood bill passed by the House August 2, 1912, which carried a duty of 25 per cent on the goods mentioned above.

We wish to make the strongest kind of a protest against any such reduction in duty. The proportion of direct labor entering into the cost of these goods is very great, and any such reduction as proposed would mean heavy reductions in the wages of our employees, and even then on a very large part of these goods it would be impossible to meet European competition.

Considerable quantities of these goods are now imported even with the present rate of duty, and it will be readily understood that any large reduction would mean the importation of a large amount of goods which are now made in this country and consequent disaster to our industry.

We appreciate the fact that some reduction may be expected, but in place of a radical reduction as proposed, and consequent upheaval of established conditions, we would respectfully suggest a gradual reduction of, say, 10 per cent a year for two or three years, which would give us time to prepare for the change in conditions.

The profits on these goods are very small. Competition is open and free. In fact, competition is very fierce, and only the best-equipped plants can exist at all. Some concerns have paid no dividends for years and within the last three months one of the largest concerns in this line was sold for 30 cents on the dollar.

We may say further that there are no trusts or combinations of any kind in this line of business.

Trusting the above facts will be given your careful consideration, we are,
Yours, truly,

THE ANSONIA O. & C. CO.,
A. T. TERELL, *Secretary.*

BRIEF OF THE INTERNATIONAL BRAID CO., PROVIDENCE, R. I.

PROVIDENCE, R. I., *December 11, 1912.*

HON. GEORGE F. O'SHAUNESSY,
Washington, D. C.

DEAR SIR: Referring to the Underwood cotton tariff bill as passed by the House of Representatives August 2, 1912, which we understand is to be the basis of the new cotton schedule to be enacted by Congress at the coming extra session, we respectfully beg to call your attention to paragraph 13, covering bandings, beltings, bindings, etc.

We are manufacturers of most of the items covered by this paragraph, and beg leave to point out that the articles enumerated therein require a very high percentage of labor in their manufacture, going through many more processes than almost any other class of cotton goods. For instance, in the Underwood bill the duty on

PARAGRAPH 331—TABLE DAMASK.

plush, velvets, velveteens, corduroys, and pile fabrics is 30 per cent (par. 8), and on stockings and hosiery 40 per cent (par. 11). None of the above materials require the percentage of direct labor that is necessary in the manufacture of the articles enumerated in paragraph 13.

Reducing the specific duties of the present tariff law to ad valorem, the duty on boot, shoe, and corset lacings figures about 65 per cent, and on woven, braided, or twisted lamp, stove, or candle wick about 50 per cent, while the duty on bandings, beltings, bindings, etc., is 45 per cent ad valorem.

To reduce the above rates to 25 per cent ad valorem would be a very severe cut, necessitating the abandonment of the manufacture in this country of most of the finer articles covered by this schedule, and the continuation of the manufacture of the coarser items only under a greatly reduced scale of wages.

We, of course, appreciate that a material reduction from the present rate of duty is to be anticipated, and in fact we are not unfavorable to any reasonable reduction, but we do feel that such a cut as proposed by the Underwood bill would bring disaster to the industry.

We respectfully beg leave to suggest that a rate of duty about halfway between the present rate and that proposed by the Underwood bill would probably enable the industry to proceed without very much disturbance or reduction of wages, and would at the same time be a pronounced step toward the downward revision of the tariff.

We also beg leave to state that in the cotton small ware industry, covered by paragraph 13, an absolutely free market exists. There is no trust or combination of any kind, nor can there be from the very nature of the business. In fact, competition is such that the business is carried on at an average profit of less than 5 per cent on sales as we can demonstrate from our books, and we believe our company to be a very fair representative of the trade in general.

We may add that cotton small ware industry is centered in the States of Rhode Island and Massachusetts, Providence and vicinity probably producing a larger quantity of these goods than any other district in the United States.

Yours, respectfully,

INTERNATIONAL BRAID CO.,
J. O. AMES, *Treasurer.*

PARAGRAPH 331.

Cotton table damask, forty per centum ad valorem; manufactures of cotton table damask or of which cotton table damask is the component material of chief value, not specially provided for in this section, forty per centum ad valorem.

TABLE DAMASK.**BRIEF OF THE ROSEMARY MANUFACTURING CO., ROANOKE RAPIDS, N. C.**

In presenting this brief to your honorable committee I will not attempt to go into a lengthy discussion of the tariff on cotton goods, but will only mention pertinent facts and figures concerning our class of product.

The part of paragraph 331, Schedule I, of the tariff act of 1909, directly relating to cotton damask reads as follows: "Cotton table damask, forty per centum ad valorem," and the part of paragraph 323 of the same schedule, relating to mercerized cotton goods, reads as follows:

"In addition to the duty or duties imposed upon cotton cloth by the various provisions of this section there shall be paid the following cumulative duties, the intent of this paragraph being to add such duty or duties to those to which the cotton cloth would be liable if the provisions of this paragraph did not exist, namely: * * * on all cotton cloth mercerized or subjected to any similar process, one cent per square yard."

In December, 1908, before the tariff act containing the above provisions was passed, I presented a brief discussion of the tariff concerning cotton damask before the Ways and Means Committee, advocating a more specific wording of paragraph 321 of Schedule I of the tariff act of 1897, to cover only the classes of cotton damask known to the trade at the time that act was passed, namely, plain bleached and colored damask.

I stated that since that time an entirely new class of damask had come on the market, known as mercerized cotton damask, which was justly entitled to a higher rate

PARAGRAPH 331—TABLE DAMASK.

of duty on account of its finer and more costly construction and finish, and asked that a new classification be given this kind of damask, with an attendant higher rate of duty.

Similar requests were made by other manufacturers of mercerized cotton cloths, at that hearing, and the Ways and Means Committee (and unanimously, we understand), decided when framing the tariff act of 1909 that mercerized cotton cloths were entitled to a higher rate of duty and intended to cover the field broadly, in the part of paragraph 323 quoted above, by adding a duty of 1 cent per square yard on all mercerized cotton cloth.

This additional duty was just and proper, as the cost of finishing mercerized cotton cloths is fully that much per square yard more than the cost of a plain bleach finish, and in the case of damask the difference is from $1\frac{1}{2}$ to $1\frac{1}{4}$ cents more per square yard, notwithstanding the statements of certain importers to the contrary.

It is unnecessary to argue before an intelligent body of men that a duty of this kind, levied for good and just reasons, should apply to some classes of mercerized cotton cloths and not to others, as such an inconsistency is hardly credible, and yet that was the ruling of the customs department in regard to mercerized cotton damask. With the exception of \$224 (Government record figures) worth of mercerized damask, the additional duty of 1 cent per square yard has never been collected on imports of mercerized damask.

The history of our efforts to convince the customs department of its unjust and inconsistent ruling in this matter was given at length in the brief which I submitted to your committee in July, 1911, and will not be repeated here.

I have mentioned this matter to call your attention to the fact, first, that sufficient evidence had been presented to a former Ways and Means Committee (which was constituted in part by a number of your present committee) to convince it of the justice and propriety of awarding mercerized cotton cloth an extra duty; second, that an unjust discrimination had been made against a certain class of mercerized cotton cloth, namely, cotton damask.

In presenting our requests concerning a tariff rate on our class of product (cotton damasks) I do not know exactly what basis to adopt. The platform of the political party at present in power has declared for a tariff for revenue only. What basis constitutes a tariff for revenue only is the question. As I see it, there can not be a tariff for revenue only without it being at the same time a tariff incidentally of protection. A tariff too low would unquestionably cause a business depression in this country which would reduce imports, and correspondingly reduce the revenue derived therefrom, whereas a tariff rate high enough to insure manufacturing prosperity and at the same time allow a reasonable and healthy foreign competition would incidentally be one of protection. We understand it is the opinion of your committee that a competitive and revenue-producing tariff rate is one that will allow imports to the extent of from 10 to 25 per cent of the total American consumption of any product. This opinion we heartily indorse, believing a tariff on that basis will prove to be a large revenue-producing one, will conserve the manufacturing industries of this country, and I will assume it as a basis for our requests.

Under the present tariff rate—i. e., 40 per cent ad valorem—which rate has existed since the year 1899, the imports of cotton damask have increased in value (foreign value) from \$172,607.75 in 1900 to \$551,637.50 in 1910. In 1900 the revenue from these importations was \$69,043.10 and in 1910 the revenue amounted to \$220,655, showing a large increase in importations and a corresponding increase in the amount of revenue derived therefrom. For the past two years the importations have been slightly less than in the year 1910, but for the three years 1910, 1911, and 1912, taken as a basis, show total imports amounting to \$1,285,634.50 (foreign value) and the revenue derived amounting to \$514,253.80.

These figures do not include the imports of manufactures of cotton damask, which were \$12,085 in 1910, \$13,590.50 in 1911, and \$31,535 in 1912, showing a rapid increase, and the combined duties for the three years resulting therefrom amounted to \$22,986.97. The Government records show that these manufactures of cotton damask were subjected to the extra specific duty of 1 cent per square yard levied on mercerized cloth.

As the total consumption of cotton damask in the United States (American value) is only from two to two and one-half millions of dollars a year, showing that from 25 to 30 per cent of the cotton damask used is of foreign manufacture, we contend that the present rate of duty is equitable and on a revenue basis.

For the past six years, even with the existing rate of duty, the foreign and domestic competition on cotton damask has been so keen that the mills making this product have been unable to earn a satisfactory profit on the comparatively large amount of invested capital. Several of the mills have gone into the hands of receivers and others have made very little, if any, money, and there are many idle looms on this

PARAGRAPH 331—TABLE DAMASK.

product to-day. The prices of the finished product, due to the close and keen competition, have decreased, whereas at the same time the cost of labor and the cost of raw materials have increased.

We respectfully submit the following requests for your earnest consideration:

First. That paragraph 331, Schedule I, of the present tariff law, be segregated into two parts—cotton damasks and the manufactures of cotton damask.

Second. That a rate of not less than 40 per cent ad valorem (the present rate) be placed on the first division (cotton damask), and that a rate of not less than 45 per cent ad valorem be placed on the second division (manufactures of cotton damask), which is a little less than the combined rates as now collected.

Our reasons for making these requests are briefly as follows:

First. The present rate of duty on cotton damask (40 per cent ad valorem) is clearly on a competitive basis and should not be lowered.

Second. The manufactures of cotton damask which are made almost entirely of the finer constructed qualities of mercerized damask require in their conversion a substantial extra labor cost and should accordingly be awarded a higher rate of duty than cotton damask. These manufactures of cotton damask, consisting of hemmed and hemstitched damask cloths and napkins and special length damask cloths, carry now an ad valorem duty of approximately 48 per cent and the imports are increasing under that rate.

Third. The Government figures of revenue derived from the importation of cotton damask and the manufactures of cotton damask compared with the small total American consumption certainly indicate the present duty (40 per cent ad valorem) as being on a revenue basis, and we contend that any lower rate of duty would not be in conformity with the spirit of a revenue-producing tariff.

Fourth. As fully 25 per cent of the entire American consumption of cotton damask is now, and has been for a number of years, of foreign manufacture, indicating a keen foreign competition on this product, the American consumer is thereby assured as low a cost as possible consistent with the cost of manufacture.

Fifth. On account of the width of cotton damask, the elaborate nature of the pattern designs, and the precision and care with which it has to be satisfactorily made, very expensive weaving machinery, pattern cards, and equipment are required. Skilled and comparatively high-priced labor is necessary, and this, together with a large cost of upkeep of the machinery and a comparatively small production, make the cost per pound high.

The above features are accentuated in the finer grades of mercerized damask, coupled with an additional investment for preparatory machinery, and as the tendency is to make still finer grades to supplant as far as possible linen products, we contend that a duty of 40 per cent ad valorem is equitable and fully justified for this class of work.

Sixth. To the best of our knowledge and belief comparative manufacturing costs have and will continue to prevent any exportation of cotton damask.

Respectfully submitted

JNO. L. PATTERSON.

BRIEF OF THE FARWELL MILLS, LOCATED AT LISBON, ME.

BOSTON, *January 31, 1913.*

HON. OSCAR W. UNDERWOOD,
*Chairman Committee on Ways and Means,
House of Representatives.*

SIR: We wish to file the following brief on behalf of the Farwell Mills:

This is a mill incorporated under the laws of the State of Maine, located at Lisbon, Me., of \$500,000 capital, with about 23,000 spindles and 600 looms.

Formerly the mill ran largely on sheeting and other plain cloths, but about five years ago, finding this line of goods unprofitable for a small mill, 12 Jacquard looms were put in for the manufacture of cotton table damask. The mill has since developed this line until at the present time there are about 200 Jacquard looms in the mill, making such table damask, over six-sevenths of which consists of napkins, and samples of these are inclosed with this letter, the remainder being bureau scarfs, tray cloths, etc.

These napkins vary in size from 15 to 22 inches square and are bleached, mercerized, and hemmed, and sold by us at prices varying from 37½ to 90 cents per dozen. We are informed that retailers receive from 60 cents to more than \$1.50 per dozen for these

PARAGRAPH 332—COTTON BLANKETS.

same goods. The napkins are called "Nikpan napkins" and are sold under that ticket, and we have advertised the line to a moderate extent.

We feel that there is a distinct call for mercerized cotton napkins to take the place of the cheap linen and cotton napkins, or of the more expensive all-linen napkins, particularly in the homes of families of more moderate means, as linen napkins of these sizes will cost at least twice as much.

The present duty upon these goods is 40 per cent ad valorem, and we do not feel that we can successfully compete with the foreign-made goods if this duty is in any way materially lowered. It is impossible for us to give the exact imports of such napkins, as they are classed with other table damasks, and we are informed by letter from Mr. A. H. Baldwin, Chief of the Bureau of Foreign and Domestic Commerce, that no subdivision of the cotton table damask imports has been made into napkins and that used for table tops and other purposes, which are dutiable under paragraph 331 of the present tariff law.

This matter is taken up on pages 144 to 146 of the "Report of the Tariff Board, on Schedule I of the tariff law."

It will be seen that for several years, from 1896 to 1910, the importations of damasks increased, although the rate of duty was for the greater part of this period as high as at present. For the last two years there has been somewhat of a decrease in the importations. This we attribute to the exceptional conditions of trade in Europe which have temporarily decreased the incentive of exportation to America, rather than to any effect which the tariff may have, as it will be noted that in the past these imports have varied with the general business of the country. Also American manufacturers have recently engaged in this industry and supplied part of the demand.

There is sharp competition with other mills in the United States and we feel that as this is a comparatively new industry it should receive the protection which has heretofore been given it. In no year since 1907 have dividends of more than 4 per cent been paid by the Farwell mills, and in two of these years but 2 per cent was paid, owing in a large degree to the necessary expense in introducing a new product to the American people. We have confidence in the product, and expect that after the cloth becomes better known the earnings will increase.

For the same revenue to accrue to the Government under H. R. 25034 the importations must increase 60 per cent. This means that an additional demand must be created for this amount, which can not be done at once, or that the American producers will be crowded from the field.

We therefore would ask your committee to retain the present duty on cotton table damask napkins which is not a hardship to any of the American people, and to thereby encourage the growth of mills making such damasks in America, that a greater supply of such cloths may be available to take the place of the higher-priced linen, which is almost entirely imported.

Very truly, yours,

FARWELL MILLS,
By JOHN E. ROUSMANIM,
Assistant Treasurer.

PARAGRAPH 332.

All articles made from cotton cloth, whether finished or unfinished, and all manufactures of cotton, or of which cotton is the component material of chief value, not specially provided for in this section, forty-five per centum ad valorem.

See Bemis Bro. Bag Co., page 3477.

COTTON BLANKETS.

TESTIMONY OF CHARLES A. CONANT, OF THE ESMOND MANUFACTURING CO.

The witness was duly sworn by the chairman.

Mr. CONANT. Mr. Chairman, I appear as a representative of the Esmond Manufacturing Co. in regard to cotton blankets.

We have no desire to ask any increase of duties above the existing law, and are quite willing to submit to certain reductions on certain grades of goods; but we would like a little different classification than is embodied in the bill which passed at the last session.

PARAGRAPH 332—COTTON BLANKETS.

There is a great difference in the quality of the different classes of blankets. The staple goods which are manufactured in the cheapest way and of domestic yarns involve much less labor cost than the higher grade of goods, the wool finish, and the jacquard finish, and therefore we think there should be a classification which puts a higher duty on the wool finish and the jacquard than on staples. The labor costs are much higher and the wool finish and jacquard goods are more or less in the nature of luxuries, especially the jacquard blankets.

We do not very well like the sweeping of these high-grade blankets into a class with wash rags, mop cloths, and inferior material of that sort. It is a little humiliating to have high-class goods of that character classed with wash rags.

That rate of 25 per cent, embodied in that paragraph of the bill which passed at the last session, may be applicable to a lower grade of blanket, but certainly the process of producing the higher grade blankets justifies putting them in a different schedule.

What we would like would be a separate clause for blankets, specifically providing, roughly speaking, that the plain blanket should pay 25 per cent, as we have it in the bill which passed the last House, that the wool finish should pay 35 per cent and the jacquard finish 45 per cent, as it is under the existing law. Therefore, we are asking no increase in the rate even on the finest grade of blankets, and have no objection to a reduction on these staple blankets which are used by the masses. I think a special clause is preferable. If it were desired to put the blankets under the countable clauses, then there should be an additional paragraph adding 7.5 to 10 per cent for the fact they are made into articles.

Necessarily the making of blankets separately, the binding, the preparation, putting them into boxes, etc., runs into considerable additional cost, and the rate should be advanced 5 per cent upon articles as compared with the rates under the countable clauses, if blankets are kept under the countable clauses. I think it would afford a much simpler administration and more equity to establish a separate paragraph for blankets.

The CHAIRMAN. There are none of the low-grade blankets imported at all?

Mr. CONANT. No; the present duty is, I believe, substantially prohibitive of the lower grades being imported.

The CHAIRMAN. I can not find in any place the importation of any jacquard blankets. What is the importation of jacquard blankets?

Mr. CONANT. A good many are imported, but so far as I know we have not any separate statistics made by the Bureau of Commerce. Have you been able to obtain them?

The CHAIRMAN. Our statistics do not show any importations of blankets.

Mr. CONANT. They are all massed under miscellaneous manufactures of cotton. There is no separate classification by the Bureau of Statistics, or the Bureau of Manufactures as it is now called. If you have any statistics, we will be very glad to have them.

The CHAIRMAN. I have not got them. I will try to get them from the Treasury Department. I am of the impression, unless you can show me otherwise, that this schedule of 45 per cent, the present tax on blankets, is practically prohibitive all along the line.

PARAGRAPH 332—COTTON BLANKETS.

Mr. CONANT. On these higher grades, the statistics are lacking. As I understand it, considerable quantities of the higher grades are brought in, just as in the case of quilts.

Mr. RAINEY. What grades do you manufacture?

Mr. CONANT. Principally the finer grades of wool finish, but some staples.

A lower rate is quite adequate on staples, as Mr. Underwood suggested.

Mr. LONGWORTH. Are there many blankets made only of cotton?

Mr. CONANT. I think the larger proportion of blankets now made are made of cotton. "Wool finish" does not mean that they are made of wool, but finished in such a way as to give them the same quality as wool, and they are very much cheaper.

Mr. RAINEY. They pay 45 per cent, do they not?

Mr. CONANT. They pay 45 per cent under the existing law, under the general clause for "Miscellaneous manufactures of cotton not otherwise enumerated."

Mr. RAINEY. Do you want them raised above 45 per cent?

Mr. CONANT. Not at all; 45 per cent is quite satisfactory upon the high-grade blankets.

Mr. LONGWORTH. What does "jacquard blanket" mean?

Mr. CONANT. It is a blanket made on a special loom, which works in figures and decorative effects. So far as warmth and comfort are concerned, it is a luxury. Plain blankets sell cheaper than the jacquard. Plain staple blankets, at wholesale or manufacturers' price, sell down to about \$1.25 a pair. Jacquards run up to \$2 or over.

Mr. LONGWORTH. You agree with Mr. Parker that all jacquards are luxuries?

Mr. CONANT. To a large degree, yes.

Mr. HAMMOND. What are the figures on jacquards? Do you refer to these stripes that we see so frequently on them?

Mr. CONANT. No; but to decorative effects. I can show you some samples if you would like to see them.

Mr. HAMMOND. You need not take time for that now.

Mr. CONANT. Some of them are all jacquard finish.

Mr. RAINEY. Is this sample a jacquard [indicating]?

Mr. CONANT. That is jacquard ornamentation.

Mr. HAMMOND. Blankets sold by the manufacturers at from \$3 to \$5 a pair—

Mr. CONANT (interposing). Prices here for jacquards are only \$2 a pair for a very good article. That is the manufacturer's price. I am not talking about the retail price. I suppose they produce them as high as that, but a very large line of them are produced at \$2.

Mr. HAMMOND. They are jacquards?

Mr. CONANT. They are jacquards; yes, sir. The plain blankets are \$1.25 a pair.

Mr. DIXON. What would be the retailer's price on those blankets at \$1.25?

Mr. CONANT. I have not made any inquiry, but they would add 50 or 60 or 75 per cent, according to local conditions and overhead charges.

PARAGRAPH 332—COTTON BLANKETS.

Mr. PALMER. I notice that this list of the witnesses for the hearing to-day does not give the concern which you represent?

Mr. CONANT. I represent the Esmond mills, near Providence, R. I.

Mr. PALMER. Are you an officer of that company?

Mr. CONANT. No; I was simply asked to appear.

Mr. PALMER. You are representing them here?

Mr. CONANT. Yes.

Mr. PALMER. They are manufacturers of blankets exclusively?

Mr. CONANT. Yes, I believe so; possibly a few accessories, like bathrobe material.

Mr. PALMER. But largely high-grade blankets?

Mr. CONANT. Yes.

Mr. PALMER. On which the duty, you say, is satisfactory to your people?

Mr. CONANT. Yes.

Mr. PALMER. You mean by that, I suppose, that you have been as prosperous under the Payne law as you wish to be?

Mr. CONANT. Reasonably so. Of course, we would not mind being more prosperous.

Mr. PALMER. Of course not.

Mr. CONANT. The industry is more or less now in an experimental stage, but I think under the existing duty it can develop.

Mr. PALMER. I assume no manufacturer would come here and say he was satisfied with the rate unless he was as prosperous as he felt he dared to be under the present rate.

Mr. CONANT. We did not think it was advisable for us to ask for any increased rates, nor did we contemplate it.

Mr. PALMER. You have been prosperous under the Payne law?

Mr. CONANT. Reasonably so. They have only been in business a few years. It is more or less in the experimental stage, but the evidence goes to show they can be and will be prosperous.

Mr. PALMER. Can be and will be prosperous under the present rate?

Mr. CONANT. Yes.

Mr. PALMER. How many people do you employ?

Mr. CONANT. About 500—that is, in this single mill. There are a number of other mills.

Mr. PALMER. In the Esmond mill, how many people do you employ?

Mr. CONANT. Three hundred and seventy-five men and 141 women, most of them skilled. The number of skilled men is 354, there only being 21 unskilled. The women are all skilled.

Mr. PALMER. Are they as satisfied as the owners of the mill with their prosperity under the Payne law?

Mr. CONANT. I can not say as to that positively, not being a director of the company. I think there was some trouble of some kind recently, but I am not prepared to say positively.

Mr. PALMER. They are engaged in a strike for higher wages now, are they not?

Mr. CONANT. I think I have heard they are.

Mr. PALMER. You represent them here, and I should think if there was a strike of the employees for higher wages, you would know it.

Mr. CONANT. It has not been brought to my attention.

PARAGRAPH 332—COTTON BLANKETS.

Mr. PALMER. Did you know that your company in the last day or two issued an ultimatum that they shall receive no higher wages?

Mr. CONANT. I did not know as to that.

Mr. PALMER. That is what the newspapers report.

Mr. CONANT. It may be so.

Mr. PALMER. Have you seen the newspapers?

Mr. CONANT. No.

Mr. PALMER. Do you read the newspapers?

Mr. CONANT. Yes, sir; but I do not read every item.

Mr. PALMER. Do you not read items in the newspapers in reference to the Esmond mills?

Mr. CONANT. I would if they were brought to my attention, but I might overlook them.

Mr. PALMER. And you have not seen anything in the papers to the effect that your company has lately refused to grant any increase in wages to your employees?

Mr. CONANT. No; I have not seen that, as a matter of fact.

Mr. PALMER. I will tell you, by the way, that that is a fact, and your employers will tell you so.

Do you think you are in a very good position, as a manufacturer, to come here and ask for a retention of duty, presumably in the interest of labor, when you say your company has been prosperous as it could ask to be under the present law, and you are right now refusing to give your employees their share of that prosperity?

Mr. CONANT. We naturally need a retention of the duty to pay them their wages. I do not know the merits of the labor trouble.

Mr. PALMER. You do not know anything about that?

Mr. CONANT. No. I will furnish you the information, if you like.

Mr. RAINEY. Senator Lippitt, from Rhode Island, is one of your directors?

Mr. CONANT. I have not a list of the directors.

Mr. RAINEY. That is true. He is one of them. I can tell you that. Mr. Clarence Griffin is another one.

Mr. CONANT. I believe Mr. Lippitt was a director at one time, but he has not been for the past two years. Mr. Clarence Whitman is a director. Mr. Lippitt resigned when entering the Senate and has absolutely nothing to do with the mill. I do not think to-day he is even a stockholder.

Mr. RAINEY. And you have a surplus at the present time of nearly \$150,000, have you not, although you have only been in business a few years?

Mr. CONANT. I do not know that I have that data here. I think there is a surplus.

Mr. RAINEY. They did not give you any information that we might need.

Mr. CONANT. I will furnish you with any information you might desire.

Mr. RAINEY. How much is your surplus?

Mr. CONANT. I have not a statement of the surplus here. I have it down town.

Mr. RAINEY. Did they not tell you what their surplus is?

Mr. CONANT. Yes; I have it down town.

PARAGRAPHS 332—COTTON BLANKETS.

Mr. RAINEY. You did not think that was important enough to bring up here?

Mr. CONANT. No; I did not suppose that question would be asked.

Mr. RAINEY. I will tell you that your surplus is nearly \$150,000 at the present time, and yet you refuse to divide with these striking employees.

Do you know how much the surplus has increased over this \$150,000, which I see is what it was six months ago? Do you know how much it has increased in the last six months?

Mr. CONANT. No, sir; I do not.

Mr. RAINEY. I know so much more about your firm than you do that I have to tell you all these things. It has increased \$50,000* in the last six months.

Do you know how much your capital stock is?

Mr. CONANT. Yes. Preferred, \$750,000; common, \$655,000.

Mr. RAINEY. All together \$1,249,000, according to my information.

Mr. CONANT. I make it \$1,405,000.

Mr. RAINEY. You have it wrong. It is \$1,249,000. You ought to get more correct information from your employers.

Mr. CONANT. Give me your figures again, please.

Mr. RAINEY. My figures are \$1,249,000, and six months ago you had a surplus of \$144,717, which in the last six months has increased to the extent of \$50,000. Look these things up and see whether they are true or not, and if they are not, you can come before the committee again. Do you not also make the cheaper grades of cotton blankets?

Mr. CONANT. Yes; some, I think.

Mr. RAINEY. Is it not true that you and the Beacon Manufacturing Co., of New Bedford, Mass., make about all of the cheaper grades that are made?

Mr. CONANT. I think likely.

Mr. RAINEY. You have a monopoly of the manufacture of cheap blankets in this country, have you not? You have a monopoly of the cheap blankets that are made?

Mr. CONANT. I would not say that.

Mr. RAINEY. You make nearly all of them?

Mr. CONANT. We make a good proportion of them.

Mr. RAINEY. You do not want the tariff taken off the cheap blankets to any considerable extent, do you?

Mr. CONANT. They are willing to accept the proposition of Mr. Underwood in that respect.

Mr. RAINEY. And you also make a large proportion of the better grades of blankets that do not come in at all?

Mr. CONANT. Yes.

Mr. RAINEY. And you do not want the tariff on that changed any?

Mr. CONANT. In saying yes to your question I do not admit that none come in at all. I understand they do, but the statistics are not ascertainable.

Mr. RAINEY. Did you ever see one?

Mr. CONANT. Oh, yes; a great many.

Mr. RAINEY. Of the better grades?

Mr. CONANT. Yes. I have some samples here.

PARAGRAPH 332—COTTON BLANKETS.

Mr. RAINEY. Tell me what that is [handing an article to Mr. Conant]. I want to see what you know about it.

Mr. CONANT. I am not qualifying as an expert. If you want to ask a series of technical questions, I will——

Mr. RAINEY (interposing). Is not that one of your jacquard blankets?

Mr. CONANT. I believe so. I do not know whether it was made in our mill.

Mr. RAINEY. It was made in your mill, and on that you have a tariff of 45 per cent under the Payne-Aldrich bill.

Mr. CONANT. Yes, sir.

Mr. RAINEY. That was an increase on blankets over the prior tariff bill of 15 per cent anyway, was it not?

Mr. CONANT. My recollection is it was an increase from 35 to 45.

Mr. RAINEY. Is there any other mill except your own mill and Beacon mill that makes that kind of blankets, of which I have just submitted to you a sample?

Mr. CONANT. I understand there are six mills making high-grade blankets.

Mr. RAINEY. They do not make very much of them, do they?

Mr. CONANT. Yes; about the same. I can give figures on that, if you like.

The National mill makes 25,000 cases; the Beacon, 15,000 cases; the Sprague, 6,000; another mill, of which I have not the name, 14,000; and the Esmond, 20,000. We make about 25 per cent of the aggregate.

Mr. RAINEY. You and the Beacon mill make nearly half?

Mr. CONANT. Yes; approximately half.

Mr. RAINEY. You are able to sell your product, and do sell it, at just a little bit less than the duty-paid price of the Germans, do you not?

Mr. CONANT. We succeed in selling a considerable porportion; yes.

Mr. RAINEY. And you do charge just a little bit below the duty-paid price of the German goods?

Mr. CONANT. I have not the quotations here.

Mr. RAINEY. You would sell them a good deal cheaper if you had to, would you not?

Mr. CONANT. I could not say as to that; that is a prediction.

Mr. PALMER. Are you asking for the retention of the present duty?

Mr. CONANT. Not at all, only on the finer grades. On the lower we are quite willing to accept the proposal of the Underwood bill for a reduction.

The CHAIRMAN. Your time has expired, Mr. Conant.

BRIEF OF THE ESMOND MANUFACTURING CO.

THE ESMOND MILLS,
Providence, R. I., Februray 1, 1913.

MY DEAR SIR: I beg leave to supplement herewith the statements made by Mr. Charles A. Conant on behalf of the Esmond Mills in the formal hearing before your committee on Thursday, January 23, last. The Esmond Mills is one of several manufacturers of cotton blankets, including plain or staple blankets, those of wool finish, and those made on a Jacquard loom. These types differ materially from each other and it is necessary, in our opinion, that there should be a higher rate of duty on the

PARAGRAPH 332—COTTON BLANKETS.

higher grades than on the staple blankets, in order to afford adequate protection to the skilled labor employed.

The argument made by Mr. Conant before your committee on the subject of classification has our approval, but we would like to supplement his statements by some additional facts and by a reply to the questions put by Mr. Palmer, of Pennsylvania, in regard to the recent strike, and those put by Mr. Rainey, of Illinois, in regard to the finances of the company. Jacquard blankets represent a luxury and their manufacture demands high-class labor. The average wages in the mill are \$10 per week, which is high for a cotton mill. As already stated, out of a total number of 375 men employed in the Esmond Mills, there are 354 who are skilled workmen, and there are also 141 women, all of whom are skilled and receive good wages.

The present strike at the mills was instigated by the I. W. W., which had caused trouble in a neighboring mill, and sought to promote discord in our mill in order to increase their influence. Over 80 per cent of our help did not desire to strike, but were afraid to do otherwise. Evidence of this is afforded by the fact that while a so-called meeting of the strikers was held on January 24, which voted not to return to work, the engine was started up at 2 o'clock, and 60 of the looms were in operation at 3.30 o'clock.

On the next morning 90 looms were in operation, and the return of almost all of our help was promised for the following Monday. It was reported that one of the reasons an increase of 20 per cent was asked in wages was the belief that it might be possible to get it now before a reduction of the tariff necessitated a reduction in wages.

Our whole policy toward our working people has been to give them the benefit of the most modern working conditions, in the belief that a healthy employee is the cheapest workingman. A large part of our investment, some \$200,000, is in homes that we have built for our workmen, and we believe that we have the beginning of one of the most beautiful and at the same time practical mill villages in the United States. This is at all events our aim. All through the mill, we have made every effort to make the working conditions the best, because it is essential, with the high wages which we pay, to obtain efficient and contented workmen. All of this has cost us much money, which has been invested upon the assumption that we would always be reasonably protected from the inroads of German competition.

One of the things which we fear the most in case of a reduction of the tariff is that the German goods will flood our market and will compel us to lower not merely the price of our goods, but their quality and value. A large part of the German goods are made from all kinds of low-class, filthy waste, and sold at lower values than we can afford because of their low cost of capital. Even under the present tariff, we have been endeavoring to make a 32-inch piece-goods cloth to compete with the German goods which are now brought in, and have not been able to make it at a profit. Our industry is still very young, having been in actual operation only a little over five years, and it requires some additional experience to make goods of honest quality which will compete with the price of the German product. Our Jacquard weave is of a very special type and requires highly trained weavers, because it has all of the difficulties of all kinds of weaving.

That is, we have the combined difficulty of the Jacquard and the box loom (for colored weaving.)

In Germany the business is much older and it is possible to obtain a larger supply of experienced help, which is more steady and less disposed to drift about than in this country. The German manufacturer, moreover, has the world for his market, because of his low cost of production and comparatively small capital. This affords him an uninterrupted opportunity for disposing of his goods, because when business is dull in one section of the globe, it is pretty certain to be good in another. In this country, on the other hand, we are dependent upon our own market, because our cost of manufacture and the high quality of materials used does not enable us to meet German competition in outside markets.

The data upon which questions were asked in regard to our financial condition at the hearing of January 23 was based apparently upon a statement prepared by representatives of certain importers which is out of date and essentially misleading. Our capital stock at present, as stated by our representative before the committee, is \$1,405,000. Of this capital, \$750,000 represents preferred stock and \$655,000 represents common stock. A dividend of 7 per cent has been paid upon the preferred stock, but none whatever at any time upon the common stock. It is because we have not thought it prudent to pay a dividend on the common stock, although it represents actual cash investment, that we have been able to add small amounts from time to time to the surplus, in order to guard against periods of depression and bad business.

PARAGRAPH 332—BEDSPREADS.

The figures taken from our statement of 1910 cover the only year in which we were able to make a fair profit and the only year in which any such addition as \$50,000 was made to surplus within six months. During 1911 and 1912 the surplus was increased only by some \$30,000 for the period of two years.

The ratio of annual product to capital invested is small, because of the character of the business and the high cost of machinery and labor. The annual product does not much exceed two-thirds of the capital, and represents an investment about 50 per cent greater than would be required to produce the same amount of goods in Germany. Our plant consists in part of machinery imported under duty of 45 per cent.

Mr. Henry F. Lippitt, now United States Senator from Rhode Island, has absolutely nothing to do with the Esmond Mills, and is not at present the holder of a single share of stock. He never had but one share, and that was to qualify him as a director. Mr. Lippitt resigned as director before entering the Senate and has no interest whatever at the present time, either as an officer or stockholder, in the company.

If desired by the committee I shall be very glad to appear before them and afford them any information in my power regarding methods of manufacture, the finances of the company, or any other branch of the subject of which I have knowledge.

Yours, very respectfully,

ARNOLD C. WHITMAN.

The Hon. OSCAR W. UNDERWOOD,
*Chairman of the Committee on Ways and Means,
House of Representatives, Washington, D. C.*

BEDSPREADS.

STATEMENT OF GEORGE A. TENNEY, OF CLAREMONT, N. H.

The witness was duly sworn by the chairman.

The CHAIRMAN. You may proceed, Mr. Tenney.

Mr. TENNEY. Mr. Chairman, I am not adverse to a revision of the tariff or to a reduction of the same, provided sufficient protection is given to adjust the difference in labor cost here and abroad and so leave us on such a basis of equality that we can with a reasonable profit on our spreads successfully compete in our home market with the foreign manufacturer.

Cotton bedspreads or quilts are provided for in the present tariff under paragraph 332 of Schedule I, where all other cotton goods not specifically named in the schedule are to come in under an ad valorem duty of 45 per cent.

I would recommend that cotton bedspreads be specifically named in the new tariff and graded as to quality and value. My reason for this is that there is a difference in value of over 500 per cent between the various grades of spreads imported into this country. Other cotton goods are subject to duty according to grade and value and bedspreads should be likewise.

Bedspreads fringed and scalloped should be classed separately and carry an extra duty because of the additional labor expended upon them.

The present duty on the medium grade of spreads is only sufficient to give us the protection needed to compete successfully with the English manufacturer, as I propose to illustrate by the example of an English-made spread in comparison with one made here. The foreign-made spread is one obtained direct from the manufacturer last spring, and the cost figures came from the superintendent of an English bedspread mill. The figures on the American spread were taken from our cost system.

PARAGRAPH 332—BEDSPREADS.

For a better administration of the present law I would suggest that ways and means be found to prevent the undervaluation of goods imported when the duty is ad valorem.

Mr. PALMER. What do you mean by the protection necessary to permit successful competition with the foreigner?

Mr. TENNEY. I mean such protection as will enable us to sell our goods in competition with the foreign manufacturer in this country.

Mr. PALMER. You mean to sell your goods in this country to the exclusion of the foreigner?

Mr. TENNEY. No, sir; not to the exclusion of the foreigner.

Mr. PALMER. What is "successful competition" from your point of view?

Mr. TENNEY. Successful competition would be competition that would allow us a reasonable profit on our goods and yet bring us in direct competition with the foreign manufacturers in this market. We are not asking for any duty that will exclude his goods.

Mr. PALMER. You are willing we should fix a rate of duty which will bring in a certain proportion of the foreign article?

Mr. TENNEY. Yes, sir; I am willing so far as I am concerned.

Mr. PALMER. What proportion of the goods comes in now?

Mr. TENNEY. In the higher grade of goods the English market has absolute control in this country, absolutely. In some of the lower grades of goods I think we have control of it.

Mr. PALMER. Are you suggesting a lowering of the duty on the lower grades of goods?

Mr. TENNEY. Yes, sir; I would suggest a graduated lower duty on the cheaper grades and a higher one on the finer grades. In other words, a duty so graduated that it would equalize the difference in cost between a high and a low grade spread.

Mr. PALMER. An ad valorem duty would be a graduated duty, would it not?

Mr. TENNEY. It would be graduated as to value; yes, sir. But the value of the spread is altogether different; that is, the labor cost in the high-grade spread is altogether different than it is in the low-grade spread.

Mr. PALMER. How much do you want us to reduce the duty on the low-priced spread?

Mr. TENNEY. I would suggest that we have a schedule based on the figures which Mr. Parker handed in for the jacquard in his cloth schedule. I think that would be a satisfactory basis on which to start. I did not come down here with any prepared schedule and therefore am not in position to give final figures that I think would properly adjust the matter. In the absence of certain English cost figures it is very difficult to say what would protect us or what would be right, but we are willing to start with his suggestion.

Mr. PALMER. Was his rate a suggestion below the present rate on low-priced goods?

Mr. TENNEY. His rate, I think, was 25 per cent for a minimum and 55 per cent for a maximum.

Mr. PALMER. You want the cheaper articles reduced?

Mr. TENNEY. Yes, sir.

Mr. PALMER. And the higher articles increased?

PARAGRAPH 332—BEDSPREADS.

Mr. TENNEY. Yes, sir.

The CHAIRMAN. Do you think that would make a more competitive rate all along the line?

Mr. TENNEY. I feel absolutely positive about it, and I think I can prove it, too.

Mr. PALMER. You are tending in the right direction all right.

Mr. TENNEY. I want you to understand our situation and what we are willing to accept. If I have gathered correctly the disposition of this committee, you are disposed to consider rates that would be classed as competitive, and this schedule that we ask you to consider would, in my opinion, be made up of such rates.

The CHAIRMAN. If it will be a reasonable amount of importations that will come in under it.

Mr. TENNEY. That would be true, sir, for I believe that the duties we are advocating would permit of such importation and at the same time allow of competition by the American manufacturer in the higher grades. The market to-day, in a grade of spreads higher than the one shown here, is entirely in the control of the foreign manufacturer. In proof of this I would relate this incident. I went into one of the leading dry goods stores in Boston, one that caters to the better class of trade, and upon inquiry was informed that two-thirds of the spreads they sold were imported. I venture to say that you can not find in the highest class hotels of this country any but imported spreads, and this would hold true also in the homes of the people of wealth. This is true, as I understand it, and goes to prove that in the high-grade spread referred to, the foreign manufacturer now has a monopoly of this market.

The CHAIRMAN. Do you think that the classification which Mr. Parker suggested yesterday differentiates between the various spreads so that we would let the heavy rate fall on the luxurious spreads that are used by the rich class of people and the reduction fall on the lower grade of spreads?

Mr. TENNEY. I think from a hasty examination of the schedule—of course I knew nothing about it until I came down here—that would be about the ratio we would want. I believe under that ratio we would get an importation of foreign spreads that we are not getting to-day. I believe also under that schedule we could manufacture a class of spreads that we can not manufacture to-day.

Mr. PALMER. Do you think we would get a cheap spread imported?

Mr. TENNEY. I think you would; yes, sir.

Mr. PALMER. Is that the kind you are manufacturing now?

Mr. TENNEY. Yes, sir; that is the kind largely we are manufacturing.

Mr. PALMER. And you do not manufacture the higher class of spreads?

Mr. TENNEY. We do not manufacture the higher class of spreads.

Mr. LONGWORTH. Why do you not?

Mr. TENNEY. Because we can not compete.

Mr. LONGWORTH. Why can you not compete?

Mr. TENNEY. Because the English manufacturers can undersell us and pay the 45 per cent duty.

PARAGRAPH 332—BEDSPREADS.

Mr. LONGWORTH. Why is that?

Mr. TENNEY. Because his labor is so much cheaper than ours.

Mr. LONGWORTH. His labor is cheaper?

Mr. TENNEY. Yes, sir.

Mr. LONGWORTH. Do you think Mr. Parker's basis would equalize the difference in the labor cost?

Mr. TENNEY. I am prepared to say I think it would, so far as I can judge.

Mr. LONGWORTH. Then that rate is high enough to enable you to pay American wages and compete against the English?

Mr. TENNEY. I hope so.

Mr. LONGWORTH. And therefore you would be able, under that protective tariff, to sell these higher classes of goods?

Mr. TENNEY. I think so, and I hope so, but I am not sure of that. If I was going to do anything to that schedule I would ask for a higher maximum rate.

The CHAIRMAN. In other words you can afford to have the prohibitive rates of the present law reduced on the lower grades of goods and face some competition if you can get a better rate for the higher grade goods?

Mr. TENNEY. Yes, sir.

The CHAIRMAN. And there would still be reasonable competition, you think, in the lower grade goods?

Mr. TENNEY. Yes, sir; I have no doubt about it.

Of course, Mr. Chairman, as a manufacturer, I am not devoid of a selfish desire to get all I can out of the business. We would like a rate that would give us complete control of the quilt business. To be quite frank, I am sure each one of us would like a monopoly of any business he is in. However, I understand that nothing of that nature is going to be entertained by this committee and that we must contemplate a reduction in this tariff. I am inclined to believe that a reduction so fixed that the American manufacturer can still live and do business with a reasonable profit, but with some foreign competition, is fair. I look at this foreign competition in the lower grades of spreads as additional competition. I should like to avoid it, but I feel that we perhaps have no right to ask to have it excluded so long as we are to be allowed to meet it on an equal footing. If that is to be the situation I am prepared to say "Amen."

Mr. LONGWORTH. All you are asking is to be put on the same basis as to your labor cost?

Mr. TENNEY. Yes, sir; that is what it amounts to.

Mr. LONGWORTH. You do not want protection on your energy or brains or anything of that kind?

Mr. TENNEY. No, sir.

Mr. LONGWORTH. If you paid the same rate of wages they are paying in England now, you would not need any protection?

Mr. TENNEY. I would not need any.

Mr. LONGWORTH. In view of the fact you have to pay the American wage scale protection is necessary?

Mr. TENNEY. I think it is necessary; absolutely necessary.

Mr. LONGWORTH. And that is all you are asking?

Mr. TENNEY. That is all we are asking for.

PARAGRAPH 332—TURKISH TOWELS.

The CHAIRMAN. Your time has expired, Mr. Tenney.
Mr. TENNEY. Thank you, Mr. Chairman.

BRIEF OF THE STEVENS MANUFACTURING CO., FALL RIVER,
MASS., RE BEDSPREADS.

FALL RIVER, MASS., January 27, 1913.

HON. OSCAR W. UNDERWOOD, M. C.,

Chairman Committee on Ways and Means, Washington, D. C.

DEAR SIR: I attended the hearing before the Ways and Means Committee on January 22, but was not on the list of speakers, but spent some time conferring with others who did speak on the different schedules.

I am taking the liberty of writing you to place our particular condition before you and your committee, and to ask you to kindly give the matter your careful consideration.

The Stevens Manufacturing Co., which I represent as superintendent only, manufactures fine and coarse cotton jacquard bedspreads, or quilts, as they are usually called. We have been running since 1892; have a plant doing very nearly \$1,500,000 worth of business and that on a capital of \$700,000. We have never paid an extra dividend of any kind, and have passed many. We also finish our own product, and are very large borrowers of money. After 20 years, roughly, we have just gotten out of debt, as shown by our annual statement of last October.

Now, as testified by Mr. Tenney and Mr. Parker, jacquard equipment is very expensive and requires a much larger investment than most other cotton mills.

In regard to competition, England and Europe practically control the fine quilt business of America. We have never had a chance to compete; we have just been able to get by on medium and coarser grades. As an example: Recently we were given a friendly opportunity to quote an order for 4,000 very fine spreads for a new large hotel, and, after careful figuring, we quoted \$5 each. We would have made on these quilts about 40 cents each had we gotten the order. Later we found that these quilts were bought of an importer for about \$4.

The bedspread or quilt industry is rather limited in this country. There are not a great many of us.

In your own bill, the so-called "Underwood bill," I note you have quilts in the clause with mop cloths, sheetings, etc. This is what almost scared us to death. Quilts are a luxury, and we have all the competition we can possibly stand, and we trust that you will see it in this light and give us as much consideration as we deserve.

Very respectfully, yours,

CHARLES B. CHASE, *Superintendent.*

TURKISH TOWELS.

TESTIMONY OF M. P. HOFFMAN, PHILADELPHIA, PA.

Mr. HOFFMAN. Mr. Chairman and gentlemen, I just want to state that I am not a manufacturer of Turkish towels, but I am engaged in selling the yarns to the manufacturers of Philadelphia and that vicinity. I felt that there had been a little negligence in not submitting a brief for your consideration, when there is a proposed reduction of 20 per cent on Turkish towels manufactured in this country, and that it would only be right and fair to submit a few facts in regard to the manufacture of those towels.

The profit is not abnormal; the industry is not overcapitalized; it is largely individual manufacturers, and there are no corporations, except two, which in the past two years have become insolvent. If you reduce the duty 20 per cent it would work a hardship on an industry that I think should at least be left on its present basis. The manufacturers are using the products of our cotton mills in this country, almost entirely all the coarse counts, ranging from 8's to

PARAGRAPH 332—TURKISH TOWELS.

20's. I think there is only a fair profit, and if you were to disturb and eliminate or curtail the manufacture of towels it would work a hardship on the spinners of our country, and I think they are entitled to at least a fair consideration at your hands, and that the tariff should remain as it is.

I thank you.

BRIEF SUBMITTED BY THE MANUFACTURERS OF TURKISH TOWELS, OF PENNSYLVANIA.

PHILADELPHIA, PA., *January 23, 1913.*

WAYS AND MEANS COMMITTEE, *Washington, D. C.*

GENTLEMEN: We, the undersigned manufacturers of terry fabrics, do hereby respectfully enter our protest to your honorable body against any reduction of tariff on the above-named articles, namely, Turkish towels, doilies, bath mats, bath sheets, wash cloths, etc., for the following reasons:

Because we need a tariff of at least 45 per cent to make a reasonable profit and give our employees a good living wage for a nine-hour work day.

Turkish towels have been made in the United States for upward of 30 years, and at the present time there are approximately 3,000 looms engaged in weaving goods of that character, and the annual product in money value is approximately \$4,500,000. The amount of wages paid employees would be about \$1,000,000. Although the manufacturers of terry fabrics have, during the period above mentioned, cultivated a knowledge of the manufacturing of this class of goods that enables them to produce any quality of Turkish towels at present in use by the consumers of this country, still the fact remains that the product at the present time is, in the greatest proportion, devoted to the making of goods of a lower grade. According to our best information, the division is about as follows:

	Per cent.
Goods retailing under 25 cents each.....	33
Goods retailing at 25 cents each.....	33
Goods retailing from 35 cents to 50 cents each.....	20
Goods retailing from 50 cents to \$1.50 each.....	14

These figures, if confirmed, illustrate the contention of the manufacturers that, although engaged in the industry for 30 years or more, they have now reached a point where they can produce the better grades of goods and market them in competition with similar goods of foreign make under the present tariff. This also accounts for the fact that the industry, although 30 years of age, remains to-day at a figure that is not equal in product to any one of the large individual mills manufacturing other classes of cotton goods. We cite one instance.

The Amoskeag Manufacturing Co., which have 22,200 looms, while we have but 3,000 in the United States. This is only one instance of many we could mention, each of which have a capacity over and beyond the entire industry in the Turkish towel production.

Imported Turkish towels are purchased by the consumer for two reasons: (1) The cheapness of the article as compared with the domestic product, and (2) the desire on the part of a certain portion of our population to use foreign goods. The latter class will buy foreign goods at any price—the higher in value the more appreciated—but the former class are looking for quality and to buy that quality at the lowest price possible. This trade belongs to the manufacturers of this country and is theirs if we are in a position to bid for the business on an equal basis.

The consumer has been accustomed to look for goods of certain weights and sizes at fixed retail prices. These sizes and weights were established at a time when cotton could be bought at from 6 to 8 cents per pound. The advance in cotton since that time has made it necessary for the manufacturer to use every device known and practice every economy possible to produce the article so that the retail price might be maintained. The manufacturer has had his limit of possibilities in this direction and it became necessary that the retailer share the difference with him by raising the price that he formerly paid for this article to a price that to-day means that the business is only profitable as an advertising medium. This statement applies only to the towels sold at retail at 50 cents each or under. Beyond that price the retailer gets

PARAGRAPH 332—CORSETS.

normal profit, but those goods are not made in America in any considerable proportion.

The manufacturer, on his part, has had to contend with the rapidly advancing price of cotton and cotton yarns.

Business done by the manufacturers of the United States on the better grades of goods is made possible by unexpected requirements of the retailer—demands that come to him for goods of a better grade when he is not in a position to furnish the foreign article. Were it not for this there would be no goods of this grade manufactured and sold by the manufacturers of the United States.

It is an absolute fact that the possibility for profit in the manufacturing of Turkish towels is not attractive to those contemplating engaging in the manufacturing of cotton fabrics, and their conclusions are prompted by the conditions that we have herein set forth.

In proof of this we can cite several cases where parties have started in this business in the last few years and have failed, with large losses to themselves and others. Another thing to take into consideration is the value of the amount of yarn purchased by the manufacturers of these goods, which are largely the product of cotton mills of the Southern States, which will amount, approximately, to \$3,000,000 per annum, which would be affected by the curtailment of this business.

In presenting this protest we earnestly hope it will have the favorable consideration which we are convinced it should receive, as this industry is comparatively in its infancy, and that you will give it the consideration it merits, without which the industry can not continue.

Respectfully submitted.

CORSETS.

BRIEF PRESENTED ON BEHALF OF THE CORSET MANUFACTURERS' ASSOCIATION OF THE UNITED STATES.

The Corset Manufacturers' Association of the United States, which includes in its membership most of the corset manufacturers of the country, begs to submit the following facts in connection with their industry:

There is absolutely no trust or combination amongst the corset manufacturers, and the freest competition prevails.

There is, approximately, \$15,000,000 invested in this industry in the United States. The total production is about \$40,000,000 per year, and about 30,000 people are employed in the manufacture of these goods.

The wages paid for labor entering into the manufacture of corsets and corset materials abroad are seldom more than one-third of the price paid for similar labor here, and never as much as one-half. The cost of the labor in the construction of corsets made in this country represents about 50 per cent of the total cost of the finished article.

The corset manufacturers believe that their product should be adequately protected, in view of the fact that so many of the materials entering into the construction of the same are largely taxed and the wages paid in foreign countries are such a small percentage of what are paid to the same class of operatives in this country.

Under existing conditions the present tariff rate is satisfactory; but if the rate of duty on the imported materials entering into the manufacture of corsets should be reduced, a proportionate reduction could be made in the rate of tariff on the finished article. There are certain materials entering into the manufacture of fine corsets (which at the present time come into closest competition with the foreign corset makers), such as yarn-dyed and yarn-bleached cloths, laces, and embroideries, fine silk materials, etc., most of which are not made in this country at all, and when made in this country are sold at a price just under the price of the imported article.

We present herewith a schedule of duties on materials entering into the construction of corsets and the difference in the rate of wages referred to above, maintaining that no lower rate of duty on corsets would give reasonable protection to American labor or to American corset manufacturers.

PARAGRAPH 332—CORSETS.

The following are the rates of duty on the principal corset materials:

	Per cent
Cotton cloths.....	35- 40
Silk materials.....	50- 60
Thread.....	40-100
Laces, edgings, and embroideries.....	70
Silk ribbons.....	50
Lacers.....	60- 75
Clasps.....	45
Boning wire.....	45

The following rate of wages prevails in the American corset factories:

	Per week.
Cutters.....	\$12.00-\$21.00
Sewing-machine operators.....	7.00- 13.50
Hand operators.....	6.00- 12.00
Examiners.....	6.00- 12.00
Overseers (male).....	15.00- 40.00
Overseers (female).....	9.00- 25.00
Designers.....	25.00-100.00
Boners.....	6.00- 10.00

The following are the rates of wages paid in foreign countries for similar work:

ENGLAND.

	Per week.
Cutters.....	\$8.00-\$9.00
Sewing-machine operators.....	2.00- 3.50
Hand operators.....	1.50- 2.50
Examiners.....	2.00- 2.50
Overseers (female).....	4.00- 6.00
Boners.....	2.00
Pressers.....	5.50- 6.00
Trimmers.....	2.00- 2.50

The above quotation of wages is from Portsmouth, England.

GERMANY.

Four of the largest corset manufacturers in Germany report average wages of experienced operators at about \$5 per week, and the average wage throughout the factories about \$3 per week. Heads of departments, \$6 to \$9 per week.

The report from Saxony, where a large number of corsets are manufactured, shows that the wages are a trifle lower than in the centers just noted.

Further information shows that in Germany German corset manufacturers pay for labor about 62 cents per day for a day of 12 to 14 hours.

In Canstatt, Germany.

Experienced stitching operators earn from \$2 to \$3 per week.

	Per week.
Cutters (men).....	\$3.75-\$5.00
Designers.....	6.50-10.00

Corset manufacturers having factories in small towns, and who make cheap goods, pay from 20 to 30 per cent less than the prices quoted.

BELGIUM.

Reports from Brussels, Belgium, state that there operatives earn from \$2 to \$6 per week. In the country districts, \$1.80 to \$3.60 per week; cutters, \$6 to \$9 per week.

Any reduction in the present tariff on corsets, unless accompanied by an equalizing reduction in tariff on materials used, would necessitate a reduction in the wages paid,

PARAGRAPH 332—MANUFACTURES OF COTTON CLOTH.

and you will note from list of manufacturers given below that any such reduction in wages would not be confined to any one locality but be widely distributed.

THE CORSET MANUFACTURERS' ASSOCIATION
OF THE UNITED STATES,

By W. A. MARBLE, *President.*

MANUFACTURES OF COTTON CLOTH.

COTTON WADDING.

BOCHOLT W., *March 19, 1912.*

To the WAYS AND MEANS COMMITTEE,

House of Representatives, Washington, D. C.

GENTLEMEN: According to the advice received from the American consul general of Hamburg in reply to my inquiry, the above request was at first addressed to the United States customs service, of New York. Having, however, learned from the latter that the matter is to be presented to you, I now beg to submit the same to your kind attention, referring for the necessary particulars to the correspondence carried on between the above office and my firm, as per letters and copies inclosed herewith, for your kind perusal. Kindly return the same with your reply.

In addition to the particulars given in the aforementioned letters I once more wish to emphasize that as cotton wadding is not made of cotton, but of the cheapest raw materials obtainable, such as inferior cotton waste (not exceeding Mk. 8 to Mk. 20 per cent Ko.), furthermore, rags, jute, old packing cloth (American wrapper), costing from Mk. 5 to Mk. 10 per cent Ko., the duty of 45 per cent ad valorem is quite out of proportion to the value of the article and to the trifling profit that can be realized on the same. It, therefore, ought to range in a special class of goods instead of being returned, as it is now, as manufacture of cotton not specially provided for.

I shall be glad to learn whether you can see your way to reduce the above rate of duty, and meanwhile I remain, gentlemen,

Respectfully, yours,

J. BORGERS.

(Inclosures.)

PARAGRAPH 332—MANUFACTURES OF COTTON CLOTH.

COTTON BINDINGS OR GALLOONS.

HAVERHILL, MASS., *January 17, 1913.*

Hon. AUGUSTUS P. GARDNER,
Washington, D. C.

DEAR SIR: As the subject of tariff revision is now up before the Ways and Means Committee, I wish to call to your attention a few facts in regard to a small industry which has been established in Massachusetts. About 8 or 10 years ago the experiment was tried of making cotton galloons or bindings for shoes in this country. These had never been made here before and everything which was used had always been imported. The business was started in a small way in Lowell and has gradually increased until at the present time there are very few, if any, cotton bindings or galloons for shoes imported. Some of these previously came from England, some from Germany and Switzerland; and owing to the tremendous advantages of labor enjoyed by those countries they were able to land their goods here cheaper than we could make them before the imposition of the present duty.

Within five years' time we have increased the wages of weavers in this business 50 per cent to 75 per cent; girls who at first earned \$6 to \$7 per week now get from \$9 to \$12. If any serious reduction in tariff should be made, it would mean that this industry would have to be abandoned. Since its start several other manufacturers have gone into it, making similar goods, and we hope you will use what influence you can to save the industries of Massachusetts.

Any further information which I can give you I shall be glad to furnish.

Respectfully, yours,

CHARLES N. DYER.

P. S.—My plant is now producing goods to the value of about \$50,000 per annum.

DRESS TRIMMINGS.

NEW YORK, *January 8, 1913.*

Hon. Mr. UNDERWOOD,
House Committee on Ways and Means, Washington, D. C.

HONORABLE SIR: On account of the many difficulties that we have been encountering with the present tariff on goods in our line (such as dress trimmings, braids, as well as buttons), we suppose that some changes in the tariff on this class of goods are contemplated.

Under the present schedules there are so many conflicting articles referring to the same class of merchandise, that being uncertain under which article particular goods are being classed, has in many instances resulted in serious loss to us, and no doubt to other importers in our line. Under the present tariff, quite a few items of low value are paying higher duty than formerly.

The reason we take the liberty of addressing this letter to you is not so much a matter of securing a reduction on certain goods, but what we, and no doubt all other importers in our line, are striving for is a tariff under which we will know just what the duty is on any specific article in our line.

We would thank your committee to take this matter under kind consideration, and if any further information pertaining to this is desired by you, we shall be only too pleased to be at your command.

Very respectfully, yours,

S. KATZ & Co.

COTTON GARMENTS.

NEW YORK, *January 9, 1913.*

Hon. OSCAR W. UNDERWOOD.

DEAR SIR: As a member of the National Cotton Garment Manufacturers' Association, interested as such in the future welfare of not only myself, but also the fellow members of our association, it would seem an easy problem to prove the disastrous consequences to our line of business should a decided reduction be made as contemplated in our tariff.

Conditions of living and environments in the localities abroad where similar grades of garments to ours are made are so radically different from those about us that no one need doubt as to the result should the exact facts be known.

MISCELLANEOUS.

There are two classes of cotton garments made for the American trade, viz, termed fantastic—extremely high class; made principally in Paris; price not cutting such a high figure as the style and quality of the trimmings and materials used.

In amount this class constitutes about 10 per cent of the total importation.

The great bulk of the foreign garments manufactured are of a low-priced, classical character for the use of the masses, and are gotten up to be sold at the lowest possible price.

The greater part of these low-grade goods are made in that section of France and Belgium formerly known as Flanders, though many of the hand-embroidered garments are made in the Department of Lorraine.

It is a well-known fact that with one exception living in these sections is at a lower percentage of cost than anywhere else in Europe.

In some towns and cities in Picardy and northern France it is computed that fully 70 per cent of the people patronize the Boucherie Hippique, or horse butchers.

Other conditions, such as amusements, housings, and all those things that go toward forming a home, are on a commensurate scale; consequently labor, with no incentive, becomes cheap.

These garments were formerly made entirely by hand, but the rapid strides made by the leading makers of American sewing machines have worked wonders.

We find at present factories of upward of three to five hundred operators, manufacturing this low grade of women's cotton garments, at wages ranging from 15 francs to 30 francs weekly.

The overhead expenses of these establishments are very small compared to similar American plants; shipping facilities are good; being within easy distance of the coast, goods can be landed in New York with no more expense than if shipped from any point in our Eastern States to New York City.

Then again, the cotton materials of which these garments are made are manufactured on the ground, so to speak, these mills all being situated in northern France, near certain streams famed for their bleaching properties.

The manufacturer is not obliged, therefore, to provide large floor space for the storing of reserve raw material as his American competitors do now.

With all these advantages, amounting to about 70 per cent in his favor, what will be the future of the American manufacturer if, in addition to the constantly changing whims of the fickle Goddess of Fashion; with a growing expense account and increased cost of labor, he is to face an inroad of low-cost merchandise, thrown on our market by foreign makers who have no interest in our people, our country, or its institutions other than a financial one?

The writer has thoroughly investigated this subject, having made semiyearly trips abroad for many years as European buyer of these goods for leading New York stores, visiting all the various countries where these goods are manufactured.

This matter is a very serious one to a large number of people and should be dealt with in an enlightened manner, consistent with the facts.

Respectfully, yours,

MENAGH & Co.,
Per L. R. MENAGH.

MISCELLANEOUS.

The following is a copy of a letter circulated by Messrs. Hornblower & Weeks, of Boston:

BOSTON, *January 3, 1913.*

The Harmony Mills, located at Cohoes, N. Y., operates over 206,000 spindles, making a medium grade of gray goods or converters' cloth. The capitalization per spindle amounts to approximately \$7.26 in notes, \$7.26 in preferred stock, and \$6.60 in common stock. The notes were issued to provide for new construction and the ordinary floating indebtedness of a mill corporation, representing purchases of cotton, etc. All this new construction has been completed, all new machinery installed, and surplus earnings will now be applied to the retirement of the notes. This will ultimately make the preferred stock a first lien on the property at about \$7.26 per spindle, which is one of the lowest capitalizations in the industry.

The new machinery is of the most modern type, including over 5,000 Northrop automatic looms. The entire property has been put in splendid condition, and as it stands to-day could not be duplicated at a cost much below \$25 per spindle.

Although the mill was not fully tuned up and operated at only about 70 per cent during the last quarter, costs were very low. The mill is to-day probably running

MISCELLANEOUS.

fuller than any similar mill in New England, is sold well ahead, and showing preferred dividends amply earned.

The kind of cloth manufactured can be produced in this country in competition with any foreign product, and, in fact, a considerable quantity is exported from this country each year. A cotton mill capitalized and operated on the above basis should be able to make good profits irrespective of tariff changes and other political conditions. In the present case we can say that the management views tariff revision with no apprehension.

The property is controlled by the Draper Co. and Saco-Pettee Co. interests through ownership of all the outstanding common stock. They are well known as among the world's leading manufacturers of textile machinery, and we do not know of any other case in which they have acquired so large an interest in a mill corporation.

The management is in the hands of the following: President, George A. Draper, Hopedale, Mass.; treasurer, Albert Greene Duncan, Boston, Mass. Directors, the above and Ex-Gov. Eben S. Draper, of the Draper Co., Boston; Frank J. Hale, of the Saco-Pettee Co., Boston; Robert F. Herrick, of Fish, Richardson, Herrick & Neave, Boston; Henry Hornblower, of Hornblower & Weeks, Boston; Lorenzo Semple, executor of the Garner estate, New York; Thomas W. Slocum, of Minot, Hooper & Co., New York; R. Paul Snelling, of the Saco-Pettee Co., Boston.

The preferred stock is selling at 118 and accrued dividend to net approximately 6 per cent free of tax in Massachusetts, at which price we offer any part of 300 shares. We can, if you desire, send you more complete information as to how the property was acquired by the above interests and put in its present condition on this very low capitalization.

Yours, truly,

HORNBLOWER & WEEKS.

STATEMENT BY HORNBLOWER & WEEKS.

Under date of January 4, 1913, there was sent out from the office of this firm a circular in reference to preferred stock of the Harmony Mills, which circular, contrary to the usual practice of this office, and by mistake, was not shown to any of the partners of this firm, nor to the officers or directors of the mill, before it was sent out.

This circular, among general statements in reference to the mills, its capitalization, equipment, etc., contained a statement to the effect that the management of the mills viewed tariff revision with no apprehension.

The officers of the corporation were named in the circular, including President George A. Draper and Ex-Gov. Eben S. Draper, of Massachusetts, one of the directors.

Since that time we have seen in the public prints various statements, some of them quoting accurately portions of the circular and others referring to it inaccurately, but to the general effect that the management of this mill had expressed themselves as having no fear of the action of the Democratic Party in the matter of tariff revision with respect to the prosperity of this company, and referring particularly to this as representing the views of Ex-Gov. Eben S. Draper, of Massachusetts, and his brother, George A. Draper, and this circular was referred to in the hearings before the Ways and Means Committee in Washington by a member of the committee when the cotton schedule was under discussion, and was offered as representing the views of Ex-Gov. Eben S. Draper, of Massachusetts, and his brother, George A. Draper.

The Messrs. Draper and the other directors have informed us and, because of the foregoing, desire us to publish that their views are not in accordance with the circular, so far as it refers to the tariff, but entirely at variance therewith.

HORNBLOWER & WEEKS.

BRIEF OF GARVIN & CO., NEW YORK, N. Y.

NEW YORK, April 7, 1911.

Hon. OSCAR W. UNDERWOOD,

*Chairman Committee of Ways and Means,
Washington, D. C.*

MY DEAR CONGRESSMAN: We desire to commend for the consideration of the committee about to present or frame a new tariff act or amendments to the present law the following:

That so far as the cotton schedule is concerned, we believe that the schedule covering cottons of the tariff of 1883 would be the very best your committee could recom-

MISCELLANEOUS.

mend. First, it was plain and simple to understand; second, it was a good revenue producer; third, it gave sufficient protection to American manufacturers.

(We might add now that at the present time the manufacturers do not need so much protection, but by reenacting the law of 1883 they could not offer valid objection.)

We believe we voice the sentiment of the majority, or nearly all the membership of the National Association of Custom Brokers, of which our firm are prominent members, in saying that we are vitally interested in reasonable and intelligent tariff legislation which means a general downward revision of the tariff. We call your attention in a special manner to the cotton schedule.

We hope that our suggestion will be remembered kindly by your committee, and wishing you the greatest amount of success, we are,

Respectfully, yours,

E. L. GARVIN & Co.

This concludes the hearings on Schedule I.

SCHEDULE J.

FLAX, HEMP, AND JUTE, AND MANUFACTURES OF.

SCHEDULE J—FLAX, HEMP, AND JUTE, AND MANUFACTURES OF.

COMMITTEE ON WAYS AND MEANS,
HOUSE OF REPRESENTATIVES,
January 24 and 25, 1913.

The committee met at 10 o'clock a. m., Hon. Oscar W. Underwood in the chair.

Present with the chairman: Messrs. Harrison, Shackleford, Kitchin, James, Rainey, Dixon, Hull, Hammond, Peters, Palmer, Payne, McCall, Hill, Fordney, Longworth.

The CHAIRMAN. The committee will come to order.

Gentlemen, since this is a new schedule that we are taking up, I would like to announce that the arrangement of the committee has been to allow each witness 10 minutes as his own time. Of course, the time that is taken up in cross-examination by the committee is not supposed to come out of the witness's time, but out of the committee's time. Our purpose in limiting the witnesses to 10 minutes is not to prevent them having a sufficient time to explain their case, but, on account of the large number of witnesses that are often here, it is necessary to put a limitation on the time, or we could not get through with these schedules.

PARAGRAPH 333.

Flax straw, five dollars per ton.

PARAGRAPH 334.

Flax, not hackled or dressed, one cent per pound.

PARAGRAPH 335.

Flax, hackled, known as "dressed line," three cents per pound.

PARAGRAPH 336.

Tow of flax, twenty dollars per ton.

FLAX.

TESTIMONY OF J. E. BARBOUR, REPRESENTING THE ALLENTOWN SPINNING CO., ALLENTOWN, PA.

The witness was duly sworn by the chairman.

Mr. BARBOUR. Mr. Chairman, I requested time on two paragraphs—one on jute and the other on linen thread. I was assigned time on both of those, but through some mistake they only printed one. I would like to start first with Schedule J, paragraphs 333, 334, 335, 336, 340, and 341.

The CHAIRMAN. Very well; proceed.

Mr. BARBOUR. I have been all my life in the manufacture of linen thread and two years ago I personally erected, started, and own in Paterson, N. J., an independent plant for the manufacture of linen

PARAGRAPHS 333-336—FLAX.

thread and wish to put before your committee some points that may help in fixing a new schedule.

Schedule J, paragraphs 333, 334, 335, 336, 340, and 341, cover linen thread and twines manufactured from flax.

I wish your committee to take into consideration the fact that the duty on flax machinery is 45 per cent, practically all of which machinery must be imported.

My plant cost me just over 50 per cent more than I could have erected one precisely the same abroad.

The average of the wages paid in this country over Great Britain and eastern Germany is as follows:

Great Britain: Rovers, 264 per cent; spinners, 380 per cent; reelers, 321 per cent.

Eastern Germany: Rovers, 288 per cent; spinners, 311 per cent; and reelers, 400 per cent.

There is no difference in the efficiency of the help.

There is no flax grown in this country that is possible for me to use, and there is not 5 per cent that is possible for any one to use. The flax grown in this country is grown for the production of seed and it is no more suitable for spinning than a radish is for eating that is allowed to go to seed. I do not believe flax will ever be grown in this country to compete with Belgium, Ireland, or Russia.

I would make the following suggestions: Paragraph 333, flax straw, present tariff \$5 per ton, free. Flax unhackled or dressed, present tariff 1 cent per pound, free. Paragraph 335, flax hackled, known as dressed line, 3 cents per pound, free. Paragraph 336, tow of flax \$20 per ton, free.

If all this raw material was put on the free list it would in no way adversely affect those concerns or the labor employed in hackling or dressing flax in this country, as a certain amount of hackling is necessary for the successful prosecution of the business in this country and only this amount is being done at present.

With free raw material a reduction of about 10 per cent can be made on the amount of the present tariff on finished goods.

Paragraph 340; threads, twines, or cords, made from yarn not finer than 5 lea or number, composed of flax, hemp, or ramie, or of which these substances or either of them is the component material of chief value, 10 cents per pound; if made from yarn finer than 5 lea or number, 12 cents per pound and three-quarters of 1 cent per pound additional for each lea or number or a part of a lea or number, in excess of 5.

The first part of this paragraph, I suggest, should read 9 cents per pound instead of 10 cents, equivalent to a reduction of 10 per cent. Yarns of this description are not made from dressed line but from tow or hemp dutiable at \$20 per ton.

"If made from yarn finer than 5 lea or number, 12 cents per pound and three-quarters of 1 cent per pound additional for each lea or number or part of a lea or number in excess of 5 lea," should read 12 cents per pound and five-eighths of 1 cent additional, instead of three-quarters of 1 cent per pound.

The imports in 1910 were as follows: Five hundred and fifty-five thousand five hundred and eighty-six pounds, with a value of \$353,853, paying a duty of \$114,867, making the United States value, or the value laid down in this country, duty paid, \$498,720.

PARAGRAPHS 333-336—FLAX.

In 1911 the imports were 576,903 pounds, with a value of \$360,288, with a duty amounting to \$146,258, making the value laid down, duty paid, in this country of \$506,546.

In 1912 the imports were 647,842 pounds, having a foreign value of \$459,914, paying a duty of \$170,455, with a value, duty paid, in this country of \$630,369. These imports equal about one-sixth of the production of this class of goods in this country.

The effect of reducing this one-eighth of 1 cent per number is equivalent to a reduction of 10 per cent of the present tariff on the whole range of numbers from 14 to 60 lea which embrace all the practical numbers of the trade. I adopt this method of reduction as I consider it better than an alteration of the base or specific portion of the paragraph, as it provides a regular and, everything considered, a more uniform reduction than though the base is reduced.

I would also say that there are great practical objections to a purely ad valorem tariff, so far as linen thread is concerned. It is very difficult for any one to tell the value of a linen thread by any ordinary method of examination.

You can not depend upon appearances as a third or fourth quality thread can be made to look just as well as a first quality. It can be spun just as fine; it can be leached and dyed the same colors and to all outward appearances it is just as good, but the real test is in the practical working, and running it on a high-speed sewing machine. The result is that high-grade threads which will run on the sewing machines are apt to be brought in under low valuation, especially if a foreign manufacturer bills to his own house in this country. The customhouse in previous years has had considerable experience in ad valorem valuations.

Paragraph 341. Single yarns in the gray, made of flax, hemp, or ramie, or a mixture of any of them, not finer than 8 lea or number, 6 cents per pound; finer than 8 lea or number and not finer than 80 lea or number, 40 per cent ad valorem; single yarns made of flax, hemp, or ramie, or a mixture of any of them, finer than 80 lea or number, 15 per cent ad valorem. Ramie sliver or roving, 35 per cent ad valorem.

The first part of this paragraph, "Not finer than 8 lea or number, 6 cents per pound," I would recommend should read 5 cents per pound instead of 6 cents, this amounting to 16 $\frac{2}{3}$ per cent reduction.

"Finer than 8 lea or number and not finer than 80 lea or number, 40 per cent ad valorem;" I would leave this as at present, due entirely to the fact that we have not now protection enough, as the records for the last three years show, as follows:

In 1910 there were 1,440,452 pounds, with a value of \$354,811.81, paying a duty of \$135,143.94.

In 1911 there were 1,934,354 pounds, with a value of \$551,775, paying a duty of \$217,868.47.

In 1912 there were 2,135,830 pounds, with a value of \$544,217, and paying a duty of \$217,686.

The figures for 1912 are estimated, and this shows an amount which, I should judge, must be from 35 per cent to 40 per cent of the consumption of these yarns in this country.

The last portion of this paragraph, "finer than 80 lea or number 15 per centum ad valorem." This should remain as it is. This is not sufficient protection to have it manufactured in this country, but

PARAGRAPHS 333-336—FLAX.

this protection at least is required to prevent importation of sizes to compete with heavier numbers.

Ramic sliver or roving should remain as it is—35 per cent—as it is not a raw material, but is advanced in the process of manufacture.

The argument for specific duty on linen thread does not hold in single yarns in the grey as these are sold just as they are produced by the spinning frame without any finishing, and they are a standard commercial article in the manufacturing centers of Europe and are quoted regularly on the exchanges. The difference in appearance is quite marked between the different qualities and can be determined by anyone familiar with the trade. For this reason I believe an ad valorem duty is equitable, just, and satisfactory to everyone.

All of these recommendations as to reductions in the tariff on the finished goods are based wholly on the supposition that the duty is removed from raw flax, tow and dressed line; otherwise these paragraphs should be left as they are, as I can see no chance of reduction with fairness to the industry.

I have here a short statement giving a comparison between the present tariff and the proposed reduction, showing the amount of the present ad valorem rate and the amount under the new specific rate, and how they would work out ad valorem.

The CHAIRMAN. You may file that and we will examine that in the record.

Comparison between present tariff and proposed reduction if raw material is admitted free, in connection with brief submitted by J. E. Barbour, Lake View Mills, Paterson, N. J.

SCHEDULE J, PARAGRAPH 340.

Lea.	Foreign prices.	Present tariff, 12 cents and $\frac{1}{4}$ additional.		Proposed tariff, 12 cents and $\frac{1}{8}$ additional.		Rate per cent reduction.
		Cents.	Ad valorem rate.	Cents.	Ad valorem rate.	
	<i>Cents.</i>					
14.....	58	18 $\frac{3}{4}$	32.3	17 $\frac{1}{8}$	30.4	5.88

60.....	127	53 $\frac{1}{4}$	42	46 $\frac{3}{8}$	36.5	13.10

Mr. BARBOUR. The second portion of my remarks, Mr. Chairman, have reference to Schedule J, paragraphs 338 and 578.

Single yarns made of jute, not finer than 5 lea or number, 1 cent per pound and 10 per cent ad valorem; if finer than 5 lea or number, 35 per cent ad valorem; yarns made of jute not otherwise specially provided for in this section, 35 per cent ad valorem.

Most of the importations from abroad, I believe, would come under the first portion of this paragraph; that is, not finer than 5 lea or number.

PARAGRAPHS 333-336—FLAX.

The average foreign prices for the last three years, from custom-house records, have been as follows: 1910, $4\frac{1}{2}$ cents; 1911, 4.6 cents; 1912, 5.9 cents; and the quotations from Dundee dated December 12 on 15 pounds carpet yarn, which is the basis size manufactured here, are equivalent to $8\frac{3}{4}$ cents, taking the tariff of 1 cent per pound and 10 per cent ad valorem, we get 1.81 protection, which is about 22 per cent. This is a very low rate of duty.

More than 95 per cent of our machinery must be imported from abroad, on which we have paid 45 per cent duty. The present tariff bill has reduced the rate of duty to 30 per cent, which just depreciates our individual plant in the neighborhood of \$50,000.

Not a new plant, wholly for the manufacture of jute yarns, has been started in this country for the last 10 years, showing that the protection is not sufficient.

A plant in this country costs from 50 to 60 per cent more than abroad.

The average of the wages paid in this country over Great Britain and eastern Germany is as follows:

Great Britain: Rovers, 264 per cent; spinners, 280 per cent; reelers, 321 per cent.

Eastern Germany: Rovers, 288 per cent; spinners, 311 per cent; reelers, 400 per cent.

Our coal and transportation charges are continually advancing.

I recommend that the first portion of paragraph 338 be changed to read: "Single yarns not finer than five lea or number, one and one-half cents per pound and 10 per centum ad valorem," and the balance of this paragraph be allowed to remain as at present, that is, 35 per centum ad valorem.

Paragraph 578, free raw jute, remain free as at present.

The only advantage we have over foreign competition is being on the spot and able to make quicker deliveries, satisfy our customers by calling on them or talking to them over the telephone, but with the very large trade, who carry large stocks, it pays them to buy yarn abroad.

I believe that the one-half cent per pound that I have asked for will not increase the cost to the consumer the slightest, for the following reasons:

The jute trade in this country is most unstable and unsettled. Raw jute advances or declines 50 to 80 per cent one year over the other. When trade is poor abroad and raw material very cheap, our protection here is reduced on account of the ad valorem rate of duty.

Quantities of goods are sent to this market, which compels the mills here to run two-thirds to three-quarters of their production, as they can not compete in price. If this foreign competition was largely eliminated the mills here could make a living and profit without increasing their prices, due to the fact of running steadily.

There has never been the slightest combination or trust in the jute trade in this country, but always the keenest competition.

We do not need this slightly increased protection asked for when trade is good, but when trade is bad we do not get protection under the present tariff law, the very time when it is most needed.

PARAGRAPHS 333-336—FLAX.

Thank you, Mr. Chairman.

The CHAIRMAN. Are there any questions, gentlemen?

Apparently not; you may be excused, Mr. Barbour.

**TESTIMONY OF J. SIDNEY STARLING, ON BEHALF OF THE
FLAXEN FIBER-DOWN CO. (INC.), OF LOCKPORT AND NORTH
TONAWANDA, N. Y.**

Mr. Starling was duly sworn by the chairman.

The CHAIRMAN. Proceed, Mr. Starling.

Mr. STARLING. I beg to appear before you as representing the Flaxen Fiber-Down Co. (Inc.), of Lockport and North Tonawanda, N. Y., of which I am president and manager.

In view of the pending tariff hearing and the probability of changes thereto, we beg to submit the following suggestions in connection with Schedule J, especially referring to paragraphs 333 and 334 of the tariff of 1909.

Paragraph 333 places \$5 per ton on flax straw but does not stipulate whether this straw shall be green, unimproved, just as it is gathered from the virgin soil (see Exhibit A), or whether retted as per Exhibit B, in which condition its value has been improved twofold commercially, as this process of retting whether by the dew method or water process is both laborious and lengthy, consequently the flax straw in the retted condition is much more valuable than the green straw, so called, which heretofore has been considered of but little value in this condition for fiber purposes. However, there are some new industries like ourselves who are using considerable quantities of this green straw for fiber and yarns, but we are put to a great disadvantage when importing same in this crude and unimproved condition in competition with the commercially improved retted straw, so called, both of which are classed at \$5 per ton.

Now, therefore, in view of the above facts we respectfully ask that green flax straw, unimproved, whether straight or broken (see Exhibit C) so as to be baled for transit more conveniently, be admitted free of duty.

In fact we would respectfully ask your committee to seriously consider the advisability of placing all green-flax products, whether straw or fiber to be used for spinning purposes, on the free or favored list. If this is done it will greatly encourage and assist the spinning of linen yarns and the weaving of same in this country thereby not only aid to build up some of the Nation's infant industries but also be the means of placing before the public a line of crashes, towels, coarse linens, etc., such as are now most used in the majority of households at a lower price than at present. See Exhibits D, E, F, and G, all of which are made by us and kindred industries. Our company has recently acquired considerable properties at North Tonawanda, N. Y., and we are equipping a plant there for the purpose of making these goods from the green-flax straw in question.

To further encourage and assist such industries as ours we would beg that your committee does not seriously disturb the present and existing duties now levied on yarns made from flax, hemp, or ramie, or the mixture of any of them and more especially the coarser ones

PARAGRAPHS 333-336—FLAX.

up to and not finer than 18 lea or number, as these are the ones most manufactured in the United States and are also the numbers which come in for the keenest competition from abroad, as we can not compete with these foreign-made yarns if admitted free owing to well-known conditions which exist regarding foreign labor versus home labor. Another factor that works to our disadvantage is the fact that we have to go abroad for nearly all of our machinery, as but very little of it is made in this country but may be as the linen industries of this country flourish.

We believe statistics show that linen industries are suffering more from foreign competition than any other textile industry in this country, and we respectfully suggest that all reasonable assistance and protection be given these industries.

The CHAIRMAN. Is that all?

Mr. FORDNEY. I would like to ask the gentleman a question. You are a manufacturer of these goods in this country?

Mr. STARLING. Yes, sir; experimentally.

Mr. FORDNEY. Are you asking for a lower rate of duty on your finished product?

Mr. STARLING. I beg your pardon?

Mr. FORDNEY. Are you asking for a lower rate of duty to be fixed on your finished product?

Mr. STARLING. No, sir.

Mr. FORDNEY. But you are asking that your raw materials be put on the free list?

Mr. STARLING. In competition; there are two different fibers. This flax [indicating] is retted, and this flax [indicating] is not retted, and the flax that is retted has more labor on it and comes in at \$5 a ton duty. That [indicating], when it comes here, is worth twice as much as that [indicating], because that is the condition where the fiber is taken off and it is more valuable than the green flax.

Mr. FORDNEY. But it is your raw material?

Mr. STARLING. This [indicating] is the raw material.

Mr. FORDNEY. Yes.

Mr. STARLING. Of course, we are interested in raising flax in this country, and we are experimenting in raising a fiber flax. American farmers have been giving most of their attention to the raising of flax for seed, but we want a fiber flax.

Mr. FORDNEY. You would be at a decided disadvantage if Congress put your finished product on the free list and put your raw materials upon the protected list?

Mr. STARLING. We would be at a disadvantage?

Mr. FORDNEY. Yes; would you not?

Mr. STARLING. It would seem to be working doubly against us.

Mr. FORDNEY. That is what the man raising flax would say about your argument, if you got what you want—that you would be protected and he not protected. That is hardly consistent, my friend, to ask that you be protected but that your neighbors' finished product, which is your raw material, be either put on the free list or lowered.

Mr. STARLING. We would be glad to raise our own flax, and we are interesting ourselves in raising our own flax in this country.

PARAGRAPHS 333-336—FLAX.

Mr. FORDNEY. But you can not raise all the flax you put through your factories. You would look to the farmers to raise the flax for you, would you not?

Mr. STARLING. Yes, sir; we would look to the farmers to raise the flax on contract or rent their land.

Mr. FORDNEY. You are asking for an additional duty on your finished product, as I understand you?

Mr. STARLING. No, sir.

Mr. LONGWORTH. You have a certain protection here, a protection on the difference between the duty on raw flax and on this finished product. Now you are asking for additional protection on the raw material.

Mr. STARLING. This [indicating] is not our finished product at all. We do not use this.

Mr. FORDNEY. That is the finished product of the farmer, is it not?

Mr. STARLING. Of the farmer?

Mr. FORDNEY. Yes; the man that raises the flax.

Mr. STARLING. No; this is the product of the man who retts the flax and ships it for fiber purposes. This is the product [indicating] before it has been treated. He treats it either in Europe or in Canada; they treat it and make it more valuable by retting it in water or on the land.

Mr. FORDNEY. When it leaves the farmer it is not further advanced by the farmer than this green flax?

Mr. STARLING. No; not as a rule.

Mr. FORDNEY. Therefore it is his finished product and he puts all his labor and money into it, and whatever state it is in when it leaves him it is his finished product. I will tell you that I am a protectionist; I want to see your industry protected, but I declare I do not like to vote to protect your industry and destroy the other fellow.

Mr. STARLING. No; I think I am not understood. I do not think I made myself plain, because that is not the condition. If you will permit me—

Mr. FORDNEY. Well, I thank you. I hope I have misunderstood you.

Mr. STARLING. Yes. We use green flax, sir.

Mr. FORDNEY. That is, flax straw?

Mr. STARLING. Green flax straw. We use it.

Mr. FORDNEY. Yes.

Mr. STARLING. The green flax straw, just as it comes from the farmer, after he has taken the seed off, and it is broken in that condition and the fiber taken out and these yarns [indicating] we make right here.

Mr. FORDNEY. Yes.

Mr. STARLING. And they are finished up to this [indicating]. This is our finished yarn, made from green flax straw in this country.

Mr. FORDNEY. One is bleached and the other is not.

Mr. STARLING. Those are processes. We take them green and process it in the yarn. That is the way we get it. It is our new way.

Mr. FORDNEY. You bleach it by the new process?

Mr. STARLING. A process which we have; yes, sir; and those materials are made from it and have been submitted to the public and are claimed to be very satisfactory for use.

PARAGRAPHS 333-336—FLAX.

Mr. FORDNEY. I do not suppose I will have anything to say about writing the rate of duty into the law, but if I did, I would protect the other man's industry as well as yours—the man who raises the straw.

Mr. STARLING. The man who raises the straw?

Mr. FORDNEY. Yes; and from that all the way down along the line, giving them a compensatory duty to offset the difference in cost of production here and abroad.

Mr. STARLING. I would like to suggest that the two should be made equivalent. In this dewretted straw, when it comes in, it is worth about \$50 a ton and the green is worth \$20 a ton.

Mr. FORDNEY. I agree with you that there should be a greater rate of protection on one than on the other.

Mr. STARLING. That is my suggestion; that one should be put down and the other should be raised.

Mr. FORDNEY. All right; that is all.

The CHAIRMAN. That is all, sir.

SUPPLEMENTARY BRIEF SUBMITTED BY THE FLAXEN FIBRE-DOWN Co. (INC.), OF
LOCKPORT, N. Y.

COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

GENTLEMEN: I am in receipt of a copy of the tariff hearings No. 17, comprising Schedule J, and in glancing over the report on pages 3623, 3624, and 3625, respectively, which refer to my hearing before your committee in behalf of our company, especially the part referring to the questions by Hon. Joseph W. Forduey, of Michigan, I fear I misunderstood the exact meaning of some of the questions put by that honorable gentleman. This misconception was undoubtedly due in part to my hearing being affected, together with the fact that our time was very limited at that hour of the day. Apparently I was not able to make our position as plain as I would liked to have done.

Consequently, I beg your indulgence and permission to submit the following supplementary corrected statements:

In the first place we are only just past the experimental stage in manufacturing the line of goods referred to in brief, but are now branching out to manufacturing on a much larger scale. As stated in original brief, our goods are manufactured from green fibrous flax straw, as per Exhibit A. This material has naturally received a great deal of our study and attention. During the past few years we have spent considerable time and money both at home and abroad studying the cultivation of a fibrous bearing flax straw, consequently we are in possession of reliable data thereto, gained by personal investigations and experiments.

CLASSIFICATION.

In this country there are two distinct classes of flax straw, i. e., fibrous bearing and seed bearing. The former, whilst not bearing as much seed, has considerable commercial value for its fiber; the latter a short or dwarf-like plant with bushy top, bearing much more seed, but is of little value for its fiber, being harsh and brittle and having but little if any value commercially from a linen manufacturers standpoint. About its only use is for upholstering tows, insulating materials, etc. This class of straw is produced mostly in the so-called Western or Middle States, also the Canadian Northwest. It is in no way a competitor of the fibrous flax as used by industries such as ours. Consequently, we believe that there could advantageously be two distinct or separate classifications for these products in question. Our belief refers exclusively to the fiber-bearing flax straw as it is the only one that interests the linen spinning and kindred industries.

PARAGRAPHS 333-336—FLAX.

RESOURCES.

With the exception of Washington and Oregon but little real good fiber-bearing flax straw suitable for our purposes is raised in the United States. Of such as we can use in part, Michigan possibly stands first, Ohio and Wisconsin second and third, respectively. Recent experiments are steadily improving these qualities but not quantities. Straw from the so-called Western States is not classed with the fiber bearing, but rather seed bearing, upholstering tows, etc.

CONDITIONS.

The conditions which result in producing the different grades or classes of fiber may be numerous. Principally atmospheric, condition of soil, class of seed used, also and more especially the method of sowing and cultivation of same.

PRICES.

The present average market prices of green flax straw in the different States, after the seed is taken off, is as follows (f. o. b. shipping point, per ton):

Washington and Oregon, \$10; Middle Western States, \$7; Wisconsin, \$11; Ohio, \$13; Michigan, \$16; Ontario, \$18.

The higher prices realized is due mainly to two things: Standard of quality and demand. The higher standard fiber-bearing quality of the Michigan and Ohio straw is undoubtedly due in part to the enterprise of such concerns as the James Livingstone Flax Co., Yale, Mich.; the Summers Fibre Co., of Port Huron; the Ashland Flax & Tow Co.; and others of us who have been educating and encouraging the farmers in producing a fibrous as well as a seed-bearing product. Even with all this we are unable to secure sufficient domestic straw of the proper quality. Whilst the Pacific Coast States produce superabundance of superior quality straw, the freight rates make it prohibitive.

The Ontario straw we find to be the next best fiber-bearing quality. This is doubtless due to local conditions and encouragements. But we can not use this advantageously owing to its original high price, together with the freight and duty.

COMPETITION.

In view of the above existing facts and figures the American growers and dealers of fibrous flax in the green have positively nothing to fear from competition with the Ontario growers and dealers, as under the present tariff conditions there is a difference of at least \$8 per ton between the two country's products here. Even with green flax straw on the free list, Ontario straw, freight included, comes much higher than our best American-grown straw.

METHODS.

Most of the fiber-bearing flax has been grown under contract by the dealers and manufacturers of retted fiber, etc., either by the ton or acreage. Some rent the land outright from the farmers and cultivate and harvest their crops. Similar conditions exist in Ontario.

RETTING.

This is a time honored method which the green straw is subjected to after the seed has been carefully taken off. This results in making the fiber more valuable, also makes it possible to relieve the fiber from the stem or wood-like portion by the scutching and hackling process.

VALUES.

Flax straw, when properly retted, see Exhibit B, has more than doubled its original value but still comes in at the same duty as the original green, i. e., \$5 per ton. But the green flax straw when merely crushed or broken, as per Exhibit C, is taxed at \$22.50 per ton duty whilst its actual value is only about \$26 per ton.

During the year 1910 we had occasion to bring in considerable broken green flax from Ontario, owing to our inability to secure a sufficient supply of satisfactory domestic quality. When passing some through port of entry it was classified as tow and taxed at \$20 per ton, although its original cost was less than \$30 per ton. We took the matter

PARAGRAPHS 333-336—FLAX.

up with our collector of customs at Niagara Falls, N. Y., and inquired whether there was not a more equitable classification for this product, with the result that he wrote to the port of New York, which act resulted in our having to pay even a higher rate of duty, i. e., 1 cent per pound. See inserted copy of letter:

UNITED STATES CUSTOMS SERVICE,
PORT OF NEW YORK,
March 22, 1910.

The COLLECTOR OF CUSTOMS,
Niagara Falls, N. Y.

SIR: This office is in receipt of your letter of the 18th instant inclosing a sample of so-called flax straw and requesting that you be advised as to its proper classification.

In reply you are informed that merchandise like the sample submitted, if entered at this port, would be returned for duty by this office as flax, not hackled, at 1 cent per pound under paragraph 334 of the tariff of 1909.

The sample is herewith returned.

Respectfully,

(Signed)

GEO. W. WANAMAKER,
Appraiser.

CONCLUSION.

We believe that if green fibrous flax straw were placed on the free list that the results could not possibly be detrimental to our growers of the like product, inasmuch as American manufacturers would not resort to Canadian (conditions make European straw prohibitive even if admitted free) markets for their raw material only in case of urgent necessity, such as shortage of supply in quality or quantity.

However, should your committee deem it wise to still continue a tax on this particular class of green flax straw, we believe it would best serve the interests intended by placing a tax of not exceeding 20 per cent ad valorem on the three specific articles or products as indicated by Exhibits A, B, and C, thus placing these on a more equitable basis.

Trusting that in submitting the above we have not been unduly trespassing on your valuable time and patience, thanking you to give same due consideration.

Yours, very truly,

FLAXEN FIBRE DOWN Co.,
Per J. SIDNEY STARLING,
President and Manager.

STATE OF NEW YORK,
Niagara County, ss:

J. Sidney Starling, being duly sworn, deposes and says that the above statements submitted by him in brief are correct and true to the best of his knowledge.

J. SIDNEY STARLING,
President and Manager.

Sworn before me this 3d day of February, 1913.

[SEAL.]

A. C. TOVELL,
Notary Public.

TESTIMONY OF C. LOUGHLIN.

Mr. LOUGHLIN. Mr. Chairman and gentlemen, I am here on behalf of the flax dressers employed in the Marshall Linen Thread Mills, of Newark, N. J. We are interested in the duty on raw and dressed flax. The present tariff has been very unsatisfactory and has wrought havoc with the flax-dressing industry. Either the duty on raw flax is excessive or the duty on dressed flax is insufficient. We flax dressers are being steadily driven out of our occupation, while the work which we ought to be getting is being done in Europe and the product imported to this country.

The increase in dressed flax in 1912 over 1911 amounted to over a half million dollars, while the number of flax dressers in this country was reduced over 30 per cent in the same year. This decrease has been continuous for the last 20 years. We have served an apprenticeship of four years and we feel very much being driven into the ranks

PARAGRAPHS 333-336—FLAX.

of the causal laborer, or, worse still, into the ranks of the unemployed. Therefore, gentlemen, we are here to ask that our case be considered and that an opportunity be given us to compete with the cheap labor of Europe. That cheap labor is the cause of all the trouble.

We wish to suggest that the raw flax be put on the free list; and gentlemen, I will say that I was much interested in the samples of flax that have been shown to you, and as an experienced flax dresser I wish to state that that is the most inferior class of flax I have ever seen. I have never before seen American flax, and in the mill where I am now employed, which is the largest flax-dressing concern in this country, there is not a pound of American flax used. Some years ago we used a little of the Canadian flax, but the Canadian flax was of such inferior quality that it also has been abandoned. It is more inferior in quality than the worst class of flax produced in Europe—and that is the Russian flax. All the flax which we dress comes exclusively from Europe—from Ireland, France, Belgium, Holland, and from the Balkan States, or Russia. We believe that if the raw flax was put on the free list that it would both stimulate and encourage the flax-dressing industry in this country. Taking the average amount of imports of raw flax for the past four years, we find that this would mean a loss in revenue of \$156,000 a year. But we believe that it would be no great hindrance to the administration, while we know that it would restore employment to a great number of men who have at least a right to look to the Government for protection.

We have explained in our brief that it requires from 1½ to 2 pounds of raw flax to make 1 pound of dressed flax and how this tax on the raw material is a very heavy tax on our labor, or rather the product of our labor. We have also set forth the great difference in wages in this country and in European countries. We received \$14 per week in this country, and in Great Britain there is paid from \$6 to \$7 per week; in Holland and Belgium they receive \$3 per week, and in Russia they receive \$2.70 per week.

With this heavy tariff on our raw material and this very low tariff on our finished material we are not able to hold our own, and as the managing director of the largest flax-spinning concern in the country said to a deputation of his workers, he could not dress the higher grades for he could import it cheaper, and therefore his stockholders would not allow him; nor can it be expected that a business man would refuse to avail himself of the cheapest market. Unfortunately for the flax dresser of the United States the flax spinner finds the European market the cheaper, while the flax dresser is allowed to feel the pinch of poverty. During the past year the men whom I am representing could only get on an average of 4½ days work per week, and their average wage was only \$11.50. At the present time that could never be called a living wage for a man with a family dependent upon him.

My one aim is to make it clear to you that our industry is on the decline for want of protection, while on the other hand all other branches of the flax-spinning industry are increasing year by year. In fact, a new factory has opened in our vicinity, and additions have been made to those factories that have been running for years.

I wish to call your attention to the fact that there are only three firms in the United States who employ flax dressers, yet there is no

PARAGRAPHS 333-336—FLAX.

firm that does not use dressed flax. Should we not expect that those manufacturers in this country who are enjoying protection on their finished article be made to realize that the workmen of the country also need the same protection on the only commodity which they have to sell—their labor?

We do firmly believe that with raw flax on the free list there would not be a flax-spinning mill in the country but would realize that it would be to their advantage to employ their own flax dressers.

After consultation with a number of men who have a large experience in the growing and handling of flax, I can not admit that flax can be grown for seed and for fiber at the same time. Flax that is grown for fiber must be pulled before it is ripe, when the sap is yet in the stem, so that the strength of the fiber will be preserved. On the other hand, flax that is grown for seed is allowed to ripen, so that it can be thrashed. Therefore, the straw is dry and the fiber brittle when it is pulled, which makes it useless for spinning. It could be used for making tow for upholstering purposes. So we ask that the present duty be retained on flax tow.

Mr. FORDNEY. You are asking protection for the flax dressers, are you?

Mr. LOUGHLIN. Yes, sir.

Mr. FORDNEY. You are in that business?

Mr. LOUGHLIN. Yes, sir.

Mr. FORDNEY. You say you have felt the pinch of low wages and small employment?

Mr. LOUGHLIN. Yes, sir.

Mr. FORDNEY. What do you think about the fellow that produced that raw material in the country? If you had your article placed on the protected list and he is on the free list, where do you think he would be pinched?

Mr. LOUGHLIN. I believe that it has been tried time and again to raise flax in this country, but each effort has been unsuccessful.

Mr. FORDNEY. Since I was a boy, my dear friend, I pulled flax on my father's farm, that was grown successfully. It can be grown successfully in several States in this Union, and there is no question about that.

Mr. LOUGHLIN. Was it not for seed?

Mr. FORDNEY. You have heard the gentleman testify that he and his associates are now engaging in the establishment of that industry here, and that flax of good fiber can be grown and is grown here. You say that can not be done.

Mr. LOUGHLIN. Why is it that the manufacturers of this country are not using the American-grown flax?

Mr. FORDNEY. Because of the arguments of such men as you, who want protection on your own industry and free trade on your neighbor's industry; that is why.

Mr. LOUGHLIN. We need protection, because as I have already shown, our business is a declining one.

Mr. FORDNEY. How about the man who produces the raw material? Does he not need protection?

Mr. LOUGHLIN. Yes, sir; when he is able to produce it.

Mr. FORDNEY. Then why don't you give it to him? Why do you ask for free trade on his product and protection on your own?

PARAGRAPHS 333-336—FLAX.

Mr. LOUGHLIN. I have stated that the tariff on the raw flax was excessive or else the tariff on the dressed flax is insufficient.

Mr. LONGWORTH. What do you call an excessive tariff? How high a rate is excessive?

Mr. LOUGHLIN. I would call it an excessive tariff if it would affect the working man or if it would prohibit the importation of the flax.

Mr. LONGWORTH. Let us see. How high a rate would you call that, generally speaking? How high a rate would you call an excessive rate—25 per cent or 30 per cent?

Mr. LOUGHLIN. There is only about 7 per cent on raw flax.

Mr. LONGWORTH. It is very low; almost imperceptible?

Mr. LOUGHLIN. I wish to emphasize this fact, that it takes from $1\frac{1}{2}$ to 2 pounds of this raw flax to make 1 pound of dressed flax. In the case of Russian flax it takes even more, about $2\frac{1}{4}$ pounds on the average. Therefore, in producing 1 pound of dressed Russian flax, the manufacturer is paying more in tariff than he has to pay to the flax dresser in wages. That is excessive.

Mr. LONGWORTH. It seems almost inconceivable that a duty of only 6 per cent can really affect an industry.

Mr. LOUGHLIN. It has affected our industry, as we have already shown. For the past 20 years the number of flax dressers in the country has been steadily reducing. In the last year we had been reduced 30 per cent, while the imports of dressed flax had been increasing.

Mr. LONGWORTH. How do you account for the fact that when flax was free under the Wilson law the value of importations was less than a million dollars, while now it runs up to over two and a quarter millions?

Mr. LOUGHLIN. When flax was on the free list the flax spinning industry was in its infancy in this country. It is one of the new industries. It has only been fostered in this country since the tariff has gone on. The firm by which I am employed and the Barbour Flax Co. had their firms in England and Ireland, respectively. When the tariff law was passed in this country, they found it was unprofitable to import their products to this country, and therefore they shifted their industries over to the United States.

Mr. FORDNEY. It was an extraordinary law, wasn't it?

Mr. LOUGHLIN. It was so extraordinary that these firms found—and there are others as well. I could mention several. There is a flax spinning company at North Grafton, a firm from Scotland, who have also established their industry in this country since the passage of the tariff act.

Mr. LONGWORTH. Which act do you mean?

Mr. LOUGHLIN. It was the act prior to the McKinley Act which has brought all these firms here.

Mr. LONGWORTH. You mean the tariff act which put a duty on dressed flax?

Mr. LOUGHLIN. On the finished article, linen thread and yarn.

Mr. LONGWORTH. It put a duty on yarn?

Mr. LOUGHLIN. Yes, sir.

Mr. FORDNEY. Do you not believe that any law that will transfer an industry from a foreign country to this country and that will give

PARAGRAPHS 333-336—FLAX.

employment to American capital and American labor without increasing the cost of the article to the consumer is an extraordinarily good law?

Mr. LOUGHLIN. Yes; but you see, while it has increased the amount of labor in this country and the amount of capital employed, at the same time this tariff gives the manufacturer sufficient protection on his finished article and enables him to enjoy a profit by using the cheap labor of Europe by importing his dressed flax.

Flax dressing is the most expensive process in the manufacture of linen thread and yarns. Therefore, he can enjoy a sufficient protection on the finished article and compete in the American market, while we can not compete in the American market with the cheap labor in Europe.

Mr. FORDNEY. That is the point exactly. The labor is cheaper than yours, and the labor enters largely into the cost. Would it not be far more consistent for you to come here and ask for an increased protection on the product of the industry in which you are engaged, instead of asking to have the rate of duty on your neighbor's product lowered? Your neighbor's product is your raw material, my friend.

Mr. LOUGHLIN. Yes, sir; it certainly would be.

Mr. FORDNEY. Why don't you do it?

Mr. LOUGHLIN. Why should we come to a Democratic administration and ask for an increase in rates? What we want is to have our industry protected. That is what we need. If we add 2 cents a pound on the dressed flax or take this 1 cent off the raw flax, it would, as I have stated, stimulate and encourage the flax-dressing industry in this country. We flax dressers are interested in our own industry, and all the men whom I have heard testify here were just as we are, interested in themselves.

Mr. LONGWORTH. You said a moment ago that this was a poor quality of flax?

Mr. LOUGHLIN. Yes, sir.

Mr. LONGWORTH. What is the trouble with it?

Mr. LOUGHLIN. It is the poorest quality of flax I have ever seen. I saw the Canadian flax which we used a few years ago and that was inferior in quality to the Russian flax, which is the poorest kind of flax grown in Europe.

Mr. LONGWORTH. What is the matter with it? Was not that yarn good yarn that was made from it?

Mr. LOUGHLIN. It looked all right, but I wish that I could have been able to bring you the flax that is grown in Europe. Although you may not be an expert in the flax industry, you would see at once that this flax was inferior to the flax grown in Europe. It is not so strong and it is not so long, and the amount of average yield per acre in American-grown flax would not be half the amount in European-grown flax.

Again, after it has passed through the scutching process, as we have experienced with the Canadian flax, the loss in tow would be twice as great as the amount which the manufacturer would lose if he imported flax from Europe.

PARAGRAPHS 333-336—FLAX.

Mr. LONGWORTH. They have stated that they have discovered a chemical process which gets rid of a very disagreeable feature of the old-fashioned process. Don't you think if it can be done in that way that it will be possible to establish the flax industry?

Mr. LOUGHLIN. No; I do not think that linen thread could be made out of American-grown flax. It is not strong enough in the fiber.

Mr. LONGWORTH. Is it a question of climate or soil, or is it a question of manufacture after the flax is grown?

Mr. LOUGHLIN. It is the fault of the flax. You notice that the flax that was shown you had quite a bushy head of seed. American flax is grown particularly for the seed.

Mr. FORDNEY. A short time ago, I saw two samples of linen made in England, one from Irish-grown flax and one from American-grown flax, that had been taken over there to be converted into the finished product to demonstrate whether or not there was a difference in the quality. I could not tell. It was said that no expert could tell the difference in the quality of those two samples.

Mr. LOUGHLIN. I am not an expert in the finished end of the business.

The CHAIRMAN. Are you an expert flax dresser?

Mr. LOUGHLIN. Yes, sir.

Mr. FORDNEY. You say that you have never handled American flax, and that this is the first you ever saw of it?

Mr. LOUGHLIN. I have handled Canadian flax, and we discontinued the use of Canadian flax because it was not strong enough in the fiber.

Mr. LONGWORTH. Do you not believe it is possible to grow flax in this country, out of which a strong yarn could be made?

Mr. LOUGHLIN. No, sir; I do not believe it. I have already stated that it has been repeatedly tried and it has failed.

Mr. LONGWORTH. I know; but what is the real reason? I am not speaking as an expert, but simply from what I have read on the subject. Is not the real reason why we have never been able to establish a linen industry in this country, because that process—I do not know the name of it—is so disagreeable and so disgusting that no American workman will work at it?

Mr. LOUGHLIN. No, sir.

Mr. LONGWORTH. Is not that the reason and not because the original product, the flax itself, is not of proper quality?

Mr. LOUGHLIN. The gentleman who testified stated that the farmer who grew flax had gained \$3 an acre. That is a very small gain, because, as I have stated, flax imported from Europe will cost 13 cents a pound. If he only gained \$3 an acre he did not make much.

Mr. LONGWORTH. That is 5 per cent per acre, which is a pretty good yield.

Mr. FORDNEY. He got \$11.65 for the total product, the straw and the seed, and \$2.45 of that was for the straw alone.

Mr. LONGWORTH. He said that that land was worth \$60 an acre, and \$3 an acre is 5 per cent of the value of the land, which is pretty good.

PARAGRAPHS 333-336—FLAX.

Mr. LOUGHLIN. I fail to see, unless they have established a new process of which I know nothing, how he can ret his flax and yet preserve his seed.

Mr. FORDNEY. Does the use you make of the straw affect the value of the seed?

Mr. LOUGHLIN. Yes, sir.

Mr. FORDNEY. After you get the seed out of the boll it doesn't make any difference what becomes of the straw?

Mr. LOUGHLIN. If you want flax, it does.

The CHAIRMAN. Does it weaken the flax to raise it for seed? Does it weaken the threads made out of the flax if you raise the product to develop the seed instead of the stalk?

Mr. LOUGHLIN. The flax that is grown for seed is a different quality of flax from that which is grown for fiber.

The CHAIRMAN. Is the fiber stronger where it is not grown for seed?

Mr. LOUGHLIN. Yes, sir. The farmers in France, Holland, Belgium, and Ireland do not produce seed. The farmer in Russia produces seed and his flax is inferior in quality to that which is grown in the other countries.

The CHAIRMAN. I want to know if they raise flax to produce seed, if that weakens the fiber of the stalk?

Mr. LOUGHLIN. Yes, sir.

Mr. FORDNEY. Will you permit me to make a statement here. I had a little experience in my life as a farmer raising flax and converting it into seed for sale, and also selling the lint for cloth.

Is it not true that there are three grades of straw from which you can produce flax profitably? One will produce very large coarse straw with a coarser fiber than the other?

Mr. LOUGHLIN. Yes.

Mr. FORDNEY. And produce the same seed, but perhaps not as much as the other?

Mr. LOUGHLIN. Yes, sir.

Mr. FORDNEY. Then there is a straw from which you get a very short straw, good seed, but the straw is fine in fiber, but small in quantity?

Mr. LOUGHLIN. Yes, sir.

Mr. FORDNEY. Then there is a medium straw which produces both seed and fiber to extraordinarily good advantage?

Mr. LOUGHLIN. Yes, sir.

Mr. FORDNEY. Is it not true that in the country where they make a business now of raising the lint they select the medium class of soil, the one that produces the best fiber and the best quantity and quality of seed? That could be done here if the industry warranted it; if it warranted the selection of the soil and the cultivation and preparation and so forth, would it not?

Mr. LOUGHLIN. That is what is done in the old country.

Mr. FORDNEY. That is what would be done here if the industry were encouraged.

Mr. LOUGHLIN. I think in this country the soil is entirely unsuitable, being too dry, and the atmosphere is too dry.

Mr. LONGWORTH. At least you will agree that if we could establish a purely American linen industry it would be a good thing?

PARAGRAPHS 333-336—FLAX.

Mr. LOUGHLIN. It certainly would.

Mr. LONGWORTH. These gentlemen come here and say they have discovered a process which relieves the conversion of flax into yarn of that feature which has made it impossible in America to-day because the American workman would not work at it. If they can overcome that obstacle, do you not believe that it should be in every way encouraged?

Mr. LOUGHLIN. Yes, sir.

Mr. LONGWORTH. Would it not help you and everybody else in the long run?

Mr. LOUGHLIN. Yes, sir.

Mr. LONGWORTH. There is every sort of soil in this country. It is not possible that there are not soils in which flax can be satisfactorily grown for the fiber, if you can get rid of that process which makes it impossible as an industry.

Mr. LOUGHLIN. It would be a good thing if the industry could be established in this country. I know it has been tried and has been unsuccessful.

Mr. LONGWORTH. A great many industries have been tried and have not been successful for many years.

Mr. LOUGHLIN. If the old process of retting the flax is still to go on in this country, the American workmen——

Mr. LONGWORTH (interposing). But these gentlemen say that they have gotten rid of that entirely; that they have a chemical process.

Mr. LOUGHLIN. They have tried a chemical process in Ireland. The board of agriculture there encouraged the farmers in the growing of flax and this was one of the inventions that was submitted to the board. The farmers found out that the chemical process of retting flax also retted the fiber and the result was that the flax did not yield as much per acre as it did under the old system. It was unprofitable and it was therefore abandoned.

Mr. FORDNEY. Their chemical process may not be the chemical process established by these gentlemen that are in business in Chicago?

Mr. LOUGHLIN. I think they have the greatest flax experts in the world in Belgium and Ireland.

Mr. FORDNEY. But there is one yet to be produced. There is another fellow that will come along and show you a whole lot of things that you do not know.

The CHAIRMAN. That is all, Mr. Loughlin.

BRIEF OF THE LOCAL UNION NO. 691, UNITED TEXTILE WORKERS OF AMERICA.

In filing this brief with the Committee of Ways and Means, I wish to state that the flax dressers whom I represent are interested only in that part of Schedule J which relates to the tariff on raw and dressed flax.

The present tariff system has been very unsatisfactory to us. Flax dressers under it have had much hardships through want of employment. Our members have also been steadily reduced, while the imports of dressed flax are continually increasing.

We wish to suggest that raw flax be now put on the free list, and we are of the opinion that if this was done it would encourage and stimulate the flax-dressing industry in this country.

There is at present 1 cent per pound duty on raw flax; now it requires from 1½ to 2 pounds of raw flax to make 1 pound of dressed flax, therefore, the 1 cent per pound duty on raw flax becomes a tax of from 1½ to 2 cents per pound on all flax which we dress, and on account of this we are unable to compete with the cheap labor of Europe.

PARAGRAPHS 333-336—FLAX.

We therefore would expect a considerable increase in the amount of raw flax imported if the 1 cent were taken off.

Flax dressers in this country are paid \$14 per week; in Great Britain and Ireland they receive from \$6 to \$7 per week; in Holland and Belgium \$3.60 per week, and in Russia \$2.70 per week. The highest rate paid in Europe is therefore 50 per cent less than what we receive in the United States. Hours of labor and the amount of work per day per man in this country and Great Britain are similar; in the other countries mentioned the working day is longer.

In showing the comparative cost of production, we wish to use the 50-per-cent basis, so as to make our statement as clear as possible. The rates which we receive for dressing flax range from \$1.48 to \$3.50 per 100 pounds. There are two grades of dressed flax, commonly known among flax spinners as "broken," which is the better-paid grade, and "unbroken," which is the cheaper grade. The cost of producing 1 pound of the class for which we receive \$3.50 per 100 pounds would be to our employer $5\frac{1}{2}$ cents. Of this the flax dresser would receive $3\frac{1}{2}$ cents, and one-half cent would be expended on the machining process through which it has to pass before the flax dresser receives it. Add to that the $1\frac{1}{2}$ cents, which is the duty paid on the raw flax, you have the total cost, $5\frac{1}{2}$ cents. The cost of producing 1 pound of the same class of flax in Great Britain would be 50 per cent less, less also the $1\frac{1}{2}$ cents, which was paid on duty on our raw material, making the total cost 2 cents for the pound; that is, allowing the flax dresser $1\frac{3}{4}$ cents and one-fourth cent for the machining. Now, to import that pound of flax to this country 3 cents of duty would have to be paid under the present tariff system, yet the importer would be having it one-half cent cheaper than if it had been dressed in this country.

In this way we are deprived under the existing tariff of dressing the best grades in the United States. If we look now at the Russian flax, it requires from 2 to $2\frac{1}{2}$ pounds of raw flax of this class to make 1 pound of dressed; the average amount of raw per pound would be $2\frac{1}{4}$ to the pound of dressed. The cost of producing 1 pound of Russian dressed flax would be to the employer $4\frac{1}{4}$ cents; one-half cent would be allowed for machining, $1\frac{1}{2}$ cents to the flax dresser, $2\frac{1}{4}$ cents duty paid on raw. Therefore on this class of flax there is more duty paid per pound than there is wages.

To produce 1 pound of this class in Russia would cost about 1 cent; to import it to this country 3 cents duty would have to be paid, making the total cost to the importer 4 cents, a saving of one-fourth cent per pound.

It will be seen from the statement that has been made that there is a considerable loss in the making of raw flax into dressed flax; this loss or by-product is called tow. Now, the flax spinner who does not use this by-product can save considerably in freight charges by importing dressed flax, as on the average it requires $1\frac{3}{4}$ pounds of raw to make 1 pound of dressed.

In concluding this brief we wish to state that the flax-spinning business in this country is increasing, yet the flax-dressing end of the business is decreasing. Of all the flax-spinning concerns in this country only three employ flax dressers, while they all use dressed flax, and of those three two of them have reduced the number of men. There are but two ways whereby this can be remedied—by taking the 1 cent off the raw material, which is a tax on our labor, or by putting 2 cents more on the dressed, and making the duty on dressed 5 cents per pound; then we would have a chance to compete in the labor market with the cheap labor of Europe. We do not think this would be an excessive tariff, or yet a prohibitive tariff.

Yours, truly,

CHARLES LOUGHLIN, *Secretary.*

HON. OSCAR W. UNDERWOOD, *Chairman.*

KEARNEY, N. J.

HON. EUGENE F. KINKEAD.

DEAR SIR: I am instructed by the flax dressers employed by the Marshall Linen Thread Mills, of Newark, N. J., to write you and ask you to use whatever influence you have with the Committee on Ways and Means to have raw flax put on the free list. There is at present 1 cent per pound duty on raw flax, and as there is no flax grown for fiber in the United States no one would be adversely affected thereby, while we flax dressers would be greatly benefited. There are those who claim flax growing for fiber may yet be a success in this country, but we who have been in the flax business for years know that it is impossible to grow flax for seed and at the same time produce fiber that can spin. So that you may understand our position thoroughly, I wish to state a few facts. It requires on the average $1\frac{3}{4}$ pounds of raw flax

PARAGRAPHS 333-336—FLAX.

to produce 1 pound of dressed. Therefore, 1 cent per pound duty on raw flax means that $1\frac{1}{2}$ cents has to be paid on duty on every pound we dress. This is a great hardship on us, as we only receive from $1\frac{1}{2}$ to $3\frac{1}{2}$ cents per pound for dressing flax. There is 3 cents per pound duty on dressed flax, so that the difference in duty is very slight between that which we pay on our raw material and that which is paid on our finished product. The wages of the flax dressers in this country are from 50 to over 100 per cent higher than what they are in Europe. The rates are as follows: United States, \$14 per week; Great Britain, \$6 to \$7; Holland and Belgium, \$3.60; Russia, \$2.70 per week. For many years Newark was the distributing center of dressed flax in this country. Now, this firm imports most of the dressed flax which they use, while those firms whom they formerly supplied also import their dressed flax from Europe, and they find it cheaper to do so than to dress it in this country. The result is that the number of flax dressers has been greatly reduced, and we are in danger of being totally deprived by foreign competition of earning our living at this business, to which we have served an apprenticeship of four years. Below we give the facts, which we wish impressed upon those who will be responsible for the new tariff law. Duty on raw flax is 7 per cent of its value; duty on dressed flax is 12 per cent. Raw flax is our raw material; dressed flax is our finished article; the difference in duty is only 5 per cent, while the wages of those with whom we have to compete in the labor market is from 50 to 100 per cent below that which we receive. There is room for a radical change here, and if the flax dressing industry is to be retained in this country, changes must be made in our favor. We will greatly appreciate any effort made by you on our behalf. Thanking you for past favors,

Yours, very truly,

CHARLES LOUGHLIN, *Secretary.*

**TESTIMONY OF A. STAMFORD WHITE, OF THE UNITED STATES
LINEN CO., CHICAGO, ILL.**

The witness was duly sworn by the chairman.

The CHAIRMAN. You may proceed, Mr. White.

Mr. WHITE. If the committee please, we represent the United States Linen Co., which has its headquarters in Chicago, Ill.

This, Mr. Chairman, is a new company, having for its objective point the creation of a new industry in this country, namely, the making of finished linen goods from American-grown flax.

Together with making these linen goods, it will incidentally create a market profitable to the growers for what is now almost a waste product, namely, flax straw.

It was stated in this room this morning that flax straw is utilized for the manufacture of tow. This is true to a limited extent, but the greatest part of this product on the 3,000,000 acres raised in the United States is burned up in the fields.

Mr. HARRISON. Do they not make linseed oil out of flaxseed?

Mr. WHITE. They make it out of the flaxseed. They grow it for the flaxseed exclusively.

Mr. HARRISON. And then throw the flax away?

Mr. WHITE. And the flax straw is nearly all burned. As I stated, a limited quantity is used in the manufacture of tow.

Nearly four years ago a chemical process was brought to some men in Chicago, by which it was claimed that flax could be retted; that is, that the chive could be separated from the fiber, enabling it to be prepared for the further processes of manufacturing into linen goods. This appeared, if true, to open up a wide field of activity, and it was decided to verify all claims made for these processes. For this purpose a syndicate of eight men was formed, who, first of all, arranged to verify those claims by thorough tests in the laboratory. Then it

PARAGRAPHS 333-336—FLAX.

was decided to make a thorough investigation of the linen business at home and abroad and to test the various points, point by point, by a series of steps, so that if serious difficulty arose at any one point the matter could be dropped there without further loss.

We are now on the last step and getting close to the end of that last step, and we hope in the course of two or three months to show finished linen goods made from American-grown flax, American all the way through from the field to the article ready for sale upon the market.

Mr. HARRISON. What have the few American factories that have been making finished linen goods in this country been using as their raw material?

Mr. WHITE. The imported yarn.

Mr. HARRISON. Where does that come from?

Mr. WHITE. Mainly from Ireland and Belgium.

The methods of retting flax over there are two in number. One is called dew retting. The other is by retting in sluggish streams, which, for sanitary and other reasons, are neither of them available in this country.

Mr. LONGWORTH. Is it because the process is a disagreeable one?

Mr. WHITE. Very.

Mr. LONGWORTH. Why is it disagreeable?

Mr. WHITE. One difficulty is the stench which it produces and the difficulty of getting labor here to work in it, and the destruction of fish in the waters.

Mr. LONGWORTH. Have you found a new and less disagreeable way of doing it?

Mr. WHITE. By a chemical process.

These steps, Mr. Chairman, I will very briefly describe to you, and I want to say here that in taking these steps this syndicate is not a stock venture, but the syndicate have put up their own money, step by step, to prove out the points one at a time, as they did not care to offer stock to the public or to their friends until the thing was an accomplished fact and proven to be successful.

Mr. HARRISON. That is almost a unique situation.

Mr. LONGWORTH. Absolutely.

Mr. WHITE. I will now briefly describe these steps. First, there was a series of thorough tests of the process in the laboratory.

Then followed nine months of testing in a larger and more practical way in an old crash mill, which was leased for the purpose, at Albany, Wis.

Then came the growing of flax in an improved way, so as to make a better fiber. This step has been, I am glad to say, eminently successful by the utilization of the very best seed, the careful preparation of the land, and rolling it well, so that the straw could be cut close to the ground, thereby preserving its length. As I say, good results have been obtained. This work has been carried out on certain farms in certain districts of Wisconsin and Minnesota to the satisfaction of the farmers who have done it under the supervision of our agents, and who have netted an average of \$3 per acre more from their land than under the system of growing for seed alone.

PARAGRAPHS 333-336—FLAX.

The next thing was to make machinery by which the flax could be thrashed and the seed saved without breaking the straw into too short lengths for use.

After that came the sending of our general manager to the other side to make an exhaustive examination into the conditions of the business there. He took with him a large quantity of the fiber which we had prepared and had it spun into very good yarn in several Irish mills.

When this was done, there followed the erection of a mill, the importation of machinery for spinning, weaving, and finishing, and as the previous steps have been successful, we think this final one should not present any difficulty, as the spinning and weaving are arts which have been long known, and I can see no reason why they can not be done in this country as well as abroad.

Mr. LONGWORTH. You will have exactly the same machinery as they have abroad?

Mr. WHITE. Yes; we have imported that machinery and paid thereon a duty, I think, of 45 per cent.

Mr. LONGWORTH. None of that machinery is made in this country at all?

Mr. WHITE. No.

We will show you here samples of this yarn made from American flax, which explodes the theory, long held, the idea having been ridiculed that linen could be made from American-grown flax.

Yesterday afternoon a gentleman who was pleading for a remission of the duties on the lower counts of yarn said that the American-grown flax was rubbish; therefore there was no object in having a duty on these lower counts. I think we will show you that is a fallacy.

I want to bespeak for this matter very respectfully the careful attention of the chairman and gentlemen of the committee when it comes to the question of revising these linen duties, for I am satisfied with the experience we have had thus far that a very large industry is being born in this country. I am satisfied that, with the present scale of duties, this country can have a large industry, and the grower of the flax a profitable market for his straw. I may also state that any material reduction in that duty would kill our project at the start.

With your permission, Mr. Chairman, I will ask Mr. Hess, the president and manager, who has been close to the detail of this work throughout, to show you the straw and the yarn made for the first time from American-grown flax, and who will also gladly answer in detail any questions which members of the committee may wish to ask.

**TESTIMONY OF CHARLES W. HESS, OF THE UNITED STATES
LINEN CO., CHICAGO, ILL.**

The witness was duly sworn by the chairman.

Mr. HESS. My part, Mr. Chairman, was to answer any questions you might want to ask, but I will illustrate the steps we have taken in the development to the present point of our industry.

First, we found it necessary to divert the farmer from growing flax for seed to that of growing it for fiber, though he gets the seed in growing it for fiber. By this improved method we get a fiber from

PARAGRAPHS 333-336—FLAX.

the straw that we have demonstrated we can spin up to 60 leas. We believe we can spin up to 80 leas, but we know we can spin up to 60 leas.

The CHAIRMAN. What is the maximum amount of leas that are spun in the industry?

Mr. HESS. I think in the neighborhood of 210, but that is very fine.

The CHAIRMAN. Is the 60-lea yarn used in ordinary commerce in the commercial linen? Can you make the ordinary commercial linen out of 60-lea flax?

Mr. HESS. For such articles as sheetings and tablecloths; yes.

You could not make fine shirts of it, but in our industry we are commencing where the present linen industry, that is at all developed in the United States, leaves off—the only industry that you might term the linen industry in the United States being mainly of crashes.

Mr. FORDNEY. This in no way depreciates the value of the flax for seed at all, does it?

Mr. HESS. No, sir; we get the seed as we have developed it now. You understand in the old way that they grew it for seed. They take the straw, under the old method of growing it, and to begin with they cut it off up here [indicating]. All they want to do is to get the head, to run it through an American thrasher and get the seed out. We have an improved thrasher by which we run the head through and then we leave the straw like this sample which I show you [indicating]. That straw is ready to be broken in this shape [indicating]. Then we scutch it into this shape [indicating].

Mr. LONGWORTH. Where does this process come in that is so disagreeable abroad?

Mr. HESS. The process you speak of comes from the retting of it.

Mr. LONGWORTH. At what point?

Mr. HESS. At this point [indicating]. At that point we put it through a chemical process, and we produce from that process this result [indicating].

Mr. LONGWORTH. That is the process that is still done abroad in this disagreeable way?

Mr. HESS. Yes; by water.

Mr. LONGWORTH. The flax has to rot in the water?

Mr. HESS. Yes; that is retting or rotting or degumming.

Mr. FORDNEY. The next process is to hackle?

Mr. HESS. It is ruffed and hackled then in this form [indicating]. It is ready now for the spread board and for the spindles.

The CHAIRMAN. For what can you probably produce that raw material in comparison with the foreign product, by means of this process which you have described?

Mr. HESS. That is, the line fiber?

The CHAIRMAN. That is where it is finished as a raw material and goes to the spinner, is it?

Mr. HESS. Yes, sir. What would go to the spinner would go in this form [indicating], and then he prepares it for the spindle. He ruffs that and hackles it, and gets it into form.

The CHAIRMAN. At the point of the material which you have in your right hand is the point where your new process finishes?

Mr. HESS. Yes, sir.

PARAGRAPHS 333-336—FLAX.

The CHAIRMAN. And from there on it goes through the old process of hackling and spinning?

Mr. HESS. Absolutely.

The CHAIRMAN. What do you call that piece which you have in your right hand there?

Mr. HESS. We call that scutched flax, and this [indicating] is the dressed.

The CHAIRMAN. It is undressed or scutched flax?

Mr. HESS. Yes.

The CHAIRMAN. How does the price of that scutched flax that you sell to the manufacturer compare with the same product abroad?

Mr. HESS. Our price would compare favorably with that of the Dutch and Irish flax, but very unfavorably with the Russian fiber. There is a point I would like to call to your attention.

The CHAIRMAN. How is that sold?

Mr. HESS. It is sold by the ton.

The CHAIRMAN. What will the Russian fiber sell for per ton?

Mr. HESS. The Russian fiber, at this point [indicating], will sell in this country at about \$180 a ton.

The CHAIRMAN. What would the Dutch and Irish fiber sell for?

Mr. HESS. \$270, or about 50 per cent more than the Russian fiber.

The CHAIRMAN. What can you put yours on the market for and make a profit?

Mr. HESS. We could not get a profit on the fiber at all, Mr. Chairman.

Mr. LONGWORTH. You use that yourselves?

Mr. HESS. There is no one to whom we could sell this in this country.

The CHAIRMAN. If you did have a sale for it, at what could you put it on the market?

Mr. HESS. We ought to get in the neighborhood of \$300 a ton for it—\$275 or \$300 a ton.

Mr. FORDNEY. For what figure can you produce it?

Mr. HESS. Approximately \$255 to \$260.

Mr. FORDNEY. It costs you more money to produce that, you say, than you can buy the Russian fiber for?

Mr. HESS. Yes, sir.

Mr. LONGWORTH. Roughly speaking, about how valuable is the land on which you produced the flax originally?

Mr. HESS. Where we operated in Minnesota, the land was considered worth from \$60 to \$75 an acre. The farmers this year netted—and this is not theory, but facts—\$3 per acre more on the ground than they would had they used the same soil for the growing of flax for seed.

Then, there is another point I would like to bring out right in that connection. We assume the risk of the crop, which is a big item with the farmer. He not only made \$3 an acre extra, but had anything happened to the crop it would have been our loss and not his.

Mr. LONGWORTH. Of course, you can not do that in the future?

Mr. HESS. It is quite probable we will have to do that. We have a ready sale for our seed. The first step in our improved method is in the importation of our seed.

PARAGRAPHS 333-336—FLAX.

The CHAIRMAN. When you estimate the cost of this, do you deduct from it what you get for the seed?

Mr. HESS. Yes, sir; we have to deduct that on the oil basis, however.

A portion of our seed we can clean up and resell to the farmer for sowing. We can use the first and second child of the imported seed; that is to say, we import that seed, of which this [indicating] is a certificate. We can use next year the child seed of that and likewise the following year. But the third or fourth we will have to import new seed, so as to keep up the quality of our seed.

Mr. HILL. Can flax be hackled by machine?

Mr. HESS. Yes, sir.

Mr. HILL. Why do they do it by hand?

Mr. HESS. In most of the mills that I have visited abroad they are not doing it by hand.

Mr. HILL. I visited the largest mill in the world, in Belfast, and they were doing it by hand.

Mr. HESS. They do it, then, not out of necessity, but perhaps from prejudice. I will take issue with you, however, as to that being the largest mill in the world.

Mr. HILL. I thought it was.

Mr. HESS. The largest is at Ghent, Belgium, having 100,000 spindles.

Mr. FORDNEY. By handling carefully by hand, you get a little larger quantity of higher grade fiber, do you not?

Mr. HESS. Yes, sir.

Mr. LONGWORTH. Generally speaking, you think the present linen schedule is correct for your industry.

Mr. HESS. We need all of that; yes, sir.

Mr. FORDNEY. Do you believe that by adequate protection the linen industry can be encouraged in this country?

Mr. HESS. Yes, sir.

Mr. FORDNEY. Is the fiber from American-grown flax equal in quality to the Irish and Scotch?

Mr. HESS. The Irish and Dutch; yes, sir.

Mr. FORDNEY. It has been claimed the fiber from the Irish-grown flax was very superior to ours here. I have heard that. I do not know whether it is true or not.

Mr. HESS. There has been no comparison until recently. For many years George Livingstone & Co. have grown flax in Michigan, and it has been sold for the manufacture of thread.

Mr. FORDNEY. In the old-fashioned way, I have taken quite a part in that, when I was a boy.

Mr. HESS. You know that is now prohibited from a labor standpoint. The price of labor has so advanced that they can no longer do it.

Mr. DIXON. You indicated that the farmer would make about \$3 per acre more than he had been making. How much would he make as a whole? You did not give the amount.

Mr. HESS. The basis on which he sold was that he netted \$11.50 an acre. On the basis of selling for seed, it would have netted \$8.65—to be exact, it was \$2.95 difference.

PARAGRAPHS 333-336—FLAX.

I have nothing further, unless there are other questions the members of the committee desire to ask.

The CHAIRMAN. There is apparently nothing further. You may be excused.

STATEMENT AND BRIEF OF UNITED STATES LINEN CO. ON LINEN SCHEDULES
GENERALLY.

To Chairman Underwood and the members of the Ways and Means Committee of the House of Representatives:

MR. CHAIRMAN AND GENTLEMEN: The following is the statement of the United States Linen Co., a corporation whose general office is in Chicago. We are a young company, undertaking the creation of a new industry in this country, namely, the manufacture of finished high-grade linen goods from American-grown flax under our improved method of growing, and thus at one and the same time not only manufacturing finished linen goods, but also making a profitable market to the grower for that now almost waste product, flax straw.

A little of our history: Almost four years ago a chemical process for the retting of flax was brought to the attention of certain well-known Chicago gentlemen, and the claim was made for it that it would ret flax, i. e., remove the fiber for spinning, in a highly satisfactory manner and on a profitable basis. There are no other known methods of retting flax except retting in semistagnant, slow-flowing streams, or by means of heavy dews. Neither of these methods may be successfully followed in our country, for sanitary and other reasons. The Chicago gentlemen, forming a syndicate, undertook to verify the claims made for this process and to investigate generally the practicability and feasibility of producing finished linen goods in this country, by means of carefully thought out steps, one step at a time, until now they are on the final step and expect shortly to put upon the market high-grade linen goods, exclusively American, from the field on, a thing which has never been done up to this time.

The steps taken, which have cost already several hundred thousands of dollars and consumed a great deal of time, we wish briefly to describe.

First, there was a thorough investigation in the laboratory of the claims of the process, then followed a nine months' testing out of the same claims on a larger scale in an old crash mill in Wisconsin. After that, the growing of flax for fiber on farms in certain sections of Minnesota and Wisconsin was undertaken by the syndicate to show the owners and others interested how properly to grow the flax, and awakening them to the increased value of their acreage sown in flax where there was a profitable market for the straw. After that came the sending of fiber, produced from straw grown under our own supervision and prepared by our process for spinning, to Ireland and having it spun there into excellent yarn. After that we made special machinery for the thrashing of the flax, that straw might not be broken up into pieces too small for profitable use, and then finally came the building and equipment of a combined thrashing and scutching plant in Le Roy, Minn., and the building of a processing spinning and weaving plant in Beloit, Wis., with a capacity of 1,000 spindles and 50 looms and machinery for finishing cloth ready for the market. This is where the project now is, and as each step in advance has been taken it has been with the knowledge that that which has gone before has up to that point proved the probability of the accomplishment of what has always heretofore been ridiculed, to wit, that high-grade linen goods could be made profitably from American-grown flax.

We want to impress upon you that United States Linen Co. has already actually produced flax fiber of excellent quality, suitable for spinning and weaving, from American-grown flax, under improved methods of growing and on what is apparently a profitable basis, when carried through the further steps necessary to make finished goods. There should be, of course, no difficulty in the spinning and weaving in this country, as both of these arts are old and well known. All this we have stated merely to let you know that a new industry is being born in our country, fostered by sound, able, business men, and opening up valuable possibilities to the grower of flax and the user of linen.

However, three years of study and work have shown conclusively, and without mental reservation, to these gentlemen that there is no hope for the making of linen

PARAGRAPHS 333-336—FLAX.

goods in the United States unless at least the present tariff on finished linen goods remains in the schedule. Under the present tariff America can have a linen industry; without at least that amount of protection she can not. Under the present tariff the flax grower will have a profitable market for his by-product—flax straw; without at least that amount of protection his straw will continue in the main to be burned on the field.

We respectfully submit this situation to your careful consideration in passing upon the present tariff on finished linen goods.

Respectfully submitted.

UNITED STATES LINEN CO.,
By CHAS. W. HESS, *President*.

CHICAGO, ILL., *January 24, 1912.*

**TESTIMONY OF PATRICK BOYLE, REPRESENTING FLAX
DRESSERS, PATERSON, N. J.**

Mr. BOYLE. Mr. Chairman and gentlemen, I have been appointed and instructed by the flax dressers employed by the Barbour Flax Spinning Co., of Paterson, N. J., to recommend that raw flax be placed upon the free list. It now bears a tariff of 1 cent per pound.

My reasons for this are that the class of material referred to is imported into this country from Belgium, Holland, Russia, Great Britain, and Ireland, and is not grown in this country to any extent that we know of. It would not hurt the interests of the American farmer to have it placed upon the free list.

In the second place, in order to explain the effect of that 1 cent a pound duty on the raw flax it becomes necessary for me to refer to the 3-cent duty on dressed flax.

There are two grades, known amongst hacklers as broken and touchem (or unbroken). The broken is the highest paid grade. So, as it takes $1\frac{1}{2}$ pounds of raw to produce 1 pound of dressed flax, it costs the manufacturer $1\frac{1}{2}$ cents for the $1\frac{1}{2}$ pounds in duty alone. It also costs $3\frac{1}{4}$ cents to $3\frac{3}{4}$ cents for machining and dressing, which is an average of 5 cents per pound it costs to produce 1 pound of dressed flax in the United States.

In Europe the same flax can be dressed at from $1\frac{1}{4}$ to $1\frac{1}{2}$ cents per pound, and there is a 3-cent duty, and they can import into this country at one-half a cent a pound cheaper than they can have it produced in this country. For this reason great numbers of our flax dressers must go unemployed. The importations of dressed flax into this country seem to be increasing, while the number of men employed at that occupation seems to be declining. It became somewhat alarming, and the only course open to us was to appeal to the Ways and Means Committee to try to have this tariff of 1 cent per pound removed.

Mr. HILL. Do you work in the Barbour Flax Mill?

Mr. BOYLE. Yes, sir.

Mr. HILL. What do they pay to the man who hackles flax?

Mr. BOYLE. \$14 a week.

Mr. HILL. And the girls in the factory? Do they weave or only make threads?

Mr. BOYLE. They only make threads.

PARAGRAPHS 333-336—FLAX.

BRIEF OF THE BARBOUR FLAX SPINNING CO., OF NEW JERSEY.

PATERSON, N. J., January 20, 1913.

Ways and Means Committee, Washington, D. C.

GENTLEMEN: Schedule J, representing flax, hemp, jute, etc., while a good revenue producer, has never had the protection afforded other industries, with the result that the other textiles having adequate duties are prosperous to a high degree.

The average rates of duty the past year have been as follows:

WOOL SCHEDULE.

Year ending June 30—	Raw material.		Manufactured goods.		Entire schedule.	
	Average rate.	Value of imports.	Average rate.	Value of imports.	Average rate.	Value of imports.
1912.....	<i>Per cent.</i> 43.61	\$33,141,408	<i>Per cent.</i> 82.98	\$15,182,694	<i>Per cent.</i> 55.98	\$48,324,102

COTTON SCHEDULE.

1912.....	Free.	\$20,217,293	55.59	\$63,415,504	42.15	\$83,632,797
-----------	-------	--------------	-------	--------------	-------	--------------

SILK SCHEDULE.

1912.....	Free.	\$69,542,154	52.03	\$27,092,356	14.58	\$96,634,510
-----------	-------	--------------	-------	--------------	-------	--------------

FLAX, HEMP, AND JUTE SCHEDULE.

1912:						
Free.....	Free.	\$29,584,508	} 37.00	\$62,469,078	24.31	\$96,929,617
Dutiable.....	9.18	4,876,031				
Total.....	1.30	34,460,539				

The above figures have been compiled from Government reports and are supplemented by a comparative statement for 13 years. See table annexed, marked "A."

The following shows the importation of threads, twines, and yarns of flax and hemp, for the past three years:

Flax and hemp yarns, 1910—1,440,452 pounds.

Flax and hemp yarns, 1911—1,934,354 pounds.

Flax and hemp yarns, 1912—2,135,830 pounds.

Flax and hemp threads, twines, or cords, 1910—555,586 pounds.

Flax and hemp threads, twines, or cords, 1911—576,903 pounds.

Flax and hemp threads, twines, or cords, 1912—647,844 pounds.

Attention is called to the increasing importations, which is clear evidence that under the present duty we are handicapped by severe competition from abroad. An important factor is that larger wages are paid in the United States than in foreign countries. Reliable and accurate information is available and shows that the wages paid in America, while none too high, are three times the average paid in foreign countries.

At our request, information has been tabulated of the wages paid in flax mills in various countries, and the same has been reduced to pence (English money) per hour worked, full detail of which is inclosed herewith. Table "AA."

Reducing the figures in table of wages to a unit of 100 for the United States, the average of all classifications for foreign countries is 34.23.

For a number of years the rate of duty for thread has been specific. The former laws (prior to 1897) gave an ad valorem duty which resulted in great undervaluation and fraud on the Government. Reference to the legal files of the Treasury Department will show that under the present law few issues have been raised under specific rates for paragraphs 340 and 341.

PARAGRAPHS 333-336—FLAX.

The facts recited would warrant the conclusion that rates in paragraphs 340 and 341 should not be reduced.

Paragraph 342 should be amended as follows:

"Gill nettings, nets, webs, and seins, made of flax, hemp, or ramie, or a mixture of any of them, shall pay the same duty per pound as is imposed in this schedule upon the thread, twine, or cord of which they are made, and in addition thereto 20 per cent ad valorem."

The addition to present law being as follows: "Made of flax, hemp, or ramie, or a mixture of any of them."

The reason for rewriting paragraph is that the present wording of the law is not clear on the question of whether hemp or ramie nets are classed with flax, and as they are all substantially one class, the amendment to present law is desirable.

Respectfully submitted.

BARBOUR FLAX SPINNING CO.,
WM. BARBOUR, *President*.

BRIEF SUBMITTED BY THE WEST END THREAD CO.,
MILBURY, MASS.

FLAX.

JANUARY 17, 1913.

The COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

GENTLEMEN: We have been manufacturing since 1892 a line of high-grade linen threads, using nothing but imported flax, as there is none grown in the United States that is at all suitable for our use.

We buy all our flax in the same markets the spinners of Great Britain and the Continent buy theirs, but with this difference (par. 334), flax not hackled or dressed, 1 cent per pound duty.

Paragraph 335. Flax hackled, known as dressed line, 3 cents per pound duty.

It makes no difference whether the flax is brought in unhackled, paying 1 cent per pound, or hackled, paying 3 cents per pound. When it is put on the spread board it costs the spinner in the United States 3 cents per pound more than it does the spinner abroad.

All our machines in the preparing and spinning rooms, comprising 80 per cent of the total machines used in the mill, come from abroad, paying 45 per cent duty. These machines are not made in this country.

PARAGRAPHS 333-336—FLAX.

A Belfast spinner buys from the same markets, paying no duty. The cost to the West End Thread Co. in labor over that of Great Britain and eastern Germany is as follows:

	Great Britain.	Eastern Germany.
	<i>Per cent.</i>	<i>Per cent.</i>
Spindlers.....	268	314
Drawers.....	286	339
Rovers.....	304	330
Spinners.....	315	353
Doffing mistress.....	214	239
Doffers.....	219	273
Reelers.....	327	408

The production is no greater in any linen-thread mill in the United States, and it is a question if it is as great as in the mills at Belfast, Ireland, spinning the same numbers.

The imports of threads, twines, or cords, under paragraph 340 of Schedule J for the last three years were as follows:

	1910	1911	1912
Imports:			
Pounds.....	555,586.40	576,903.25	647,844.00
Value.....	\$353,853.45	\$300,288.00	\$459,914.00

The above comparisons show a steady increase in the imports the past three years, which fact is supported by our finding a steadily increasing competition from foreign linen threads which is becoming harder to meet even under the present tariff.

As there is no flax grown in the United States that can be used in manufacturing linen threads, we would recommend paragraph 334, flax not hackled or dressed, 1 cent per pound, be free; paragraph 335, flax hackled, known as dressed line, 3 cents per pound, be free.

Should paragraphs 334 and 335 be put on the free list, paragraph 340 could be reduced in proportion, but the base of 12 cents per pound should not be altered, but the increment of three-fourths of 1 cent per pound additional for each lea or number could be reduced by about 10 per cent. This would equal a reduction of over 10 per cent on the whole schedule of threads finer than 5 lea or number.

But this change would only be justified by having flax on the free list.

The specific duty on thread has been much more satisfactory and free from the undervaluations which prevailed under the ad valorem system. The specific rates in paragraphs 340 and 341 have prevented undervaluation and fraud, so much in evidence under former laws.

We believe that any reduction in the tariff except as we have recommended would result disastrously to the linen-thread industry in the United States.

Respectfully submitted.

WEST END THREAD CO.,
RUFUS W. POOLE, *Managing Director.*

BRIEF OF CHARLES D. ORTH, OF HANSON & ORTH, NEW YORK.

FLAX, NOT HACKLED OR DRESSED.

Present duty, 1 cent per pound.

Change recommended, free.

Reason: Flax for spinning is not grown in the United States, and the duty, therefore, is not protective. The revenue is only \$200,000 to \$250,000 per annum, against which free flax would not only stimulate this branch of textile manufacturing in the United States but would also tend to cheapen the price of crash, or "poor man's linen," which is now the chief American linen fabric manufacture.

PARAGRAPHS 333-336—FLAX.

FLAX, HACKLED.

Present duty, 3 cents per pound.

Change recommended, 1 cent per pound.

Reason: On account of the low price of labor, flax can be hackled much more cheaply abroad than in the United States; but any advantage which might be derived by the Government in revenue or by the mills or the consumers by taking advantage of this cheap labor is impossible on account of a practically prohibitive duty. The reduction in duty indicated would probably stimulate importations so as to yield more revenue and would probably give more employment to flax-spinning labor here than the reverse.

BRUSHED FLAX.

Present duty, either 1 cent or 3 cents per pound, according to the decision of the appraisers.

Change recommended, one-half cent per pound.

Reason: "Brushed" flax is partially advanced in value by a species of rough hackling, but not to the same extent as flax known as "hackled." "Brushed" flax should be specifically provided for to prevent attempts to enter such flax as raw and also to fix a duty proportionate to the facts.

TOW OF FLAX.

Present duty, \$20 per ton.

Changes recommended, free.

Reasons: Flax tow is a very much cheaper article than flax itself and a duty practically the same as that on flax is illogical and unreasonable.

HEMP AND TOW OF HEMP.

Present duty, \$22.50 per ton.

Changes recommended, free.

Reasons: The production of hemp in the United States is a constantly declining industry, owing to the fact that other crops are found much more remunerative, and that the "breaking" of hemp requires hand labor of a very arduous nature, with the result that the laborers prefer other work. The revenue is only from \$100,000 to \$125,000 per annum, against which the absence of a duty would cheapen rough linens, shoe threads, carpet yarns, cordage, and strings for tying packages, and would further stimulate this branch of textile manufacturing in the United States. In any case the duty on hemp tows should not be as great as the duty on hemp itself, for the same reasons specified regarding paragraph 336 immediately preceding.

HEMP HACKLED.

Present duty, \$45 per ton.

Change recommended, \$22.40 per ton.

Reasons: Same as those regarding flax, hackled.

GRASSES AND FIBERS.

Present duty, free.

Change recommended, in nomenclature. Specification in more detail of articles meant to be included.

Reasons: No fibers now commercially imported are "grasses" and the term is a misnomer. Many fibers now admitted free are not mentioned in the paragraph and they could and should be included in detail.

Schedule N, paragraph 479, now covers hemp, jute, and flax wastes, and flax noils which are imported for use other than for paper manufacturing (in which latter case they are enterable free under free list, paragraph 644).

Present duty, 10 per cent.

Change recommended, free.

Reasons: These articles are mill by-products, and consequently the present duty protects nothing nor nobody. The revenue is inconsequential, and free entry would help the textile industries. Moreover, it would prevent dishonest entry of these articles under paragraph 644 of the free list; so that merchandise actually being imported for spinning is not entered "for paper making."

PARAGRAPHS 333-336—FLAX.

NOTE.—In any case the duties on all "tows" should be materially less than the duty on the material from which they are derived, because the values of tows are so much less, and their condition is much more crude.

No recommendation is made herein for free entry of anything except raw materials.

CHARLES D. ORTH,
HANSON & ORTH.

BRIEF OF MEREDITH LINEN MILLS, MEREDITH, N. H.

JANUARY 24, 1913.

The WAYS AND MEANS COMMITTEE,
Washington, D. C.:

The Meredith Linen Mills, located at Meredith, N. H., respectfully submit the following brief:

This corporation is organized under the laws of Massachusetts with capital of \$140,000. The business is the manufacture of pure linen crash and towels. The average annual production is 2,000,000 yards. All of the raw material is flax purchased in the open markets of Europe, on which a duty is paid. No American-grown flax has ever been purchased or offered for sale to this company. The mill employs American labor entirely and has never had any labor troubles. The plant lost heavily during the first eight years of its existence (1901 to 1909), the principal cause of which was its inability to compete with foreign-made linen crash. It has been a difficult task to induce large buyers of linen to take up the American-made goods. Imported crash bearing Irish or Scotch names has a great advantage over American-made goods. Our Irish and Scotch competitors purchase their raw material (flax) free of duty, which fact, coupled with their lower rate of wage and prestige on the market, gives them a decided advantage. Inasmuch as there seems to be no American-grown flax on the market available for spinning, we make the following suggestions to your committee: That raw flax, tow of flax, and combings of flax be admitted to this country free of duty; that any material reduction of duty on linen crash or linen towels will make it extremely difficult to compete with foreign-made crashes and might result in disaster to the industry.

Respectfully submitted.

MEREDITH LINEN MILLS,
ALFRED F. HALL, Agent.

TESTIMONY OF V. R. BLEHDON, BRISBANE BUILDING, BUFFALO, N. Y., ON THE SUBJECT OF FLAX TOW.

Mr. BLEHDON. Mr. Chairman and gentlemen, during the week that I have been present here I have heard everything discussed except an article out of which hundreds of different articles are manufactured; that is, flax straw and flax tow. Flax straw is raised in the Northwest, in North Dakota, South Dakota, Minnesota, Iowa, Michigan, Ohio, and Wisconsin.

The duty on flax straw has been \$5 a ton and \$20 a ton on manufactured tow. I have some samples here, but I left them over at Mr. Smith's office. I wish I could show them to you. Can I be excused for a moment?

The CHAIRMAN. You may submit the samples later.

Mr. BLEHDON. In flax straw the top, the little bulb, contains the seed; the lower part is the straw. The longer it grows the better. For instance, Michigan and Ohio produce the best straw, and in North Dakota and South Dakota the straw is inferior.

The seed is used for linseed oil, as we all know, and the straw is used in tow mills to make tow out of it. Tow is used for upholstering. For instance, you buy a parlor suite, a chair, or a couch stuffed with hair, you get the tow. Hair is worth about 40 or 50 cents a pound, and tow is much cheaper. But the bottom of any upholstered chair

PARAGRAPHS 333-336—FLAX.

is tow, with a little hair, perhaps, on top. It is also used for lining refrigerator cars, where formerly they had used charcoal and cattle hair. Instead of that, tow is now used. The tow is boiled and chemically prepared, put into heavy papers, and refrigerator cars are lined with it. Fruit and vegetable articles are now shipped from California to New York with only one icing at Denver, where formerly three icings were necessary. Most of the railroads now use tow for lining their refrigerator cars. The tow mills have only been recently established in America, between 40 and 50 years ago, and as far as the car lining is concerned that has only been within the last five years. As I said, cattle hair was formerly used, but cattle hair smells after a certain time, and fruit can not be shipped. The tow is boiled, and it never smells after it is chemically prepared. It is a kind of flax. The farmers raise that flax and sell the seed to the linseed-oil mill companies, and the flax straw they sell to the tow mills. They derive a very large income because they receive from three to eight or nine dollars a ton for the flax straw delivered at the mills. There is at present a very large concern, called the Union Fibre Co., at Winona, Minn., manufacturing linings for refrigerator cars.

About 3,000,000 tons of flax straw is raised by the farmers in this country, of which about 1,500,000 tons are in good condition to be used for tow for refrigerator-car linings. Michigan and Ohio produce about the best flax straw in this country. They take more care in raising it than they do in North Dakota, where it is mostly raised for the seed. The farmers derive a very large income, hundreds of thousands of dollars, out of selling flax straw to refrigerator-car people and the tow mills. The tow mills are distributed all over the Western States, in Iowa, Michigan, Minnesota, and Wisconsin, in both the Dakotas, and some in Ohio. Gentlemen, the farmers are desirous of selling their straw. To some farmers it means \$10 a year, to some \$20, to some \$50 a year, and to some \$500 a year. I am interested in several of the tow mills and own some land out in North Dakota, and I am anxious to sell straw to the manufacturers of refrigerating cars. I travel all over the Northwest, and I am intrusted by the farmers of the Northwest to bring the matter before you. I receive not a cent for it. I am only acting in the interest of the farmers. I had the pleasure of turning over to the clerk of your committee petitions containing a thousand signatures of farmers of the Northwest, and I understand there are a hundred thousand signatures to petitions which have been submitted to the Representatives and Senators, and more coming.

Mr. HARRISON. What did you say was the American production of flax straw?

Mr. BLEHDON. Good flax straw that is worth something, about 3,000,000 tons.

Mr. HARRISON. We imported last year 170 tons. Do you think the farmers of the Northwest need be alarmed about the invasion of their markets?

Mr. BLEHDON. Yes, sir. The appraisers have made a mistake. In the Payne tariff it said "tow of flax," and the appraisers took it literally. You make tow out of flax straw, and not out of flax.

Mr. HARRISON. Of tow flax, only 1,325 tons were imported, so that with all the tow of flax and flax straw put together there was not as

PARAGRAPHS 333-336—FLAX.

much as 1,500 tons imported at the very low rate of duty, and you say yourself there were at least three and a half million tons of good flax straw produced in the United States.

Mr. BLEHDON. But since the appraisers have made that decision thousands of tons have come in.

Mr. HARRISON. When did they make that decision?

Mr. BLEHDON. On the 7th of October. I have the papers, and I will present the petition and everything. That decision has been immediately reversed by the Secretary of the Treasury, and a new hearing is going to be held on it.

Mr. HARRISON. Under what classification does it now come in, if it is not flax straw nor tow of flax?

Mr. BLEHDON. Flax straw—

Mr. HARRISON. Flax straw is specifically dutiable at \$5 per ton.

Mr. BLEHDON. It costs from ten to twenty dollars to make a ton of tow out of flax straw.

Mr. HARRISON. What is this material that has been decided by the Board of Appraisers to be on the free list, if it is not flax straw nor tow of flax?

Mr. BLEHDON. They let it come in as flax-straw paper stock.

Mr. HARRISON. Well, but flax straw is specifically dutiable under the law at \$5 per ton?

Mr. BLEHDON. Yes, sir.

Mr. HARRISON. What was their decision which permitted them to bring it in free?

Mr. BLEHDON. I did not say free. I meant tow as flax straw. There is no duty on tow. They bring it in as flax straw now.

Mr. HARRISON. Tow flax is taxed at \$20 per ton, and flax straw at \$5 per ton?

Mr. BLEHDON. Yes.

Mr. FORDNEY. But they now let the tow come in under the flax-straw rate.

Mr. HARRISON. They let the tow come in at a lower duty?

Mr. BLEHDON. Yes; as flax straw.

Mr. HARRISON. It is not on the free list?

Mr. BLEHDON. No, sir; unless it is falsely imported as flax waste or paper stock.

The CHAIRMAN. Proceed.

Mr. FORDNEY. So that the rate on tow, which was \$20 under the law, is now \$5?

Mr. BLEHDON. It is \$5. Flax is worth 16 cents a pound, and tow is worth about 2.5 or 3 cents a pound.

The CHAIRMAN. You say that decision has been reversed by the Secretary of the Treasury?

Mr. BLEHDON. Not reversed; but a new hearing has been ordered.

The CHAIRMAN. Before the Board of Appraisers?

Mr. BLEHDON. Before the Board of Appraisers; but there is an old saying that they never reverse themselves, but that may not be so; it may be wrong.

Now, gentlemen, the farmers pray, and you will see hundreds—thousands—of their signatures, part of which I have submitted to-day, asking that the duty be left as it is.

PARAGRAPHS 333-336—FLAX.

There is no combination; they are all poor farmers, and that is all they want.

I would further like to say this, Mr. Chairman, that I have been here a week and have listened to what was going on here.

I travel a great deal through North and South Dakota, and Minnesota, and West, and I have found out that some newspapers and some fellows who travel over the Northwest and meet the farmers tell them that "Now the Democrats are in, and you voted for them, and you will find out that things will be altogether different," and that you give only 10 minutes to each witness who appears before you.

I have, as I stated, been here a whole week and listened to the proceedings of your honorable committee, and I have seen that you have given everybody all the time he or they wanted. You have had men before you for an hour and have listened carefully to what they have to say, and I tell you that whoever has chosen your committee has chosen well, and in the interest of the people, and I found that it is a good thing that you have been chosen, for you will certainly decide in the interest of the people.

I thank you, gentlemen.

Mr. FORDNEY. After that compliment I should be surprised if flax is not well taken care of.

Mr. BLEHDON. Now, no, I do not say it for that. It is all right, I can tell you that.

CORRECTED BRIEF OF V. R. BLEHDON, 438 BRISBANE BUILDING, BUFFALO, N. Y., REPRESENTING FARMERS AND HIMSELF.—SCHEDULE J, FLAX STRAW (SEC. 333), FLAX TOW MADE OF FLAX STRAW (SEC. 336).

HON. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

MY DEAR SIR: The northwestern and western parts of the United States raise about 3,000,000 tons of flax straw in favorable years. There are some years, as for instance 1909 and 1910, on account of the great heat then prevailing, millions of acres were damaged and the product made worthless, causing great loss to the farmers.

Most of the good flax straw raised in the Northwest, in Iowa, Michigan, North and South Dakota, Ohio, Wisconsin, and Minnesota, is purchased from the farmers by the tow mills, of which there are large numbers located in the different States mentioned.

Furthermore, it is used for binder twine by the International Harvester Co. and several other concerns.

For the last few years a new use has been made of it. When common flax straw is being manufactured into tow, and that tow is being now used by almost all the railroads for lining of refrigerator cars, and thousands of these cars are now running from California to New York, from the North to the South, and only one icing is wanted for perishable articles, when formerly the cars were lined with cattle hair or cork or charcoal, the same distance needed three icings.

Tow mills have been established only in this country within the last 30 or 40 years, for previously all flax straw was burned by the farmers when the straw was thrashed out.

The price the farmers receive for flax straw is from \$3 to \$9 a ton, according to the quality and length of the straw and the amount of fiber it contains, for it is the fiber alone which can be used for tow, for binder twine, or for car linings. So, therefore, the farmers, when the straw is thrashed and the seed taken out, cart it themselves or bale and ship the straw to the mills and receive immediate cash for the product, and is therefore a very large income to farmers.

At the mill the flax straw is dried, then goes through from 24 to 72 corrugated steel rollers; then goes through revolving pickers; then through wire shakers where all woody substances are shaken out, or should be, as far as possible. It is then baled.

The better and finer the grade of tow the oftener it has to be repassed through the machinery and rollers, and the oftener it goes through the finer the tow and more expensive it will be.

PARAGRAPHS 333-336—FLAX.

The manufacture of fine grades of tow alone costs us as much as \$12 to \$15 a ton of tow, and from 3 to 5 tons of straw are needed to make 1 ton of the finest tow.

The many tow mills distributed over the North and Northwest are to a large extent owned by people who live among the farmers in the small towns, who borrow money from small banks to pay for the flax tow, and being their own salesmen sell the tow themselves, or have agents who travel through the country and sell the tow, or who buy it of them, and when they have sold the tow they pay back the bank. A tow mill is a small matter, costing from \$4,000 to \$8,000 or \$9,000, except two or three, which are owned by the International Flax Twine Co., St. Paul, or the Union Fiber Co., and cost perhaps \$30,000 or \$40,000 a piece. In this way only not more than one-third of the flax straw produced in this country is salable, and the farmers are waiting anxiously some new industries which have so far been found a great loss, as by instance the manufacturing of linen out of American straw, but some grades of paper are being seriously tried now out of the American flax straw.

Russia raises more flax, and consequently more flax straw, than America, and together with Canada they could flood the whole United States with cheap tow at one-half or less, for Russia pays only 55 cents (1 ruble Russian money) a day to laborers in the tow mill, whereas the Americans pay from \$2 to \$2.75 a day, and Canada pays only half these wages, and the farmers receive only, in Russia, I understand, about 50 cents for the flax straw a ton, and in Canada only one-half we pay to the farmer.

For all these reasons the farmers have signed many petitions to your honorable body, to which I have the honor to present, as well as all kinds of citizens, and I understand that 100,000 signers will follow, praying that the present duty shall remain as it is, to wit, \$5 on flax straw a ton; and the present duty on tow made out of flax straw remain as it is now, \$20 a ton of 2,000 pounds. Leaving the matter in your hands,

I have the honor to be,

V. R. BLEHDON,
For himself and farmers of North and South Dakota,
Iowa, Minnesota, Michigan, Ohio.

BUFFALO, N. Y., February 22, 1913.

HON. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

DEAR SIR: AS I took the liberty of explaining to your committee, the United States General Appraisers of the customhouse, New York, made a decision, based upon technical grounds, reducing the duty on tow from \$20 per ton, as it was for years back, to \$5 per ton of 2,000 pounds, because the composers of the Payne tariff made a mistake, for it says "tow of flax" instead of, as it should be, "tow manufactured of flax straw," for tow is manufactured of flax straw and not of flax.

There are two kinds of flax, one simply retted, which means the hulls retted off by wetting the flax straw and exposing it to the sun, or otherwise, until the woody part is retted off, and it is called flax not hackled, whereas flax hackled, known as dressed flax, is first "retted," then "combed," then "hackled," then "scutched," and, last, but not least, "drawn" (straight).

I have explained the retting—the combing a man has to do by taking a large handful of the retted flax straw in his hand and pulling it through combs of steel about 6 or 8 inches long, set into a horizontal board. This takes off part of the hulls. Then it goes through finer combs, and then it goes under the scutching knife, the man holding a long knife in his right hand and passing it over the combed flax held in his left hand, until every vestige of the woody part disappears.

After all that is done the flax is braided into braids similar in size to that of a woman's hair, and in that way it is packed and shipped out, especially to thread and linen manufacturers. This takes a very long time and is very arduous labor, it being all hand work, nothing being done by machinery.

The duty on such flax has been 3 cents a pound, or \$60 a ton, the value of it being up to \$300 a ton and more.

Tow of flax straw is made out of flax straw from which the seed is thrashed out, and then it goes from one to four times through two or three brakes, each having from 32 to 34 steel corrugated rollers, according to the fineness of the grade of tow, the price of which is up to \$60 a ton; thence it goes through several steel pickers, steel shakers, all worked by steam power or electricity.

In former years all straw, after seed was thrashed out, was burned and used for manuring the ground, whereas for the last 30 or 40 years tow mills have been established. Binder twine was and is being made out of it, and recently, as I stated before, part of the flax

PARAGRAPH 337—HEMP.

straw raised is used for lining refrigerator cars, and where formerly three icings were wanted for shipping fruit from California to the East, now, since the cars are being lined with tow made out of flax straw, only one icing is necessary.

In spite of this the farmers can sell only less than one-half of the product called flax straw, there being no use for the other half, although it is being tried now to make wrapping and writing paper out of it.

If the duty was taken off, Canada and Russia would import flax straw and tow to cover the whole United States, thereby preventing the farmers of Ohio, Michigan, Minnesota, Wisconsin, North and South Dakota, and Iowa from selling their flax straw, and they would have to burn it, as they did in olden time.

The farmers receive from \$3 to \$9 a ton of 2,000 pounds for their flax straw, amounting to hundreds of thousands of dollars a year, which would be a serious loss to farmers.

The Hon. Mr. Harrison, of New York, a member of your committee, asked if it could injure the farmers of the West and Northwest very much if 3,000,000 tons of flax straw are raised in this country, whereas the importation of flax straw and tow has been comparatively a very small one.

To this I make the truthful statement that the use of tow in general, and to a large extent, is only about 20 years old, and the use of tow for lining refrigerator cars only about 6 or 7 years, and since there was only very little use for tow the few tow mills then established could provide all needs, and no importation was needed.

That has changed now, when, as I stated, of the 3,000,000 tons of flax straw raised nearly one-half of the good straw is bought of the farmers and used, and doubtless the whole will be used when the making of paper comes into effect.

Therefore the American farmers ought to be given a chance to sell their flax straw and tow, for many tow manufacturers are farmers themselves and raise flax straw, especially in North and South Dakota.

It is an old story that importers want no duty, but everything free, and in this special case—flax and tow—such firms as the J. E. Barbour Co., of Paterson, N. J., and Allentown, Pa., who represent themselves and others and count among the big million dollar monopolies, want flax and flax straw imported free and call it raw material, whereas it takes from 5 cents to 10 cents a pound to manufacture first-class flax for thread spinning out of raw flax straw, therefore the designation that flax is a raw material is untrue.

The other man who advises flax and tow be on the free list is one Patrick Boyle, and is employed by the Barbour Co.

As a further fact, thread spinners can not use tow at all, for this is impossible, since it is all mixed up in going through the brakes, pickers, shakers, and other machinery, and could not be used for thread spinning.

The Barbour Co. would certainly not make a written agreement that they would reduce their prices on all kinds of threads, which is one of those prices, as we all know, about the same by every thread manufacturer, and is upheld pretty well.

I allow the farmers to speak themselves, praying that the duty on flax straw and tow remain as it is now, and they have submitted to the clerk of your committee a large number of petitions and signatures, and I understand the farmers themselves are collecting thousands more, all of which without my doing, but by themselves, in order that they may be able to save their product and get something for it, and that foreign countries be not permitted to kill off the flax trade, the Agricultural Department of the United States continually working to improve and enlarge the flax crop and its value, which would be destroyed if the duty was taken off.

I have the honor to be, having represented before your honorable body, under affidavits turned over to your clerk, western and northwestern bankers, farmers, tow manufacturers, and refrigerator car-lining concerns,

Yours, very truly,

V. R. BLEHDON.

PARAGRAPH 337.

Hemp, and tow of hemp, twenty-two dollars and fifty cents per ton; hemp, hackled, known as "line of hemp," forty-five dollars per ton.

HEMP.

TESTIMONY OF EDWIN D. METCALF, PRESIDENT OF THE COLUMBIAN ROPE CO., AUBURN, N. Y.

The CHAIRMAN. Mr. Metcalf, what paragraph do you refer to?

Mr. METCALF. Paragraphs 337, 578, covering our raw material, and 339 and 507, covering our manufactured product.

PARAGRAPH 337—HEMP.

Mr. Chairman, in considering how any new tariff will affect an industry it is well to investigate and consider present conditions.

The CHAIRMAN. Mr. Metcalf, I understand that Mr. Loring has yielded you his time?

Mr. METCALF. Yes, sir; in view of the interest that this committee has expressed in the refund of export duty on manila hemp.

The CHAIRMAN. Very well; the committee will allow you 20 minutes.

Mr. METCALF. I want to say right here and have it go into the record that there are for sale in the United States at the present time six manufacturing establishments in our industry, including the buildings and machinery, that are shut down. I will give you the names: Sewell & Day, of Boston; Pearson Cordage Co., of Boston; the Newburyport Cordage Co., of Newburyport, Mass.; the Morgan Avenue Co., of Brooklyn, N. Y.; the Waterbury Mill, of Brooklyn N. Y., and the Overman Schrader Mill, of Cincinnati, Ohio.

While the manufacture of cables, rope, and cordage is as ancient as any known industry, it has been one of the most unfortunate industries to investors in the United States for the past 25 years. Many old plants are now for sale or dismantled, which were once prosperous industries, and not a new mill has been built in the past 10 years.

While the United States has exported as well as imported manufactured products in our line, this condition is due to various causes; in some to overcapitalization; sharp competition between manufacturers; small margins of profit between raw material and finished products; wide fluctuations in the price of raw material; increase in cost of labor, which to-day is more than 60 per cent higher than similar industries pay in Europe; the gradual increase in the use of wire rope in the equipment of vessels; and the competition of convict labor in some of the State prisons; and now, to add to our troubles, under the Panama act, new vessels are permitted to equip and replace with cordage admitted free of duty.

The CHAIRMAN. That was the case on all ships in the foreign commerce before the Panama act. That act only extended that provision to the coastwise trade.

Mr. METCALF. I do not understand it was.

The CHAIRMAN. I think American ships in foreign commerce before that time were entitled to import free articles that were used in the building of the ship.

Mr. METCALF. They could not equip the ship and replace them free.

The CHAIRMAN. I think the extension in the Panama act was only to ships in the coastwise trade.

Mr. METCALF. Yes; but that covers our best trade. Now, with regard to convict labor. There were over 39,000,000 pounds produced in State prisons this last season.

With these conditions before you, we beg leave to suggest the following recommendations:

First, that paragraph 578 of the tariff act of 1909, covering the principal part of our raw material, and the coarsest kinds of vegetable fiber, shall remain the same as at present;

PARAGRAPH 337—HEMP.

Second, that paragraph 337, covering hemp and tow of hemp, read as follows:

Hemp and tow of hemp, \$20 per ton; hemp, hackled, known as "line of hemp," \$40 per ton.

This tariff is a special protection to American hemp growers in Kentucky, and the above is all that Mr. Hamilton Scott, representing the growers, asked for before the Committee on Ways and Means November 30, 1908. But in the Senate it was increased to \$22.50 and \$45 per ton.

Mr. DIXON. That is the same rate they had in 1897.

Mr. METCALF. Yes; the same rate as formerly, before the last act.

Third, that paragraph 339, covering cables, rope, and cordage, remain the same as at present—three-fourths of a cent a pound duty—which is much less than the duty in any other country that does an export business in our product, excepting England; and so much of such paragraph as refers to tarred and untarred rope, remain as at present—namely, 2 cents per pound—as upon that raw material there would be a duty of \$20 and \$40 a ton.

Mr. FORDNEY. Do you recommend the same rates in paragraph 337 as are in the existing law?

Mr. METCALF. Yes, excepting that which applies to hemp, which is now \$22.50 and \$45 a ton. I recommend the same as the hemp growers themselves asked for in 1909—\$20 and \$40—just the same as in the Dingley bill. But it was increased in the conference committee, after the Senate had changed it.

Mr. PETERS. You referred to competition with convict labor just now. Can you tell us where such convict labor is located?

Mr. METCALF. Yes, in the State of Kansas, in Minnesota, in North Dakota, South Dakota, Michigan, Indiana, Wisconsin, and Missouri.

Mr. FORDNEY. Does not California also have convict labor?

Mr. METCALF. I have no record of it. This is the only record I have here.

Mr. PETERS. Have you the number of men?

Mr. METCALF. I have not.

Fourth, that paragraph 507, covering binding twine, remain the same as at present, with the present proviso, which is quite necessary to prevent Canada from placing a duty on binding twine, to protect their own manufacturing industries. This clause now makes the trade reciprocal, and binding twine is admitted free in both countries.

That is decidedly to the advantage of the American manufacturer, because we are exporting large quantities of twine from this country to Canada.

When the tariff act of 1909 was under consideration, in view of the refund of export duty on manila hemp from the Philippines to the United States, the manufacturers of cables, cordage, and binding twine voluntarily appeared before the Ways and Means Committee and suggested a reduction of from 1 cent to three-quarters of a cent a pound on such portion of their manufactured product as was affected directly and indirectly by the refund of this export duty.

We voluntarily appeared; we were one of the few industries that asked for or suggested a reduction on our own manufactured products.

PARAGRAPH 337—HEMP.

It was in view of the refund, so called, of the export duty on manila hemp from the Philippines—which, by the way, is a misnomer—because at the present time it is not a question of refunding the duty, but simply a question of free raw material to the American manufacturer.

Mr. PAYNE. That was in the tariff of 1909.

Mr. METCALF. It is in the Philippine bill.

The CHAIRMAN. I thought it was in the Philippine bill. The refund proposition is not in the Payne tariff bill, but it is in the Philippine tariff bill.

Mr. METCALF. The refund act was first passed on March 8, 1902, and then was reaffirmed in the Philippine bill, as I recall it.

The CHAIRMAN. It was then already on the statute books when you appeared before this committee?

Mr. METCALF. Yes, sir.

The CHAIRMAN. And it was not reenacted into the statute books until after the Payne bill had become a law?

Mr. METCALF. There had been no change in the tariff, and by reason of having that refund we voluntarily suggested a reduction by reason of having it.

Mr. PAYNE. It was reenacted in the Philippine tariff on goods coming in and going out of the Philippine Islands.

The CHAIRMAN. Yes; it was reenacted in the Philippine bill.

Mr. METCALF. Since the passage of the act of 1902 refunding to manufacturers in the United States the amount of export duty on manila hemp from the Philippines shipped directly here and manufactured here has resulted in the following:

First. Increased export business of the United States in cables, cordage, and binding twine, by enabling the manufacturers of this country to better compete with the manufacturers of other countries, especially in South American markets.

I have filed statistics with you taken from the Government records, showing the gradual increase of exports in our line of goods.

Second. It has increased the importation of manila hemp shipped directly to the United States from the Philippines, thus affording direct cargoes for our shipping interests; increasing business for the bankers of this country, in financing this large amount of importations, and necessarily the business of the marine-insurance companies and importing merchants of the United States.

The direct shipments between the Philippines and the United States have increased 100 per cent since the passage of the original act of March 8, 1902.

Third. This refund of duty has not acted so as to depress the hemp industries of the Philippines, but, on the contrary, has added very much to increasing it, as the increased production of manila hemp in the Philippines for the past 10 years shows.

My Exhibit D will show that there has been an increase from about eight hundred and some odd thousand bales in 1902 to one million four hundred and some odd thousand bales last year, showing that this export duty has not depressed the industry in the Philippines.

Should the manufacturers in this country not receive this refund of duty, they would be placed at a great disadvantage in the compe-

PARAGRAPH 337—HEMP.

tion with the Canadian manufacturers, as well as the manufacturers of France, England, and Germany, in the South American trade, and in some portions of Europe, where the duty is not prohibitive.

As you are probably aware, Mr. Chairman, Canada gives a bonus to the manufacturers of rope and twine in an amount equal to the refund, so called, to the American manufacturer here. In other words, they pay back to them the amount of the export duty that they pay in the Philippines.

Sixth. Manila hemp is recognized as the barometer of values of all other kinds of vegetable fibers that we use, and anything that would increase the cost of manila hemp to the manufacturers in this country would naturally increase the value of other fibers and the cost of all our product, including binding twine, to the American farmers.

Seventh, the export tax on manila hemp from the Philippines comes to us as a relic of the Spanish régime; and any return to this method of ancient times between citizens of the United States, which would seriously affect the manufacturing industries here and the users of their products, would be entirely foreign to the principles of the Constitution of the United States and our democratic principles of government.

The export duty, so called, as you understand, Mr. Chairman, is not now as it was a few years ago. Now they give a bond on hemp shipped direct to the United States in place of paying the export duty, so that to-day the situation is this: That the manufacturers of the United States do not pay an export duty; the manufacturers of other nations do.

Mr. JAMES. What is the total production of hemp in the United States?

Mr. METCALF. The total American hemp produced here, you mean?

Mr. JAMES. Yes.

Mr. METCALF. I do not think I have those figures. It is very small. It is practically in Kentucky.

Mr. JAMES. About how much?

Mr. METCALF. I do not think I have those figures.

Mr. JAMES. About 5,000 tons, is it not?

Mr. METCALF. I would not want to say. It is not a very large amount compared with what they import.

Mr. JAMES. Since jute has been admitted free, what effect has that had upon the price of hemp?

Mr. METCALF. I do not know whether that is responsible for it, but American hemp is selling at a great deal higher price to-day than it was 10, 15, or 20 years ago; a great deal more.

Mr. JAMES. How much hemp is imported here?

Mr. METCALF. I can not give you those figures. It is a matter of public record. I suppose the hemp that you refer to is the hemp that competes with the American hemp. That is not the Manila hemp that we are referring to. The hemp you are referring to is Russian and Italian hemp.

Mr. JAMES. Yes; that is true.

Mr. METCALF. That competes with the product of Kentucky.

Mr. JAMES. Then you think these importations of 5,000 tons of hemp have reference to Russian and Italian hemp.

PARAGRAPH 337—HEMP.

Mr. METCALF. I should imagine so, because that is the only hemp that competes with the American hemp.

Mr. JAMES. What is it you want? Do you want the rate reduced on this character of hemp?

Mr. METCALF. On American hemp we suggested a reduction of \$2.50 on the rough hemp and \$5 on the hackled hemp, which is the same as existed prior to the last tariff act of 1909, and the same as Mr. Scott, representing the growers of American hemp in Kentucky, appeared before this committee and advocated.

Mr. JAMES. He only advocated a duty of \$20 a ton, you say?

Mr. METCALF. \$20 and \$40. When it went to the Senate they raised the rate there, and in conference it was compromised at \$22.50 and \$45, which was higher than the representative of the growers of hemp asked for. You will find that in the records.

The CHAIRMAN. You say you want the present law in reference to the export tax on Manila hemp to remain as it is?

Mr. METCALF. I do.

The CHAIRMAN. You are advocating that?

Mr. METCALF. I am.

The CHAIRMAN. Mr. Metcalf, the American manufacturer or purchaser of Manila hemp gets that export tax, does he not?

Mr. METCALF. The manufacturer does, and it decreases the cost of his material just so much, and so eventually his customer get the benefit of the refund.

The CHAIRMAN. That export tax is not levied by our Government, but by the Philippine Government on all hemp that is raised in the Philippine Islands and exported from the Philippine Islands to any other country; is not that right?

Mr. METCALF. That is right, excepting the United States.

The CHAIRMAN. And if it comes to the United States, then, upon affidavits being made showing that it was imported to the United States, the importer is allowed to get a drawback to the amount of the export duty?

Mr. METCALF. There is no drawback at the present time, as I understand it, as a bond is given saying it is to be manufactured in the United States.

The CHAIRMAN. Well, he gets the export tax?

Mr. METCALF. No; he does not pay the export; he gives a bond.

The CHAIRMAN. In other words, the American exporter instead of having to pay the tax and then get it back, does not even have to go through the form of paying it like other people do?

Mr. METCALF. No.

The CHAIRMAN. And that export tax, except in the last year, as the price of hemp has gone up by reason of the shortage in the crop in the markets, has had the effect of depressing the price of hemp to the farmers who grow it in the Philippine Islands?

Mr. METCALF. I do not think so. I do not think it has had any effect. As a matter of fact, the records show that there has been a gradual increase in the production of Manila hemp almost every year.

The CHAIRMAN. There might have been an increased production, but it has not held the price of Manila hemp in its own market below the price in foreign markets, has it?

PARAGRAPH 337—HEMP.

Mr. METCALF. I do not think so, when you allow for freight, insurance, and commission.

The CHAIRMAN. That is my information.

I want to know whether you think it is fair for this Government, because it has the power, to levy an export tax on a product of these Philippine people and then convert that same tax into the pockets of some of the manufacturers in this country?

Mr. METCALF. Mr. Chairman, I must take issue with you there. They are not levying a tax on the farmer or the producer in the Philippines, but you will be levying a tax upon the farmer of the United States, because it would increase the cost of raw material which the manufacturers are obliged to use in the manufacture of binding twine.

The CHAIRMAN. I think our forefathers, when they established the Constitution of the United States, provided in there that this Government should not levy an export tax on any article. They did that in order that they would prosper and build up the productive capacity of the people of North America, did they not?

Mr. METCALF. That was one of the objects.

The CHAIRMAN. There is no civilized country in the world, outside of our own country and the Philippine Islands, which levies an export tax on any of its goods going abroad, is there?

Mr. METCALF. I can not say what other nations do. I only know about the Philippines. But I think Cuba used to have an export tax. I do not know whether they do now or not.

The CHAIRMAN. They have not had such a tax since the Republic of Cuba was organized. The Spanish Government allowed this export tax in the Philippines.

You get the benefit of the export tax levied by the Philippine Government, instead of the Philippine Government getting it, do you not?

Mr. METCALF. No, sir. Our customers get the benefit of it, by decreasing the cost of our raw material just so much.

The CHAIRMAN. Whether it is you or whether it is your customers, we are all in the same boat; we are all American citizens, and whether we are the manufacturer or the purchaser it seems to me we ought to have the same respect for the flag and the principles of the foundation of our own Government. I want to know whether you think that what our forefathers thought would be an injustice to our own people is a fair thing for us to do to a subjugated people, simply because we have the power?

Mr. METCALF. I take issue with that statement, because I look at it from an entirely different standpoint. I look upon this as not a tax levied on the Filipino, but that we pay it, and it becomes a tax upon the people of this country who use the product. That is the fact of the case. If I buy an article for \$1 and get a 5-cent discount my cost is 95 cents, and not \$1; and that is just what this is; if we get this refund, so called, our cost is the original cost, less that amount of refund.

The CHAIRMAN. But here is the proposition: We levy a tax on all hemp, or rather our Government forces the Philippine Government to levy a tax on all hemp that is exported from the Philippine Islands. If that hemp goes into England or any other foreign country the tax

PARAGRAPH 337—HEMP.

that is collected goes into the treasury of the Philippine Government for the benefit of that country, does it not?

Mr. METCALF. It does. But I do not think we forced it upon them. I think it was there before we forced it. I think the Spanish Government had it.

The CHAIRMAN. Then it is continuing a bad law of Spain. But Spain gave the Philippine Islands all the tax she levied. We have forced this export tax upon them, and if hemp goes to a foreign country that tax goes into the Philippine treasury?

Mr. METCALF. Yes.

The CHAIRMAN. But if it comes to our country we take it and absorb it either for the benefit of the hemp manufacturer or, as you say, the manufacturer turns it over to the American consumer.

Whoever gets it, it does not make any difference. I want to know whether you think it is right to continue a condition of that kind?

Mr. METCALF. I think it would be just as unjust for the State of New York to put an expert tax on their product against the citizens of the State of Pennsylvania as for any country controlled by the United States Government to put a tax on the manufacturers of another portion of the United States, which is not recognized in the Constitution, and which in fact the Constitution has practically prohibited.

Mr. JAMES. You are engaged in the manufacture of rope, are you not?

Mr. METCALF. Yes, sir.

Mr. JAMES. You manufacture what character of rope?

Mr. METCALF. All kinds of rope.

Mr. JAMES. Do you manufacture binding twine?

Mr. METCALF. We do not make binding twine in our mill, but I am representing some of the largest manufacturers of binding twine in the country.

Mr. JAMES. Is Kentucky hemp used in the manufacture of binding twine?

Mr. METCALF. It is not.

Mr. JAMES. I thought not. Kentucky hemp is used in the making of these heavy cables and ropes and things of that sort, is it not?

Mr. METCALF. No; Kentucky hemp is used in the manufacture of commercial twines, for tying up packages and bundles, and it is used in polished twines, what are known as B's and C's.

Mr. JAMES. Such as is used in stores?

Mr. METCALF. Yes; that is what it is used largely for.

Mr. JAMES. Do you manufacture any of that?

Mr. METCALF. We do.

Mr. JAMES. If the tariff is reduced \$2.50 a ton, as you advocate, what will be the effect upon the consumer? How much cheaper will you be able to give the consumer this twine?

Mr. METCALF. I have not figured the percentage. I think there is so much waste in Kentucky hemp, anyway, that it would be very small. There is a very large waste in Kentucky hemp. It does not come in competition with any other American product that I know of, or any of the free-entry materials; it only comes in contact with Russian and Italian hemp.

Mr. JAMES. So you think that a reduction of this tariff would not affect the Kentucky hemp at all?

PARAGRAPH 337—HEMP.

Mr. METCALF. I do not think it would. Prices have been advancing in Kentucky hemp for the last 10 years, every year.

Mr. JAMES. Do you not think that is caused by the fact that our farmers there are not growing so much hemp?

Mr. METCALF. Unquestionably so. They found out that they could grow tobacco and wheat more profitably than they could American hemp.

Mr. JAMES. There is no doubt about that. The truth of it is there are not over 10 counties in Kentucky, and I doubt if there are that many, who are growing hemp, and the product is falling off all the time.

Mr. METCALF. It has been falling off gradually every year until this year.

Mr. JAMES. I notice under the tariff rate here it was \$20 per ton, and the revenue derived was \$76,000 in 1905, and the amount of revenue derived in 1912, at the \$22.50 rate, was \$88,170.88. Do you think a reduction of this tariff of \$2.50 would increase the importations here and thereby increase the revenue?

Mr. METCALF. I can not see that it would. I think that the importation of Italian and Russian hemp is restricted. There is only a limited amount used comparatively, and a change in the tariff would not increase the use very much.

Mr. JAMES. It would not increase it?

Mr. METCALF. I do not think it would.

Mr. JAMES. It would not increase the revenue?

Mr. METCALF. I do not believe it would.

Mr. PETERS. I notice that under the Wilson tariff hemp came in under section 337, and hemp hackled, known as "dressed line" and hemp tow, both came in free. Do you consider that making those articles free now would have a tendency to lower the price of your product to the consumer?

Mr. METCALF. I do not ask that hemp come in free.

Mr. PETERS. I know, but I was asking your opinion.

Mr. METCALF. I think you are mistaken as to my product. I have two mills, one a hard fiber mill, for which I am appearing here, and the other is a soft fiber mill, which uses Kentucky hemp, the Russian hemp, and Italian hemp. But in the interests I am representing here to-day, which is the hard-fiber product, very little of that is used. There is some of it used for tarred goods, etc., but the great amount of these importations of hemp that you see, and which Mr. James has read about, refer to commercial twines, and is used in the manufacture of commercial twines.

Mr. PETERS. You said you did not make binding twines yourself, but that you appeared here for some other manufacturers who did, so I was asking you what effect it would have upon binding twine to make these two materials I refer to free.

Mr. METCALF. They are not used in the manufacture of binding twine; neither of them. The barometer of all the coarser fibers is Manila hemp, and when Manila hemp advances, sisal and other ingredients that go into the manufacture of binding twine advance; when Manila hemp is cheap, sisal is cheap, and therefore anything that you do that affects the cost to the manufacturer of the Manila

PARAGRAPH 337—HEMP.

hemp would affect the cost of the other grades of material which go into our product.

Mr. JAMES. Is not jute a competitor of hemp?

Mr. METCALF. Not a competitor in the sense to which you probably refer. Do you refer to manila hemp?

Mr. JAMES. No; I refer to Kentucky hemp.

Mr. METCALF. No; I do not think so. Kentucky hemp is a higher-priced material and sells for a great deal more.

Mr. JAMES. What sort of hemp makes the binding twine that the farmer uses?

Mr. METCALF. That is made out of what is known as sisal fiber and manila hemp.

Mr. JAMES. Is any of that grown in the United States?

Mr. METCALF. None of that is grown in the United States; but the manila hemp is grown in the Philippine Islands.

Mr. JAMES. Do you think there is only a limited supply of this hemp in Russia and Italy?

Mr. METCALF. There is plenty of it in Russia and Italy of that character. The only limited supply is the American hemp in Kentucky. As a fact the farmers in Kentucky can produce wheat and tobacco, even with the increased cost of labor which the farmer has to contend with to-day, cheaper and make more money out of it than he can in producing hemp. It is largely a question of labor in Kentucky, as it is everywhere else. Labor cost has increased. In any case, they can produce, with the modern machinery, more to the acre and receive more revenue by raising tobacco and wheat than they can by raising hemp.

Mr. JAMES. Especially when tobacco is worth \$20 a hundred pounds.

Mr. METCALF. I do not know anything about the value of it.

Mr. JAMES. They do not make cigars out of our tobacco.

Col. E. D. METCALF,
 Columbian Rope Co., Auburn, N. Y.

DEAR SIR: We are in receipt of your letter of the 14th and thank you for calling our attention to the hearing on Schedule J, on January 24, and note your attitude on the subject and your suggestion that we send a representative to the hearing.

This law went into effect before the organization of International Harvester Co., and we have never taken any action for or against it. Your letter was submitted to the officers of the company, and after full consideration, they instruct me to say to you that while we regret to refuse your request, we do not in this case see our way clear to change our position and will not, therefore, send a representative to the hearing.

Very truly, yours,

INTERNATIONAL HARVESTER CO.

UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF PLANT INDUSTRY,
Washington, D. C., December 27, 1912.

Mr. WM. ERS. LAMB, *Washington, D. C.*

DEAR SIR: Your request for information regarding the production of American hemp addressed to the Bureau of Foreign and Domestic Commerce, has been referred to this office.

Hemp is regarded as one of the minor crops, and no attempt is made to gather accurate statistics regarding its production, as is done in the case of wheat, corn, oats, cotton, and the other important crops.

The most reliable data that we have is based upon the reports of the commissioner of agriculture of Kentucky, where most of the hemp is grown, and upon personal investigations and statements received at this office from hemp growers. The following table gives the statistics based upon these sources from 1898 to 1912, and, for purposes of comparison, the importation during the same years.

Year.	Produced in Ken- tucky.	Imported.	Year.	Produced in Ken- tucky.	Imported.
	<i>Tons.</i>	<i>Tons.</i>		<i>Tons.</i>	<i>Tons.</i>
1898.....	4,024	4,017	1906.....	2,529	5,317
1899.....	2,333	3,941	1907.....	2,981	8,718
1900.....	2,416	3,400	1908.....	3,000	6,231
1901.....	1,589	4,057	1909.....	3,500	5,208
1902.....	3,830	6,054	1910.....	1,500	6,423
1903.....	5,319	4,919	1911.....	1,000	5,278
1904.....	2,747	5,871	1912.....	1,000	5,007
1905.....	3,776	3,987			

The figures for production in Kentucky from 1898 to 1907 are taken from the biennial report of the commissioner of agriculture of Kentucky, 1908-9. The figures for the years since that date are based entirely upon the statements received at this office. The production for 1912 is, of course, a mere estimate, for very little fiber has thus far been prepared from the crops of last year. From 100 to 500 tons of fiber are produced each year in States outside of Kentucky. The production during the past year in Indiana, Wisconsin, and Ohio will probably amount to nearly 200 tons. The low production in 1911, in Kentucky, is due in part to reduced acreage, but still more to unfavorable weather conditions. During the past season the acreage has been somewhat larger and the weather conditions have been more favorable.

Very truly, yours,

LYSTER M. DEWEY,
Botanist in Charge of Fiber Investigations.

SALES OF PROPERTIES OF THE STANDARD CORDAGE CO.

NEW YORK, *April 2, 1912.*

Mr. EDWIN D. METCALF,
Auburn, N. Y.

DEAR SIR: The properties of the Standard Cordage Co. recently sold under foreclosure were bought in by the bondholders at the following prices:

In Elizabethport, N. J.: Land only; no buildings on property.....	\$25, 000
In Boston, Mass.: Sewall & Day and Pearson, mill and machinery.....	150, 000
In Brooklyn, N. Y.: Waterbury and Morgan Avenue, mill and machinery..	100, 000

The above, \$275,000, is practically 10 per cent of the bond issue covering said properties.

Yours, very truly,

H. W. GRIMWOOD, *Secretary.*

COLUMBIAN ROPE Co.,
Auburn, N. Y., February 6, 1913.

Hon. OSCAR W. UNDERWOOD,
Chairman Committee on Ways and Means,
Washington, D. C.

MY DEAR SIR: Inclosed please find statement of the various amounts of manila hemp used by the manufacturers of the United States since the refund law passed in 1902.

I wish to call your attention specially to this: In view of the joint resolution introduced by Mr. Jones, in the preamble of which he says: "It is charged that the International Harvester Co., and other American importers of manila hemp, have in the last 10 years collected more than \$4,000,000 in refunds of export taxes on manila hemp." It is decidedly unfair to the industry, as a whole, and to the legitimate manufacturers of rope and cordage in this country that their interests should be prejudiced by a statement of this kind.

This inclosed statement shows just what the International Harvester Co. have used of manila hemp, which they have manufactured entirely into binding twine, and have been obliged, the same as other manufacturers, to give their customers the benefit of this decreased cost of hemp.

PARAGRAPH 337—HEMP.

Plymouth Cordage Co., of North Plymouth, Mass., are the largest users of manila hemp in the United States, using more than double the amount used by the International Harvester Co. They manufacture rope as well as binding twine, and they have a mill in Canada, and the Canadian Government refunds to the manufacturers of that country, by means of a bonus, a sum equal to the refund to the manufacturers in the States.

This statement of receipts also shows the manufacturers who are closed up and gone out of business, by reason of competitive conditions in this country. There are 11 blank spaces for the year 1912, which shows there are 11 different manufacturers who have retired from the use of manila hemp in the manufacture of binding twine or rope.

Every manufacturer in the United States of rope, cordage, or binding twine, needs free raw material to not only hold their share of the domestic business, but to get a share in the foreign business; and such statements as contained in the resolution referred to are misleading and injurious to legitimate manufacturers.

Yours, truly,

EDWIN D. METCALF, *President.*

The following figures were obtained from Messrs. Hanson & Orth, hemp brokers, 27 Cedar Street, New York:

PARAGRAPH 337—HEMP.

MEMORIAL OF THE ITALIAN CHAMBER OF COMMERCE IN
NEW YORK REGARDING HEMP.

Hon. O. W. UNDERWOOD,
Chairman of the Ways and Means Committee,
Washington, D. C.

SIR: The exempting from duty of textile raw materials necessary to American industry should be an underlying principle in the framing of our tariff. This principle has, however, received in the past only partial indorsement for such of the textile materials as, for instance, raw silk, not produced in this country, or cotton, for which this country is the main source of supply, on which the necessity of the exemption from duty is obvious, and on which duties would be injurious and not only superfluous, as they would prevent the importation of either the raw material or of certain grades not produced in this country, and indispensable to American manufacture.

On other important textiles—for example, raw wool, flax, and hemp—duties have been levied under the guise of protection to domestic production, in a measure, however, which has, as a rule, always been higher to that which reasonable protection would justify, and always more or less burdensome to manufacture, and dearly paid for by the consumer.

Hemp, although in comparison with the above-stated textile materials of lesser importance, has certain specific uses in which it can not conveniently be replaced by other materials.

While manila hemp, istle, jute, and other kindred fibers of cheaper cost which have substituted hemp in certain uses, such as the manufacture of hard cordage, have been exempted from duty, thus giving them, besides the advantage of lower cost of production, that of exemption from fiscal burdens, hemp proper, such as imported from Italy and Russia, which is a material of higher cost, has been made to bear a duty of \$22.50 per ton, which has contributed, by enhancing its cost, to further restrict its use.

The duty on hemp was established as a protection to domestic production, this fiber being produced in Kentucky, where, however, production has declined for reasons other than want of protection.

Kentucky is the only State of the Union where this crop is raised to any appreciable extent. According to the census report on agriculture for 1909, the quantity of hemp produced in that State was of 2,866 tons, valued at \$348,386, out of a total of 3,326 tons, valued at \$410,986, for the entire United States. It has been stated that once this country used to grow from 30,000 to 40,000 tons of hemp, which illustrates the striking decrease of this production.

This decrease can not be imputed to want of protection, because during the last 15 years domestic production has enjoyed the privilege of a protective duty of \$20 per ton, increased to \$22.50 at the last tariff revision (1909), without any special demand or necessity for such advance.

The real causes why this fiber is not raised to a greater extent in this country are the unfamiliarity of farmers with the requirements of this crop, the difficulty of obtaining suitable machinery for separating the fiber from the lint, and the rather insanitary operation of retting in order to prepare the stems for the machine.

At any rate the fact remains that production of this fiber in this country has declined to such an extent as to make the present duty on the foreign article the more burdensome to American manufacturers, who are of necessity compelled to obtain it from abroad, where more favorable conditions exist for its supply.

Italy furnishes about four-fifths of the imported hemp, or 4,420 tons, against a total importation of 5,278 tons in the fiscal year 1911.

That the last increase of duty on this fiber did not materially improve the condition of home supply, which marked a further decline, is shown by the statistics of production, from 5,245 tons, valued at \$546,338, according to the census of 1899, to 3,326 tons, valued at \$410,986, according to the census of 1909.

The increase of duty discouraged importations, which from a total of 8,718 tons in 1907 fell to 5,007 tons in 1912, shown by the following table:

	Tons.	Value.
1907.....	8,718	\$1,534,371
1908.....	6,213	1,086,805
1909.....	5,208	799,164
1910.....	6,423	1,039,833
1911.....	5,278	938,338
1912.....	5,007	1,273,000

PARAGRAPH 337—HEMP.

Quantities of hemp entered for home consumption in 1907, which were 7,963 tons, valued at \$1,452,428, yielding a revenue to the customs of \$159,267, fell to 4,827 tons, valued at \$747,759, and yielding in duties only \$108,614 in the fiscal year 1911, notwithstanding the increase of the rate from \$20 to \$22.50 per ton.

Under the present conditions not only have manufacturers been compelled to pay a higher cost for this raw material but revenue has also failed to produce, notwithstanding the higher duty, even an equal income, which shows that the limit of taxation, from the standpoint of raising revenue, has been passed, and that the present rate, instead of responsive, has proven inconvenient.

The admission of manila hemp, sisal, istle, and jute free of duty, which has encouraged the substitution of these fibers in certain uses in which hemp was formerly employed, has, together with the lower prices of hard cordage fibers and the increasing use of cotton for twine and yarns, been the cause of the unsatisfactory conditions of both domestic production as well as of the importation of this article, and confines the market possibilities for imported hemp to the higher grade of cordage and to the manufacture of certain fabrics such as carpet yarn, rough cloth, and high-grade twines, in which line it occupies a unique position, without competing with domestic production. The latter, owing to its different color and strength, is destined to uses different from those in which imported hemp is employed.

Freights on this commodity have increased of late years over 68 per cent, and this, together with increased cost of production of the article and higher duty, has further prejudiced the consumption and demand of imported hemp, thus increasing the difficulties of manufacturers, who have been compelled to raise the cost of the fabrics—many of them necessities—in which it is employed.

From the foregoing it is apparent that hemp is a raw material indispensable to the American textile industry, the use of which is a source of profit to American labor; that it bears upon the cost of commodities which are necessities; that imported hemp does not compete, owing to its different uses, with the domestic production; that while no benefit has derived to the latter from the duty, this has worked unnecessary hardship to the manufacturer and loss to revenue: wherefore this chamber respectfully recommends that hemp be exempted from duty, or should a duty be deemed unavoidable for reasons of revenue, that it be reduced to a more reasonable rate.

Respectfully submitted.

LUIGI SOLARI, *President*,
For the Italian Chamber of Commerce.
G. R. SCHROEDER, *Secretary*.

BRIEF OF KENTUCKY HEMP GROWERS.

PARIS, KY., *January 24, 1913.*

Hon. OSCAR UNDERWOOD,

Chairman Committee on Ways and Means, House of Representatives.

SIR: The undersigned as a grower of hemp, and representing those Kentuckians engaged in that pursuit, begs leave to submit through you to the committee a brief argument in favor of retaining the duty on hemp and hemp tow as existing at present.

THE DUTY IS PURELY A REVENUE TAX.

The tax as now imposed is in no sense a protective duty, as will appear from an examination of the statistics as to domestic production and imports. The duty under the present law is \$22.50 per ton, and the aggregate of imports, including hemp not hackled, hemp dressed, and tow, for the year 1912 amounted to 4,997.52 tons. The total value of these imports amounted to \$1,097,058, and the total duty paid amounted to \$116,107.88. The equivalent ad valorem duty would be 10.58 per cent.

We have not at hand the exact figures covering domestic production for 1912, but the amount produced in the United States was less than 10,000,000 pounds, and certainly would not exceed the amount imported, which, as above stated, amounted to 4,997.52 tons. Imports therefore were just about 100 per cent of the home production. The duty has not prevented importation, but has merely served to prohibit absorption of the American market by the cheaper-grown fibers of Russia, Italy, Hungary, and Roumania.

American-grown hemp under the present duty is on a competitive basis with fibers from the above-named countries, so radically competitive indeed that half the American market in the past year was appropriated by foreign products.

PARAGRAPH 337—HEMP.

WE SHOULD PRODUCE AMERICAN HEMP.

It is not difficult to submit an argument to the effect that no industry should be maintained that can not live without governmental aid, though aid be merely indirect. The duty on hemp, however, is a revenue duty, and a tariff for revenue must be maintained, or will be maintained, to meet the ends of government. Since this is true the farmers of Kentucky and other States engaged in hemp production, are not certainly unreasonable in asking that this purely revenue duty be retained. They do not ask an increase of the duty. They only desire to be placed upon a footing with other citizens engaged in other pursuits, and whose industries will not be disturbed by removal of duties purely of a revenue nature.

An important reason why the growth of our hemp should be fostered, if possible, is that the fiber is stronger, superior by any test, to that grown abroad. But the labor and rent items entering into production make the cost higher. The revenue duty now existing would by no means cover the difference in cost in our country and abroad.

SOME HISTORY OF HEMP CULTURE.

Hemp has been an important element of commerce since the beginning of historical records. Indeed, Chinese literature refers to its growth as early as 2,700 years B. C., and it has always been grown in China for fiber purposes, the seed being used for food and oil and the stalks for fuel. Centuries after it seems to have appeared in China its cultivation was maintained in Persia, not for its fiber, but for the production of medicine and narcotic drugs from the seed. For these purposes the seed were transported to India in about the tenth century A. D., but later the Hindus made use of the fiber in the same manner as the Chinese.

According to Herodotus, the Scythians beyond the Caspian Sea cultivated hemp, and it was probably introduced by them into Europe. We know that Hiero II bought hemp in Gaul in 270 B. C., using it as cordage for his ships, and for this purpose it has been employed from that day to now, and it will no doubt be always in demand for the same purpose.

Within 10 years after the settlement by the Puritans in New England the cultivation of hemp was introduced, and it is recorded that it grew "twice so high" as it did in old England, as an evidence of the superior soil of the new colony. And, similarly, within 10 years from the settlement of Jamestown the Virginians were growing hemp, and it is not unreasonable to affirm that hemp growing is the oldest of American agricultural pursuits.

The first crop of hemp grown in Kentucky was cultivated near Danville in 1775, and from that date until the present it has been a very important feature of the agricultural history of Kentucky. It is true that in tonnage the amount produced is negligible as compared to the production of former years; but, taking into consideration the great numbers of people whose interests are concerned, the possibility of growing or not growing hemp becomes of serious importance.

THE DECLINE IN TONNAGE.

It is not purposed to affirm here that retaining the duty will restore American hemp culture to the position it once occupied. Between 1840 and 1860 the amount produced occasionally reached 75,000 tons, while the production of 1912 was a mere fraction of that amount. Nor will it be claimed that tariff variations have been entirely responsible for this situation. The high cost of labor in this country, as compared especially to that of India, was chiefly responsible for the falling off of production. Indian jute was first imported in about 1870, and this foreign fiber, costing practically nothing to produce, quickly absorbed the market for cotton bagging and was appropriated to other uses where strength and wearing qualities of the fiber were not necessary. The duty on jute was entirely removed in 1890, and from that date American hemp has not been a competitor with jute where cheaper and weaker fibers could be employed.

The cost of production in this country, however, apparently will within a short time be largely reduced. We already have machines for cutting the hemp instead of relying on hand cutting, as in former times, and at least three machines, it is claimed, will soon be placed at the disposal of the grower for breaking hemp and flax. Should

PARAGRAPH 337—HEMP.

these machines prove successful, of which there is every assurance, the cultivation of hemp would be largely increased, not only in Kentucky, but extended to many States, for hemp may be grown successfully wherever limestone underlies the soil.

For these reasons, as farmers, paying a duty on practically everything we buy, and deriving little, indeed, from any of the schedules of tariff taxation, the duty on hemp being one of the few that is of benefit, we earnestly request that this duty be retained.

Respectfully submitted.

THE HEMP GROWERS OF KENTUCKY,
By CLAUDE M. THOMAS.

WASHINGTON, D. C., *January 25, 1913.*

Hon. OSCAR UNDERWOOD,
*Chairman Committee on Ways and Means,
House of Representatives, Washington.*

SIR: I had the honor this morning to file with the committee a brief argument in favor of retaining the duty (\$22.50 per ton) on hemp and hemp tow. Since then I am advised that a statement was made to the committee at its session held yesterday that the representatives of the hemp growers, Messrs. Scott and Rogers, when they appeared before the committee in 1909 did not request a duty of \$22.50 per ton, but only asked for a duty amounting to \$20 per ton. This statement, I beg leave to assure the committee, is absolutely incorrect.

Hon. J. Percy Scott and Mr. C. R. Rogers, who are residents of Fayette County, Ky., a county whose people are largely interested in hemp growing, came to Washington in the early part of 1909 and submitted to the Committee on Ways and Means a proposal as to duties on hemp and an argument in favor of that proposal. I find, fortunately, that I have with me a copy of the argument made by these gentlemen at that time, and which contains the proposal presented by them, and I file this paper herewith as an exhibit marked "Scott and Rogers Proposal."

The committee will observe that instead of favoring a duty of \$20 per ton (the duty existing at that time was \$20 per ton), these gentlemen asked of the committee an increase of practically 100 per cent, and in these words: "We ask that a duty of 2 cents per pound be placed on Russian and Italian hemp and tow, flax, and flax tow, and all other soft fibers except India hemp or jute and jute butts, upon which we ask a duty of 1½ cents per pound."

These gentlemen, far from making a statement that they would be satisfied with merely retaining the duty of \$20 per ton, asked that the duty be practically doubled on hemp, flax, and tow, and went much further and requested of the committee the placing of a duty of 1½ cents per pound on jute and jute butts, the latter being at that time, and are yet, on the free list.

The argument of Messrs. Scott and Rogers was an excellent presentation from their viewpoint and under conditions then controlling, in favor of a protective duty on behalf of this agricultural product. The writer is not a protectionist and does not ask that the duty be retained as a protective tax, but because the statistics touching the matter convincingly show that if there is a tariff impost in any schedule that may be looked upon as of a purely revenue nature the duty on hemp must be so regarded. During the past year imports just about equaled the aggregate amount of our hemp production. There is no monopoly involved in the industry, and, in the nature of things, there can never be. Farmers are not disposed to combine, and were they so inclined they would be unable to do so because of their isolated environment. The price can not be controlled by the American producer or by others who might even secure possession of the entire American product. It is claimed by some authorities that an importation equivalent to 10 per cent of an American commodity will fix the price of the latter in the home market. Members of the committee will know whether or not this contention is correct. Certainly it will be admitted by every one that, as to any given commodity, if the amount imported equals the home production the price is determined by that of the foreign competitor.

For these reasons and for those presented in the statement filed with the committee this morning, I earnestly trust that the duty of \$22.50 per ton will be retained.

Respectfully,

CLAUDE M. THOMAS.

PARAGRAPH 337—HEMP.

[Inclosure.]

SCOTT AND ROGERS PROPOSAL.

A duty of \$20 per ton is now levied on Italian and Russian hemp and tow.

A duty of 1 cent per pound is levied on flax and a duty of \$20 per ton on flax tow.

India hemp or jute, the strongest competitor of American-grown fiber, is free, and has been since the tariff law of October 1, 1890.

We ask that a duty of 2 cents per pound be placed on Russian and Italian hemp and tow, flax and flax tow, and all other soft fibers, except India hemp or jute and jute butts, upon which we ask a duty of 1½ cents per pound.

We ask for a corresponding increase in the duty on the manufactured goods made from these fibers so that the American manufacturer and mill worker may be amply protected.

Prior to the introduction of India hemp or jute into the American market, in about the seventies the hemp industry in America had grown to formidable proportions—the total tonnage in 1860, the banner year, being about 75,000 tons. It has been grown successfully in Virginia, Kentucky, Illinois, Missouri, Minnesota, Nebraska, and California, while experimentally it has been grown in many localities extending as far south as the Gulf of Mexico. Following this period the high price of American labor, and the absence of machinery for cutting the hemp and separating the fiber from the stalk, made the production of hemp in America unprofitable in the face of the large importations of India hemp or jute, which by the year 1880 had completely robbed the American industry of the bagging trade for covering the cotton of the South and had taken away a large part of the general twine and rope business. Under these conditions the production steadily declined until in 1880 the entire production of hemp in America was less than 2,000 tons. It being apparent that the industry in America would be completely destroyed, Congress, in the tariff act of March 3, 1883, put a duty on all fibers. Under this stimulus the production of American hemp steadily increased until 1890, when the production was about 6,000 tons. On October 1, 1890, the tariff act put on the free list manila, sisal, jute, and jute butts, with the result that the industry has steadily declined since, notwithstanding the largely increased demand for fibers. With the increase in price, however, land rents and labor have also advanced, and the American farmer who is producing hemp is in no better condition. The fact is that he is forced to meet on equal footing the pauper labor of India—labor that is satisfied with 2 cents to 5 cents per day. Or, to make the comparison in another way, the preliminary report of the department for 1908 shows importation from India to be 107,533 tons, which was valued at \$6,504,920, or \$60.50 per ton. The American production averages about 1 ton to 2½ acres, and figuring on \$60.50 from India, the American farmer must compete with a gross income per acre of \$24.20, while in America seed and labor will cost the American farmer from \$22 to \$25 per acre, and to this must be added land rent, averaging probably \$15 per acre.

Now, to make the comparison for a more unfavorable year, would call attention to the report of the Agricultural Department for 1898, when India sent us 112,306 tons of fiber, valued at \$2,543,498, or an average of \$22.70 per ton. Making the same comparison as above of 2½ acres to the ton, the gross income per acre would show only \$9.10, which would in America be insufficient to pay either the land rent or the labor charge against an acre of hemp. As a result of this American hemp fell below 3 cents per pound, which is below the cost of production.

Within the last 10 years machines have been perfected for cutting hemp and flax, and there are before the public to-day three or four machines for breaking the hemp and flax which are meeting with deserved success, though not receiving the financial backing which would come to them if the American hemp and flax industry was properly protected and encouraged.

The perfecting of these machines will solve the labor problem for the producer of American hem and flax.

The uses of American hemp are varied, ranging from fine twines, where it is often mixed with flax, up to heavy cordage, such as is manufactured at the Charleston Navy Yard, Boston, for use in the United States Navy. But the volume of business in fiber must be done on medium and low priced raw material, and the present duty on Italian and Russian hemp, flax, and flax tow only protects American hemp in so far as it enters into the manufacture of the high-grade products, the tonnage of which always has been and always will be small.

PARAGRAPH 337—HEMP.

Under present conditions any time the American production should rise above the present level the price of American hemp would be forced down to the level of India hemp or jute, and could not live now even in a small way if unprotected from Italian and Russian hem and flax and flax tow.

In Minnesota and the Dakotas and throughout the great Northwest hundreds of thousands of acres are sown in flax annually, the seed saved, and then the million tons of flax straw are burned, which could go into the manufacture of bagging, burlap, binder twine, and various kinds of cord and ropes, but for the enormous influx of cheap foreign fibers, the product of the world's pauper labor.

With a duty such as we ask on foreign fibers, it would be but a few years until American-grown hemp and flax, together with manila hemp from the Philippines, would supply the demand for coarse fiber in the United States, making the American people independent of the outside world for their fiber supply both in peace and in war; would greatly enhance the value of farm lands; would supply labor to many thousands of men, and would result in a boom in this country in the agricultural districts beyond anything that has heretofore been known.

Hemp and flax can be and have been successfully grown throughout the South and Middle West, as far north at Minnesota, as far south as the Gulf of Mexico, and on the Pacific slope. There is every reason why America should grow all her own fiber; there is every reason why the American farmer should be encouraged to produce it; and in producing it, there is every reason why he should be protected from the pauper labor of India as well as from the Italian and Russian laborer, who is willing to work for a mere pittance in comparison with the wages demanded and deserved by the American workingman.

BRIEF OF THE PORTLAND CORDAGE CO., PORTLAND, OREG.

PORTLAND, OREG., *January 17, 1913.*

Senator GEORGE E. CHAMBERLAIN.

United States Senate Chamber, Washington, D. C.

DEAR SIR: Under the present law governing the Philippines there is an export duty on manila hemp of 95 cents per bale, but when the hemp is shipped to the United States and consumed in the United States export duty is refunded on same. This gives the United States manufacturer, and consequently the consumer, that advantage over all foreigners which does not seem to be at all unreasonable, taking into consideration what the United States has done for the islands. The natives have more liberty and more justice shown them than they ever dreamed of, and there has certainly been a phenomenal material advance in the islands.

We understand there is a movement on foot to have this export duty removed from all hemp, and this movement is largely fostered by the foreign exporting houses, and most of the exporting houses are foreigners. We fail to see where there is any statesmanship in such a move as this, as it reduces the income of the islands and only tends to help the foreign consumers, and we do not feel that the preference shown the United States manufacturers and consumers is an unreasonable or unjust one.

We trust if this subject comes up in Congress that you will not favor any change.

Yours, truly,

THE PORTLAND CORDAGE CO.,
By S. M. MEARS, *President.*

[Telegram.]

PORTLAND, OREG., *January 22, 1913.*

Hon. A. W. LAFFERTY,

House of Representatives, Washington, D. C.

Referring Schedule J, flax, hemp, and jute, we think present small duty necessary to protect us against cheap labor in cordage factories China and Japan, and we believe the United States cordage manufacturers do not average profit per pound over present amount of duty three-quarter cent. We understand refund of export duty on manila hemp shipped from Philippines also under discussion for withdrawal. Certainly this small concession to United States manufacturers, and ultimately the consumer, should be retained considering country's past sacrifices in lives and money for real benefit of Philippines. Why should foreigners be on same basis when they have made no sacrifices? Trust you will work for retention of present schedule.

S. M. MEARS.

PARAGRAPH 338—JUTE YARNS.

PARAGRAPH 338.

Single yarns made of jute, not finer than five lea or number, one cent per pound and ten per centum ad valorem; if finer than five lea or number, thirty-five per centum ad valorem; yarns made of jute not otherwise specially provided for in this section, thirty-five per centum ad valorem.

JUTE YARNS.

BRIEF SUBMITTED BY HENRY D. COOPER, PRESIDENT LINEN ASSOCIATION OF NEW YORK CITY.

NEW YORK, *January 6, 1913.*

HON. OSCAR W. UNDERWOOD,
*Chairman Ways and Means Committee,
House of Representatives, Washington, D. C.*

DEAR SIR: Through you I wish to put forward a request that the following changes be made in Schedule J.

On frequent occasions in previous tariffs a number of linen and jute importers had many suggestions to offer which were very often conflicting, although the ideas of the individuals were quite similar. Linen and jute importers were requested on more than one occasion to get together and thrash out their small differences and unite on one presentation of their views, which would tend greatly to clarify the situation and impress more favorably the members of the Ways and Means Committee.

The Linen Association of New York was in consequence formed, and as its president I am requested to make the following suggestions:

Schedule J, paragraph 338. We would suggest the following: "Jute yarns, made of jute, jute waste, jute butts, free." Jute yarn being the basis of jute cloth and employing less labor in its production, should logically pay a lower rate of duty than the finished cloth.

Paragraph 340. "Threads, twines, cords composed of flax, hemp or ramie, or of which those substances or either of them is the component material of chief value, 25 per cent."

Paragraph 341. "Yarns in the gray, on beams, cops, cones, tubes, spools or mandrels, or in bundles or skeins, made of flax, hemp, or ramie or a mixture thereof, 20 per cent." This request is made because linen yarns, being an intermediate state of manufacture, should be accorded a lower rate than linen cloth.

Paragraph 345. "Hydraulic or flume hose, made in whole or in part of cotton, flax, hemp, ramie, or jute, 25 per cent."

Paragraph 352. "Woven fabrics of jute yarn by whatever name known, not exceeding 44 threads to square inch, free; counting over 44 threads and not exceeding 56 threads, one-half cent per pound." The article that would be most important in this paragraph is known as burlap, which is used in the manufacture of bags to sack grain and its various productions, feed for cattle, fertilizers for farmers; is used by meat packers, by manufacturers of textile articles, and many millers and carpet manufacturers as a covering for their various products. It is also a raw material for oilcloth and linoleum manufacturers, which is a very large and growing industry in this country. Putting these goods on the free list injures no existing industry. The industries mentioned above do exist and would be benefited by this reduction. The farmer of grains has as many rights as the farmer of cotton, which we understand is to be put upon the free list.

It has long been contended by people living in the South and by the Democratic Party that cotton bagging should be imported free for the benefit of the cotton planter. The farmer growing grain has exactly the same right to free burlap to provide cheap sacks for farm products of all kinds as well as grain.

Paragraph 354. "Bags or sacks, made of jute cloth, as described in paragraph 352, not dyed, colored, stained, tinted, printed, or bleached, not exceeding 44 threads to the square inch, counting warp and filling, one-half cent per pound."

Paragraph 355. "Bagging or sacking made of jute, jute waste, jute butts, or hemp, not exceeding 18 threads to the square inch counting warp and filling, and bagging for cotton, gunny cloth, and similar fabrics suitable for covering cotton, composed of jute, jute waste, jute butts, or hemp, not exceeding 18 threads to the square inch counting warp and filling, free." This benefits the farmer and all users of cotton and cotton goods. It cheapens the cost of putting cotton upon the market and enables the manufacturer of the fiber into its various articles to offer goods to the consumers at a lower

PARAGRAPH 338—JUTE YARNS.

price. Two threads have been added to the square inch to the count of bagging cloth in this paragraph, as it was not always easy to avoid the extra yarn or two in hasty weaving of such a cheap material.

Paragraph 357. We would request that you strike out paragraph 357 and substitute one similar to 277 in the tariff of 1894, which reads as follows:

"All manufactures of flax, hemp, jute, or other vegetable fiber, except cotton, or of which these substances or either of them is the component material of chief value, not specially provided for in this act, 25 per cent.

"Woven articles composed of flax, hemp, or ramie, or of which these materials or any of them is the component of chief value, if scalloped or embroidered or both, 40 per cent.

"Handkerchiefs composed of flax, hemp, or ramie, or of which these substances or either of them is the component material of chief value, whether in the piece or otherwise, and whether finished or unfinished, not hemmed or hemmed only, 35 per cent; if hemstitched, or imitation hemstitched, or reversed, or with drawn threads, or embroidered, or initialed, 40 per cent."

It will be necessary to delete from paragraph 349 in the present tariff, or whatever similar paragraph takes its place in the new tariff, all reference to goods made of flax or other vegetable fiber, except so far as lace or lace effects are concerned.

There has often been a conflict between importers and customs officials on fabrics made of a union of cotton and linen as to which was the component material of chief value. You have already proposed an act, known as H. R. 25034, where, in section 14, page 6, you propose cotton table damask, etc., should pay a duty of 25 per cent ad valorem. This would obviate, therefore, all discussion between the Government and the importer as to whether linen or cotton was the chief value, as they would both pay the same rate of duty. These proposals will go a long way toward simplifying the existing tariff, will take much that is confusing out of it, and make the matter clear and understandable, not only to the Treasury officials, but also will make it so simple that importers who are not extremely skillful will stand an even chance in interpreting the law with those who are. It will relieve the Treasury and customs officials from many trials and discussions and will result in an immense saving of time and also result in a much more economical administration of the tariff act.

The tariff on linens has been by degrees and by indirect methods advanced to a point which is prohibitive. Thus the coarser and commoner grades of table damask have been driven out of the country by the very high duty imposed on all linens weighing over $4\frac{1}{2}$ ounces to the square yard.

There is no reason why a higher duty should be charged on linens weighing more than $4\frac{1}{2}$ ounces to the square yard, as it serves no purpose of any kind and causes those in moderate circumstances who wish a serviceable fabric to be compelled to buy a lower and thinner cloth, weighing under $4\frac{1}{2}$ ounces to the square yard. These are unserviceable and unsatisfactory to the housekeeper. It also compels the importation of towels so thin that their absorbent qualities are largely reduced and their usefulness diminished. This demarcation in weight also causes a practically prohibitive duty on the commonest, coarsest, and simplest kind of cloth known as crash for roller toweling, wherein a duty of more than 50 per cent is exacted, which prevents less prosperous people from buying a heavy, serviceable linen roller toweling or crash, because of the excessive and unjust duty placed upon these cheaper linens, which are made by the simplest process of spinning and weaving. There is no reason why the poor should pay a higher rate of duty on the commoner linens than do those who are in more affluent circumstances, who use the finer grades, yet the present tariff makes such unjust discrimination.

We ask for this reduction in linen goods because much of it is raw material for dress-makers, and for cloak and suit makers, for clothiers who manufacture in large quantities the more reasonably priced ready-made clothing; it gives cheaper necessities to the poor and in no way injures any industry of any size in this country.

A prominent Republican Senator of the recent Finance Committee in the Senate, in privately discussing duty on linens, admitted that it was purely a revenue matter, and that the oft-named contention that it was protecting a linen industry in this country was unsound and unjustified.

During each period of tariff discussion there are a number of linen industries proposed and statements are made that these industries are just about to be opened up in a large way in this country, but that it will be impossible to create this industry unless amply protected. These industries are mere stalking-horses paraded at the time for the ulterior purpose of serving those who do not wish to come out in the open and is a scheme to demand rates of duty which will prevent consumers of this country from using linens of the commoner grades owing to the prohibitive tariff which they are proposing for their own secret ends.

PARAGRAPH 338—JUTE YARNS.

A reasonable rate of duty on linens will benefit every household in the country and many industries using linen as the raw material in their manufactures. The Stevens Linen Works, established in 1846, has existed through several lower tariffs than the present one, and this proves it does not need the present high rates. It is the only manufacturer of linen goods in this country of any size. The enormous rates of duty charged on linen goods in the present tariff have failed to establish any important linen industries manufacturing linen goods. A few have imported linen yarns and used them in conjunction with cotton yarns to manufacture a few goods.

It is probable that the Oxford Linen Co., which has occupied a prominent position in the newspapers recently, is still fresh in the minds of your members. We ask that you give earnest attention to our moderate requests.

Our reasons for making above statements are based on the experience of houses belonging to this association, one of which has been in the linen business since 1845, and others nearly as long.

This reduced duty should increase the revenue, as at present the importation of many grades of linens has almost ceased owing to prohibitory rates. A moderate tariff will undoubtedly greatly increase the revenue in these articles and will also cause a larger revenue from those goods which are imported at present only in moderate quantities because of high rates.

Very respectfully, yours,

HENRY D. COOPER,
President Linen Association of New York.

Address: Henry D. Cooper, care of James F. White & Co., 54 and 56 Worth Street, New York City.

NEW YORK, *January 14, 1913.*

DANIEL C. ROPER, Esq.,
Committee on Ways and Means,
House of Representatives, Washington, D. C.

DEAR SIR: In reply to your favor of January 11 I would say that I scarcely feel that it will be necessary to make any address before you, but I do wish that you would put my statement before the committee to the effect that a great many varieties of linen goods paying a high rate of interest as assessed have been reduced in volume of import to a very great extent. Reducing them to a fair rate of duty as suggested in my brief, will increase the importation of these goods very largely and will increase the revenue. In other cases, as in the case of cheap damasks, cheap towels, cheap napkins, these goods have been largely prohibited through the higher duties imposed at the present time and the rates as suggested by us will once more reestablish the importation of these goods in considerable volume and will increase the revenue of the country to a very marked extent.

If you would be good enough to add this letter to my brief I would be obliged to you.

The statements made about the increased importation of these goods are based entirely upon our past experience when we and others in our line of business brought large quantities of the goods under discussion into this market, but during the existence of the present law and the law immediately preceding the present law the rates of duty were so large that the quantities of goods were greatly reduced in many cases, and in other cases absolutely ceased to be brought into the country, the rate of duty being so high that the cost of the cloth was beyond the means of the consumer. Therefore, establishing rates as suggested in my brief will definitely and certainly cause a very considerable increase in the revenue.

Yours, respectfully,

H. D. COOPER,
President Linen Association of New York.

BRIEF SUBMITTED BY DOLPHIN JUTE MILLS, PATERSON, N. J.

GENTLEMEN: The Dolphin Jute Mills at Paterson, N. J., is one of the oldest mills in the country. It was established in 1850 and has been operated with varying results ever since. It manufactures jute yarns and twines, and is now employing about 600 people. It earnestly protests against any lowering of the present duty on jute yarns, for the reason that yarns manufactured abroad, chiefly at Dundee, Scotland, are now being imported under the present rate of duty in direct competition with its yarns, and if there be any lowering of the duty, it will be compelled to close its mill and discharge its hands. This competition of imported yarns at the present duty is made possible by the difference in rate of wages paid in Dundee and in America.

PARAGRAPH 338—JUTE YARNS.

The present rate of duty on jute yarns not finer than 5 lea or number is 1 cent per pound and 10 per cent ad valorem; if finer than 5 lea, 35 per cent ad valorem; and on jute yarn not otherwise specially provided for, 35 per cent ad valorem.

The wages paid in Dundee, as reported by the Department of Commerce and Labor, plus 5 per cent increase since the report was made, in comparison with the wages paid in this country in manufacturing jute yarn are as follows:

	Average rate in Dundee per week.	Average rate in America per week.
Batching.....	\$2.80	\$7.80
Carding.....	2.48	6.15
Spinning.....	2.68	8.00
Winding.....	3.57	8.20
Packing.....	4.35	8.40
Foreman.....	6.65	20.50

As shown by the above table, the average wages in this country are 260 per cent of the Dundee wages.

The difference in the cost of production of 14 pounds of jute yarn (3½ lea and basis size) between Dundee mills and American mills is about 1¼ cents per pound, and the average duty paid during the past three years from customhouse records has been: 1910, \$0.0148 per pound; 1911, \$0.0150 per pound; 1912, \$0.0160 per pound.

Never in the last three years has the duty equaled the difference in cost of production, and the competition from abroad works harm to the American spinner. We have no advantage over our foreign competitors; the hours of labor are the same; the production is limited to the speed of the machinery; the spindles can run no faster here than they do in Dundee.

The importations of jute yarn during the past three years have been 10,041,010 pounds. This will indicate to you the seriousness of the foreign competition.

It is because the difference in cost of production between Dundee and America is greater than the duty as shown above, and the competition very keen, that we respectfully request that the rates be not lowered.

During the continuance of the Wilson bill, 1894, 1895, 1896, and 1897, when the duty on jute yarn was 20 per cent ad valorem, the business was very unprofitable. This was entirely due to the competition from abroad, for during that time our yarn sales fell off 35 per cent in spite of the fact that we sold some yarn for less than cost in order to meet foreign competition and hold our customers.

We did our best to reduce cost by reducing wages and all salaries, and practicing rigid economy, but in spite of this were shut down, and compelled to run short time a great deal during 1894, 1895, and 1896.

The jute-yarn business in this country is absolutely dependent on a protective duty equal to the difference in cost, and we trust you will help this long-established industry to keep its employees at work and earn a fair return on our investment.

Respectfully submitted.

DOLPHIN JUTE MILLS,
S. S. EVANS, *Treasurer.*

**SUBMITTED IN BEHALF OF SUMMERS LINEN CO., PORT HURON,
MICH., AND MILFORD, N. H.**

WAYS AND MEANS COMMITTEE,
House of Representatives, Washington, D. C.

GENTLEMEN: Relative to Schedule J, covering flax, hemp, jute, etc., we beg to submit the following brief:

The committee is undoubtedly aware that nearly all linen yarns and woven goods manufactured in America are made from foreign-grown flax. This company's position is somewhat unique, as they are concerned with the American-grown flax.

The utilization of American-grown flax has recently received very serious attention. There is every reason to believe that the industry will thrive if given proper protection. While it is true that most of the American flax is inferior in quality to

PARAGRAPH 338—JUTE YARNS.

the foreign, there are some parts of the country that have produced flax of a quality fully equal to the foreign.

It is, furthermore, quite certain that as the American farmer is induced to bestow upon the crop more care and foreign methods of cultivation with fertilizers are utilized nearly the whole range of household linens can be manufactured from the native-grown plant.

The American manufacturer is at a serious disadvantage compared with his foreign competitor. This is equally true whether he spins his yarns out of imported or native-grown fiber. This disadvantage is present in the three main considerations governing the cost of production, i. e., labor, machinery, and material.

LABOR.

The American labor is not only much more costly, but owing to the peculiarities of the industry, it is in most cases, not as productive. It is true that the American operator is more efficient in certain lines of work, but in most of the operations having to do with the production of linen goods this is not true. The foreign operator enters the linen mill when he or she is quite young, and becomes skilled in the particular operation they are concerned with at a period of their lives when expertness is easily acquired. This is impossible in America, not only on account of the restlessness of labor, but also owing to severe labor laws. In Michigan, where we are now spinning our flax, we are not permitted to hire either girl or boy under 16 years of age. This labor comes to us entirely unskilled and is very high priced. Where we pay from 12½ to 14 cents an hour for female help, in some parts of Russia the same class of help is paid from 2 to 4 cents, and in the foreign countries paying the highest wages the scale is seldom over 50 per cent of our wage. The quality of the work is such that the operator has no great opportunity for initiative, such as usually gives preference to American labor, but must keep the machinery to full operation by manual dexterity. In this, the foreign labor excels our native help. We are therefore at a double disadvantage as regards the item of labor.

MACHINERY.

The machinery concerned in the manufacture of linen goods is almost wholly foreign built. This is particularly true of the spinning machines, practically none of which are built in this country. Nearly all the improvements in this class of machinery has been of foreign origin, and if any advantage lies in the machinery, that advantage is with the foreign manufacturer. It is true that with weaving machinery, the American manufacturer is able to supply some, at least, of his needs with the American-made looms, but these looms are more adaptable to cotton than linen.

MATERIAL.

In the way of material, the American manufacturer who does not utilize imported flax is apt to be at a particular disadvantage, and even though he imports his fiber he is at a disadvantage owing to the cost of importation and the need of obtaining material of the proper quality. The mills nearer the source of supply have naturally the advantage of selection, unless the American manufacturer's business is sufficiently large to permit him to have an agent on the ground.

NATIVE GROWN FIBER.

The incentive for endeavoring to utilize American grown flax in this art is due to the fact that the flax straw itself can be grown cheaper than abroad. The serious aspect of the case, however, has to do with the cost of converting the flax straw into spinning fiber. Here again the labor item is excessive. The main operation of conversion has to do with an operation called scutching. These operators are difficult to get, and when obtained earn about \$2 per day. The foreign operator concerned with this operation is much more efficient and in many cases earns but a third of this sum. There is, however, every reason to believe that if this native industry is encouraged, machinery will be found to overcome this disadvantage.

Undoubtedly the importers and towel mills that buy their yarns abroad will make representation before your committee looking toward a reduction of the duty on coarse flax yarns. If such reduction were made it would greatly retard flax spinning in America. It is largely such yarns that would be made on this side, either from

PARAGRAPH 338—JUTE YARNS.

foreign or domestic flax, for weaving purposes. Indeed, the only spinning that would be done would be at those large mills equipped to produce fine yarns.

In view of the above facts, we ask the duties relative to flax yarns and linen goods remain undisturbed. We would, however, call the committee's attention to the duty of \$5 put on flax straw. This duty we do not consider necessary for the protection of the American farmer. American grown flax straw costs less than Canadian. Canadian straw is the only straw it would be possible to import on account of cost. The Canadian straw would only therefore be imported when the American crop was deficient, either in quantity or in quality. If, therefore, this duty were removed, it would help the industry through bad seasons, without working to the detriment of the farmer.

SUMMERS LINEN CO.,
By BERTRAND S. SUMMERS, *Vice President.*

BRIEF SUBMITTED BY LUDLOW MANUFACTURING ASSOCIATES.

In view of the proposed revision of the tariff, the Ludlow Manufacturing Associates present this statement why the jute industry should receive special consideration.

Jute is a long vegetable fiber, the cheapest commercial fiber in the world. It is grown in India only. The chief products of jute manufactured by the Ludlow Manufacturing Associates, and the duties levied on each under the present United States tariff, are as follows:

JUTE YARN (USED IN THE MANUFACTURE OF CARPETS).

Jute yarns are made from free raw material, and the duty on the manufactured product under Schedule J, paragraph 338, of the present tariff law is as follows:

"Single yarns made of jute, not finer than five lea or number, 1 cent per pound and 10 per cent ad valorem; if finer than five lea or number, 35 per cent ad valorem; yarns made of jute not otherwise specially provided for in this section, 35 per cent ad valorem."

Jute yarn is used principally in the manufacture of carpets, and the duties levied do not afford a large measure of protection against Dundee, the principal competitor, or Calcutta, the prospective and ultimate one, as shown by the tabulation of wages given in the following pages.

BAGGING FOR COVERING COTTON.

This bagging is used exclusively for covering the American cotton crop. It is made from free raw material, and is dutiable under Schedule J, paragraph 355, of the present tariff law, as follows:

"Bagging for cotton, gunny cloth, and similar fabrics, suitable for covering cotton, composed of single yarns made of jute, jute butts or hemp, not bleached, dyed, colored, stained, painted, or printed, not exceeding 16 threads to the square inch counting the warp and filling, and weighing not less than 15 ounces per square yard, six-tenths of 1 cent per square yard."

As nearly all bagging used for covering cotton is made 45 inches in width, the above duty is equivalent to three-quarters of 1 cent per running yard.

We give below a table compiled from the United States Treasury statistics showing for the years 1903-1912 the amount of bagging imported, the value, duties paid, price per running yard, and the equivalent ad valorem rate of duty assessed.

PARAGRAPH 338—JUTE YARNS.

Importations of bagging under duty of six-tenths cent per square yard, 1903-1912.

Year.	Quantity in square yards.	Value.	Duty collected.	Average value per square yard.	Equivalent ad valorem duty.
1903.....	5,417,039	\$213,098.00	\$32,502.24	\$0.039	<i>Per cent.</i> 15.26
1904.....	7,801,672	261,235.00	46,810.02	.033	17.92
1905.....	9,603,487	391,730.00	57,620.91	.041	14.71
1906.....	12,309,136	663,843.00	73,854.80	.054	11.13
1907.....	19,817,860	1,215,446.00	118,907.12	.061	9.87
1908.....	16,349,696	1,076,353.00	98,098.16	.066	9.11
1909.....	8,012,434	413,208.00	48,079.63	.052	11.63
1910.....	16,505,542	699,940.00	99,033.28	.042	14.15
1911.....	13,365,349	623,099.00	80,192.11	.047	12.87
1912.....	5,778,731	363,751.00	34,672.38	.063	9.53
Average.....	11,496,094	592,170.00	68,977.06	.0515	11.65

The fabrication of jute was first begun in Dundee, which for many years held a monopoly of this form of manufacture, and is still the largest center of manufacture with the exception of Calcutta.

According to Consular and Trade Report No. 3302, October 12, 1908, the great manufacturing centers of the jute industry are Calcutta, Dundee, Dunkirk, Hamburg, Vienna, Turin, Brooklyn, and Ludlow, Mass. Calcutta, however, overshadows them all, and it is against the competition from this source that the American jute mills most need tariff protection.

The American mills have in Dundee a competitor paying less than one-half the American rate of wages. The machinery used in the American mills is from the same English shops as the Dundee machinery, but the machinery and machine supplies imported into the United States have to pay a duty of 30 per cent.

This Dundee competition is similar to that met by other American industries, and against which others have a protection of from 35 per cent ad valorem upward, as compared with an average of 11.65 per cent ad valorem protection to American manufacturers of jute bagging for covering cotton.

In Calcutta, now the greatest jute manufacturing center of the world, the American mills compete with a rival much more dangerous than Dundee. The Calcutta mills are situated alongside the exporting press houses, on tide water, at the port of shipment.

They can buy their jute as it is received loose from the upcountry farms, thus saving the cost of export packing. The Calcutta manufacturers can also buy from week to week as their needs require and can select their jute most carefully.

The following table shows the remarkable growth of the Indian mills, especially since 1900. A list of the mills, with the number of looms in each, is given at the end of this pamphlet:

Looms in mills in and around Calcutta.

Jan. 1—	Looms.	Jan. 1—	Looms.
1870.....	960	1906.....	23,884
1880.....	6,854	1907.....	26,799
1890.....	7,964	1908.....	29,074
1901.....	15,336	1909.....	30,824
1902.....	16,640	1910.....	31,755
1903.....	17,597	1911.....	32,711
1904.....	19,901	1912.....	32,632
1905.....	21,318	1913.....	34,831

In addition to the looms given above, mills are now being built to be equipped with 1,300 looms additional, and it is generally understood in Calcutta that the total number of looms in that section will be increased in the course of the next two years by fully 10 per cent.

The Calcutta mills are now employing about 250,000 operatives.

These mills are largely owned by Dundee manufacturers, who find their Calcutta mills more profitable than those of Dundee, and in consequence Calcutta has grown at the expense of Dundee.

The Calcutta mills are of the very best construction and are equipped with the best English machinery, imported free of duty. They are managed by the most

PARAGRAPH 338—JUTE YARNS.

experienced English managers, while the working people are paid about one-twelfth the wages paid in America, in some cases as low as 7 or 8 cents a day. (See diagram, p. 7.)

The American manufacturer has to contend not only against these advantages of location, cheaper plant, and exceedingly low labor cost, but he is also handicapped by certain limitations put on him by laws of his own State or the United States. The contract labor law of the United States places restrictions on the American manufacturer in his efforts to obtain operatives, which are unknown to the foreign manufacturer. This is a handicap to the American manufacturer who is subject to foreign competition.

In Massachusetts we are restricted in the number of hours per week we can run our mills by the law which forbids the employment of women and minors more than 54 hours in one week and except between the hours of 6 a. m. and 6 p. m.

In India the jute mills run 13½ hours per day and 81 hours per week.

Furthermore, it seems probable that before long the hours of labor for women and children will be reduced in Massachusetts to 48 hours a week. This will mean 48 hours for men also when employed in the same mills as are women and children.

Judging from past experience, there will be no corresponding reduction in wages; probably, eventually, a rise, if other industries are to be affected as is ours.

A consideration of our cost figures for the past 15 years shows that the cost to us of manufacturing a yard of bagging has increased since 1897 (when the present duty of six-tenths of 1 cent per square yard was established) by over 70 per cent.

In most industries the lowering of the price of an article increases its consumption, and hence competition, which reduces the price of a commodity, stimulates the consumption and enables the manufacturer to operate his machinery full time, thus keeping down the cost. This rule does not apply to bagging.

Cotton bagging is used only for covering the American cotton crop. The moment the last bale is covered the demand ceases. No more is needed until the harvesting of the next year's crop. All bagging unsold must be carried over into the next season. It is a very bulky article, requiring great expense in storage, as well as the expense of interest and insurance.

WAGES AND COST OF MANUFACTURING.

We have previously referred to the extremely low wages paid in the Indian jute mills, a comparison of which with the wages paid for similar classes of work in our mills at Ludlow we give in the diagram on the opposite page.

We have obtained the figures of Indian wages through our own agents in Calcutta, as well as from other sources, and their correctness may be checked by reference to United States Consular and Trade Reports Nos. 2872, 2897, 3302, and 3330.

From examination of the figures given in this diagram it will be found that the actual pay for similar work in Calcutta amounts to from 5 to 18 per cent of the wages paid at Ludlow, or an average of 8.3 per cent for the 10 occupations given.

Statement showing wages paid for different classes of work in Ludlow and Indian jute mills.

Occupation.	Ludlow wages.	Indian wages.
Jute softeners.....	\$15.00	\$0.65
Jute cutters.....	7.25	.70
Dust shakers.....	8.00	.61
Breaker cards:		
Spreaders.....	10.00	.49
Tenders.....	7.75	.49
Finishers.....	6.50	.49
Roving tenders.....	7.75	.70
Doffers.....	6.50	.49
Weavers.....	12.50	2.25
Laborers.....	9.00	.61
Average.....	9.03	.75

PARAGRAPH 338—JUTE YARNS.

A comparison of the cost of manufacturing 1 yard of 2-pound bagging in Ludlow and in the Calcutta mills is given below:

Cost of manufacturing 1 yard of 2-pound bagging 45 inches in width, in Ludlow and Calcutta jute mills.

	Ludlow.	Calcutta.
	<i>Cents.</i>	<i>Cents.</i>
Labor cost.....	1.118	0.191
Supplies and machinery renewal.....	.366	.297
Administration.....	.218	.209
Plant charges.....	.640	.538
Total cost.....	2.342	1.235
A difference in favor of Calcutta of.....		1.107
		2.342

Present duty equivalent to three-fourths of a cent per running yard.

An examination of the above shows that, as compared with Calcutta, Ludlow has a handicap of 1.1 cents per running yard 45 inches wide. To offset this difference in cost in favor of Calcutta bagging requires a duty of 1.1 cents per running yard, or 0.9 cent per square yard.

Thus, it will readily be seen that the duty of 0.6 cent per square yard (or three-fourths of a cent per linear yard of 2-pound bagging), which was designed to protect American manufacturers under the conditions and relative costs of manufacturing in 1897, is not now protective.

Regarding the relative efficiencies of American and Indian labor, Sir John Leng, in his "Letters to the Dundee Advertiser," page 99, estimates that in the Calcutta mills one-third more hands are employed for the same work than are in Dundee. We employ practically the same number of hands as the Dundee mills, and their efficiency is certainly no greater than in the Scotch mills.

In a report made at the instigation of the Dundee Social Union in 1905, entitled "A Report on Housing and Industrial Conditions in Dundee," it states as follows:

"The jute brought from India to be spun and woven in Dundee has to compete in the world's markets with the product of the native labor at Calcutta. The unequal fight has gone on for the past 30 years or more, with the advantage always in favor of Calcutta, which has grown from small beginnings in the manufacture of jute until to-day its production is double that of Dundee.

"It is true that efficient labor and cheap labor are not interchangeable terms, but it is an open question whether in the ordinary processes of jute manufacture the white workers have any special advantage in brain or skill in a contest with the Indian workers. If they have not, they must in time yield place to cheaper workers, unless a way is found to develop aptitudes in the white workers for more specialized forms of production."

AMERICAN VERSUS INDIAN STANDARDS OF LIVING.

Let us compare living conditions in Calcutta with those in Ludlow.

We quote from United States Consular and Trade Report No. 2897 of June 17, 1907:

"The wages paid to men in the mills range from \$2 to \$3 per month, women from \$1.50 to \$2, and boys and girls from \$1 to \$1.75. These people subsist principally on rice and vegetables made up in the form of curry, which is a peppery and sweetish mixture of rice and vegetables, with now and then chicken, duck, or goat meat.

"They all chew betel nut constantly as a stimulant. They eat two meals a day as a rule, one before beginning work and one after the day's work is done. The men and boys wear breechclouts or dhoties, and the women and girls saris, which consist of 40 yards of thin muslin wrapped in a peculiar way about the loins and shoulders."

PRIMITIVE MODE OF LIVING.

"The people of a mill, or several mills if the mills are nearly located together, occupy a village, which is made up of huts made of mud, bricks, and palm leaves woven into sheets and tacked onto bamboo poles. All are thatched with a long, tough grass

PARAGRAPH 338—JUTE YARNS.

used throughout India for covering huts and bungalows, and which makes a tight, cool, and durable roof. The floor is made of clay tamped down hard, which makes a very good floor. On this floor is spread in places matting made of bamboo grass. On this matting many of the natives throw down a cotton blanket, or possibly a thin mattress, for beds. Some have a rude bed made of four posts 16 inches high, with crosshead and side pieces pinned together and then crisscrossed with bedcords. There may be a few rude benches, but little or no other furniture is to be seen in the huts. The natives eat on the floor, squatted around a pot or pan containing the food. The men and boys eat first and the women and girls afterwards, taking what is left. The mode of life is thoroughly primitive. No knives, spoons, or forks are used in eating, the fingers answering all purposes."

On pages 23 and 25 we give pictures taken by our agents of such huts as are referred to in the above quotation, and, for comparison, pictures of cottages in which our operatives live in Ludlow.

We also give a number of pictures taken of operatives at work in a Calcutta mill and others at work in our mills at Ludlow.

The United States receives Europeans of all nations, but Asiatics and Indians, such as are here pictured, it bars out.

If the competition of the Asiatic laborer is so feared that he is forbidden entrance to the United States, is it unreasonable for the manufacturers of the United States to ask for protection against the importation of goods manufactured by him?

In the United States Census of 1880 three New England villages were selected as representing the highest type of housing for manufacturing employees, and Ludlow was one of the villages selected. We give on pages 22, 24, 26, 27, 28, 29, 30, 31 a number of views of Ludlow as it is to-day.

A great deal is said about infant industries that never outgrow their infancy, but seem to grow weaker as they grow older. We do not claim to be an infant industry. We have been able to compete, and believe we can continue to compete, successfully with any American mill, but we do fear the combination of English capital, enterprise, and management, Asiatic labor, and cheap ocean freights.

We know of no oriental industry competing with Europe and the United States that has grown as has the Calcutta jute industry, or that so threatens the life of mills employing white labor.

The manufacture of jute has been and is one of the least protected of all American industries. We do not ask for more than the present low percentage of duty, although realizing fully that increasing importations may be made.

If the competition of the American mills were eliminated as a result of the removal of the duty, in all probability the price of cloth for covering the American cotton crop would be higher than at present.

The foreign control of the American market, without any return of revenue to the Federal Government, would be the result, and as burlaps, or light jute cloth, have been increased about 70 per cent in price during 1912 by the foreign mills, having no American competition, the same result may reasonably be anticipated in bagging, which in the same period advanced less than 9 per cent.

We do not believe it is the duty of our Congress to put a premium on inefficiency and incompetency, or that the rate of duty should be high enough to protect the same, but that only such a measure of protection as will enable a mill equipped with the latest and best machinery, and managed with the greatest skill, to continue as an American industry.

Can any intelligent person contend that the conditions in Ludlow can be maintained unless the village industry is given protection against the competition of Calcutta mills, which receive their jute direct from the farms, are equipped with the very best English machinery, and managed by the best technical talent in England, employing the lowest-paid labor, and shipping at the very lowest rates directly from their mills to southern seaports, where the Constitution of the United States exempts their merchandise from local taxation? (Art. 1, sec. 10, United States Constitution.)

LUDLOW MANUFACTURING ASSOCIATES,
CRANMORE N. WALLACE, *President*.

PARAGRAPH 338—JUTE YARNS.

JUTE MILLS IN INDIA, 1913.

In 1909 the capitalization of the jute mills herewith given was \$50,032,246. These mills are now employing about 250,000 operatives.

SUPPLEMENTARY TO THE BRIEF FILED BY THE LUDLOW MANUFACTURING ASSOCIATES WITH THE WAYS AND MEANS COMMITTEE, REFERRING TO SCHEDULE J.

Neither the Ludlow Manufacturing Associates as an organization, nor by its officials, nor in any other way, has any financial interest in any other mill or organization of any kind, either in the United States or elsewhere. Nor has any other mill or its officials any financial interest in the Ludlow Manufacturing Associates. Neither has the Ludlow Manufacturing Associates ever had, nor has it now, any interest in any pool or other device for controlling prices or profits, but is an absolute free lance.

LUDLOW MANUFACTURING ASSOCIATES,
By CRANMORE N. WALLACE, *President*.

JANUARY 24, 1913.

BRIEF SUBMITTED BY CHELSEA FIBER MILLS, BROOKLYN,
N. Y.

JANUARY 23, 1913.

Hon. OSCAR W. UNDERWOOD,
Chairman Committee on Ways and Means,
House of Representatives, Washington, D. C.

GENTLEMEN: The following is in reference to Schedule J, with particular reference to paragraphs 338, 344, and 354, and in free list paragraph 578, and submitted by the Chelsea Fiber Mills, of Brooklyn, N. Y.

PARAGRAPH 338—JUTE YARNS.

"PAR. 338. Single yarns made of jute, not finer than five lea or number, one cent per pound and ten per centum ad valorem; if finer than five lea or number, thirty-five per centum ad valorem; yarns made of jute not otherwise specifically provided for in this section, thirty-five per centum ad valorem."

The above paragraph covers description of the main product manufactured in jute mills in this country, and any reduction in the rates specified would at once further increase competition, and with importations lessen demand from factories here. It is a fact that during a considerable portion of the period covered by present tariff prices have been materially below cost of production, and one jute mill in this district has been liquidated.

We recommend that consideration be given to the following wording for paragraph 338, so that same will read as follows:

"Single yarns (in hanks or in skeins), in the gray, made of jute, and not finer than five lea or number, one cent per pound and twenty per centum ad valorem; if finer than five lea or number, thirty-five per centum ad valorem."

Importations under this clause would cover the ordinary yarns required in large bulk as raw material for subsequent manufacture, but would make it clear that specialties usually required in small amounts and yarns which require additional labor and particular manufacture would be classified under paragraph 358. At present, paragraph 334 does admit plied, twisted, cabled, polished, colored, or bleached jute yarns, and in any form of final "put-up condition" or package which may be desired. It would appear to us that product with this additional labor and increased cost should be subject to higher classification. The suggested change, i. e., in ad valorem portion of duty would tend to more nearly maintain the differential which may be available through the very wide ranges of the price of the raw material.

Paragraphs 344 and 354.—Importations have been on basis of material increase, as covered by the above, and during the operation of present tariff schedule we have been forced to abandon weaving machinery formerly operated, and product is now practically limited to such specialties and to such limited requirements as must necessarily be supplied through direct and near-by connections.

Under the free list we would submit the following:

"PAR. 578. Grasses and fibers, istle or Tampico fiber, jute, jute butts, manila, sisal grass, sunn, and all other textile grasses or fibrous vegetable substances, not dressed or manufactured in any manner, and not specially provided for in this section."

We would recommend that raw material remain, as at present, on the free list, as no similar fiber has possibility of production on our high-valued land and with labor conditions as found in this country.

The Chelsea Fiber Mills (operating since 1876) directly furnishes employment to about 1,500 operatives, in addition to the number required for the handling of its raw material stored outside of its factory property.

Products made from jute and hemp, covered by following list, are produced: Jute and linen carpet yarns, matings and floor coverings, Smyrna rugs, seamless bags and specially woven fabrics, twines and cordage.

A very considerable portion of the product is for subsequent further manufacture in other properties, and only to a very limited extent is the product in its final condition for consumption by or for direct delivery to the consumer.

Respectfully submitted.

CHelsea FIBER MILLS,
FRANK L. PIERCE,
General Manager.

BRIEF OF HENRY W. T. MALI & CO., NEW YORK CITY.

NEW YORK, *January 23, 1913.*

HON. OSCAR W. UNDERWOOD,
Chairman Ways and Means Committee,
House of Representatives, Washington, D. C.

SIR: We are importing French linen threads made of flax yarns, and are interested in the erection of a mill in this country where these threads could be made, under suitable conditions, of the imported single yarns. These yarns are now listed under Schedule J, paragraph 331, paying 40 per cent ad valorem, and we beg to submit to the consideration of your committee a revision downward, in keeping with the difference in the cost of manufacture here and abroad, which difference is now by far exceeded by the present duty; we would suggest a revision to 20 per cent ad valorem, which would give ample protection to the amalgamated manufacturers spinning their

PARAGRAPH 338—JUTE YARNS.

yarn from raw flax paying only 1 cent per pound; create healthy competition and yield a better revenue to the State than the raw flax; at the same time providing for American labor, as under reasonable conditions a rather extensive business could be worked up.

Yours respectfully,

HENRY W. T. MALI & Co.

STATEMENT SUBMITTED BY THE STEVENS LINEN WORKS.

JANUARY 25, 1913.

THE WAYS AND MEANS COMMITTEE.

GENTLEMEN: As the name of our company, the Stevens Linen Works, has been brought prominently before your committee in the hearing on Schedule J, we desire to submit the following statement:

Fifty per cent of the yarns used in our goods are not finer than 8 lea and pay a duty of 6 cents per pound, which is equivalent to about 50 per cent ad valorem on our American cost. The other 50 per cent are finer than 8 lea, and under the present tariff pay a duty of 40 per cent ad valorem. (See par. 341.) This is an average of 45 per cent ad valorem on yarn which represents only 56 per cent of our conversion cost. The other 44 per cent of cost of conversion is covered by a duty of 5 per cent ad valorem. The present duty under paragraph 357 equals about 50 per cent on the finished goods.

It can be readily seen that with the present duty equivalent to about 50 per cent on crash toweling, paragraph 357, it leaves only 5 per cent between the duty on yarn and that imposed on the goods.

This insufficient duty between the yarns and woven goods is one of the causes why the woven linen industry has not been further developed in this country. We manufacture our own yarns, and this fact alone allows us to compete under the present rate of duty.

Yours, truly,

STEVENS LINEN WORKS,
NATHANIEL STEVENS, *President*.

BRIEF OF THE ROCHESTER THREAD CO., ROCHESTER, N. Y.

ROCHESTER, N. Y., *January 21, 1915.*

HON. OSCAR W. UNDERWOOD,
Chairman Ways and Means Committee,
House of Representatives, Washington, D. C.

DEAR SIR: We beg to submit for the consideration of your honorable committee reasons for a reduction of the present rate on single-linen yarns, "Schedule J, paragraph 331," on which the present tariff is 40 per cent ad valorem to 20 per cent ad valorem, and a retention of the present rate on twisted linen yarns and linen threads.

A reduction of the present rate on twisted linen yarns and finished threads would open the American market to a flood of cheap, foreign threads, with the inevitable result of wage cutting in the American mills.

A reduction of 20 per cent of the present rate on single yarns would not only permit the erection of mills in this country, giving employment to American workmen, but would force the foreign manufacturer to do the same—that is, erect mills in this country and employ workmen here, in order to compete.

It is a fact worth noting that while the consumption of linen thread has kept pace with the growth of the country, in the past 10 years (from 1901 to 1911) not a single new manufacturer of linen threads has entered the field in this country, due partly to the large amount of capital required to process thread from the raw flax to the finished article and partly to the prohibitive tariff on single yarns.

With a reasonable tariff on single yarns it would be possible for those anxious to enter the field to start in in a modest way—twisting, finishing, and tubing yarns—and with care to gradually work up to a complete mill.

Yours, very truly,

ROCHESTER THREAD CO.
THEODOR SCHELLING.

PARAGRAPH 339—CORDAGE.

PARAGRAPH 339.

Cables and cordage, composed of istle, Tampico fiber, manila, sisal grass or sunn, or a mixture of these or any of them, three-fourths of 1 cent per pound; cables and cordage made of hemp, tarred or untarred, 2 cents per pound.

CORDAGE.

STATEMENT OF RICHMOND ROCHESTER, ON BEHALF OF THE
NEW YORK CORDAGE CO.

The witness was duly sworn by the chairman.

Mr. ROCHESTER. Mr Chairman and gentlemen of the committee, I am representing the New York Cordage Co., of New York City. I suppose we would be known as jobbers, or factors and importers of cordage.

The particular item in which we are interested and here to speak to you about is the item known under your Schedule J, paragraph 339, as "cables and cordage made of hemp, tarred and untarred." There are two divisions under that paragraph 339.

While my training and breeding and tendencies have always been toward free trade, I am only advocating or asking for the abolition of the duty on the last item mentioned in the paragraph, known as "cables and cordage made of hemp, tarred and untarred."

The untarred cables and cordage made of hemp are known in the cordage trade as "dumb-waiter rope or elevator rope." In the large cities, and especially is it true in New York City, nearly every apartment house that is built or that exists, of almost any class except the very high-class apartments, is equipped with dumb-waiters, and these dumb-waiters, of course, have to be run with ropes; and it has been found that the rope best suited to that purpose is the rope known commercially as Russia rope, which is the same as that item, "cables and cordage, untarred."

This rope we have been importing for several years, to a greater or less extent, depending somewhat upon the number of new houses that go up and somewhat upon the relative value of other ropes made in this country and somewhat upon the general trade conditions, etc.; so that I say the principal consumption for such rope, if not almost the exclusive consumption, is for dumb-waiter and elevator use, and our trade in that line is with the poor carpenter and the dumb-waiter and elevator maker who, as a rule, is a man of not very much means and who makes his living by his daily wage.

Mr. HARRISON. In what respect is this dumb-waiter rope different from the rope that is used in building construction and for a thousand other purposes?

Mr. ROCHESTER. The rope used in building construction is manila rope, made from the hemp that comes from the Philippine Islands, which withstands the weather and is very much stronger. This dumb-waiter rope does not require tensile strength, but it needs to be round and needs to be smooth, both of which characteristics this hemp untarred rope possesses.

Mr. HARRISON. How do you suppose it originally came to be in a separate classification like this? Why are not untarred cables the same thing as any other kind of rope?

PARAGRAPH 339—CORDAGE.

Mr. ROCHESTER. For the very reason that the untarred cable is not made in this country. We tried diligently for a long time to get some manufacturer here to make this particular rope for us, but we have been unsuccessful in doing it.

Mr. LONGWORTH. How do you account for the fact the imports are so small?

Mr. ROCHESTER. The business is small. It is a small business, at best. I think we have to-day paid most of the duty that appears in that schedule, some \$7,000 or \$8,000 a year.

Mr. LONGWORTH. Between \$7,000 and \$8,000; yes.

Mr. ROCHESTER. I am sure we have paid as much as \$6,000 of that duty on the rope, if not more.

Mr. LONGWORTH. The equivalent ad valorem is only about 17 or 18 per cent. It is not a high duty.

Mr. ROCHESTER. It is 2 cents a pound.

Mr. LONGWORTH. The equivalent ad valorem would only be about 17 or 18 per cent of the import value of the rope, so that is comparatively a small duty.

Mr. ROCHESTER. On the other items under the same paragraph you will see they are assessed at three-fourths of a cent a pound.

Mr. LONGWORTH. Yes.

Mr. ROCHESTER. Those things are made in this country—that manila rope, sisal grass or sunn, etc.

Mr. LONGWORTH. There are other exports of those.

Mr. ROCHESTER. All those things are made here in this country, and under the theory of protection I can see some justification for a tariff on those particular items; but on the others that we do not make—

Mr. LONGWORTH (interposing). It is purely a revenue duty?

Mr. ROCHESTER. Purely revenue, and the revenue is negligible.

The other part of the rope—that is, the tarred—is used principally by the Government itself. We sell quite largely to the different posts and forts this tarred hemp cordage, so that it seems to me it would be the height of folly to be putting a duty on there to tax yourselves. The Government puts 2 cents a pound duty on, and goes down into its pocket and pays the 2 cents back to itself. They are the principal users of that stuff here.

Mr. LONGWORTH. None of it is made in this country at all?

Mr. ROCHESTER. As Mr. Metcalf stated in his speech yesterday, there is a very little of it made, very little of the tarred, and so far as I know none of the untarred. You could not buy a coil of it any place.

Mr. HARRISON. In what respect does the phraseology “cables, tarred or untarred” denote a different article from the next phrase “cables and cordage composed of manila”?

Mr. ROCHESTER. I have just attempted to explain to you that “cable and cordage, tarred and untarred, made of hemp,” is a piece of cordage made of what we know in the trade as Russia hemp, hemp grown in Russia and Prussia and Belgium and other countries in that particular section, where the climatic and other conditions are conducive to the growth of such fibers. The manila rope, on the contrary, is made of a fiber known as abaca, which grows exclusively

PARAGRAPH 339—CORDAGE.

in the Philippine Islands and never grows or is imported from any other country. The sisal that you see noted there is a species of cactus which grows in Mexico and Yucatan, and is imported here principally from Merida. Sunn hemp comes from India, I believe.

Mr. HARRISON. Surely the bulk of this Yucatan product does not come here in the shape of cables and cordage? It is a sort of binder twine, is it not?

Mr. ROCHESTER. The Yucatan product comes in as hemp altogether. There is no finished rope or twine imported from Yucatan. All of the sisal cordage we have anything to do with is made there.

The CHAIRMAN. Russia hemp is soft hemp?

Mr. ROCHESTER. Russia hemp is a soft fiber. Sisal and manila are classed as hard fiber. They are separate and distinct entirely with us.

I would certainly be content if you could see your way clear to abolish the duty on this stuff, which I think is iniquitous, which ought to be on a parity with manila and sisal and other things which are made here, and which are maintained at three-quarters of a cent a pound for the sake of protection.

The CHAIRMAN. That sounds reasonable.

Mr. ROCHESTER. It does to me; yes, sir.

Mr. LONGWORTH. Even I will admit that.

Mr. ROCHESTER. I would state, Mr. Chairman, that I have seen, and I think your committee will see, if they have not already, several overtures from several people in our trade to the same purport and effect to which I am speaking, showing you how they feel about it, and you will recall that of all the witnesses you have had before you, only one has touched on this particular paragraph at all, namely, Mr. Metcalf, who stated there was little or no cordage made in this country, "cables and cordage, tarred and untarred."

Thank you, Mr. Chairman.

BRIEF SUBMITTED BY THE PLYMOUTH (MASS.) CORDAGE CO.

WHY THE PROTECTION ON ROPE SHOULD NOT BE REMOVED.

For 89 years the Plymouth Cordage Co. has maintained in the town of Plymouth, Mass., a factory for the manufacture of cordage made from manila, sisal, and other fibers. This industry has grown from a small beginning until in its present condition it constitutes a New England institution, and we might say a national institution, worthy of a good deal of consideration.

This company has an enormous investment in its property at Plymouth—not only strictly for manufacturing purposes but in ways which amount really to public improvements and means of furnishing highly desirable living conditions for its employees, things which are without question of great benefit to the community. A living wage is paid even to the most unskilled laborer, and the company has recognized the increased burden of the cost of living by making such increases to the compensation of its employees as conditions from time to time have permitted.

Here is an enterprise which really forms a community in itself, with all practical modern improvements in its factory equipment, making for the safety, contentment, physical and moral welfare of its people; with churches, schools, public library, places devoted to recreation and social purposes, free nursing, free instruction in domestic science and manual arts; in short, a community where high regard is given to the welfare of its people along every line of human need, where the younger generation is given every opportunity to train itself for good citizenship. All these things are carried on without paternalism, although their maintenance so far as expense is concerned comes from the proceeds of the industry around which the community is

PARAGRAPH 339—CORDAGE.

centered. While, in order to make the situation clear, we have thus frankly described this feature, it should be understood that this work is carried on in a cooperative spirit and without ostentation or commercial exploitation.

When it is stated that the present number of employees in this institution now nearly numbers 2,000, it can be seen at once what the scope of the influences above described must be, and one need but compare for one instant the conditions just described with those commonly understood to exist in connection with similar manufacturing establishments abroad, to realize the importance to the community and to the Nation of maintaining such an attitude in regard to foreign-made goods as shall absolutely preclude the possibility of this difference in conditions being done away with.

We do not need argue that the reduction of the duty on rope and cordage would endanger this situation and imperil these advantages to the public which the conditions of the past and the present have made possible. But we do most strongly contend that there is a possibility of such a danger, and we respectfully submit that no reduction should be made without the most searching and careful examination of all conditions here and abroad in order to be perfectly sure that no action may be taken which would have the effect of reducing the condition of American employees in this industry to or toward that of similar employees in other countries. Certainly such investigation should be carefully and scientifically made before imperiling such desirable conditions as we first described. Some years ago, at the voluntary suggestion of members of the trade, the duty on certain classes of rope, comprising the bulk of production, was reduced to three-fourths of 1 cent per pound. It should be understood that this protection is seemingly increased by the remission to the American people of the Philippine export duty upon manila hemp. This remission, while it may act as a protection against foreign goods, certainly acts definitely and immediately to the advantage of the consuming public. This being a question somewhat apart, we shall refer to it latter.

If the effect of still further lowering the duty on rope should be to allow the importation of rope made by English and European manufacturers, would such a condition be of benefit to the American consumer? It is generally admitted that the rope made by such manufacturers is of a quality inferior to that of a great part of the rope made by manufacturers in the United States.

In the cordage industry there is no such thing as a trust or combination. The business is strictly competitive among a considerable number of manufacturers, and profits in individual cases have depended entirely upon questions of superior organization, business ability, and economy of factory methods instead of upon any condition of control of prices, limitation of supply, or artificial regulation of any phase of the business.

There is always a supply of rope equal to the demand, and prices are based upon the cost of the goods under the most favorable manufacturing conditions. These things seem to mean that if it were possible for foreign manufacturers to introduce their rope into the United States the market would be oversupplied, a surplus of goods would be provided which would tend to depress the market below the point where the American manufacturer could continue to do business, he being already close to the dividing line through domestic competition. It is difficult to see how this situation would benefit our consumer. It is true that the price of rope might be temporarily reduced, especially on the poorer grades of goods. This lower price, however, being one at which the American manufacturer can not make goods at a profit, he very naturally will stop manufacturing. This action will curtail the supply of high-grade rope, which is made by the American manufacturer but not by the foreigner. A very large class of American buyers demand this grade of rope, and it seems natural to suppose that in this case, while the price of the poorer goods may drop to the advantage of certain buyers, the price of the high-grade goods will advance, because the opportunity to use his facilities to advantage has been taken from the American manufacturer. The curtailment in his production will make the cost of the high-grade rope, which must be made in this country, greater than it is at the present time. Thus, as we have indicated, if a certain class of buyers will be benefited, probably a larger class will be injured, thereby more than neutralizing the advantage gained. At the same time, American business will be severely injured and ideal industrial conditions rendered impossible.

It therefore seems fair to judge that the introduction of foreign rope into the American market would be to the disadvantage of not only the American manufacturer and his thousands of employees but of the American consumer as well.

A question which we have previously mentioned as having a connection with the protection of this industry is that of the exemption from the export duty on manila

PARAGRAPH 339—CORDAGE.

hemp now enjoyed by the American public. The opinion has been advanced in certain quarters that this exemption should be done away with, but it seems to us that such a contention is based upon a false conception of facts. It is true, as we have indicated, that this exemption acts as a protection to American goods, but for reasons previously described it is obvious that it does not operate as a benefit to the manufacturer but as a benefit to the purchasing public.

The cost of manila hemp to the American manufacturer is, of course, reduced by the amount of the export duty from the price which his foreign competitor must pay. We have shown, however, that selling prices of rope in the United States are determined by the highly competitive conditions, in which this reduction in cost of fiber is fully taken into account. Were the American user of hemp to be compelled to pay this export duty, it would immediately and fully be reflected in the price of the finished product to the buyer of manila cordage.

Assuming that the imposition of the export duty on hemp is the accepted and proper manner for raising a part of the funds for the support of the Philippine Government, it would seem that the exemption from this duty, so far as it applies to the people of the United States, is a benefit which should properly flow to them through their ownership of the islands. To put the matter bluntly, such a course results in imposing upon the people of other countries who use Philippine products a part of the burden of maintaining the Philippine Government, to the relief of the American people.

It is understood the opinion is held in certain quarters that the exemption from this import duty operates for the benefit of some so-called "fiber trust." We respectfully submit that the Plymouth Cordage Co. is the largest user of manila hemp in the United States, and so far as we are aware, there does not exist any such thing as a fiber trust, nor indeed such a thing as any trust or combination in the cordage business. The only concern importing manila hemp that is commonly known as a trust is the International Harvester Co., sometimes referred to as the Harvester Trust. It needs, however, only reference to the statistics of importation to learn that the cordage manufacturers take the bulk of the fiber and that the company just referred to receives less than 10 per cent of the total importation, using it in the manufacture of binder twine for their harvesting machines, and not for making rope.

As we have explained above, the benefit of this free trade with our island possessions goes not to any manufacturer, but to the American public. This is a thing, concerning which the people's Representatives should thoroughly post themselves before taking action which would deprive their constituents of a benefit which properly is now theirs.

Respectfully submitted,

PLYMOUTH CORDAGE CO.,
By F. C. HOLMES, *Treasurer*.

BRIEF OF THE CONTINENTAL CORDAGE CO., NEW YORK, N. Y.

New York, *January 9, 1913.*

HON. OSCAR W. UNDERWOOD,
Washington, D. C.

DEAR SIR: We should like to have you lay before the coming session of Congress, which is to take up the question of tariff revision, the proposition of removing the present unnecessary and detrimental duty which importations of tarred and dry Russian rope are compelled to pay when brought into this country from abroad.

Cables and cordage made of hemp, tarred or untarred, present tariff, page 339, is same as tarred and dry Russian rope here referred to.

So far as we know, there is absolutely no untarred Russian rope made in the United States and never has been. The United States Navy is perhaps the largest individual user of Russian rope. What logic there can possibly be in taxing the people of the country and the Government itself, on a matter which needs no protection, as there is no one to protect, is something we have never been able to fully comprehend.

Such dry Russian rope as we handle for our trade we are compelled to import, and we know the cordage manufacturers in general, and large and small distributors, would certainly welcome the removal of the onerous duty.

If there is any additional information you would like to have, we should be pleased to furnish it.

Respectfully yours,

CONTINENTAL CORDAGE CO.
By CHAS. M. ALBERTSON.

PARAGRAPHS 340-341—LINEN THREAD AND YARN.

TELEGRAM FROM TUBBS CORDAGE CO.

SAN FRANCISCO, CAL., *January 20, 1913.*

Congressman JULIUS KAHN,

House of Representatives, Washington, D. C.:

We are advised that a hearing will be given in Washington on January 24, on Schedule J, flax, hemp, and jute manufacturers, at which hearing will come up the matter of reduction in the tariff rate on Manila and sisal rope, and the refund of the present export duty on manila hemp from the Philippine Islands. We can not too strongly oppose any action looking to a reduction of the present tariff and refund of export duty. It would work a great hardship to us and the entire cordage industry of the United States, and would absolutely leave our industry unprofitable and at the mercy of foreign manufacturers.

TUBBS CORDAGE CO.

PARAGRAPH 340.

Threads, twines, or cords, made from yarn not finer than five lea or number, composed of flax, hemp, or ramie, or of which these substances or either of them is the component material of chief value, ten cents per pound; if made from yarn finer than five lea or number, twelve cents per pound, and three-fourths of one cent per pound additional for each lea or number, or part of a lea or number, in excess of five.

See J. E. Barbour, page 3687.

PARAGRAPH 341.

Single yarns in the gray, made of flax, hemp, or ramie, or a mixture of any of them, not finer than eight lea or number, six cents per pound; finer than eight lea or number and not finer than eighty lea or number, forty per centum ad valorem; single yarns, made of flax, hemp, or ramie, or a mixture of any of them, finer than eighty lea or number, fifteen per centum ad valorem; ramie sliver or roving, thirty-five per centum ad valorem.

See J. E. Barbour, page 3687.

LINEN THREAD AND YARN.

BRIEF SUBMITTED BY T. S. TODD, NEW YORK.

NEW YORK, *January 23, 1913.*

The WAYS AND MEANS COMMITTEE,

Washington, D. C.

GENTLEMEN: We beg to direct your attention to the duties on flax threads, which seem to us unwarranted, and in many cases, absolutely prohibitive. (See particulars in par. 340 of Schedule J.)

In most cases it is impossible to land such merchandise without a loss, and in many cases are the duties so excessive that, based on the domestic price, there is not sufficient margin to warrant a consumer in importing such threads, or an importer in engaging in this business.

The manufacture of these goods in this country at this time, as in 1908, is controlled by a syndicate or trust, which embraces about 90 per cent of the production throughout the United States. (See pp. 4647-4678, tariff hearings, testimony of Mr. G. F. Smith.)

The product of the mills comprising the syndicate is sold in the United States exclusively through the Linen Thread Co. of New York.

We do not object to the American producer having a reasonable protection, which we submit should be represented by the difference in cost of labor abroad and in America. British labor, comprising spinning and twisting of linen threads, has been paid for several years past 20 per cent advance on former schedules and another 10 per cent will be added March 1, 1913, although we believe there has not been any material change in the rates of similar labor prevailing in this country.

The prevailing difference in cost between American made threads and those made in Europe is almost entirely the difference in the cost of labor, which we understand runs about double the rates in America to the wages paid in Europe.

The raw flax, from which linen threads are made, is higher to-day than it has been for years. Its cost, however, is practically the same to the American as to the foreign manufacturer. The elements of loss and waste are also the same. In some instances, dyestuffs and chemicals are cheaper abroad than here, and in other instances, the reverse is the case.

PARAGRAPHS 340-341—LINEN THREAD AND YARN.

Flaxes from which these goods are made are chiefly grown in Ireland and Belgium. Unfortunately, no flax is grown in this country which is suitable for manufacture into linen threads, which require the strongest and best flaxes the world can produce.

The annual American production of linen threads is fully 90 per cent of the entire trade in this country, leaving only 10 per cent for importations of foreign manufacture. The latter are largely composed of special brands, the production of the foreign houses with which the American combine is affiliated.

These linen threads are very largely employed in the manufacture of boots and shoes, clothing, harness, and fishing nets, and these manufacturing interests should not pay more than a reasonable tariff on their raw material.

In making 1 pound of thread No. 60 yarn quality, the labor abroad costs 7.97 pence per pound, equal to \$0.1594. If we double this, to equal the American labor, add thereto 25 per cent additional making thereby a very liberal allowance to cover extraordinary expenses, which may or may not accrue, and 4 cents per pound to cover duties on raw material, both manufacturers are then placed on a parity, and you find the labor cost in this country, together with the duty on raw flax, to be \$0.3986 per pound. (This assumes that $1\frac{1}{2}$ pounds of dressed line flax are required to make 1 pound of finished threads. We, therefore, add 4 cents per pound, which covers the present rate of duty of 3 cents per pound on dressed line flax.) The duty on No. 60 linen thread, which is assessed on finished thread of 66 lea to the pound, is \$0.5775 per pound, so that the American manufacturer has a protection equal to the duty on raw material, plus two and one-quarter times the entire foreign labor cost and 44 per cent additional, which is practically prohibitive.

Taking 1 pound of No. 40 yarn quality, on which the duty is assessed, as of No. 44, the foreign labor cost is \$0.1196 per pound. If we double this to equal American labor, add 25 per cent additional, also 4 cents per pound for duty on raw material, we have entire American labor cost of \$0.3091 per pound; the duty is \$0.4125, or 33 per cent, over the full American labor cost. Taking this same thread on the foreign value, packed in condition ready for shipment, the ad valorem duty is more than 50 per cent. This quality of thread is used extensively for fishing nets, which is an important industry in this country. The manufacture of these nets is also largely controlled by a company affiliated with the same linen-thread combination or trust.

These illustrations, based solely on labor, show an abnormal and apparently wholly unwarranted protection. It may therefore be desirable to analyze the situation from another standpoint, namely, the relation of duty to the whole foreign cost, and we will therefore take the figures of the Government for the year ending July 1, 1912, as the basis, wherein we find imports of 254,698 pounds, valued at \$162,916, of numbers 15 to 20, which is such a wide range as to work against our contention, nevertheless we accept it and point out for your consideration that the average value per unit in the above range is \$0.639 per pound, packed in condition ready for shipment from abroad. Taking No. 19 $\frac{1}{2}$, probably the number of largest import, assessed as No. 20, the duty is \$0.2325 per pound, equivalent to more than 36 per cent, and shows cost of imported thread of this number, duty paid, and 2 cents to cover ocean freight, insurance, and landing charges, of \$0.8915 per pound, against which the corresponding American product sells for, one quality 89 and another 98 cents net.

Taking a specific and actual case we find 19 $\frac{1}{2}$ lea costing abroad 52 cents per pound and assessed for duty at No. 20 lea at \$0.2325 per pound, which shows an ad valorem duty of more than 44.7 per cent.

Linen threads, three-cord, put up on 200-yard spools, such as are used in every household for domestic purposes, are sold in all sizes at a net price of \$0.805 per dozen spools, corresponding foreign threads would pay a duty, on a liberal average, of 23 cents per dozen spools, or a protection of more than 42 per cent, which is prohibitive.

The information as to the cost of foreign labor has been given to us by a gentleman of the highest standing, who has been for many years engaged in the business abroad, and, if desired, proofs can be given as to the accuracy of the figures submitted.

The control of this business by combination has brought about much economy of operation, by reason of the fact that the mills have been assigned to produce different brands of similar character, formerly made in several mills, which concentration obviates the necessity of readjusting machinery to make several types or numbers. It has also lessened administrative and selling expense, and given territory is supplied from and by one distributing house as against several. These economies of operation, however, have not been manifest in any lessening of price to the consumer.

In view of the above, we would suggest that a specific duty of 10 cents for No. 5 lea, with three-eighths of a cent for each additional lea, would give to the American

PARAGRAPHS 340-341—LINEN THREAD AND YARN.

thread manufacturer ample protection and at the same time give us, as manufacturers of other lines of goods, the advantage of the world's markets for our raw materials, to which, after affording full protection to American labor, we feel ourselves entitled.

The above figures are predicated on the present duty of 3 cents per pound on the raw material as dressed line flax, and if the duty on such material is reduced it would change to the extent of such reduction our calculations, and we should hope would correspondingly reduce the duty on the finished article—thread.

We feel that the liberality of our contention will commend our cause to the equitable consideration of your committee.

We have the honor to be, yours, respectfully,

T. S. TODD.

STATEMENT OF SMITH & DOVE MANUFACTURING CO., ANDOVER, MASS.

THE COMMITTEE ON WAYS AND MEANS,
Washington, D. C.

GENTLEMEN: The Smith & Dove Manufacturing Co., of Andover, Mass., are manufacturers of linen threads, yarns, and twines. This concern was the first in this country to manufacture linen threads, having been established in 1835. From the very beginning it has been fully equipped to take the raw flax as produced by the farmers along the Hudson River, as well as in Russia and other foreign countries, hackle it, and carry it through all of the subsequent processes into the finished thread. During these 78 years it has been growing constantly, and to-day it is doing a very large business.

Years ago the growing of flax for fiber on a commercial basis ceased to exist in this country, and we have been compelled to depend entirely upon its importation from foreign countries. During the greater part of this time there has been a duty on raw flax, and there is to-day a duty of 1 cent per pound on raw flax, \$20 per ton on flax tow, and \$22.50 per ton on hemp and hemp tow. The duties on flax and flax tow are really revenue duties, as there is practically no flax suitable for spinning produced in this country. From our standpoint as manufacturers it is immaterial to us whether these duties on our raw material are continued or not, so long as we are compensated for them in the duties on our finished products. If, however, it seems desirable to allow raw fiber to come in free, a proportionate reduction could be made in the duties on the finished products covered by paragraphs Nos. 340 and 341. This reduction, however, should not be greater than the equivalent of the reduction on the raw material, as even under the present rates of duty large quantities of linen yarns and threads are being imported.

Should it be decided to put flax, hemp, and tow on the free list, the duty on hackled flax and hackled hemp should be reduced, but only by the equivalent of the reduction on the raw fiber. Should hackled flax and hackled hemp be placed on the free list as is being advocated by certain manufacturers, it would operate most unfavorably against manufacturers in this country who hackle their own flax. A fully equipped flax-spinning mill includes hackling and sorting among its other processes, and those who advocate free hackled flax are either not fully equipped in this particular or must desire to maintain hackling establishments abroad, where they can avail themselves of cheaper labor. The Smith & Dove Manufacturing Co. has always maintained hackling and sorting departments as part of its plant, and should hackled flax and hackled hemp be placed on the free list would be obliged to establish a hackling and sorting plant abroad, thus discontinuing the use of a large and expensive department, as well as throwing out of employment a large number of men. In fact, the amount paid by this concern in wages in its hackling and sorting departments amounted last year to over 13 per cent of its total wage disbursements.

Concluding, we would point out that any reduction in the existing tariff on our products, excepting such pro rata reduction as might be brought about by the admission of free raw fiber, would seriously affect the flax manufacturers in this country.

PARAGRAPHS 340-341—LINEN THREAD AND YARN.

Our costs in this business are increasing enormously; nearly all of our machinery has to be imported at a duty of 45 per cent; our labor costs us from two and one-half to three times what it costs in Ireland, Belgium, or Germany; our supplies are constantly advancing in price; and the added cost due to legislative requirements in the line of shorter hours, costly ventilating systems, workmen's compensation laws, etc., is very considerable. There should therefore be no reduction in our net protection, if the difference in the cost of manufacture here and abroad is to be given consideration and the successful operation of this industry is to be maintained.

Yours, very truly,

SMITH & DOVE MANUFACTURING CO.,
By GEORGE F. SMITH, *President*.

JANUARY 20, 1913.

BRIEFS OF RAMIE YARN MANUFACTURERS, SUBMITTED BY
HULL & REEVE.

WASHINGTON, D. C., *January 24, 1913.*

HON. OSCAR UNDERWOOD,
*Chairman of the Committee on Ways and Means,
House of Representatives, Washington, D. C.*

MY DEAR SIR: We inclose you herewith two briefs, one by Mr. John H. Meyer, who has been greatly interested in the raising of ramie, as well as its manufacture, and one by the Superior Thread & Yarn Co., through the president of the company, Mr. John W. Hiltman.

We regard these briefs as furnishing your committee information on the growing and the manufacturing of a product which may in the future, and we hope will develop into a great industry, and we know that we can confidently expect from you and your associates a careful examination of the facts presented therein.

We are, with great respect, yours, very truly,

HULL & REEVE.

BRIEF SUBMITTED BY JOHN H. MEYER, OF THE SPRINGDALE FIBER CO.

RAMIE YARNS AND FIBERS.

Ramie, or China grass, as known to the trade, is a fibrous plant which grows in China, India, the Malay Islands, and, in fact, can be grown in most warm climates, and our Agricultural Department has for several decades past made most exhaustive experiments and tests in several parts of the United States of America, and has conclusively proven that ramie, or China grass, can be most successfully grown in our Southern States, or in any part of this country where there is no ground frost. It is also grown in Mexico, and in almost all parts of Central America and South America.

Ramie is unquestionably the linen of the Bible, as flax, or linen, is absolutely indigenous to the more temperate climates of northern Europe and can not be grown in hot climates. Therefore, the mummy cloth of the ancient Egyptians was made of the ramie fiber, and, in fact, so named after one Ramesis, Pharaoh of Egypt. Some of these mummy cloths are in a perfect state of preservation, which only serves to prove the enormous durability of this fiber—far superior to any other.

Ramie is a most wonderful fiber, almost as glossy as silk, much stronger than linen or any other fiber; it is absolutely mildew proof, does not stretch, can be spun into very fine yarns, and can be successfully manufactured into any fabric of clothing, table linen, napkins, dress goods, threads of all description, mixed silk fabric of great beauty, underwear, hose, gas mantles, and many other goods whose names are legion. There is no doubt but what, if the oriental nations had been as progressive in the manufacture of goods, and in particular of textile fabrics, in a measure the same as the occidental nations were for the past 300 years, ramie fabrics would have flooded the European countries of the past and present ages, and would now not be a comparatively unknown article. This shortcoming will undoubtedly be remedied in the near future, and particularly in the United States with the assistance of our Government.

The only very large mill where ramie is most successfully processed and spun into yarns is the one owned by Mr. Baumgarten, at Emmendingen (Grand Duchy of Baden). This factory, however, is subsidized by the German Government, and is

PARAGRAPHS 340-341—LINEN THREAD AND YARN.

therefore in a position to import Italian and French labor (particularly skilled in the spinning and manipulating of spun silk yarns) at very low wages, whose children again, form a very formidable quota of still cheaper but very useful labor.

Mr. Baumgarten is practically the only manufacturer whose yarns are now shipped to this country, and are mostly used for the manufacture of gas mantles.

It is further a fact, with reference to the importation of yarns or woven fabrics, that the main quantity of yarn imported into this country is produced at Emmendingen, Germany, and a decrease of duties would but serve to create a practical monopoly for the concern in Germany, who would have little or no competition whatever from other sources. And further, the only person who would directly benefit in this country by the decrease of duties would be the representative for the foreign producers.

Gas mantles manufactured from ramie yarn are perhaps only 2 to 3 per cent of the entire gas mantle production of this country, which, however, may be enormously increased on account of the great superiority of ramie over those of cotton gas mantles.

It is further noteworthy that Mr. Baumgarten has been decorated by the German Government, for the reason, as the writer understands, that the ramie yarns supplied by him are especially adapted for the manufacture of dirigible balloons and aeroplanes.

The few mills now existing in the United States, which have spent hundreds of thousands of dollars (not to speak of past ventures in this same direction by others, which undoubtedly have run into the millions) are now on the high road to producing a perfectly satisfactory article, and are willing to make still further sacrifices in the direction of importing the latest and most improved machinery in order to attain equal perfection to the foreign product.

It is therefore the prayer of the undersigned, and on account of the entire American ramie industry:

(a) That the classification of ramie yarns, or fabrics, is taken out of tariff schedule J, where they are now placed with flax, hemp, jute, etc., and that ramie be put into an entirely separate schedule, as none of the other fibers can possibly have the same claim in any way whatsoever.

(b) That the duties are readjusted in a manner to further offset the enormous advantages of low-priced and skillful labor, of foreign Government subsidy, and also making certain allowances for the great struggle incidental to all infant industries.

(c) That in order to do full justice to the American ramie manufacturer, and to at once help the planters of our Southern States, to develop an entirely new and most profitable business, the undersigned prays the honorable committee to consider the following schedule:

	Per cent.
The China grass in the raw state as now imported.....	Free.
The fiber degummed; that is, after the removal of all wood and gummy substances.....	40
Combed sliver.....	50
Roving preparatory to going on the spinning frame.....	55
Spun yarns, metric Nos. 5 to 12, inclusive.....	60
Over No. 12, up to No. 20, inclusive.....	62½
Over No. 20, up to No. 28, inclusive.....	65
Over No. 28, up to No. 35, inclusive.....	70
Over No. 35, up to No. 65, inclusive.....	75
Over No. 65, up to No. 100, inclusive.....	80
Noils.....	30

The Chinese manufacture their very finest garments from the ramie, such as samples herewith submitted (Exhibition No. 5) will show.

The Japanese are also largely using ramie mixed with silk, and should the ramie schedule be readjusted in the manner pointed out there is no question but what this country will build up an immense industry, making some of the most beautiful and serviceable goods; also insuring to the southern farmers, where there are millions of acres open for the cultivation of ramie, with its three yearly crops, a profit unprecedented and far greater than cotton, which will add to our country one more most flourishing industry, starting up from the soil to the finished product.

Respectfully submitted.

SPRINGDALE FIBER CO.,
JOHN H. MEYER, Owner.

PARAGRAPHS 340-341—LINEN THREAD AND YARN.

STATE OF NEW YORK, *County of New York*, ss:

John H. Meyer, owner of the Springdale Fiber Co., being duly sworn, deposes and says that he is the petitioner in and has read the foregoing petition and knows the contents thereof, and that the same are true of his knowledge, except as to matters therein stated to be alleged on information and belief, and as to those matters he believes it to be true.

[SEAL]

CHAS. HULSMAN,
Notary Public, New York County.

Sworn to and subscribed before me this 18th day of January, 1913.

BRIEF SUBMITTED BY THE SUPERIOR THREAD & YARN CO.

RAMIE YARNS AND FIBERS.

To the tariff revision congressional committee:

Reasons why the tariff on yarns and fabrics made from ramie or China grass should be increased rather than reduced.

First. The ramie industry in the United States is still in its infancy and needs the fostering care of the Government at this time more than it ever needed it before.

A short survey of the history of this industry in the United States shows conclusively that neither time nor skill nor money were spared to make it a commercial success and that the retardation of this process was not due to causes which could be attributed to our manufacturers.

Recognizing at an early date that the climatic and atmospheric conditions make it impossible to grow flax and manufacture linen goods in the United States which could compete with the European products, manufacturers and textile men began experimenting with ramie as far back as 1860, with the view of using it as a substitute for flax. Bruckner's early experiments having shown in our botanical gardens what soil and climate were necessary to bring the plant to its full growth and develop to the utmost the fiber which it contains, attempts were made to raise it commercially by Emile Leiram, who began operations in Camden and Newark, N. J. This enterprise failed because the climate of New Jersey was not well suited to the cultivation of the plant. Felix Fremery introduced it then into Texas, and the Agricultural Department opened an experimental station at New Orleans under the management of Prof. Hubbs. It was soon found that ramie could be grown successfully in the Southern States and that its cultivation could be made more profitable to our southern farmers than the cultivation of either sugar cane or rice if they had a market for it.

At the same time manufacturers began experimenting with the fiber, some to make decorticating machines in order to free the fiber from the stem upon which it grows, others to spin it into yarn and to weave it into cloth. While in foreign countries, especially in Germany, France, and England, the Governments subsidized this infant industry, in our country it was left entirely to individual initiative and in the hands of inventors, manufacturers, and capitalists. But though the financial risks and initial failures prevented systematic work and retarded the growth of the industry, a steady progress was made toward solving the difficulties and surmounting the obstacles which presented themselves from time to time. Among the manufacturers of decorticating machines mention must be made of the Kauffman Fiber Co.; of the Collyer Fiber Co.; of Leruth & Myers, of New Orleans, La.; of Fremery, of Galveston, Tex.; of Green & Co., Versailles, Ky.; Sanford, of Brooklyn; Van Buren, of Jacksonville, Fla.; Rothermel & Lorimer, of Philadelphia; Spence, of Providence, R. I.; and quite recently G. W. Schlichten, of Los Angeles, Cal.

In the last 10 years several companies were organized to spin this fiber to the exclusion of all others, some of which failed either from insufficient funds or lack of knowledge. In fact, there is scarcely a silk or cotton manufacturer in the United States who has not, at one time or another, spent time and money in attempting to spin or weave this fiber, and thus directly or indirectly help to bring this industry to success. Dobson, of Philadelphia; Cheney Bros., of South Manchester; Fleitman & Co., of New York; the Phoenix Silk Mills, of Paterson; Jenckes & Co., of Pawtucket, R. I.; are but a few names in the long list.

To-day the Superior Thread & Yarn Co., of New York, and the Springdale Fiber Co., of Springdale, Mass., are working ramie exclusively.

It is very difficult, perhaps impossible, to get at exact figures or statistics, as manufacturers are loath to speak of losses which they suffered in chasing rainbows, but

PARAGRAPHS 340-341—LINEN THREAD AND YARN.

the most conservative estimate will show \$50,000,000 at the least as the amount expended so far, and there is not one manufacturing company in the United States to-day manufacturing ramie yarns or ramie goods that is on a paying basis.

Second. American ramie products can not be manufactured as cheaply as the European products are. The only really successful ramie enterprise in Europe is located at Emmendingen, in Germany, and is called "Erste Deutsche Ramie Gesellschaft." This company employs Italian labor of the cheapest kind. Children of the operatives are employed to do the assorting and cleaning of the fibers preliminary to their treatment in the mill, for which work they are paid a nominal sum per day. In this country such work is done by boys, who earn \$1 to \$1.25 per day. In spinning and finishing the yarn, experienced girls earn from 20 cents to 35 cents per day at the German factory, while here \$1.25 per day is paid to unskilled hands.

American manufacturers have recognized the fact that they must use superior machinery in order to be able to compete with the German ramie yarn, and they are constantly improving along such lines. But inasmuch as ramie stands in a class of its own as a textile fiber, and can not be worked successfully on systems such as are used in the spinning of cotton, wool, silk, hemp, or jute, considerable time and large sums of money have been expended in order to reach a satisfactory solution of this problem.

A reduction of the tariff at the present time would therefore be equivalent to the paying of a subsidy to the one successful company in Germany and put the American manufacturers absolutely out of business.

Third. The chief use of ramie in the United States so far is, first, for hat braids; second, for incandescent gas and kerosene mantles, and all efforts to introduce ramie yarns for other textile purposes have been unsuccessful. While every indication points to a large field at some not very remote day, nothing of a substantial nature has as yet been accomplished. Everything, therefore, with the exception of the two items here named, may be disregarded. So far as hat braids are concerned the market is not large enough to keep a small mill busy, and braided hats being subject to the dictates of fashion can not be depended upon as a continuous market. The superiority of ramie yarn in the manufacture of incandescent gas mantles has been fully demonstrated, but its adaptation by mantle manufacturers depends upon their skill and knowledge of the fiber to such an extent that 98 per cent of all incandescent mantles manufactured to-day in the United States are still made from cotton yarn. Manufacturers of ramie yarn in this country will have to spend time and money in educating mantle manufacturers before this market is secured, and until such a time they should be protected by the Government. The present duties are entirely inadequate, and the tariff on ramie mantles and ramie yarns for mantle purposes should be materially increased.

Fourth. The report of Mr. Charles Richard Dodge, fiber expert of the United States Agricultural Department, made in 1890, and the report of his successor, Mr. Lyster Dewey, made very recently, show that the southern farmer can raise ramie successfully, and is, for many reasons, anxious to do it if a market can be opened up for his product. The American Cane-Sugar planters, in their meetings at New Orleans, deliberated upon this subject repeatedly, and it is their unanimous opinion that the raising and cultivation of ramie would be more profitable to them and to the South in general than the raising of cane sugar. They can make money from sugar cane only once in seven years, they claim, owing to climatic conditions, and that one year has to pay for the other nonproducing years. They attempted to cultivate rice, but with no better result. On the other hand those who had grown ramie for experimental purposes were enthusiastic in speaking of its possibilities, especially so because its cultivation, after the first two years, requires but little work and attention, and because three crops can be grown in a year, the product of which, at half the price of the imported Chinese ramie, would yield a larger profit than anything which they now grow. The only way this can be accomplished is by encouraging the American manufacturer to use ramie. Large sums of money have been spent and are still being spent in experiments with ramie on southern plantations; farmers have devoted time and money to the study of this question, mainly by reason of the encouraging reports which they received from the Agricultural Department. The reduction of the tariff on ramie yarns and ramie goods would, therefore, very materially and very seriously affect the interests of the southern farmer who keeps his eye on our ramie manufacturer with care and anxiety.

Fifth. Ramie occupies a singular position among the textile fabrics, inasmuch as it requires a treatment preliminary to spinning different to all other fibers. This treatment consists of separating the fibers from the adhering woody matters and from the gums which hold them together. The German company invented a simple fer-

PARAGRAPHS 340-341—LINEN THREAD AND YARN.

mentation process, the cost of which is a negligible quantity, amounting to less than $\frac{1}{4}$ cent per pound; but though this process is not patented in the United States, it can not be used here. The fermentation produced by ramie is the source of such stench that it is most offensive to people living in a radius of 4 miles around Emmendingen. The German government having issued to this company a license to manufacture, had to issue special grants and privileges to enable this company to work under its charter.

No community in America would tolerate such a nuisance, consequently American manufacturers of ramie are compelled to have recourse to chemicals to free the fiber from wood and gums. This chemical process is not the same in all the mills, and its cost varies according to the uses to which the fiber is to be put. Thus, the cost of the chemical process in the case of yarns used for incandescent mantles is nearly three times the cost of the chemical process ordinarily used, and exceeds the cost of raw material and manual labor.

The Emmendingen Co., of Germany, subsidized by their Government, is the only concern that has so far made a commercial success of the manufacture of ramie yarn, and their product in one form or another is almost the only import of ramie to this country. Consequently any reduction that may be made on the present duty is in effect a subsidy by this Government of the German concern that is already subsidized by their Government.

Our recommendation is that ramie (china grass) be taken from its present classification as linen, be given a separate class under its proper name, and that the duty on ramie yarns, sliver, and noils, as well as on articles manufactured therefrom, be made 70 per cent ad valorem.

Respectfully submitted.

SUPERIOR THREAD & YARN CO.,
JOHN W. HILTMAN, *President*.

STATE OF NEW YORK,

[SEAL.]

LONDON W. L. EDMONDS,
Notary Public, Kings County.

Certificate filed in New York County.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

PARAGRAPH 342.

Flax gill nettings, nets, webs, and seines shall pay the same duty per pound as is imposed in this schedule upon the thread, twine, or cord of which they are made, and in addition thereto twenty per centum ad valorem.

PARAGRAPH 343.

Floor mattings, plain, fancy, or figured, manufactured from straw, round or split, or other vegetable substances, not otherwise provided for in this section, and having a warp of cotton, hemp, or other vegetable substance, including what are commonly known as China, Japan, and India straw matting, three and one-half cents per square yard.

PARAGRAPH 344.

Carpets, carpeting, mats and rugs made of flax, hemp, jute, or other vegetable fiber (except cotton), valued at not exceeding fifteen cents per square yard, four cents per square yard and thirty per centum ad valorem; valued above fifteen cents per square yard, eight cents per square yard and thirty per centum ad valorem.

FLOOR MATTINGS, ETC.

TESTIMONY OF MYRON W. ROBINSON, PRESIDENT OF THE
CREX CARPET CO., NEW YORK CITY.

Mr. ROBINSON. In presenting this case I wish to say that I not only represent the Crex Carpet Co., but I am here as a committee on behalf of the American manufacturers of carpets, mattings, and rugs manufactured from vegetable substances, which come under sections 343 and 463 of Schedule J.

This committee recommends that the present tariff on imported mattings and rugs which are sold in competition with our products be maintained. There are two kinds of mattings and rugs manufactured from vegetable substances in the United States. One is made from wire grass, which is grown in the States of the Northwest, the other is made from a so-called fiber, which is a paper product. I shall have to deal with them separately.

In the industry of manufacturing carpets and rugs from grass there are four distinct companies, none of which is in any way connected with the other, and it is only by the strictest economy that we are able to make this business profitable and to pay our stockholders 6 per cent. In fact, in the first two or three years of this industry it was carried on at a loss.

Our brief, which we have prepared and would like to go on record, will show you that we use considerably over 100,000 acres of theretofore waste lands; we use this wire grass, which is absolutely useless for any other purpose, and we employ in the grass fields over 2,000 men, and in the factory over 1,500 operatives, paying annually in wages \$700,000, and producing about six and a half million square yards of carpet, of value of about \$2,600,000.

We are the largest individual users of domestic cotton warp, the two industries using about 4,000,000 pounds a year. The freight charges to and from our mills every year amount to something over \$200,000.

Competition in this is entirely a question of wages. The wages come in twice in our manufacture, you might say, in that we have to employ men to cut the grass first and then we employ people in our mills to make the grass into rugs, so the competition between these

. PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

rugs and the Japanese and Chinese mattings is entirely a question of labor. The average wages paid at our mill is \$1.85 and \$1.90 a day, and the average paid to the weavers is \$3.46 a day, whereas the total wages in Japan are from 17½ cents to 25 cents. The average labor cost of a square yard of rug in the United States is 11 cents, and in Japan it is eight-tenths of a cent; in China it is somewhat less than in Japan. So that the difference in the labor cost between Japan and the United States, figured on a 9 by 12 rug, is \$1.22, while the present duty on this rug is only \$1.09. These figures do not take into account the great difference in the cost of labor of harvesting the grass and the higher taxes paid in this country in overhead charges. Our brief will go further into detail in regard to some of these goods, and will show you conclusively that under the present tariff we have the strongest competition not only in this country but abroad.

In regard to the paper manufacture, we will say that is a paper product; a twisted thread is prepared and it is then woven into mattings and rugs. Those rugs, together with the grass mattings, are intended as a cheap substitute for the ordinary woolen carpet.

There are 12 companies engaged in this business in this country and, as in the matting industry, their interests are entirely apart and there is the strongest kind of competition.

This is a very new industry, and I think you can readily see the necessity of sustaining the present tariff and that any reduction would simply be so much more for the importers without any change in price to the consumer.

Either this, or if there was any further reduction in price it would mean a considerable reduction in labor which we employ in the United States in order for us to compete at all. In other words, taking away the rate of duty would not only be a great injury to the whole industry, but it would not improve the revenue.

I understand that the importers ask for a specific duty on grass rugs of 5 cents. The present duty is an ad valorem duty of 35 per cent, which amounts to from 8 to 12 cents. We would recommend on this, if the committee thought that a specific duty was better, that this duty should be placed at 12 cents.

The statement was made here yesterday by the importers that they did not consider that we are in competition with them. In view of that I brought some samples that will show you very conclusively there is the keenest kind of competition and that this [exhibiting rug] is practically an imitation of our goods. I also will show you the prices if I may be permitted.

This [exhibiting rug] is our grass rug, and this [exhibiting rug] a rug which the Japanese make. This rug we sell at 93 cents, and they pay the present tariff and sell this rug [indicating] for 90 cents.

Mr. PAYNE. What is that Japanese rug composed of?

Mr. ROBINSON. It is made from some sort of a grass fiber produced on the other side. I do not know exactly what it comes from, but it is a sort of grass fiber which they twist.

Mr. FORDNEY. Is there any difference in the lasting qualities of the two rugs?

Mr. ROBINSON. We consider our rug the best rug.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

Mr. PAYNE. What paragraph does that Japanese rug come under?

Mr. ROBINSON. Things manufactured of straw, other than mattings.

Mr. HARRISON. It comes under the basket clause, does it not?

Mr. ROBINSON. Yes, sir.

Mr. HARRISON. They pay 35 per cent customs duty in order to get into competition with you.

Mr. ROBINSON. They pay a 35 per cent duty, which amounts to from 8 to 12 cents.

Mr. HARRISON. The specific rate of 5 cents a yard which the importers suggested is the same as 20 per cent ad valorem?

Mr. ROBINSON. Yes, sir.

Mr. HARRISON. This is one of the three kinds of floor covering which is made out of straw or grass?

Mr. ROBINSON. Yes, sir; there are three kinds.

Mr. HARRISON. There are rugs made out of one piece, with a cotton warp, and then there are rugs made out of matting sewn together.

Mr. ROBINSON. Yes, sir; the regular width of matting sewn together making a rug.

Mr. HARRISON. The one-piece rugs which come into competition with your grass products pay a rate of 35 per cent ad valorem, under the basket clause?

Mr. ROBINSON. Yes, sir.

Mr. HARRISON. And on the other two classes the rates are specific?

Mr. ROBINSON. Three and one-half cents a square yard; yes, sir.

Mr. HARRISON. That was raised in the Payne law, and it worked out to an ad valorem equivalent of about 49.51 per cent.

Mr. ROBINSON. I understood that they were reduced in the Payne law.

Mr. HILL. They were reduced by being cut in two.

Mr. HARRISON. The specific rate was 3 cents a square yard under the Dingley law and $3\frac{1}{2}$ cents a square yard under the Payne tariff.

Mr. HILL. The Payne tariff made it $3\frac{1}{2}$ cents a square yard, without the ad valorem.

Mr. HARRISON. The fact is the Payne law abolished the differential of 10 cents, so that the duty is no longer assessed at different rates, whether it is worth more or less than 10 cents a yard; but the cheaper or commoner kinds that used to come in under 10 cents a yard now actually have the duty raised upon them from 3 cents to $3\frac{1}{2}$ cents a square yard. It was only on the kind formerly imported above 10 cents a square yard that the duty was reduced. On the cheaper kind the duty is raised, and on the more expensive kind the duty is now reduced. I think I am correct in that contention.

Mr. ROBINSON. It is my understanding that it was formerly 7 cents and was reduced to $3\frac{1}{2}$ cents.

Mr. HARRISON. Those that were imported under 10 cents a yard were formerly imported under the Dingley law at 3 cents; that was raised by the Payne law to $3\frac{1}{2}$ cents a yard. Those are the ones of which there are the most importations. The only effect the rate has had has been to take about \$2,000,000 worth of imports with consequent revenue away from us that we used to have in 1905.

Mr. ROBINSON. The matting is not used as much to-day, no matter whether there is any competition or not.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

Mr. HARRISON. I do not wish to make your testimony for you or to take your time. You can testify only as to these one-piece rugs woven with a cotton warp, made out of grass, twisted straw, or some similar fiber?

Mr. ROBINSON. Yes, sir.

Mr. HARRISON. That is only a small item. The most important part is the question of mats or matting.

Mr. ROBINSON. We also make a matting of the same width as the rugs but of heavier substance.

Mr. HARRISON. Do you contend that the mats and matting made in China and Japan are sold at prices anything like the mats and mattings which are made in the United States? If they are not, if they are sold at much lower prices, do they really come in competition with you?

Mr. ROBINSON. The importations, according to the records, are over twice as much as the combined amount in square yards that is made by these two industries, the fiber industry and the grass-carpet industry. It is impossible to find out whether the higher-priced Japanese matting is imported or the lower priced. In fact, when you get up to matting which costs them 22 cents, why then they come in competition with us. The cheaper ones do not come in such direct competition, although any matting will come in competition—

Mr. HARRISON (interposing). In your judgment is it not true that the bulk of the importations which come in and which are restricted by the raise in the Payne rate to 3½ cents a yard, are the cheaper kinds of Chinese and Japanese mattings, which do not come into competition with the American made product?

Mr. ROBINSON. No, sir; I do not think that is so. I think they do come in competition.

Mr. HARRISON. It seems that they used to be imported to the extent of \$3,000,000 worth under the Dingley tariff, and now they import less than \$2,000,000 worth of the kind that were valued not exceeding 10 cents a square yard. Those did not come in competition with you, did they?

Mr. ROBINSON. There are all sorts of different prices. You can not tell how much of any one price is imported.

Mr. HARRISON. As to the grades which fell under 10 cents a yard the effect of raising the duty has been to decrease the revenue, and at the same time in what way do you think it has benefited you?

Mr. ROBINSON. In regard to the revenue, in the whole carpet trade, it is a recognized fact that the matting and three-fourths of the carpets are not used any more to the same extent that they used to be used. They used to have the floors entirely covered by carpets. If you will go into any house to-day in which they have a decent floor, you will find that they use rugs. The carpets are not used, so there is a certain decrease in importations on that account any way. It is a question of the people's wishes, and they are using rugs instead of carpets.

I do not believe that any decrease in the tariff on the cheaper goods would be of any benefit as to revenue to the Government, because if they undersell us so much already, they are surely not going to sell any cheaper to the consumer because of the difference of 1 cent a yard decrease for which they ask.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

Mr. HARRISON. They do not undersell you if they sell to any entirely different class of consumers?

Mr. ROBINSON. We are selling to the same class of consumers. We sell our goods at a higher price, because we have to. We can show very conclusively in the figures in the brief that it is only by the strictest economy that we are able to make the small margin of 8 per cent that we do make. I simply want to impress the committee with the thought that competition exists.

Mr. FORDNEY. Does this competition come from any other countries except China and Japan, where you have described the difference in wages?

Mr. ROBINSON. Only from these countries.

The following communications signed by the witness were at a later date filed with the committee:

NEW YORK, *January 15, 1915.*

Hon. JOHN J. ESCH,
Washington, D. C.

DEAR SIR: I take pleasure in inclosing you a little pamphlet¹ on the story of Crex. The story interests your State very much, in that this industry has turned heretofore useless wire-grass lands into something profitable. It has given employment to a great many of your constituents, and, in addition to that fact, we employ all the farmers we can get in the different sections at a time between their seeding and harvesting, when, otherwise, they would have nothing to do. This has resulted in keeping up the farming lands very materially.

We also furnish to the people of the United States a very cheap, sanitary, durable grass covering, and it is only by the greatest economy that we are able to pay 6 per cent to our stockholders. In fact, the first three or four years we lost considerable money.

I would ask that you kindly put this matter up to the Ways and Means Committee in the proper light, as I do not believe they care to do anything that would injure the American manufacturer and the public at the same time. On the other hand, I do not want to leave any step unturned to bring this to their attention, and I thought you would appreciate it, in the interests of your State, that I bring it to your attention to do what you can in the matter.

There are four distinct companies in the country—the Willow Grass Matting Co., at Green Bay, Oshkosh, the Grass Matting Co., and Waite Grass Matting Co., at Oshkosh, and the Crex Carpet Co. at St. Paul. All of these companies own a very large acreage throughout Minnesota and Wisconsin. The Japanese and Chinese mattings are already able to undersell us, on account of the cheap labor on the other side, even with the present tariff, and we might conscientiously and consistently ask for additional tariff; but knowing that there is a tendency to cut down on the tariff, we ask that you take the matter up very seriously and maintain the present tariff, at least, and we ask, both on account of the labor we employ, not only ourselves, but we are the largest users of paint in the Northwest, very large users of cotton yarn, and, in fact, many other things would be indirectly affected by any injury to this industry.

We wish to say that there is not a single stockholder in any one of these competing companies that is a stockholder in another, and we have a thorough competition, not only on this side, but with the Japanese and Chinese mattings and rugs under the present tariff.

I would be pleased to answer any further questions, and I trust, in behalf of not only your State, but the people of the United States, that you will look into this matter and do all in your power to have it properly presented and considered.

Yours, truly,

MYRON W. ROBINSON, *President.*

¹ Not printed.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

NEW YORK, *January 27, 1913.*

HON. OSCAR W. UNDERWOOD,
House of Representatives, Washington, D. C.

MY DEAR SIR: I presented the brief in regard to the Crex Carpet Co. and grass twine industry on Saturday, but this matter is so important to a strictly American industry that if there was anything that I possibly could answer further I would be pleased to do so.

I know that it is not the intention of yourself or the Ways and Means Committee to do anything that is going to injure American manufacture and the American people. At the same time and for this reason we have tried to state our business very clearly in our brief and are very proud of our industry and have every reason to believe of still more benefit to the American people in the future if allowed to grow.

Any decrease in the tariff would simply mean a decrease in the revenue to the Government and an injury to our manufacturing business. I have tried every rule of tariff that I have gathered through different people and I can not see one that does not show that this company deserves every protection. The belief is, that I think this importation should be at least one-third in order to have the proper competition. In this instance, although we are growing steadily, we have not made one-third of the goods on this side, which would indicate that the revenue should be increased and the tariff increased on this in order to get to the right proportions. I believe on account of the cheapness of the Japanese and Chinese labor that these tariffs could be increased and revenue of the United States increased without injury to the manufacture or the people.

In going through our brief we have openly put every bit of our business from organization to the present time and if there is anything that is not clean I will be pleased to use every endeavor to place the matter properly before you. The tariff really should be increased and I really have no doubt but what it should be maintained, but I want to use every endeavor I think that you have every information at hand for your consideration.

Yours, truly,

MYRON W. ROBINSON.

BRIEF ON BEHALF OF AMERICAN MANUFACTURERS OF CARPETS, MATTINGS, AND RUGS MANUFACTURED FROM VEGETABLE SUBSTANCES—(SECTIONS 343 AND 463, SCHEDULE J).

We, the undersigned, a committee representing the domestic manufacturers of mattings and rugs made from fiber and grass, respectfully recommend that the present tariff on imported mattings and rugs which are sold in competition with our products be maintained.

There are two kinds of mattings and rugs manufactured from vegetable substances in the United States: (1) Mattings and rugs made from wire grass grown in the States of the Northwest; (2) mattings and rugs made from so-called fiber, which is a paper product. We shall deal with these articles separately.

FLOOR MATTINGS AND CARPETS MANUFACTURED FROM GRASS.

There are four companies engaged in this industry, with a total capitalization of \$3,300,000, namely, the Crex Carpet Co., capitalized at \$3,000,000; the Willow Grass Rug Co., the Waite Grass Matting Co., and the Oshkosh Grass Matting Co., capitalized, respectively, at \$100,000 each. These companies manufacture exclusively a cheap rug and matting made from wire grass that grows in certain swamps and marshlands. Previous to the inception of this industry these swamps or marshlands were of little or no value—in fact, treated as waste lands, being unsuitable for grazing—while the practical impossibility of killing off the wire grass and of draining the land precluded its cultivation. This is well illustrated by the price of these lands in Minnesota and Wisconsin, which a few years ago before use had been discovered for the wire grass were selling at from \$2 to \$3 an acre, whereas to-day the average selling price is from \$20 to \$25 an acre, the rise being due almost entirely to the growth of the new industry.

The above-mentioned companies are all of recent growth, the Waite Grass Matting Co. having been operating since 1905, the Oshkosh Grass Matting Co. since 1902, the Willow Grass Rug Co. since 1911 and the Crex Carpet Co. since 1908. The latter, however, was the successor of the American Grass Twine Co., which began the manufacture of rugs in 1900. The industry is a new one, and all the companies engaged in

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

it are on a strictly competitive basis, having no common directors or interests in common.

The article produced is in no sense a luxury, but is intended for and used by families of small or moderate means as a substitute for more expensive woolen rugs and carpets. It is clean and durable, and, to the great extent, that it has succeeded in supplanting the cheaper and less durable and cleanly Japanese and Chinese straw matting, it has been a distinct advantage to the less prosperous American people who use such rugs.

The above-mentioned companies own 77,000 acres of grass lands and lease 80,000 additional acres from the farmers, who are thus enabled to realize a return on that part of their land which had heretofore been treated as unproductive. They operate four mills, situated, respectively, Waite company and Oshkosh company at Oshkosh, Wis., Willow Grass company at Green Bay, Wis., and Crex company at St. Paul, Minn.; employ in the grass fields 2,000 men, and in the factories 1,500 operatives; pay annually in wages \$700,000; produce annually 6,500,000 square yards of a value of \$2,600,000; use annually in the manufacture of their product goods of the value of over \$750,000, the greater percentage of which are produced in this country; and pay annually to the railroads in freight charges approximately the sum of \$40,000. The capitalization in each case represents money actually invested in the companies, there being no so-called water in any of them. We cite as typical the Crex Carpet Co., the largest concern.

The Crex Carpet Co. was organized in 1908, with a capital of \$3,000,000, as a successor to the American Grass Twine Co., which has been capitalized at \$15,000,000, and did not prove successful. The assets of the company, as of December 31, 1908, were as follows:

St. Paul plant—land, buildings, machinery, etc	\$1, 316, 150. 82
Superior plant—land, buildings, machinery, etc	125, 000. 00
Oshkosh plant—land, building, machinery, etc	35, 000. 00
Grass department—land, buildings, sheds, machinery and camp equip- ment, live stock, etc.....	638, 885. 85
	<hr/>
	2, 115, 036. 67
Franchise, license, shop rights, good will, etc	589, 963. 48
Manufactured product, at cost	\$183, 201. 71
Material and supplies, at cost.....	193, 059. 88
Furniture and fixtures	2, 500. 00
Accounts receivable	99, 235. 68
Cash	186, 441. 65
	<hr/>
	664, 438. 92
	<hr/>
	3, 369, 439. 07

The company's annual statement for the year 1912 has not yet been prepared, the various inventories not being completed. Its assets, as of December 31, 1911, were as follows:

St. Paul plant—land, buildings, machinery, etc.....	\$1, 260, 723. 69
Superior plant—land, buildings, machinery, etc	93, 221. 50
Oshkosh plant—land, buildings, machinery, etc	18, 897. 57
Grass department—land, buildings, machinery, camp equipment, live stock, etc	801, 775. 01
	<hr/>
	2, 174, 597. 77
Franchise, license, shop rights, good will, etc	583, 710. 10
Manufactured product, at cost	\$368, 004. 30
Material and supplies, at cost.....	291, 118. 52
Furniture and fixtures	3, 373. 63
Bills and accounts receivable	154, 811. 09
Cash	166, 816. 87
	<hr/>
	984, 124. 41
	<hr/>
	3, 722, 432. 28

The company in these four years has produced 13,005,431.14 square yards of material, valued at \$5,146,227. It has paid in dividends \$550,000, while its surplus has increased \$450,553.67; or, in other words, on a capitalization which represents actual investment it has earned but 8.4+ per cent.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

The company has disposed of its Oshkosh and Superior plants, and at present operates one mill at St. Paul, Minn., while a second mill between St. Paul and Minneapolis is about to be constructed. It owns in Minnesota and Wisconsin 47,000 acres of grass lands, and leases from the farmers an additional 40,000 acres. It employs 700 men in its mill, paying annually in wages \$300,000, and in the camps during the summer months it employs a thousand men, paying them in wages \$90,000 and furnishing them in addition board and lodgings. Furthermore, it employs farmers and farm hands during the grass-cutting season, with their horses and wagons, to whom it pays the sum of \$100,000 annually. The rate of wages of operatives is \$1.85 to \$1.90 per day. Foremen get \$4 per day. The average rate of wages to laborers in the grass fields is \$1.75 per day, including board and lodging.

The Crex Carpet Co. uses in the manufacture of its products 1,796,000 pounds of domestic cotton annually, valued at \$315,000. It consumes in its grass camps domestic foodstuffs of the value of \$42,000 annually. The Crex Co. is one of the largest single users of harvest machinery, mowers, reapers, binders, etc., in the United States, which are used in the harvest of the grass grown upon 87,000 acres of land. It ships annually 1,400 carloads of goods, and itself pays the sum of \$22,544.23 in freight rates, while its customers pay over \$150,000 to the railroads for the carriage of these goods.

Willow Grass Rug Co. was incorporated in 1911, has a capital of \$100,000, and operates one mill at Green Bay, Wis. Its product is a woven grass rug and matting similar to that manufactured by the Crex Carpet Co. It employs in its plant in the manufacture of goods 100 employees. It uses 1,500 tons of grass and 150,000 pounds of cotton yarn annually. This company owns and rents 2,500 acres of grass land from which it cuts the grass used in the manufacture of its product. It employs 100 people in harvesting the grass.

Waite Grass Matting Co., operating since 1905, and Oshkosh Grass Matting Co., operating since 1902, own mills in the State of Wisconsin and produce a grass rug and grass matting similar to that manufactured by the Crex Carpet Co. and the Willow Grass Rug Co. The operations and product of the Waite Grass Matting Co. are about twice that of the Willow Grass Rug Co., and the operations and product of the Oshkosh Grass Matting Co. are about four times that of the Willow Grass Rug Co. The two last-named companies own and lease about 65,000 acres of grass land in the State of Wisconsin and employ about 700 men in their mill. The mattings and rugs made by these companies compete with grass and straw mattings and rugs imported from China and Japan, the duty being $3\frac{1}{2}$ cents per square yard on mattings and 35 per cent ad valorem on rugs. The great disparity in wages which obtain in China and Japan and in the United States is a matter of common knowledge. There are no importations of these products from other countries, and a comparison of the wage scale of China and Japan and of the United States alone justifies the retention of the present tariff on these commodities.

The average wage paid in the American mills is \$1.90 per day, and the average wage paid to weavers is from \$3 to \$4 per day, whereas the average daily wage in Japan for weavers is from $17\frac{1}{2}$ cents to 25 cents; the average labor cost of a square yard of rug in the United States is 11 cents, and in Japan $\frac{1}{10}$ cent, while in China it is somewhat less than in Japan; so that the difference in the labor cost between Japan and the United States, on a standard 9 by 12 rug, is $\$1.22\frac{1}{10}$, while the present duty on such a rug amounts to \$1.093. These figures do not take into account the great difference in the cost of labor of harvesting the grass, or the higher taxes paid in this country, and overhead charges, the exact data as to which is not available.

The cost, landed in New York, of a 9 by 12, one color, Japanese grass rug, such as competes with the rug made by the manufacturers of Minnesota and Wisconsin, is as follows:

Bale containing 4 Japanese rugs, 9 by 12, cost.....	Yen. 24.60
Packing.....	.72
5 per cent commission.....	1.23
	26.55
At exchange.....	.51
Gold.....	\$13.54
Duty, 35 per cent ad valorem.....	4.375
Freight.....	1.80
Marine insurance.....	.1354
Total for 4 rugs (gold).....	19.85

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

The landed New York cost for one rug, 9 by 12, is \$4.9625, or 41 cents per square yard.

The average selling price to the jobber of the American grass rug, 9 by 12, is 44 cents per square yard; so that, after receiving a 5 per cent commission, the importer is able to earn 2½ cents per square yard, or 28 cents per rug, making a total of over 10½ per cent and still undersell the American manufacturer who, as we show above, in the case of the Crex Carpet Co. (the largest American company), is earning but 8.4+ per cent on its investment.

The domestic rugs sell at \$5.51, 4 per cent for 10 days, in carload lots, to points not taking a freight in excess of 38 cents per hundredweight; in less than carload lots, f. o. b. the mills. The competitive Japanese rug sells for \$5.50, 4 per cent off 10 days, delivered to common overland points; carload lots not necessary. The difference between the selling price of \$5.50 and the price received by the manufacturer as given above is accounted for by the jobbers' commissions.

Furthermore, the American grass rug comes into competition with the so-called Japanese stenciled rug, the cost of which landed in this country is as follows:

	Yen.
Bale containing 6 stenciled, 9 by 12, rugs	11. 10
Packing 92
	12. 02
5 per cent commission 601
	12. 621
At exchange 51
	\$6. 437
Gold	2. 002
Duty 9625
Freight 064
Marine insurance 064
	9. 47

The landed New York cost for one 9 by 12 rug is \$1.57 $\frac{5}{8}$, or 13 cents per square yard. This rug sells for \$1.80, less 4 per cent.

MATTINGS.

As far as the matting is concerned, there are a very great number of grades of Japanese and Chinese straw mattings.

The following is the cost of the lowest and highest grades of Chinese and Japanese mattings:

40 to 45 pound China matting.

First cost, a roll of 40 yards	¹ \$2. 40
Less 2 per cent trade discount 048
	2. 352

Only one grade of American grass matting is made. The price received by the manufacturer for this is 30 cents per square yard. This is superior to the imported matting, but is sold in competition with the Japanese and Chinese article.

¹ Mexican.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

The great bulk of the Japanese and Chinese matting sold in this country are of the cheaper grade, in which, in spite of the duty, the foreigner is well able to undersell the domestic product. Although this is due, to a certain extent, to a poorer grade of material, in the main it is the result of the great difference in the cost of labor.

As we have hereinbefore pointed out, the American operative in a mill earns on an average \$1.90 per day; the Japanese weaver and foreman, who are skilled workmen and the best paid, earn daily from $17\frac{1}{2}$ cents to 25 cents. The labor cost on a square yard of matting in Japan is but eight-tenths cent, while in the United States it is $6\frac{2}{5}$ cents. The difference in labor cost is thus $5\frac{4}{5}$ cents per square yard, while the present duty is but $3\frac{1}{2}$ cents per square yard.

FLOOR MATTINGS, CARPETS, AND RUGS MANUFACTURED FROM FIBER.

Fiber is a paper product so treated that a twisted thread is prepared which is then woven into mattings and rugs. These mattings and rugs compete in the market with the articles manufactured from grass and straw in China and Japan and in this country and are generally used for the same purposes. They, as well as the grass mats and mattings, are intended as a cheap substitute for the ordinary woolen carpet or rug for people of moderate and small means. There are 12 companies engaged in this industry in the United States, namely: Plymouth Mills, Lawrence, Mass.; Hodges Fiber Carpet Co., Indian Orchard, Mass.; Harvey Fiber Carpet Co., Philadelphia, Pa.; C. H. Masland & Sons, Philadelphia, Pa.; Bradley, Ricker Co., Plymouth, Mass.; H. Nelson & Co., Rycker & Co., William T. Smith & Sons, Swyre, Herring & Co., and William Scholes & Co., all of Philadelphia, Pa.; Joseph Wild & Co., New York City; and Laurel Mills, Frankfort, Pa.

The industry is a new one, having originated with the Hodges Co. in 1894, which company was alone engaged in the business until 1905, with the exception of William Scholes & Co., a small concern. In 1905 were organized the Harvey Fiber Carpet Co. and the Plymouth Mills. These three are the principal companies manufacturing fiber mats and mattings in the United States. The other concerns above enumerated are all of very recent origin, four of them having been started in 1912. The approximate number of looms respectively operated is as follows:

Plymouth Mills.....	275
Hodges Fiber Carpet Co.....	225
Harvey Fiber Carpet Co.....	154
C. H. Masland & Sons.....	17

the remaining companies in the neighborhood of 10 looms each, with the exception of Joseph Wild & Co. and William Scholes & Co. with approximately 20 looms each.

The exact figures with reference to the various smaller concerns are not available, but the total capital invested is computed at \$1,400,000 and the annual production at over \$2,000,000 worth of goods.

We cite as typical two of the largest concerns, namely, the Plymouth Mills and the Harvey Fiber Carpet Co., which do approximately 50 per cent of the fiber business. Their combined annual production is 3,941,056 square yards of the value of \$1,126,510.72. They employ 579 employees, male and female; pay annually in wages \$317,933.02; consume annually 4,256,749 pounds of fiber; and utilize in the manufacture of their product 568,524 pounds of domestic cotton. The average weekly wage of operatives is \$11.41. The Plymouth Mill Co. has since 1908 paid dividends at 6 per cent, while the Harvey Fiber Carpet Co. has as yet paid no dividends.

All of the above-mentioned companies are on a strictly competitive basis and have no common directors or interests in common.

The fiber mattings and rugs manufactured by these companies compete with the grass products imported from China and Japan. There are no other importations into this country of mattings and rugs with which the fiber products come in competition.

The average wage paid in the American mills is \$1.90 per day, whereas the average daily wage in Japan is from $17\frac{1}{2}$ cents to 25 cents, or from 800 to 1,000 per cent lower. A weaver in Japan earns 25 cents per day, while a weaver in the United States earns an average of \$3.50 per day, or 1,400 per cent more. The average labor cost per square yard of rug is in the United States $8\frac{2}{5}$ cents and in Japan $\frac{8}{10}$ cent, while in China it is somewhat less than in Japan, so that the difference in the labor cost between Japan and the United States on a standard 9 by 12 fiber rug as compared with the Japanese competitive straw rug is $92\frac{4}{10}$ cents, while the present duty on the Japanese stenciled straw rug of medium quality is $33\frac{1}{10}$ cents.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

RUGS.

The rug with which the American fiber rug comes into chief competition is the so-called Japanese straw stenciled rug, the cost of which landed in this country is as follows:

	Yen.
Bale containing 6 stenciled 9 by 12 rugs.....	11. 10
Packing.....	. 92
	<hr/>
5 per cent commission.....	12. 02
	<hr/>
At exchange.....	12. 621
	<hr/>
Gold.....	\$6. 437
Duty.....	2. 002
Freight.....	. 9625
Marine insurance.....	. 064
	<hr/>
	9. 47

The landed New York cost for one 9 by 12 rug is \$1.57 $\frac{3}{4}$, or 13 cents per square yard. The average production cost per square yard of the American article is 30 $\frac{7}{10}$ cents; so that after paying the per cent ad valorem duty and the 5 per cent importer's commission, the importer of the Japanese product has an advantage of 17 $\frac{7}{10}$ cents per square yard over the American manufacturer, while the duty is but 2 $\frac{8}{10}$ cents per square yard. The average selling price of the American fiber rug is 37 $\frac{5}{10}$ cents per square yard.

The cheapest fiber rug sold in the United States, basis 9 by 12, is \$4.80, 4 per cent off at 10 days, f. o. b. the mills, Philadelphia or New England, for which the manufacturer receives \$4.20. The competitive imported rugs, manufactured of grass, are as follows: Japanese stenciled matting rugs, \$1.80; Chinese woven rugs, \$1.75; Japanese woven rugs, \$2.17; all 4 per cent 10 days, delivered to any common overland point in the United States. The difference in the case of the Japanese rug between \$1.57 $\frac{3}{4}$, which is the landed New York cost of the Japanese rug, and the selling price of \$1.80, represents the importer's profit, while the difference between \$4.20, received by the American manufacturer for the fiber rug, and \$4.80, the so-called selling price, is accounted for by jobbers' commissions.

MATTINGS.

When we come to mattings, as already stated in that portion of the brief covering grass mats and mattings, there are a very great number of grades of Japanese and Chinese straw mattings. We give again the figures showing the landed cost of the lowest and highest grades of Japanese and Chinese mattings, for purposes of comparison with the fiber product.

Landed cost, New York (square yard= $42\frac{5}{8}$ cents) or an average selling price per square yard for the four mattings of 21 cents.	17.05

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

The average production cost of American fiber matting per square yard is 15.8 cents. The average price received by the manufacturer for these goods per square yard is 17.6 cents. The American operative in a mill earns on an average \$1.90 per day. The Japanese operative earns daily from 17½ to 25 cents. The labor cost on a square yard of matting in Japan is but eight-tenths of a cent, while in the United States it averages 4.2 cents. The difference in labor cost alone is thus 3.4 cents per square yard. By far the greatest proportion of Japanese mattings sold in this country are of the cheaper variety, of a grade on which the importer, as shown above, is well able to pay a duty of 3½ cents and still undersell the American manufacturer.

The cheapest fiber matting made in this country is plain goods, sold at 14½ cents a square yard. The next grade is 17.1 cents per square yard, also plain, manufactured for the use of the makers of suit cases and utility boxes. The cheapest woven goods competing with Japanese fancy mattings are 18 cents per square yard. All these goods are subject to 4 per cent for 10 days, and are sold f. o. b. the mills, Philadelphia and New England. The competitive imported mattings are as follows: Japanese mattings to be used for suit cases and utility boxes, plain white, 120 warp, 13¾ cents; 150 warp, 14 cents; 4 per cent off, 10 days. Japanese carpet patterns competing with the fiber woven goods, 15½ cents up, and the Chinese mattings somewhat cheaper. The prices of the imported goods are f. o. b. common overland points.

The above figures demonstrate clearly that the present tariff is in no sense prohibitive, as is further evidenced by the fact that in 1912 25,787,752 square yards of matting, worth \$1,750,618, were imported, on which a duty was paid of \$902,571.78. The figures as to the number of mats imported under section 463 are not available. That imports have diminished since 1908 can not be attributed to the present tariff, the rates of which are lower than those of the tariff of 1897, but is accounted for by the entrance of the American manufacturer in the field and by his energy and industry and the better quality of his goods.

Moreover, it is apparent that in the great majority of grades of both mats and matting the importer of the Japanese product is able under the present rate of duties to undersell the American manufacturer by a very considerable margin. In fact, in the lower grades the margin is so great that there is practically no competition, and the latter, in order to sell his goods, must appeal to those desiring a somewhat higher quality, and in so far as this class of goods is concerned, must rely on the tariff to protect him from the foreign competitor. A reduction of the present rates will probably have a two fold result. In the first place there will be an increase of imports in the higher class of Japanese and Chinese goods, particularly in those whose price more nearly approaches the price of the American product and which, therefore, come into more direct competition with the latter, to the great detriment of the home industry which, as we have seen, is still in its infancy and at a tremendous disadvantage in so far as wages are concerned, and whose profit is so narrow (8.4 per cent) as not to warrant a cut in price without a corresponding reduction in wages. In the second place, in so far as the lower grades of mats and mattings are concerned, a reduction will not mean an increase in imports, since the price to-day, even with the present duty, is well below that of the American product. Such a reduction, then, merely means the transfer of the duty now paid to the United States Government to the pockets of the importer who, as already stated, will have no inducement to reduce the price to the public. It is doubtful whether the increased imports of the higher class of goods will equalize the loss on the lower grades, which are by far the larger part of such imports. But in any event we submit that such action would be doing a grave injustice to an American industry in favor of the importer of foreign goods.

Respectfully submitted.

GRASS AND FIBER RUG AND CARPET MANUFACTURERS,
MYRON W. ROBINSON,
I. SOLOMON,
SAMUEL K. HARVEY,
Committee.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

TESTIMONY OF J. C. WIRTZ.

Mr. WIRTZ. Gentlemen, I will file my brief, and I will not read in detail. I will state in a general way that we have three distinct propositions.

The first proposition is that on floor matting, commonly known as Chinese and Japanese floor matting, the duty should be reduced. At the present time the duty is $3\frac{1}{2}$ cents a square yard, which varies from 108 per cent on the low grades to about 30 per cent on the high grades. It is the opinion of the importer that this is an excessive duty on that class of floor covering, because it competes practically with nothing made in this country, and that in the interest of the consumer it should be reduced. For the purposes of revenue I presume it will be necessary to retain some duty on matting, and it is the consensus of opinion of the importers that $2\frac{1}{2}$ cents a square yard would produce a reasonable revenue without being a hardship.

Our second proposition is that on rugs—

Mr. HARRISON (interposing). Before we leave the question of floor matting, I would like to ask you a question. Have you any figures giving the production in the United States and the amount of imports?

Mr. WIRTZ. There is no floor matting made in this country similar to that which is imported from China and Japan.

Mr. HARRISON. Is there no production of any kind of floor matting in the United States?

Mr. WIRTZ. Not straw floor matting. There will be a contention made by one of the gentlemen who was called, but who has not yet appeared, that floor matting to some extent competes with fiber matting made in this country, which is a product of twisted paper, but not of straw. Their own figures will show that their lowest cost is somewhere in the neighborhood of 15 cents on the product that they sell mostly in the neighborhood of 20 cents. That is their manufacturing cost, or, perhaps we had better say, that is the selling price to the jobbers.

Mr. HARRISON. Then you mean to inform us that there is no American production of straw floor matting?

Mr. WIRTZ. That is a positive fact; yes, sir.

Mr. HARRISON. And that our imports of this article come from China and Japan.

Mr. WIRTZ. All of them; yes, sir.

Mr. PALMER. For what reason have the imports so largely fallen off?

Mr. WIRTZ. It is a question of taste and hardwood floors. As the floors in the homes improve, people are loath to put them full of the tacks that are necessary to keep the matting together. When they can afford it they put in a good flooring, paint borders, and put on rugs. Floor matting has greatly decreased in use on that account.

Mr. HARRISON. What is the ordinary matting made of that we see in so many houses?

Mr. WIRTZ. Of a reed specially grown in China and Japan for the purpose of manufacturing straw matting.

Mr. HARRISON. Is there any other fiber except straw from which that matting which is in common use in the United States is made?

Mr. WIRTZ. No, no other fiber for ordinary floor matting.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

Mr. Payne will remember that during the last session there was a contention made that floor mattings could be produced in this country, but it was proven that there was absolutely no industry at all. Since that time nothing has been heard of it. While there were about a million rolls imported in 1909, when we had the last tariff hearing, there were perhaps 50 or 100 rolls produced in this country and their cost was five or six times the cost of the imported article.

Mr. HARRISON. So when you are discussing the effect of this specific rate, which you said runs from 30 to over 100 per cent, you are discussing that merely from a revenue standpoint and there is no question of protection involved?

Mr. WIRTZ. Of course, being an importer, I naturally do not look on the side of protection. Nevertheless, there is nothing of a like nature made in the United States. Floor mattings are used very largely in the South, where the houses still have the broad board floors and where the rooms are large, and where they must have a low-priced floor covering to use over the entire floor. The roll matting serves that purpose and, I repeat, interferes with nothing that is manufactured in this country.

Our second proposition is that rugs made of strips of floor matting should come in at the same specific duty as the floor matting itself.

Mr. HARRISON. Are any of those rugs made in the United States?

Mr. WIRTZ. No rugs of that material are made in the United States. There are domestic rugs of wire grass, and also fiber rugs, the 9 by 12 size, retailing at something over \$8, whereas a matting rug of the same size will retail for something in the neighborhood of \$2 to \$2.25. The imported rug costs, laid down in this country, from \$1.50 to \$1.75, whereas the cheapest price of grass rugs is somewhere in the neighborhood of \$5.50 to \$6.

They will give you their figures on that, of course. The fiber rug, as I understand it, the cheapest one is now in the neighborhood of \$4.50, 100 per cent more than the straw rugs are being sold for.

Mr. HARRISON. Of what material is the fiber rug made?

Mr. WIRTZ. The fiber rug is made of paper, twisted paper, not straw, and very much higher in cost.

Mr. HARRISON. Is it made in the United States?

Mr. WIRTZ. Made here in the United States. Our contention is that the rugs which are made in Japan of strips of floor matting sewn together and then stenciled should carry the same rate of duty as the floor matting does, and it was the intention in the Payne-Aldrich bill; but due to the rulings of the Board of General Appraisers they were finally put down as manufactures of straw not specially provided for, at 35 per cent, and that causes a great deal of difficulty in collecting revenue because of the fact that the market in China and Japan fluctuates considerably, and it is a question of the market value at which they should be entered. We have to contract for them some months in advance of the shipment, in order to get them made, and we contract for them at one price, and the market at the time of shipment may be another price, and consular invoices have to be made out and sent to our purchasers at the purchase price, and it necessitates informing them of the market price at the time we ship them.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

Those fluctuations may not be more than 5 to 10 per cent, but they are sufficient to impose a penalty on the importer, and it is to do away with that that we want a specific.

Mr. HARRISON. You want them taken out of the basket clause and given a special mention themselves?

Mr. WIRTZ. Given special mention; and in our brief we say that the clause should in our opinion read as follows:

Floor mattings, plain, fancy, or figured, manufactured from straw, round or split, or other vegetable substances, not otherwise provided for in this section, and having a warp of cotton, hemp, or other vegetable substance, including what are commonly known as China, Japan, and India straw matting, $2\frac{1}{2}$ cents per square yard. Mats and rugs manufactured from straw, round or split, having a warp of cotton, hemp, or other vegetable substance and made of the same material as what is commonly known as China, Japan, and India straw matting, $2\frac{1}{2}$ cents per square yard.

That would cover it and take it out of the possibility of going into the basket clause.

Mr. HARRISON. What would that be, ad valorem?

Mr. WIRTZ. That ad valorem would be in the neighborhood of 29 per cent.

Mr. HARRISON. That is an actual reduction of 6 per cent in the rate?

Mr. WIRTZ. Yes; it would be some reduction in the rate; but our contention is that as there is nothing that approaches floor matting from the point of cheapness, and those who buy floor matting of necessity wanting something cheap and having to consider the almighty dollar, it should not be unnecessarily taxed, because any tax within reason would be sufficient to amount to a protection to the domestic industry.

Then our third contention is that the duty should be reduced on rugs made of so-called binder twine, which are very similar to the Crex rugs and other rugs made in this country similar to the Crex.

For about five years we have been experimenting in Japan with the manufacture of a rug similar to this. It is not made of the same material, and it is probably not, at least at present, as good an article. It costs laid down here, duty paid, at the present time, practically the same as the domestic.

Mr. HARRISON. What are those made out of?

Mr. WIRTZ. The domestic are made of wire grass, so called. The foreign are made out of waste rice straw and waste barley straw, and also from some fiber that is imported into Japan from Formosa and there turned into a rug.

Mr. HARRISON. Are they competitive, or do those prices differ a great deal?

Mr. WIRTZ. In five years the total import, I think, has probably not exceeded in value \$250,000 to \$300,000 in five years.

Mr. HARRISON. Why is that? Is it because they are not the style in this country?

Mr. WIRTZ. No, they are the style in this country. The domestic manufacturers have been increasing their business by leaps and bounds; they have been under the necessity of increasing their plants right straight along. At that, during the busy part of the season, they are unable to keep up with their orders.

Mr. HARRISON. Are those under the 35 per cent duty?

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

Mr. WIRTZ. Those are under the 35 per cent duty. Under that 35 per cent duty, foreign competition has not been a factor.

Mr. HARRISON. What figure do you suggest?

Mr. WIRTZ. We suggest 5 cents per square yard.

Mr. HARRISON. What is that ad valorem?

Mr. WIRTZ. Those rugs cost about \$3, and 5 cents per square yard would be 60 cents, equaling about 20 per cent.

Mr. HAMMOND. Is this paragraph 344?

Mr. WIRTZ. No; paragraph 343 and the paragraph under which they come in, the basket clause, is in Schedule N, paragraph 463.

We claim that if the consumers are to have the benefit of foreign competition—and I believe the idea is to make the duty a competitive one—that it will have to be reduced, because at 35 per cent it has been shown that the manufacturers in foreign countries are not able to produce an article at a price that will compete with the domestic.

Mr. HARRISON. How would you describe these binder-twine rugs?

Mr. WIRTZ. I would say that the committee of which I am chairman, and which represents the matting importers, drew up the following:

Rugs, mats, or matting, plain, fancy, or figured, made of straw or other vegetable substances, so twisted or wound with a binding thread or other material as to produce a rope or twine, and then woven into rugs, mats, or matting, with a warp of cotton or other vegetable substance, five cents per square yard.

That, to our minds, seemed to cover the point.

Mr. HARRISON. You think that would increase our revenue?

Mr. WIRTZ. I think it would, because I think it would permit of the manufacture of some of these goods in foreign countries to come in here.

The CHAIRMAN. Your time has expired.

Mr. HILL. I would just like to ask a question.

Here is something I do not understand at all: Schedule J, paragraph 343, under the act of 1909, reads:

Floor mattings, plain, fancy, or figured, manufactured from straw, round or split, or other vegetable substances, not otherwise provided for in this section, and having a warp of cotton, hemp, or other vegetable substance, including what are commonly known as China, Japan, and India straw matting, three and one-half cents per square yard.

Mr. WIRTZ. Yes, sir.

Mr. HILL. I do not see how it is possible that matting averaging 10 cents and up, with $3\frac{1}{2}$ per square yard, could have a 78 per cent duty. The comparison here in this book gives two rates which do not read the same as the tax here in the law.

Mr. PALMER. It is 7 cents per square yard.

Mr. WIRTZ. That is in the previous bill. It is now $3\frac{1}{2}$ cents per square yard. Under the previous bill it was 7 cents, with 25 per cent ad valorem on high grades. What you speak of was in the previous bill.

Mr. HILL. The tax which is given here in the statistics which gives 78 per cent duty provides for 7 cents per square yard and 25 per cent ad valorem, whereas the Payne bill is a straight $3\frac{1}{2}$ cents per square yard.

Mr. WIRTZ. Quite right.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

Mr. HILL. And this is evidently a serious mistake, and I wondered at it when I heard the gentleman from New York talking about the tariff being—

Mr. HARRISON (interposing). Mr. Wirtz told us on the first class of articles of which he was testifying, namely, these Chinese and Japanese floor mattings, that the specific rate under the present law, as the entered value decreased, mounted up to over 100 per cent.

Mr. HILL. If it got down to 1 cent a yard it would be over 300 per cent.

Mr. WIRTZ. Six cents Mexican is equal to 3 cents of our money, because exchange is 50, and when we pay $3\frac{1}{2}$ cents duty on a 3-cent article, and the duty is always reckoned at the market value at the time of shipment in the country of shipment, you will see that that is over 100 per cent.

Mr. HILL. Those figures that are given here are given not in Chinese and Mexican money; they are given in United States money.

Mr. WIRTZ. In my brief I gave the averages.

Mr. PAYNE. This matting that you speak of is matting made of vegetable substances, split straw, or something of that kind, and cotton or hemp or some other vegetable fiber or fabric?

Mr. WIRTZ. Yes.

Mr. PAYNE. And you say it is not made in this country? It is highly colored, some of it, and some of it plain, is it not?

Mr. WIRTZ. Yes; some of it is dyed.

Mr. PAYNE. Is it not a fact, however, that it comes in direct competition with the cheaper mattings made in this country, woven from vegetable fiber, from the yarn?

Mr. WIRTZ. I do not think so.

Mr. PAYNE. A floor covering?

Mr. WIRTZ. It was the contention before the committee of which you were chairman, Mr. Payne, that ingrain carpet interfered with it, that it interfered with ingrain carpet, but ingrain carpets have steadily declined and their greatest period of decline was during the time when the manufacturers of ingrain carpet enjoyed that 7 cents and 25 per cent ad valorem which they had put onto our rates in order to protect them. The people in the South want matting, and they do not want anything made of wool in place of it.

Mr. PAYNE. How do you account for the fact that when this matting you speak of came in free there was a very large importation and very small manufacture in this country of the other matting of which you speak, made from these vegetable products?

Mr. WIRTZ. Mr. Payne, I do not know of the matting made of vegetable fiber, of which you speak. I am not familiar with anything similar to matting that is made or sold in this country.

Mr. PAYNE. You spoke of the woven cotton matting or the woven fiber matting in this country, which is manufactured here, which is a pretty cheap article.

Mr. WIRTZ. There is a paper fiber matting here, in which the wholesale price is 20 cents, but the retail price of imported straw matting varies from 10 to 25 cents. There is very little of it above that.

Mr. PAYNE. I am speaking of matting under paragraph 344.

Carpets, carpeting, mats and rugs made of flax, hemp, jute, or other vegetable fiber (except cotton), valued at not exceeding fifteen cents per square yard.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

That is not in excess of the second class you spoke of yourself, and which comes in direct competition, or with which that imported matting comes in direct competition when it comes to this country, so much so that you are driving out the manufacture of that, and when this duty was put on there was a large importation; there were about \$2,000,000 worth imported and about \$2,000,000 manufactured of this other kind in this country.

Mr. WIRTZ. You say that you are gradually driving out these things, but if you will look at the statistics you will find that in 1910, 2,400,000 square yards were imported, and in 1911, 1,900,000 and in 1912, 1,800,000.

Mr. PAYNE (reading):

Paragraph 343, floor mattings, plain, fancy, or figured, manufactured from straw, round or split, or other vegetable substances, not otherwise provided for in this section, and having a warp of cotton, hemp, or other vegetable substance, including what are commonly known as China, Japan, and India straw matting, three and one-half cents per square yard.

I find that in 1905 the import value was three million and a half. That is the kind you spoke of.

Mr. WIRTZ. That is the kind I spoke of, and we barely do half the business we used to.

Mr. PAYNE. That has decreased under the present law, until there was \$1,750,000 in 1912.

Mr. HARRISON. That is because the rate was raised. That is what decreased the imports.

Mr. WIRTZ. Yes, sir.

Mr. PAYNE. That is what I am trying to get to the witness.

Mr. WIRTZ. It would favor our contention to say that, and it is our hope that a lower rate will stimulate the imports, else we would not be appearing before you, but on the other hand the greater part of the decrease in the importation of matting is due to a change in the tastes of the public.

Mr. PAYNE. What is that?

Mr. WIRTZ. I say that the greater part of the decrease in the importations is due to a change in the public taste.

Mr. PAYNE. Yes, I think that would make a change in the taste, and people would get a little better floor matting, and for that reason our manufacture seems to have kept pace with the importation of this cheap stuff.

Mr. WIRTZ. The manufacture of the domestic material has increased with leaps and bounds, and some people prefer it when they can afford it; but you ought not to tax excessively the foreign and only cheap floor covering that there is in the market.

Mr. PAYNE. There does not seem to be much difference in the price of the article per yard in the foreign stuff you want to come in here free of duty and the domestic article.

Mr. HARRISON. There is a considerable difference in the amount of revenues we got in 1905 under the old rate. We got \$1,465,000, and then you raised the rate, and in 1912 we only got \$902,000.

Mr. PAYNE. Gentlemen, if that is all you are after, you may be able to raise the revenue in this particular. If you get a law under the operation of this present law that will raise the revenue you will do

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

a great deal better than I think you will. We have got to have business here in order to get it.

BRIEF FOR IMPORTERS OF MATTINGS FROM CHINA, JAPAN, AND INDIA.

Schedule J, paragraph 343.

NEW YORK, *January 22, 1913.*

The COMMITTEE ON WAYS AND MEANS,

House of Representatives, Washington, D. C.

GENTLEMEN: As importers and distributors through the jobbers to the retailers, and consequently coming in close contact with the consumers, of what are known as China and Japan mattings and matting rugs, we ask your consideration of a readjustment of the present tariff on these articles, which reads as follows:

Schedule J, paragraph 343: "Floor mattings, plain, fancy, or figured, manufactured from straw, round or split, or other vegetable substances, not otherwise provided for in this section, and having a warp of cotton, hemp, or other vegetable substance, including what are commonly known as China, Japan, and India straw matting, 3½ cents per square yard."

We ask that the duty on mattings be reduced to 2½ cents per square yard. The present duty, as shown by our exhibit of samples, varies from 108 per cent on the low grades to, say, 38 per cent on the high grades, averaging about 49 per cent, as shown by the Government statistics, and is too great a burden on the consumer. By far the larger part of mattings sold is to those in moderate circumstances, as evidenced by the fact that fully 75 per cent of the importations cost from 8 cents to 14 cents per square yard all charges landed, duty paid, and are retailed at from 10 cents to 25 cents per square yard. The better grades of mattings are rapidly going out of consumption, because when consumers can pay a moderate to a high price and are not looking for something "cheap" in the way of a floor covering, they do not consider mattings, as their tastes lead them to something else. The class of matting imported to-day proves it to be essentially the poor man's floor covering, and the tariff should not tend to increase the price of it more than necessary to produce a reasonable amount of revenue for the Government.

It will probably be claimed by certain manufacturers of domestic floor coverings that the imported straw mattings interfere with them, but their own figures will show that their first cost on practically every grade is almost equal to, if not above what straw mattings retail for.

There is no commodity made in this country that takes the place of straw mattings. Straw mattings do not compete with any floor covering made in the United States. Mattings were on the free list from 1890 to 1897. Then through the claims of manufacturers in this country that mattings were interfering with the sale of domestic goods, a very excessive duty was imposed by the Dingley bill of 3 cents per square yard on low and medium grade mattings and 7 cents plus 25 per cent ad valorem on the higher grades. The duty imposed by the Payne-Aldrich bill is 3½ cents per square yard for all grades. Thus the consumer, in order to use straw mattings, has been paying an excessive premium for a period of 16 years.

We repeat, that mattings and matting rugs are articles of necessity and should not bear the present excessive rates of duty. Mattings should be free; but we realize that the Government must have a revenue from imports, hence our suggestion of 2½ cents per square yard, which equals an ad valorem of 35½ per cent, this figure being arrived at by using the Government statistics of imports for the year ending June 30, 1912.

Plain white Japanese matting is used to some extent by manufacturers of furniture, fancy boxes and suit cases as a covering. Manufacturers of a domestic substitute are making great strides in supplanting the imported for suit cases, etc., due to certain natural advantages which their product has for this purpose—owing to its uniformity of make, flexibility, etc., inherent in the article itself and which can not be obtained in the Oriental product; and this natural difference plus the 2½ cents per square yard, which the importers suggest as a revenue to the Government, will give the manufacturers of the domestic article all the protection they can reasonably expect; the great increase in the volume of their business within the last five or ten years showing that they have nothing to fear from the importers' competition.

We suggest that the phraseology of the paragraph be as follows:

"Floor mattings, plain, fancy, or figured, manufactured from straw, round or split, or other vegetable substances, not otherwise provided for in this section, and having

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

a warp of cotton, hemp, or other vegetable substance, including what are commonly known as China, Japan, and India straw matting, two and one-half cents per square yard. Mats and rugs manufactured from straw, round or split, having a warp of cotton, hemp, or other vegetable substance, and made of the same material as what is commonly known as China, Japan, and India straw matting, two and one-half cents per square yard."

This change in phraseology will take in matting rugs which are now assessed at 35 per cent under Schedule N, paragraph 463, as manufactures of straw not specially provided for. Inasmuch as they are made of identically the same material as the floor mattings covered by paragraph 343, and in reality are merely strips of this matting sewn together, as demonstrated by our exhibit No. 23 and No. 24, they should bear the same rate of duty. This was the original intention, the change coming about through the methods of administering the law. This will also be in keeping with the carpet schedule, which provides that rugs made of the same fabric as carpets should bear the same rate of duty.

In our opinion, to simplify and improve the administering of the law, as many duties as possible should be made specific rather than ad valorem. It is not an uncommon practice for some importers to attempt to increase their volume of business by cutting prices and making it up by the lower duties obtained by undervaluation.

In a separate brief we refer to rugs now being imported, made of straw or other vegetable substances, so twisted, or wound with a binding thread or other material as to produce a rope or twine, and then woven into rugs, mats, or mattings, with a warp of cotton or other vegetable substance, as per exhibits No. 25 and No. 26—as it is not the intention of this committee that they should come under the paragraph covering straw mattings.

Respectfully submitted.

JOHN N. BOYD, of *Joseph Wild & Co.*,

T. RUSHMORE, of *Carlowitz & Co.*,

JOHN C. WIRTZ, of *Smith, Baker Co.*,

Committee.

J. C. WIRTZ, *Chairman, 85 Wall Street, New York.*

This committee represents the following firms: Arnhold, Karberg & Co., Akawo, Morimura & Co., Carlowitz & Co., Dowler, Forbes & Co., F. S. Ellenberg & Co., Alfred Richter, Shewan, Tomes & Co., Smith, Baker Co., Jos. Wild & Co.

RUGS OR MATTING MADE OF STRAW OR OTHER VEGETABLE SUBSTANCES, TWISTED OR BOUND WITH A BINDING THREAD OR OTHER MATERIAL.

Addition to Schedule J.

NEW YORK, *January 22, 1913.*

COMMITTEE ON WAYS AND MEANS,

House of Representatives, Washington, D. C.

GENTLEMEN: We wish to present the following facts regarding imported rugs made of straw or other vegetable substances, so twisted or wound with a binding thread or other material as to produce a rope or twine, and then woven into rugs, mats, or matting with a warp of cotton or other vegetable substance, as per Exhibits No. 25 and No. 26.

At the present time the duty is 35 per cent, equaling from 8 to 12 cents per square yard, which is very excessive. While we do not want to see the manufacturing interests of the country jeopardized, and realize that the country must be prosperous if we are to have a satisfactory outlet for our importations, we do feel that the consumer is entitled to the price regulating force of reasonable competition, and we ask that the present excessive duty be reduced to a reasonable one.

Foreign manufacturers have been working for four or five years in an attempt to produce an article of this nature. The business in that time has been so small that the revenue to the Government on imports probably does not exceed \$25,000 per annum, if that; whereas the domestic industry started about 20 years ago and has been growing with leaps and bounds, a constant increase in facilities being necessary, the manufacturers not being able to keep pace with the demand. All the indications are that the profits in the business are large, and the present protection of 35 per cent more than necessary, while five years of effort in foreign countries with the present handicap of the duty has prevented any material progress.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

In order to provide a revenue for the Government, and to put the duty on a reasonable basis, we ask that the duty on this class of rugs be made 5 cents per square yard and that the tariff read as follows:

"Rugs, mats, or matting, plain, fancy, or figured, made of straw or other vegetable substances, so twisted or wound with a binding thread or other material as to produce a rope or twine, and then woven into rugs, mats, or matting with a warp of cotton or other vegetable substance—5 cents per square yard."

Respectfully submitted.

JOHN N. BOYD, of *Joseph Wild & Co.*,
T. RUSHMORE, of *Carlowitz & Co.*,
JOHN C. WIRTZ, of *Smith, Baker Co.*,
Committee.

J. C. WIRTZ, *Chairman*,
85 Wall Street, New York.

This committee represents the following firms: Arnhold, Karberg & Co.; Akawo; Morimura & Co.; Carlowitz & Co.; Dowler, Forbes & Co.; F. S. Ellenberg & Co.; Alfred Richter; Shewan, Tomes & Co.; Smith, Baker Co.; Jos. Wild & Co.

SUPPLEMENTARY BRIEF FOR IMPORTERS OF MATTINGS FROM CHINA, JAPAN, AND INDIA.

Schedule J, paragraph 343.

NEW YORK, *February 6, 1913.*

The COMMITTEE ON WAYS AND MEANS,

House of Representatives, Washington, D. C.

GENTLEMEN: On January 24, this committee filed a brief with you with reference to Schedule J, paragraph 343, covering mattings from China, Japan, and India; and on January 25, Mr. Myron W. Robinson filed a brief on behalf of the American manufacturers of carpets, mattings, and rugs manufactured from vegetable substances.

The brief filed by him gives a proforma invoice of China mattings weighing 110 to 120 pounds, and landing duty paid at 22½ cents; and also gives a proforma invoice of Japanese white matting containing 460 warps and landing duty paid at 42½ cents.

The importation of both of these grades is practically nil and has been for years. The firms which we represent do business in all grades, and not one-tenth of 1 per cent of their business is done in grades of this description or approximating them in cost.

The Government import figures for the 12 months ending June 30, 1912, show that the dutiable value of the importations was \$1,819,224 for 25,870,411 square yards, or an average of 7 cents per square yard. With freight, duty, and incidental charges added, the landed cost does not exceed 14 cents per square yard. In the light of these statistics the average of 21 cents mentioned in the domestic manufacturer's brief is shown to be entirely misleading.

The argument of the domestic manufacturers to the effect that the better grades of matting interfere with their business falls to the ground, for the reason that the importation of such grades is infinitesimal and declining.

The domestic manufacturers further say that the reduction in duty would not benefit the consumer, but would go into the pockets of the importers. Competition is so keen that the jobbers and distributors of matting are always kept informed of the slightest fluctuation by circulars sent by the various importing houses, and any reduction in duty would at once be deducted from the quotations and would ultimately reach the consumer through the keen competition of the retailers.

In our original brief we referred to exhibits which were filed with Mr. Daniel C. Roper, clerk of the committee, but were not shown to the committee when we were before them. We would ask that they be examined and considered when paragraph 343 of Schedule J is being taken up, as they are ticketed to show in detail the percentage of the present excessive duty, and, furthermore, the distinct difference in character between the imported straw matting and any domestic manufacture (including the domestic paper fiber matting) will at once be apparent.

Respectfully submitted.

J. C. WIRTZ, *Chairman*.

T. RUSHMORE,
JOHN C. WIRTZ,
Committee.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

This committee represents the following firms: Arnhold, Karberg & Co., Akawo, Morimura & Co., Carlowitz & Co., Dowler, Forbes & Co., F. S. Ellenberg & Co., Alfred Richter, Shewan, Tomes & Co., Smith, Baker Co., Jos. Wild & Co.

BRIEFS ON MATTINGS, RUGS, ETC.

SCHULTZ & BRO.,
Baltimore, January 18, 1913.

HON. OSCAR W. UNDERWOOD,
Chairman, Ways and Means Committee, Washington, D. C.

DEAR SIR: We, as importers of Chinese and Japanese mattings and as manufacturers of domestic carpets, have been called upon by committees representing both of these interests in this country to express our views to you on the matter of duty on mattings.

While being in favor of lower tariff, generally speaking, we feel that the duty on straw matting does not carry any great hardship to the people of this country, as it is still very cheap merchandise. We would suggest, however, that a great many complications have arisen by reason of the ad valorem duty on the matting rugs, and we think it would be very much better for all concerned if this duty was made a specific duty, the same on all grades. Our own opinion is that 3 cents per square yard on all matting and matting rugs would work to the best interest of all concerned.

Thanking you for your kind consideration of this suggestion, we remain,

Yours, very respectfully,

SCHULTZ & BRO. (INC.).

LORENTZ BROS. CO.,
Cincinnati, January 21, 1913.

HON. OSCAR W. UNDERWOOD,
Chairman, Ways and Means Committee, Washington, D. C.

DEAR SIR: Our attention having been called to the tariff on mattings and matting rugs imported from China and Japan of approximately 3 to 3½ cents a square yard, we wish to state that we do not consider said rate either excessive or prohibitive. This will only average about 75 cents to \$1.25 for an ordinary room or a rug for an ordinary room, and we believe that this slight additional cost to the consumer will be more than offset by the additional labor afforded American workmen on such other floor coverings as this additional cost may be the cause of influencing the consumer to buy. We therefore ask your committee to retain the present rate or nearly so.

Very truly,

THE LORENTZ BROS. CO.

GERSHON BROS CO.,
Atlanta, Ga., January 13, 1913.

HON. THOMAS M. BELL, M. C.,
Washington, D. C.

DEAR SIR: We are advised that on January 24 the Ways and Means Committee will have a hearing in the matter of mattings, an article which we have imported in considerable quantities during the past 10 years. Matting art squares and rugs and also matting in rolls are used in considerable quantities in the South, owing to their lightness and, until recently, owing to their reasonable cost. At one time there was a specific duty on all of these goods which was changed to an ad valorem duty, which raised the price quite a good deal and consequently the cost to the consumer. We believe that a specific duty should be placed on matting rugs just as same as it is on matting carpet, and we would appreciate your investigating the matter and using your efforts to have the most advantageous rate placed on these goods for the benefit of the consumer and consistent with your ideas in regard to the tariff.

Assuring you of our very best wishes for a happy and prosperous year and our personal regard and esteem, we remain,

Yours, respectfully,

GERSHON BROS. CO.,
IRA GERSHON, President.
S. FREITAG, Secretary.

PARAGRAPHS 343-344—FLOOR MATTINGS, ETC.

J. & A. D. GRIMOND (LTD.), OF NEW YORK,
New York, January 18, 1913.

CHAIRMAN WAYS AND MEANS COMMITTEE,
Washington, D. C.

DEAR SIR: J. & A. D. Grimond (Ltd.), of Dundee, Scotland, used to ship to this country large quantities of jute carpeting. I, personally, sold and invoiced the goods in 1895, when jute carpeting under the Wilson bill paid only 20 per cent ad valorem. The advance in duty on this commodity under the Dingley bill stopped the importing trade entirely, and consequently must have caused a great loss of revenue to the Government. The present bill reduced the duty a little, but it is still almost impossible to import cheap jute carpeting. Goods worth 8 pence per square yard cost 20 cents to land under the Wilson bill. To-day they cost 30 cents to land. So far as I know, there are not many manufacturers of jute carpeting in this country, and the protection afforded to them amounts to almost 200 per cent. A reasonable ad valorem duty similar to the Wilson bill would work no hardship to any manufacturer here and would most assuredly provide revenue for the Government. As things are at present there can be no revenue worth talking about, the importations being so trifling. With the present duty the cheaper woolen carpetings can be sold in competition with jute goods. The result is that the ultimate consumer gets no really cheap carpeting at all.

Yours, very truly,

J. & A. D. GRIMOND (LTD.), OF NEW YORK.
H. N. GILDEA, *President*.

LAMOND & ROBERTSON CO.,
PATERSON, N. J.

*The Committee on Ways and Means,
House of Representatives, Washington, D. C.*

GENTLEMEN: We herewith beg to submit for your consideration brief of our opinion and experience on Schedule J in reference to the carpets, mats, etc.

We recommend that the duties on the above be retained as at present, and our reasons for recommending same are as follows:

1. (a) That during a time in the jute business when the demand for burlap and linoleum foundations are off the manufactures of the other side, when devoting their time to floor covering products, can in every instance compete, and in some cases (on light-weight carpets), undersell the American manufactures.

(b) Also the condition of the Calcutta market should be kept in mind, as at the present time the India mills are making at or about 60 per cent of the burlap used, and practically all of the lighter weight burlaps are made in India. To our minds it is but a question of very short time when the introduction of the floor coverings will be introduced in the India mills, as the class of help used are becoming very proficient in working on this fiber. If such should be the case, and knowing the condition of labor (extremely low wages) the American manufacturer, even at an increased tariff, would be at a great disadvantage to compete, and his business would be reduced to a point of simply being able to secure business owing to the fact of prompt shipments.

(c) Also the manufacturer whose goods are made entirely of jute is at a great disadvantage, as the fiber is the cheapest used and is universally known as such, and he must therefore base his price according as it is necessary for him to compete against all carpet floor coverings made, not only the imported, but domestic, and his price on all grades must be under every known fiber, which does not allow for any fancy prices, but merely a legitimate return on his investment.

(d) Also the last revision of the tariff, when carpets, mats, etc., were reduced to value under 15 cents per square yard to 4 cents per square yard, 30 per cent ad valorem, and value over 15 cents per square yard to 8 cents per square yard and 30 per cent ad valorem, making average deduction of slightly over 10 per cent, we felt a decided decrease in business due to the increased imports, and in a great many cases were unable to meet the competition, due to the fact that the cost of production is ever on the increase. From our last experience, do not feel that the line could stand further reduction of the tariff.

4. In the present tariff as now written, specific duty on all carpets is figured from a square yard basis. From our experience we wish to assure you that the cost of making the narrow widths such as 2/4, 18 inch; 2/5, 22 1/2 inch; and 3/4, 27 inch, is higher. From records you will find that in jute goods the larger proportion of imports

PARAGRAPH 345—FIRE HOSE.

are the narrow widths, and would therefore recommend that the change be made accordingly in specific duty, so change of duty will offset the increased cost of manufacturing on narrow widths.

We trust you will give the foregoing due consideration, and beg to be,
Respectfully, yours,

THE LAMOND & ROBERTSON CO.,
By GEORGE R. ROBERTSON, *Vice President.*

PARAGRAPH 345.

Hydraulic or flume hose, made in whole or in part of cotton, flax, hemp, ramie, or jute, fifteen cents per pound.

FIRE HOSE.

BRIEF OF WM. & CHAS. BECK, LAWRENCE, MASS.

LAWRENCE, MASS., *December 23, 1912.*

The WAYS AND MEANS COMMITTEE,
Washington, D. C.

GENTLEMEN: We understand that you are to give a tariff hearing on January 24 on Schedule J, in which we are vitally interested and as we are unable to have one of our representatives present at the hearing we wish to take this opportunity of protesting against the present high rate of duty on single linen yarn on which we are paying a duty of 45 per cent, whereas there is no concern in this country who can make suitable yarns, so we can not see where it would hurt any concern in this country if the duty on this raw material was lowered.

Two or three years ago, when the tariff was revised, the committee saw fit to recommend a reduction on the manufactured goods, namely, linen fire hose, and the reduction of 5 cents per pound on these goods was put through and the duty on the raw material was left as it was, namely, 45 per cent ad valorem. This, in our minds, was hardly fair and was not consistent with the needs of this country.

It certainly appears to us a just and reasonable request that the duty on the raw material, which will not conflict with the United States spinners, should be reduced and the duty on this material should only be reckoned for revenue purposes. We should be glad to give any further information and we stand at your disposal.

Thanking you for your kind attention and consideration, and hoping you will see your way clear to recommend a reduction in the duty on the raw material, we remain

Yours, very truly,

WM. & CHAS. BECK,
A. E. BECK, *Manager.*

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

PARAGRAPH 346.

Tapes composed wholly or in part of flax, woven with or without metal threads, on reels, spools, or otherwise, and designed expressly for use in the manufacture of measuring tapes, forty per centum ad valorem.

PARAGRAPH 347.

Linoleum, corticene, and all other fabrics or coverings for floors, made in part of oil or any similar product, plain, stamped, painted or printed, only, not specifically provided for herein, if nine feet or under in width, eight cents per square yard and fifteen per centum ad valorem; over nine feet in width, twelve cents per square yard and fifteen per centum ad valorem; and any of the foregoing of whatever width, the composition of which forms designs or patterns, whether inlaid or otherwise, by whatever name known, and cork carpets, twenty cents per square yard and twenty per centum ad valorem; mats for floors made of oilcloth, linoleum, or corticene, shall be subject to the same rate of duty herein provided for oilcloth, linoleum, or corticene; oilcloth for floors, if nine feet or less in width, six cents per square yard and fifteen per centum ad valorem; over nine feet in width, ten cents per square yard and fifteen per centum ad valorem; waterproof cloth composed of cotton or other vegetable fiber, whether composed in part of india rubber or otherwise, ten cents per square yard and twenty per centum ad valorem.

OILCLOTH AND LINOLEUM.

STATEMENT OF GEORGE STABER, REPRESENTING THE GERMANIA IMPORTING CO., 41 UNION SQUARE, NEW YORK CITY.

Mr. STABER. I appear in behalf of a number of New York houses engaged in the business of selling floor covering. They are not only importers, but they are also dealers and jobbers in domestic goods, and to a certain extent are exporters of domestic goods.

The CHAIRMAN. To which paragraph do you refer?

Mr. STABER. Paragraph 347—oilcloths and linoleum.

I came here to advocate a radical reduction in the duties on these articles, as we believe these duties are entirely unnecessary and excessive, and we know that on certain articles included in this paragraph that they are prohibitive.

The duties on oilcloth and linoleum are compound duties, partly specific—so many cents per square yard—plus ad valorem duties. Like all specific duties they weigh most heavily on the cheaper grades of goods, or are even prohibitory on those grades of goods which are used by the masses, while they allow a moderate importation of the high-priced goods which are used by the well-to-do people.

Speaking first of oilcloth. The last census shows that the production of domestic oilcloth for floor covering was, in the year 1909, \$3,777,000, while the imports of the same article in 1911 were \$68,000, and in 1912, \$52,000. In other words, the domestic manufacturers had 98.5 per cent of the market and the imports were only 1.5 per cent.

Now, you probably all know that oilcloth is not used in the houses of the wealthy, and not even in the houses of the middle classes. The farmer's wife uses it to cover the floor of her kitchen or her bathroom, if she has one, and the poorer classes in the cities use it. Therefore the heavy tax on an article of general use among the poorer classes falls entirely on those classes and not on the wealthy.

The CHAIRMAN. Do the figures which you have just given include linoleum or do they just refer to oilcloth?

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

Mr. STABER. Just oilcloth, for floor covering. They are according to the census.

The making of oilcloth in this country is not an infant industry. The leading house in the business in Philadelphia advertises, with just pride, that their business was established more than 100 years ago. They have grown wealthy and powerful in the business, and certainly they have outgrown the infant stage.

Gentlemen, every time that Congress is in session and tariff matters are considered there appears before you that very house over 100 years old, appealing for more protection and more protection, and so far they have gotten it every time.

Mr. HILL. The import business is not any chicken, is it?

Mr. STABER. No; and I am not any chicken either.

Mr. HILL. I say the import business generally is not an infant industry, is it?

Mr. STABER. What industry?

Mr. HILL. The import business?

Mr. STABER. No; I do not consider a merchant's business an industry, although we have to be industrious.

Whatever reduction Congress in its wisdom may make in the rates on oilcloth, it will bring an increased revenue to the Government, because the entire revenue that the Government received in 1912 on this article was \$23,130.

I will go to linoleum—

Mr. PALMER. Before you leave oilcloth, I want to ask you a question about it.

Mr. STABER. Certainly.

Mr. PALMER. There is a section in the cotton schedule which provides for cotton cloth, filled or coated, oilcloths, cotton window hollands, etc., 3 cents a square yard and 20 per cent ad valorem. That is not the section you are speaking of?

Mr. STABER. No; that is another section.

Mr. PALMER. That paragraph I have read was intended to cover what we know as shelf oilcloths, was it not?

Mr. STABER. I believe so.

Mr. PALMER. Do you know whether this is true, that instead of shelf oilcloths coming in under that section, they have been held to come in under section 347 about which you are now talking, as waterproof cloths?

Mr. STABER. I do not know.

Mr. PALMER. Is shelf oilcloth a waterproof cloth?

Mr. STABER. I am not familiar with that.

Mr. PALMER. What kind of oilcloths are you talking about?

Mr. STABER. Oilcloth for floor covering, under paragraph 347.

Mr. PALMER. That is the linoleum paragraph?

Mr. STABER. Yes.

Mr. PALMER. That is the same paragraph that provides for "waterproof cloth composed of cotton or other vegetable fiber, whether composed in part of India rubber, or otherwise, 10 cents a square yard, and 20 per cent ad valorem."

Mr. STABER. I am not familiar with that article.

Mr. PALMER. I would like to find out whether under that clause cheap oilcloths have been coming in or whether it has been kept out,

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

because the duty would be from 150 to 175 per cent. There may be other oilcloth people here who can tell me that.

Mr. STABER. Yes, sir.

Speaking of linoleum, that is an industry that is not as old as the oilcloth industry, and yet it is not an infant industry. Linoleum was invented about the year 1870 in England, and the first mill in this country was started in 1875 by the American Linoleum Co. Linoleum is sanitary, it is easily kept clean, and is long wearing, and is, in the long run, the cheapest floor covering. As the public found out these merits of the article, the demand for linoleum increased, and during the last 15 years the linoleum industry has made wonderful progress. The census figures show that in the five years of from 1904 to 1909 the production of linoleum in this country, of plain linoleum and cork carpet, increased 78 per cent in quantity and 86 per cent in value, and the production of inlaid linoleum in the same five years increased 110 per cent in quantity and 171 per cent in value. That is certainly a prosperous industry.

Mr. LONGWORTH. How about the importations during that same period?

Mr. STABER. The importation also increased up to the year 1907, for the reason that the American industry could not supply the demand. The importations in 1907 are the maximum.

Mr. LONGWORTH. What were they?

Mr. STABER. \$2,314,000. Since then the importations of linoleum have steadily declined, and in the year 1912 they were \$1,918,000.

The CHAIRMAN. What is the total production of linoleum in this country?

Mr. STABER. The total production of linoleum?

The CHAIRMAN. I do not think you gave that in your brief, and that is the reason I am asking you now.

Mr. STABER. According to the census, in the year 1909 the production of linoleum, including plain linoleum and cork carpet, was \$7,850,000, and of inlaid linoleum, \$2,994,000, and others, \$279,000—between eleven and twelve millions in 1909.

Mr. LONGWORTH. So that according to those figures to-day, the importations are nearly 25 per cent of the total consumption?

Mr. STABER. No, sir. Since 1909 the production of linoleum in this country has very much increased again.

Mr. LONGWORTH. Those figures were for 1910?

Mr. STABER. Excuse me; I am speaking of to-day.

The CHAIRMAN. Let me see if I understand you. The amount of cork linoleum and carpet produced for 1909 was \$7,850,000; inlaid linoleum was \$2,944,000, and for all other linoleum about \$279,000, making a total of linoleum produced in this country of about \$11,000,000. Now, you say the importations were how much?

Mr. STABER. The total importations in 1912 were \$890,000 for plain linoleum; \$71,000 for linoleum over 9 feet wide, and \$905,000 for inlaid linoleum.

Mr. LONGWORTH. Making a total of very nearly two million?

Mr. STABER. Yes, sir; \$1,800,000.

Mr. LONGWORTH. So that the total production was eleven millions in round numbers and the importations over two millions?

Mr. PALMER. Under two million.

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

Mr. STABER. \$1,800,000.

Mr. LONGWORTH. Then your figures show that about 20 per cent is imported.

Mr. STABER. No; I figure \$1,800,000 and \$11,000,000 a good deal less than 20 per cent. These figures are for 1909 and since then the production has been materially increased.

Mr. HARRISON. I notice the production jumps from a little over five million in 1905 to \$10,800,000 in 1910, and if it is keeping on at that rate, it is reasonable to suppose that the production is somewhere in the neighborhood of \$13,000,000 now.

Mr. STABER. If the production during the last four years has increased at the same ratio as it did increase for the five years from 1904 to 1909, then of course the figures for linoleum would be about \$20,000,000. That is what I believe they are. I believe the total production of linoleum in this country is about \$20,000,000.

Mr. HARRISON. As to these imports, are they of the higher grades of linoleum?

Mr. STABER. Only the higher grades; the lower grades can not be imported. The duty is too high.

Mr. HARRISON. As to the lower grades the duty is prohibitory?

Mr. STABER. Yes, sir.

Mr. HARRISON. Are the lower grades of linoleum the kind that we export in such comparatively large quantities?

Mr. STABER. The export of linoleum is moderate, \$700,000.

Mr. HARRISON. It is increasing very fast, is it not?

Mr. STABER. Yes, sir; it is.

Mr. HARRISON. It nearly doubled from 1910 to 1912.

Mr. STABER. I am not well posted as to whether it is the lower or the higher grades. I would suppose it was the lower grades, because the higher grades would be furnished from Europe.

The CHAIRMAN. Are you talking about the lower grades in linoleum or oilcloth?

Mr. STABER. Linoleum. We consider the duties on linoleum entirely too high, for the reason that the materials in this country, with one exception, are not higher than in Europe. Good linoleum is made of ground cork and the best grades of oxidized linseed oil, to which is added what are called driers and pigments and some clay and other stuff, which do not figure much in value either way.

Mr. FORDNEY. Have the importations of linoleum increased or decreased since the adoption of the Payne tariff?

Mr. STABER. They have decreased.

Mr. FORDNEY. They have decreased?

Mr. STABER. Yes; they reached their maximum in 1907.

Mr. FORDNEY. What do you attribute that to—the higher rate of duty?

Mr. STABER. To the higher duties under the Payne Act.

Mr. HILL. It was lower than it was under the Dingley law.

Mr. STABER. I beg your pardon.

Mr. FORDNEY. Under the Dingley law the rate on the widths under 12 feet was 8 cents a square yard and 15 per cent ad valorem; under the Payne law, 6 cents per square yard and 15 per cent ad valorem; that is, under 9 feet in width.

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

Twelve feet in width under the Dingley law, it was 20 cents per square yard and 20 per cent ad valorem; under the Payne law, 10 cents per square yard and 15 per cent ad valorem. They are very material reductions. And here is what happened, my friend, and as an importer you may remember something about this: Under the Dingley tariff law the widths of linoleum, as I understand it, ranging from 3, 6, 9, 12, and 15 feet widths, and in the intermediate widths it doubled and tripled, and so on; and under the Dingley law widths under 12 feet were 8 cents a square yard and 15 per cent ad valorem; 12 feet and wider, 20 cents and 20 per cent ad valorem. But the importers, taking advantage of a clerical error, perhaps, in the writing of that law, imported linoleum 11 feet, 11 feet 11½ inches, and 11 feet 11¾ inches—a fraction under 12 feet—and brought it in under the lower rates as 9-foot linoleum.

Mr. STABER. They did.

The CHAIRMAN. Before you answer the question I would like to have the record show the change in the law. I have a book compiled by the Ways and Means Committee which shows a comparison of the tariffs. Under the act of 1897, the Dingley bill, the tax on oilcloths and linoleums was, under 12 feet, 8 cents per square yard and 15 per cent ad valorem.

Mr. FORDNEY. I stated it that way, Mr. Chairman.

The CHAIRMAN. Pardon me a moment. I would like to make this statement: Twelve feet and over in width, 20 cents a square yard and 20 per cent ad valorem; inlaid linoleum, 20 cents per square yard and 20 per cent ad valorem. When the Payne bill was enacted you wrote into the bill "9 feet or under in width, 8 cents a square yard and 15 per cent ad valorem."

Mr. FORDNEY. Pardon me, Mr. Chairman, I am reading this from your own book.

The CHAIRMAN. It is 6 cents in my book. Nine feet and under in width 8 cents per square yard and 15 per cent ad valorem; over 9 feet in width 12 cents per square yard and 15 per cent ad valorem; and of different widths, composed of different forms or designs or patterns, whether inlaid or otherwise, 20 cents per square yard and 20 per cent ad valorem.

Up to that point the Payne bill corresponded identically with the Dingley bill on linoleums. Then the Payne law went on "oil cloth flooring, 9 feet in width or less, 6 cents a square yard and 15 per cent ad valorem." But so far as linoleum was concerned there was no reduction.

Mr. LONGWORTH. There was a reduction in the 12-foot linoleum from 20 cents to 12 cents.

Mr. STABER. In the 9-foot linoleum?

Mr. FORDNEY. And in the ad valorem duty from 20 to 15 per cent.

The CHAIRMAN. I think I read that correctly.

Mr. FORDNEY. You did, but there is a reduction. I had this item wrong. Let me say to the gentlemen that these changes were made in the language to overcome the claim of the importers who had imported the linoleum a quarter of an inch and a half an inch under 12 feet in width to take advantage of the 9-foot rate. Our custom collectors had held that that was 12-foot linoleum. The importers

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

paid the duty under protest, went to the Supreme Court, and the Supreme Court held that linoleum 11 $\frac{3}{4}$ feet wide was not 12 feet wide.

Mr. STABER. That is right.

Mr. FORDNEY. Now, the importers or manufacturers made a linoleum that sold for 12 feet wide, but which was not 12 feet wide, and it was an evasion of the law.

Mr. STABER. I admit that, but the buyers were aware that the goods were half an inch less than 12 feet wide.

Mr. FORDNEY. The language of the law was changed, the rate of duty was lowered, and you say the imports have fallen off?

Mr. STABER. I admit that it was an evasion of the law.

Mr. FORDNEY. The duty has been lowered on the 12-foot and wider linoleum, or on all linoleums over 9 feet in width?

Mr. STABER. Yes, sir; on 12 feet and over which was not imported, but on 9 feet to and including 11 feet 11 $\frac{1}{2}$ inches it was raised from 8 cents to 12 cents, and these were the widths that were largely imported. The present law also raised very materially the duty on so-called granite and oak plank linoleum. These paid, under the Dingley law, 8 cents and 15 per cent ad valorem, an equivalent of 40 per cent ad valorem. They have to pay now 20 cents and 20 per cent ad valorem, an equivalent of 80 per cent ad valorem, which is prohibitive, and has stopped importations completely.

Under the Dingley law about \$200,000 of these goods were imported, yielding a revenue of \$80,000. Under the present law the Government gets no revenue whatever from these goods. When the present law went into effect, the domestic mills raised their prices of granite and oak plank linoleum 8 to 10 cents per square yard, which means for the consumer about \$60,000 per year increased cost.

Mr. FORDNEY. And you say the importations have fallen off?

Mr. STABER. Yes, sir.

Mr. FORDNEY. That was not because of the increase in duty, because they were lowered, and on the lower grades there was no change in the duty at all. You understood that the duties had been raised, did you not?

Mr. STABER. Will you allow me to make an observation?

Mr. FORDNEY. Certainly.

Mr. STABER. I would like to observe that this lower duty which you quote works out 62.30 per cent ad valorem.

Mr. FORDNEY. But it is a specific rate.

Mr. HILL. Let me call your attention to the committee's statistics, which show that the rate on this paragraph in 1905 was 56.54; in 1910 it had fallen to 52.32; in 1911 to 49.68; and last year it was 45.52; so that the ad valorem would show that the contention of the gentleman from Michigan is pretty nearly correct.

The CHAIRMAN. He was talking about a specific rate. This rate that the gentleman from Connecticut has read puts them all together.

Mr. HILL. Certainly.

Mr. STABER. I have here the official figures of the United States Treasury.

Mr. FORDNEY. Mr. Chairman, these goods paid both a specific and ad valorem duty. Now, the only way, under the Payne law, that the

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

ad valorem duty could increase would be because of the lower price of the imported article. It could not otherwise increase, could it?

Mr. STABER. I have here the official figures of the United States Treasury.

Mr. FORDNEY. How can the ad valorem duty on an article imported pay a specific rate? How can the ad valorem advance unless the article is reduced in price?

The price of the imported article must have gone down if the ad valorem is higher than it was before if there was no lowering of the duty.

Mr. STABER. Before the present law went into effect no goods 12 feet and over that ought to have paid 20 cents and 20 per cent ad valorem were brought in. The law was evaded by the bringing in of goods 11 feet 11 inches and a fraction. Since then goods over 9 feet are not brought in to any extent, and the average rate of duty on goods over 9 feet was, in the year 1911, 62.3 per cent.

Mr. FORDNEY. Goods which paid 12 cents per square yard specific duty and 15 per cent ad valorem?

Mr. STABER. That is right.

Mr. FORDNEY. When you figure all the duty as ad valorem, then the price of the linoleum must have gone down in order to raise the ad valorem?

Mr. STABER. Certainly.

Mr. FORDNEY. It could not be otherwise?

Mr. STABER. No, sir.

Mr. LONGWORTH. Have you figured as to the retail price of the linoleum?

Mr. STABER. I have never been in the retail business in my life.

Mr. LONGWORTH. You were complaining a moment ago that this duty was oppressing the consumer.

Mr. STABER. Of course. The wholesale price has gone up, and I suppose the retail price will go up.

Mr. LONGWORTH. Is it not a fact that the retail price has gone down substantially?

Mr. STABER. I do not believe it has.

Mr. LONGWORTH. Do you deny it?

Mr. STABER. I know that the people to whom I sell the goods wholesale do not sell the goods they buy from me at less than they pay for them, and I know they are in the habit of making very fair profits.

Mr. FORDNEY. Under the lower rate of duty, with lower importations, you have advanced the price to the jobber, have you?

Mr. STABER. I have never handled that kind of goods, goods that were over 9 feet in width, in my life.

Mr. FORDNEY. Well, in any other way?

Mr. STABER. The importations at the present time are insignificant. They amounted to \$82,000 in 1911 and \$71,000 in 1912.

Mr. LONGWORTH. Have you raised your price recently?

Mr. STABER. Not recently. The price of linoleum has gone down because the price of material has gone down.

Mr. LONGWORTH. Of course they have. Linoleum has gone down, too; that is what I said.

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

Mr. STABER. The reason is that linseed oil has gone down over 50 per cent.

Mr. LONGWORTH. The consumer is paying less for linoleum to-day than he did five years ago?

Mr. STABER. That depends on the market price.

Mr. LONGWORTH. You said it depended on the tariff.

Mr. STABER. Certainly it does.

Mr. LONGWORTH. But the price has gone down.

Mr. STABER. It has gone down because the price of linseed oil has gone down.

Mr. FORDNEY. Where does the consumer come in on the price of linseed oil? Has the consumer gotten the benefit of it?

Mr. STABER. The benefit of the price on linseed oil?

Mr. FORDNEY. The cost has not been affected by the price of linseed oil or the tariff, but because the merchants put the prices up just because they could——

Mr. STABER. The merchants do not put the price up any.

Mr. FORDNEY. Then, why has it gone up?

Mr. STABER. It went up when the price of materials went up——

Mr. FORDNEY. If the price of the raw material has gone down and the duty has been lowered, how is it that the price to the consumer has gone up?

Mr. STABER. I did not say it had; I said it has gone down. It has gone down a little within the last two or three months because the price of linseed oil has declined.

Mr. FORDNEY. I understood you to say that the price to the consumer has not gone down.

Mr. STABER. I beg your pardon; I never mentioned the price to the consumer.

Mr. FORDNEY. That is what I was trying to find out.

The CHAIRMAN. Your time has expired, Mr. Staber, but a good deal of time has been taken up by questions from the committee.

Mr. STABER. May I continue, Mr. Chairman?

The CHAIRMAN. About how much time will you require?

Mr. STABER. I suppose about 10 minutes, if I am not interrupted.

The CHAIRMAN. The committee will allow you five minutes.

Mr. STABER. So far as other materials are concerned, the question of tariff does not enter into the other materials except burlap. Under the Dingley tariff burlap had a duty of 45 per cent ad valorem, and the linoleum manufacturers considered the specific duty simply as a compensation for the duty which they paid on burlap. Under the present tariff the rate on burlap was reduced from 45 per cent ad valorem to nine-sixteenths cent per pound and 15 per cent ad valorem, which amounts to about 21 per cent. In other words, the duty on burlap was cut in half, but the specific duty on linoleum was not reduced; it is the same, except on the over 9 feet proposition.

The burlap is very high in price to-day and consequently the 22 per cent or 21 per cent duty which it pays amounts to about 1½ cents per square yard, outside.

We assert, with the exception of labor, the materials out of which linoleum is made are not higher in this country than in Europe.

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

As to labor. Linoleum is an article in the manufacture of which practically no skilled labor is employed. It is all made by machinery, and in that machinery this country had made immense progress in the last five years; in fact the machinery making linoleum here is ahead, in the amount of production, certainly, of the machinery used in Europe to-day. Outside of a few skilled workmen only the cheapest grade of immigrant labor is employed. I am told that when you go into some of these mills there is hardly a man that speaks English. They employ imported cheap labor.

The census states that in 1909 in the production of oilcloth and linoleum of a value of \$22,805,000, the manufacturers paid out in salaries to the officers of the thirty companies, and the clerks and salesmen and office force, I suppose, \$3,482,000, which amounts to 15½ per cent of the production. Of course the census does not show what part of this sum the officers of the companies drew out as salaries, but everybody who is familiar with the close industrial corporations in this country knows very well that when they make money it is the fashion to divide a good deal of the profits in the shape of salaries to the officers, even if it is only done to make the dividends which are paid the stockholders and which are published, appear moderate.

If I estimate very moderately the salaries and bonuses, and so on, of the 340 officers and clerks, etc.—if I estimate that at only about \$500,000—that would amount to 2¼ per cent of production. That would leave 13 per cent as paid to the workmen. According to the census there are 5,198 men employed in the 30 mills in this industry, and it shows an average wage per man of \$571, about \$1.90 per day for each working day.

We assert that the cost of labor per square yard for the manufacture of linoleum in Europe is about the same as it is here—13 per cent of the production. We do not claim that the wages that they pay here are as low as they are in England or Germany, but I do claim that the manufacturers here get out of their men a great many more square yards per day than they do out of their men in Europe; and besides, it is well known that the machinery in the American mills has to run 25 to 50 per cent faster than in Europe.

Mr. HILL. You said that the wages in Europe were the same?

Mr. STABER. About the same; 13 per cent.

Mr. HILL. You do not mean that their cost was 13 per cent of our cost? That would make quite a difference in the wages.

Mr. STABER. No, I did not say that at all. I have stated here that I believe that the materials for making linoleum, with the exception of burlap, do not cost any more here than they cost in Europe; and that the cost of labor is about 13 per cent of the production, both here and in Europe, consequently the cost of production here is increased only by the duty on burlap, amounting to about 1½ cents per square yard.

Mr. HILL. Are you familiar with the process of making oilcloth?

Mr. STABER. I have seen it.

Mr. HILL. You are not a practical manufacturer?

Mr. STABER. No, sir; and I do not pretend to be.

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

Mr. HILL. I want to ask you whether it has come to be the practice to make narrow oilcloths on wide looms and then split them up afterwards. Do they do that at all?

Mr. STABER. I do not know.

Mr. HILL. Or is the wide loom used exclusively for the wide oil-cloth?

Mr. STABER. I do not know. I am confining my remarks just now to linoleum. Some representative manufacturers of Europe have traveled in this country and have thoroughly investigated conditions. They told me that they believed that if they employed a hundred men, the American mill would turn out the same quantity with 70 men, or, in other words, when a man in Europe gets a day's wage of \$1, and we pay here a wage of \$1.50, it would not be more expensive per yard or per pound.

Mr. FORDNEY. Is not that the only industry in existence where that factor is true? It is the only one I have ever heard of, if it is true.

Mr. STABER. There are other industries.

Mr. FORDNEY. I, have never heard of it except from the cotton men. They are getting ready to go into bankruptcy if they get what they are asking for.

Mr. STABER. I have heard it. I have imported to some extent from some leading paper manufacturers. Some leading foreign manufacturers came here and they traveled around the country and saw the leading mills in this country, and they told me that if their men worked as hard as they have to over here, or if they could turn out so many pounds of paper with so many men, they could pay much higher wages.

Mr. FORDNEY. The Tariff Board report shows just the reverse. They stated that the present rate of duty on paper, at the time the investigation was made, was just about enough to offset the difference in the cost of production—\$4.70 per ton.

Mr. LONGWORTH. Mr. Staber, did you not say, a moment ago, that so far as you knew the labor in the linoleum manufacture here was cheap imported foreign labor?

Mr. STABER. I did not say all of the labor. I said very little skilled labor is employed which gets good wages; but the majority of their labor is cheap.

Mr. LONGWORTH. Yet you say that our labor is twice as efficient as it is abroad.

Mr. STABER. That is because the machinery is run so much faster. We have so much better machinery, and we run the machine so much faster.

Mr. LONGWORTH. Do you know that to be a fact?

Mr. STABER. Yes, sir.

Mr. LONGWORTH. Have you the figures to support it?

Mr. STABER. I am not a technical man, but I know it is a fact that in all of the industries here—

Mr. LONGWORTH (interposing). I am not talking about all industries; I am talking about the linoleum industry.

Mr. STABER. Yes; the machinery is run faster.

Mr. LONGWORTH. How much faster?

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

Mr. STABER. I am not a technical man, but I was told by manufacturers—

Mr. LONGWORTH (interposing). Who told you it was run faster?

Mr. STABER. I have seen it in the advertisement of companies in Philadelphia, that are building linoleum machinery, and they claim that their machinery is far superior to any in Europe and turns out a great deal more per hour or per day?

Mr. LONGWORTH. Have they exported any of that machinery?

Mr. STABER. I believe they have exported those machines to England.

Mr. LONGWORTH. So that the English have the same machines that we have here.

Mr. STABER. They may have one or two machines. The English are go-ahead people. When they see a better machine in America they buy it.

Mr. LONGWORTH. Thank you very much. That is the first real information that you have given me.

Mr. FORDNEY. You say you saw in the papers where a certain machine is more efficient?

Mr. STABER. Yes, sir.

Mr. FORDNEY. And you say the labor is more efficient than abroad?

Mr. STABER. Yes, sir.

Mr. FORDNEY. There was a New York gentleman here the other day, a jeweler, who testified that he had purchased Waltham watches and sold them for less money than he paid for them. If you saw a retail price advertised by that gentleman in the newspaper you would say that he was entitled to some profit, that the jobber is entitled to a profit, and that the Waltham Watch Co. could sell watches far below the prices that they did sell them, and that this man was making a profit at the price at which he was selling them. Would you believe it if you saw it in the newspaper?

Mr. STABER. When I see the advertisement of a machine-building firm of high standing, I generally give credit to the advertisement until I know to the contrary.

Mr. FORDNEY. How much of the machinery used in the linoleum manufacture in this country is foreign and how much domestic?

Mr. STABER. In this country?

Mr. FORDNEY. Yes.

Mr. STABER. I do not know. I believe there is a little foreign machinery in here.

Mr. FORDNEY. But you do know that the machinery here is more efficient than it is abroad?

Mr. STABER. Yes—

Mr. FORDNEY (interposing). You say there is foreign machinery in our linoleum factories run by foreign labor, which, you say, is a cheaper class of labor, but which turns out twice as much as that same machine and that same class of labor can turn out abroad. That is hardly consistent—

Mr. STABER (interposing). I did not say that. You do not quote me right. I said that experienced manufacturers who are well able to judge have told me that they got out of 100 workmen in Europe on the average no more work than the American manufacturer gets

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

out of 70 men. That is not twice the amount. That is a difference of 30 per cent.

The CHAIRMAN. Mr. Staber, I do not like to interrupt you, but I will have to ask you to extend the balance of your remarks in the record.

Mr. STABER. May I go on?

The CHAIRMAN. Mr. Staber, we have so many witnesses here that I shall have to ask you to extend the balance of your remarks in the record.

Mr. STABER. Thank you, Mr. Chairman.

Hon. OSCAR W. UNDERWOOD,

*Chairman Committee on Ways and Means,
House of Representatives, Washington, D. C.*

SIR: In behalf of seven New York houses, importers and dealers in foreign and domestic floor coverings, I beg to submit the following:

We consider the duties on oilcloth and linoleum unjust and excessive. The duties are compound duties consisting of specific rates per square yard plus ad valorem duties. Like all specific duties, they are heaviest on the cheaper qualities and lighter on the high-priced qualities. As a matter of fact, they are prohibitory on all oilcloth and prohibitory on the cheaper grades of linoleum.

According to the census in the year 1909 the production in this country of oilcloth for floors was \$3,777,000, and the imports in 1911 were \$68,000 and in 1912 \$52,000; or the American factories supplied 98.43 per cent and import 1.57 per cent.

Oilcloths for floors is an article which is not used in the houses of the wealthy, but only by the farmers and the poorer classes of the population; and these are the consumers who must pay for the floor coverings of their kitchens and bathrooms the prices that a small number of manufacturers who have grown wealthy in the business choose to dictate to them.

The making of oilcloth is not an infant industry in the United States. A leading firm in the business points in its advertisements with just pride to the fact that its business was established over 100 years ago. Surely they have outgrown the stage where they have to depend on tariff favors of the Government. They are not infants, nor are they old men in their dotage needing protection, but although 100 years in existence they are to-day young and vigorous giants, financially and otherwise—yet every time that Congress is in session considering tariff rates they appear at your doors asking for more tariff favors.

I appeal to you in the name of my associates for a radical reduction in the duties on oilcloth for floors. Whatever reduction Congress in its wisdom may make is bound to bring an increase of revenue to the Government, for in 1912 the total revenue from imports of oilcloth amounted only to \$23,130.

Linoleum.—This industry is not as old as that of oilcloth. The invention was made about 1865 in England. The first factory here, the American Linoleum Co., was started in 1875, so it may not be considered an infant industry either. However, it is only in the last 15 years that it has made a marvelous progress. The United States census shows that in the five years from 1904 to 1909 the increase of production was: Linoleum, including cork carpet, 77.6 per cent quantity, 85.8 per cent in value; inlaid, 109.8 per cent quantity, 171 per cent in value. This wonderful increase was due to the large demand for the article after the public had found out that linoleum is the most sanitary, cleanest, and in the long run the cheapest floor covering.

Up to 1907 the American factories could not supply the demand, and importations naturally increased until 1907, when they reached \$2,314,000. Since then they have declined to \$1,918,000 in 1912, or a decrease of 17 per cent, while exports of linoleum and oilcloth have increased from \$354,000 in 1907 to \$711,000 in 1912, or an increase of over 100 per cent.

We consider the duties on linoleum also as unjust and excessive, for the following reasons: Linoleum is made of ground cork and oxidized linseed oil on a foundation of burlap. As a binder certain so-called pigments are used, viz: Coloring matters, clay, ochers, wood flour, etc. Now, it has been claimed that the specific duty on linoleum of 8 cents, respectively, 20 cents square yard, is to compensate the manufacturer for the duties he pays on the imported articles he uses. But cork comes in free from Spain and Portugal, where Great Britain and Germany also must buy it. Flaxseed is not grown in England and Germany. They must import it from the

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

United States, Russia, India, and Argentina to make this linseed oil. Flaxseed is an important crop in this country, estimated for 1912 at 28,000,000 bushels, of a value of \$37,000,000, and in normal years this country exports \$9,000,000 of flaxseed. Linseed oil ought to be cheaper here than in England and Germany, except, perhaps, when the United States flaxseed crop is exceptionally short, as it has been in 1910 and 1911.

The so-called pigments are not higher here than in Europe; ochre is in fact exported from here. Only wood flour, which is an adulterant and not a necessary ingredient of linoleum, is imported to some extent, paying 35 per cent duty.

The only other article entering into the manufacture of linoleum which is dearer here than in England and Germany is burlap, which is imported from Dundee or Calcutta. The Payne-Aldrich tariff reduced the duty on this article, of which the linoleum manufacturers complained at the time, from 45 per cent to $\frac{1}{8}$ cent a pound and 15 per cent ad valorem, or to about 22 per cent ad valorem, without reducing the specific duty on linoleum. At the present prices of burlap the duty amounts to about $\frac{1}{2}$ cents per square yard.

We assert that, except burlap, the cost of materials for linoleum is the same here as abroad.

Labor.—Linoleum is made for the largest part by machinery and involves little skilled labor. In the special machinery used in the mills here very great progress has been made, and this country is in this regard ahead of Europe to-day, especially in the large and extremely ingenious machines making inlaid linoleum, which take the place of many human hands. Very little skilled labor receiving high wages is employed in a linoleum mill. The majority employed is the cheapest kind of immigrant labor.

The census states that in 1909 on a production of oilcloth and linoleum of value \$22,805,000, salaries to the officials, employees in the offices and the selling force, and wages to the workmen amounted to \$3,482,000, equal to $15\frac{1}{2}$ per cent of the value of the production. The census does not show what part of this sum represented the salaries of the officers and managers of the 30 mills in the industry, but everybody knows that in these close industrial corporations generally a large part of the profits is paid out as salaries to the officers and managers, if only to make it appear that the dividends earned are moderate. But estimating the salaries of officials and clerks, reported to number 340 persons, as only \$513,000, or $2\frac{1}{4}$ per cent of the output, that leaves 13 per cent going to wage earners out of a production of \$22,805,000.

We assert that the cost of labor in the linoleum mills of England and Germany is not under the American cost of 13 per cent of the output. Wages in Germany and England have steadily increased during the last five years, and while day's wages are still lower than here, it is conceded that machinery here is run much faster and the output per hand employed greater. An American mill employing 70 hands turns out as many yards as a European mill employing 100 hands. We assert that the cost of labor per yard here is not greater than in England or Germany.

Expenses.—As to other expenses. Coal in the States of Pennsylvania, New Jersey, and New York, where the linoleum mills are situated, is very much cheaper than in England and Germany to-day. The mills here have to pay very light State and municipal taxes, and no direct taxes to the United States Government at all except a trifling corporation tax. In Europe taxation of industrial establishments is very heavy.

In this country there is no legal compulsion to provide funds for sickness, accidents, and old-age pensions of the workingmen, whereas in England and Germany these payments entail a very heavy expense on the mills.

Considering all these facts entering into the cost of production we believe that the present rates of duty on linoleum are entirely excessive.

For some reason that nobody in the trade has been ever able to understand, the Dingley tariff fixed the duty on cork carpet at the practically prohibitive rate of 20 cents per square yard and 20 per cent ad valorem. Cork carpet is made of the same materials and by the same process as linoleum, only the cork is ground coarser and less linseed oil is used. It costs to produce rather less than linoleum. There is absolutely no reason why it should pay any higher duty than linoleum. Linoleum known as granite and linoleum known as oak plank linoleum have to pay under the present tariff 20 cents per square yard and 20 per cent ad valorem although the courts had decided, during the existence of the Dingley tariff, that they are not inlaid linoleum, but properly taxable the same as plain linoleum at 8 cents per square yard and 15 per cent ad valorem. These two kinds are not made by the same process or on the same machines as inlaid. There are no patterns or designs in them, repeated at regular intervals, but simply effects produced by linoleum mass of different colors being

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

spread haphazard on the burlap foundation and treated like plain linoleum. We request that these two kinds of linoleum be put again in the same class as plain linoleum in compliance with the decisions by the United States courts after exhaustive testimony was taken.

Since the present tariff went into effect, importations of these two kinds of linoleum have entirely ceased and the Government has derived no revenue from them.

Over 9 feet wide linoleum pays under the present tariff 12 cents per square yard and 15 per cent ad valorem, and we claim that this is an unjust duty aimed to prevent importations or 12 feet wide goods, which in effect it does prevent. Every manufacturer charges somewhat more per square yard for 12 feet wide than for the ordinary 6 feet wide, and goods of the larger width pay therefore a higher duty per square yard than the narrower width, but there is absolutely no reason for imposing a higher rate of duty on linoleum over 9 feet wide, except to shut out competition.

On inlaid the rate of duty is 20 cents per square yard and 20 per cent ad valorem, amounting on the importations of 1911 to 55.03 per cent. On cheaper grades the duty is 65 to 70 per cent.

When linoleum making was an infant industry in this country, there may have been some reason for imposing high duties on inlaid. Since then the machinery for making inlaid linoleum has been so perfected here, and the whole industry has reached such a state of efficiency, that there is no reason to-day for maintaining an excessive duty, which is driving out competition and diminishing revenue.

According to the census the American manufacturers produced, in 1909, oilcloth and linoleum, \$22,805,000, or 92.3 per cent, and import was \$1,895,000, or 7.7 per cent. These official figures confirm the statement of the importers made before your committee on November 30, 1908, that production was 90 per cent and imports 10 per cent, and flatly contradict Mr. H. A. Potter, who asserted on November 30, 1908, most positively that production was 80 per cent and imports 20 per cent, and reasserted these figures when questioned by Mr. Underwood.

GEO. STABER,

President Germania Importing Co., 41 Union Square, New York City.

NEW YORK, January 24, 1913.

NEW YORK, January 15, 1913.

HON. OSCAR W. UNDERWOOD,

*Chairman Committee on Ways and Means,
House of Representatives, Washington, D. C.*

SIR: The undersigned, importers and dealers in foreign and domestic floor coverings, wish to present to you their views on suggested changes in Schedule J, paragraph 347, covering linoleum and floor oilcloth. These two articles are used more or less in almost every house in the land, but principally by the poor classes of the population. Import duties which increase especially the cost of the cheaper grades of these articles are therefore a tax on a great majority of consumers, and benefit only a very few manufacturers. We submit that the present high duties on linoleum and floor oilcloth are unreasonable and unnecessary. Linoleum is properly and principally composed of ground cork, linseed oil and jute burlap as foundation. The cork wood is produced principally in Spain, Portugal, and Algiers, and the cost of it in the United States is not higher than in Great Britain or Germany, practically the only countries competing with the United States in the manufacture of linoleum. Flaxseed is not raised in Great Britain or Germany but it is imported from the United States, the Argentine, East Indies, and Russia, whereas in the United States it is raised on a large scale and is regularly exported to a large extent, although for the last two years, owing to the failure of the crop, exports were less than formerly. This year, however, the crop is very heavy, and prices have again reached a normal level. It may be asserted that under normal conditions linseed oil is produced cheaper in the United States than in Great Britain or Germany. The other important item in the manufacture of linoleum and oilcloth is the burlap or jute canvas which forms the foundation of both. This article has to pay an import duty of nine-sixteenths cent a pound and 15 per cent ad valorem, and as it is used in so many American industries the existing duties if lowered in the coming change should give an additional reason why the duties on the manufactured article of which it forms a part should be further reduced. So far as labor is concerned, this is a comparatively small item in the productive cost of linoleum and oilcloth, as the work is done almost entirely by machines, in the perfection of which the American manufacturers have excelled those of Europe. Only a few skilled workmen are employed

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

in a linoleum factory, and the majority of the employees of the American linoleum manufacturers are of the cheapest kind of immigrant labor.

We believe that the present duties can be greatly reduced and still afford ample protection to the American industry, which, in the first place, is protected to the extent of 10 per cent or more by freight insurance, and other necessary expenses incurred in importing foreign goods. As the present Payne-Aldrich bill and the Dingley bill have worked out, the specific duties have borne most heavily on the cheaper grades used principally by the poorer classes, and for that reason the undermentioned proposals eliminate all specific duties and substitute only ad valorem rates. We therefore suggest the new schedule should be as follows, in comparison with the present schedule:

PRESENT SCHEDULE.

Paragraph 347, Schedule J.

Linoleum, corticene, and all other fabrics or coverings for floors, made in part of oil or any similar product, plain, stamped painted or printed only, not specially provided for herein:

If 9 feet or under in width 8 cents per square yard and 15 per cent ad valorem; over 9 feet in width, 12 cents per square yard and 15 per cent ad valorem.

Any of the foregoing of whatever width, the composition of which forms designs or patterns, whether inlaid or otherwise, by whatever name known, and cork carpets; 20 cents per square yard and 20 per cent ad valorem.

Mats for floors made of oilcloth, linoleum, or corticene shall be subject to the same rate of duty herein provided for oilcloth, linoleum or corticene.

Oilcloth for floors, if 9 feet or less in width, 6 cents per square yard and 15 per cent ad valorem.

Over 9 feet in width, 10 cents per square yard and 15 per cent ad valorem.

(a) Cork carpet, so called, being simply a variety of linoleum, the ingredients being exactly the same, the only difference being in the chemical treatment of the linseed oil, there never was any reason for its being classified apart from ordinary linoleum. Cork carpet is cheaper to produce than equivalent thickness or quality of ordinary linoleum, and therefore it should carry no higher rate of duty. We include in this section linoleum known as granite, also linoleum known as oak plank, because neither of these are inlaid linoleum.

(See Treasury Decision No. 25075, *Hunter v. U. S. re Granite*, Feb. 7, 1904; Treasury Decision No. 29208, *Scott v. U. S. re Oak Planks*, July 27, 1908.)

(b) Inlaid linoleum: The rate of duty on inlaid linoleum under the present law has been continued for the past 16 years, during which time great developments and improvements have been made in this class of goods by the American manufacturers. Lower grades than formerly produced are now being made and the cost of production has been greatly decreased, whilst as the outcome of the lowering of the qualities the consumption has greatly increased. On the other hand, the importation has decreased since 1907. The proposed rate of 25 per cent ad valorem is ample protection under the present conditions.

It is impossible at this time to give figures as to the probable increase of importations under the herein-suggested changes. It is believed by us that the American manufacturers can meet by a reduction of their prices a substantial lowering of the present tariff, but, believing that the abolition of the specific duties would permit of the resumption of imports of low-priced linoleums and oilcloths as used by the masses, it is reasonable for us to state that these increased imports would offset the lowering of the present rates and could be expected to result in an increased revenue for the Government.

SUGGESTED NEW SCHEDULE.

Paragraph 347, Schedule J.

(a) Linoleum, stamped, painted, or printed, including corticene and cork carpet, figured or plain, also linoleum known as granite and oak plank, 20 per cent ad valorem.

(b) Inlaid linoleum in which the composing colors go solid through from the surface to the back to form a design or pattern confined in space, and repeated at regular intervals throughout the fabric, 25 per cent ad valorem.

Mats or rugs made of oilcloth linoleum, corticene, cork carpet shall be subject to the same rate of duty herein provided for oilcloth, linoleum, corticene, or cork carpet.

(c) Oilcloth for floors, stamped, painted or printed, 15 per cent ad valorem.

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

According to the last United States census the production of oilcloth and linoleum by 30 mills in the year 1909 amounted to \$22,804,000, of which \$10,844,000 was linoleum. Since 1909 up to the present time the production of these articles, especially of inlaid linoleum, has increased very much, as a number of large new mills have gone into operation.

Assuming that the ratio of increase of production prevailing from 1904 to 1909 has been maintained during the last four years, the total production of oilcloth and linoleum to-day would be \$35,855,000 and of linoleum alone \$20,330,000, as per table at foot. The exports in 1911 of oilcloth and linoleum were \$493,902, whereas the imports of oilcloth in 1912 amounted to the insignificant sum of \$52,246 and of linoleum \$1,866,185, or for oilcloth an insignificant fraction of the United States production and for linoleum amounting to 9.18 per cent of the United States production.

Production	1909	Increase over 1904.	Estimated increase, 1913 over 1909.	Estimate, 1913.
		<i>Per cent.</i>	<i>Per cent.</i>	
Oilcloth, floor.....	\$3,777,000	5.9	4.7	\$3,954,000
Oilcloth, enameled.....	2,265,000	46.9	37.5	3,114,000
Oilcloth, table.....	5,639,000	59.3	47.6	8,323,000
Linoleum, including cork carpet.....	7,850,000	85.8	68.6	13,235,000
Inlaid.....	2,994,000	171.0	137.0	7,095,000
Others.....	279,000	165.3	152.2	134,000
	22,804,000			35,855,000

† Decrease.

Respectfully submitted.

BRIEFS OF THOMAS POTTER SONS & CO.

OILCLOTH AND LINOLEUM.

[Schedule J, paragraph 347.]

There are three distinct articles of manufacture under this heading, all using linseed oil as a basis.

First. Table oilcloth, which is made on a cotton base and appears under paragraph 321 in the cotton schedule.

In all previous tariff laws these goods were specified as oilcloth not otherwise provided for and took a duty of 8 cents per square yard and 15 per cent ad valorem, which made an equivalent ad valorem of over 150 per cent, but in the present law were transferred to the cotton schedule, paragraph No. 321, and the duty here is 3 cents per square yard and 20 per cent, or an equivalent ad valorem of about 45 per cent.

Second. Floor oilcloth, paragraph 347. (Exhibit A.)

Third. Linoleum, paragraph 347. (Exhibits B, C, D, E, F, G, H, K.)

Floor oilcloth and linoleum appear in the flax and jute schedule because the foundation on which they are made is burlap made of jute.

Floor oilcloth is made on imported burlap. (Burlaps, par. 352.) The process is to take linseed oil in its liquid state mixed with ochre and other pigments and build up the fabric with successive coats spread on the burlap with a knife. After the desired thickness is obtained the patterns are printed on the surface and when dried and varnished is ready for the market. These goods, under the Dingley Act, if under 12 feet in width, were 8 cents per square yard and 15 per cent ad valorem and under the Payne Act were reduced to 6 cents per square yard and 15 per cent ad valorem. If

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

over 12 feet in width, were reduced from 20 cents per square yard and 20 per cent ad valorem to 10 cents per square yard and 15 per cent ad valorem.

The commercial widths of floor oilcloth are all practically under 9 feet.

Linoleums are made on a burlap foundation, but the linseed oil is oxidized and brought into a solid mass (Exhibit 1) and is then mixed with ground cork (all cork being imported, but free of duty) and other pigments. This composition is then rolled onto the burlap by passing the burlap and oil compound through heavy calender rolls, the quality and thickness of goods being determined by how far apart the calender rolls are placed.

Linoleums are divided into three classes: Plain, printed, and inlaid. The definitions of these classes are:

First. Plain is a uniform surface of composition of one color rolled on burlap. (Exhibit B.)

Second. Printed is a plain with a design or pattern printed on the surface either by a flat block or roller. (Exhibit C.)

Third. Inlaid: The composition is similar to the two foregoing, but the pattern or design is made of different colored compositions, which go through, or practically through, to the burlap foundation. (Exhibits D, E, F, G.)

The changes in the present law on this class of goods from the Dingley Act were principally in the phraseology.

The two commercial widths of linoleums are 6 and 12 feet. The Dingley Act made the division in width at 12 feet. It was intended that the 12-foot goods should pay a higher rate of duty than the 6-foot goods, but the importers took advantage of this language and cut the 12-foot goods (commercially known as 4-yard sheets) to 11 feet 11 inches and thus imported them under the lower rate of duty. To prevent this palpable evasion of the law Congress made the dividing line 9 feet, thus preventing the fraudulent entering of goods by cutting them 1 inch narrower.

Under 12 feet in width, the duty in the Dingley Act was 8 cents per square yard and 15 per cent ad valorem. The present law did not change this rate of duty.

Twelve feet in width and over in the Dingley Act, the duty was 20 cents per square yard and 20 per cent ad valorem. Under the present law the duty on 9 feet and over was reduced to 12 cents per square yard and 15 per cent ad valorem.

From August 6, 1909, to June 30, 1912, under the Payne Act, there were imported into the United States linoleums under 9 feet in width, 7,504,945 square yards, valued at \$2,320,740.97, and the Government collected in duties \$898,505.29. (Exhibits B, C, H, K.)

Inlaid (Exhibits D, E, F, G).—The Dingley Act fixed the duty on these at 20 cents per square yard and 20 per cent ad valorem. There was no change made in this duty, but the phraseology was changed to correct two decisions of the circuit court, one in Boston and one in New York. After the passage of the Dingley Act there were two new kinds of inlaid linoleum introduced to the trade, known as Plank (Exhibit E) and Granite (Exhibit F) inlaid linoleum. The importers claimed that these were not inlaid, but plain goods. The appraisers at New York said that Granite (Exhibit F) was inlaid linoleum and should pay a duty of 20 cents per square yard and 20 per cent ad valorem. The importers appealed to the Board of General Appraisers, and they sustained the appraisers. Then the importers appealed to the circuit court in New York, and they decided that these goods were plain and admitted them at 8 cents per square yard and 15 per cent ad valorem.

The Plank inlaid (Exhibit E) was entered at Boston. The appraisers at that port classed it as inlaid. On appeal, the Board of General Appraisers sustained the appraisers. On appeal, the circuit court in Boston reversed the board and allowed the goods to come in as plain at 8 cents per square yard and 15 per cent ad valorem instead of 20 cents and 20 per cent.

The same question has come up again under the present law. The appraisers in New York classed Granites as inlaid and were sustained by the Board of General Appraisers. On an appeal to the Customs Court, the decision of the Board of General Appraisers was sustained.

The changes made in the rates on these goods from the Dingley Act were as follows:

Linoleums under 9 feet in width are 8 cents per square yard, 15 per cent. No change. Equivalent ad valorem under present law, 38.7 per cent.

Linoleums over 9 feet in width, reduced from 20 cents per square yard and 20 per cent ad valorem to 12 cents per square yard and 15 per cent ad valorem. Equivalent ad valorem, 61.5 per cent.

Inlaid linoleums are 20 cents per square yard and 20 per cent. No change. Equivalent ad valorem, 54.4 per cent.

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

There was imported into the United States, under the present law, up to June 30, 1912, 14,316,508 square yards of floor oilcloth and linoleum, valued at \$5,745,207.10, from which the Government derived a revenue of \$2,762,448.15.

Besides this, the American manufacturers imported about 60,000,000 square yards of burlap per year, all made abroad. For the three years of the present law they would have imported 180,000,000 square yards, at an average foreign value of 5 cents per square yard, and with an equivalent ad valorem of 28 per cent, the Government would have derived an additional revenue from this industry of \$2,500,000.

Imports in year—	Square yards.	Foreign value.	Duty.
1909.....	5,351,521	\$1,909,339.46	\$984,396.73
1910.....	4,943,381	1,845,046.75	956,901.50
1911.....	5,317,651	2,070,747.35	1,026,883.03
1912.....	4,439,078	1,918,431.00	868,879.51

Under the last year of the Dingley Act, equivalent ad valorem 51.5 per cent. Under the three years of the Payne Act, equivalent ad valorem 48 per cent.

When you take into consideration the fact that this is one of the smaller industries of the country, employing about 5,000 men, and a capital of about \$15,000,000; that the Government derives a revenue from the industry of nearly \$2,000,000 per annum; it would not appear that the duties are either excessive or prohibitive.

Linseed oil has a duty of 15 cents per gallon, and the pigments that we use average considerably over 25 per cent ad valorem. We do not question the right of the committee to place what duties they see fit on the manufactured products of others, which are our raw materials, but when these duties are fixed, we think we should have compensation for this and for the difference in labor and overhead charges.

In regard to labor and overhead charges, we in the United States pay double that of England, and labor is even less on the Continent than it is in Great Britain. A recent advertisement for the sale of a linoleum plant in Antwerp says, among other inducements: "Wages are moderate; on an average of 3 francs for a day's work of 10 hours." The cheapest labor that we can get is from \$1.75 to \$2 for 8 hours.

Since 1894, when the Wilson bill was passed, labor conditions in this country have entirely changed. At that time we could get all the labor we wanted at from \$1.10 to \$1.25 a day for 10 hours, with no extra charge for overtime, but now we have to pay from \$1.75 to \$2 for 8 hours, and time and half time for overtime.

Therefore, since that time labor has doubled in the United States and Europe has not kept up this pace. This increase in labor applies to wages paid for manufacture and affects also the overhead charges, such as building operations, salesman expenses, insurance, etc.

The sales and consumption of floor oilcloth are decreasing, but of linoleum are increasing.

Over 80 per cent of the imports are on lineolums having a foreign value of more than 36 cents per square yard, and over 40 per cent of this quantity is on inlaid having a foreign value of over 60 cents per square yard. These goods are not consumed by the masses, but are used by the people who have money to pay for a good, serviceable article, and they compete with hardwood and mosaic floorings. The introduction of cement floors has largely increased the consumption of linoleum and inlaid. They are used largely by the Government on all vessels in the Navy and Government buildings, and also for courthouses, hospitals, libraries, churches, theaters, restaurants, and hotels.

The act of 1890 (McKinley) was the first act to recognize linoleum by name, as distinguished from floor oilcloth. The dividing line in this act was on value. Goods valued below 25 cents per square yard were 40 per cent ad valorem; over 25 cents per square yard the duty was 15 cents a square yard and 30 per cent ad valorem.

The act of 1894 (Wilson) used the same language as the act of 1890, but placed the duties for goods under 25 cents per square yard at 25 per cent ad valorem, and over 25 cents per square yard at 40 per cent ad valorem.

The act of 1897 (Dingley) did away with the value and made the division on the width, because the wide goods were used exclusively by the rich, the manufacture of which was small in the United States, and the duties under all previous acts did not compensate us for the difference in material and labor used in this product.

PARAGRAPH 347—OILCLOTH AND LINOLEUM.

The most aggressive manufacturer in England is Jas. Williamson & Son, of Lancaster, England. The American representative of those goods is Lyon Bros. & Co., of Baltimore, and their activity in trying to break down the American tariff on linoleum was undoubtedly inspired by their principal in order to make a larger market in the United States for his product.

The British manufacturers have an association, which is very much in the nature of a trust, to control prices in Great Britain and her colonies. Our agent in Great Britain writes us as follows:

"The following are the facts relating to the association of linoleum manufacturers in this country (Great Britain):

"The greatest secrecy is enjoined on all connected with the association, even in small matters, so that it has been difficult to get at the actual facts.

"Each firm issues two price lists, one applicable to Great Britain, British colonies, and possessions, the other to foreign countries, excepting France, Austria, and the United States. The two latter countries are regarded as open markets, and there is a special list for France.

"Qualities are fixed by micrometer gauge; weights are specified for each piece of 50 square yards each gauge; manufacturers employing their own designation of qualities. The price lists are subject to 10 per cent discount, except Government and railroad contracts, these being strictly net.

"No orders are to be accepted where delivery exceeds six months, except in case of Government and railroad contracts.

"New pattern books are to be issued once annually, on September 1, and no jobs or rejects to be offered during that month. Any member having a complaint brings the matter before the notice of the secretary, and in event of the matter not being adjusted, and a dispute arising, the matter is then placed before the arbitrator. He inflicts all penalties, and his decision is final.

"The arbitrator is a man outside of the business and is a prominent member of Parliament."

In conclusion, we submit that the duties in the present law are fair, both from the view of moderate protection and for a revenue basis, and would therefore ask that this paragraph be not disturbed. But in any event, we would ask that the duties be left compound rather than reduce them to all ad valorem.

THOMAS POTTER SONS & Co. (Inc.).
H. A. POTTER, *President*.

Since the enactment of the Payne Act, August 6, 1909, there has been imported into the United States up to June 30, 1912:

LINOLEUMS UNDER 9 FEET IN WIDTH.

	Square yards.	Foreign value.	Duty.
1910.....	2,328,427.79	\$605,716.50	\$227,131.71
1911.....	2,713,149.74	825,169.47	340,826.78
1912.....	2,463,368.32	889,855.00	330,547.71
Total.....	7,504,945.85	2,320,740.97	898,506.20

Equivalent ad valorem, 38.7 per cent.

LINOLEUMS OVER 9 FEET IN WIDTH.

1910.....	181,423.95	\$44,382.00	\$28,429.26

PARAGRAPH 347—OILCLOTH AND LINOLEUM

SUPPLEMENTAL BRIEF OF THOMAS POTTER SONS & Co. (INC.).

The importers of linoleums assert that the present duty will only permit the importation of high priced goods and tends to shut out all low priced goods.

We have been unable to obtain any figures from any of the treasury reports published to show what the various prices of the linoleums were entered in 1912 on the 2,463,368 square yards, but we know that in this quantity were included Battleship linoleum, Plain A linoleum and cheap printed linoleums.

If the importers were honest and invoiced these goods at the price in the home market on the day of shipment, which is required by our laws, Battleship linoleums should have been invoiced at 88.45 cents per square yard, Plain A linoleum at 43.35 cents per square yard and D and E printed linoleum at an average of 26.06 cents per square yard.

All linoleums over 9 feet in width are sold in Great Britain at 5 cents per square yard over the price of linoleums under 9 feet in width, but the treasury reports of 1912 show that linoleums under 9 feet in width had a foreign value of 36.1 cents per square yard, while over 9 feet in width the foreign value was 27.2 cents per square yard.

The figures and prices herein mentioned are taken from the foreign price list, copy of which is attached.

If you analyze the imports of 2,463,368 square yards of linoleum at various prices to arrive at the unit of foreign value per square yard for the year 1912, it would figure as follows: 2,463,368 square yards; valued at \$889,855; duty, \$330,546; foreign value, 36.1.

	Square yards.	Foreign price.	Value.	Per cent.
Battleship.....	369,625	88.45	326,933	15
Plain A.....	100,000	43.35	43,350	4
Printed linoleum.....	1,993,743	26.06	519,568	81
Total.....	2,463,368	36.1	889,851	100

This would show that 81 per cent of the linoleums imported are the cheap linoleum made in Great Britain.

According to this division, which we believe to be practically correct, the equivalent ad valorem would be on Battleship linoleum, 24 per cent; on Plain A linoleum, 35.7; D and E printed linoleum, 45.6. The equivalent ad valorem for 1912 for all linoleums over and under 9 feet in width was 38.7 per cent.

In regard to inlaid linoleums the manufacturers in the United States are not yet able to supply the demand for this class of goods, and any duty that is placed on this article will bring a good revenue to the Government. The equivalent ad valorem on this class of goods for 1912 was 52.2 per cent, and for the year the Government derived a revenue of \$473,126.31.

Floor oilcloths.—On account of climatic conditions the material made in Great Britain would not sell in this market at any price. The foreign oilcloths have a soft, leathery feel as against the hard, firm feel of the American product.

The imports on this class of goods are confined almost exclusively to a new product under the various names of Palruba, Parquette cloth, Woodgrain, etc. (Exhibit No. 1), which has come in extensively with the increased demand for carpet rugs. These goods sell at retail in the United States at about the same prices as cheap linoleums.

The foreign value of oilcloths imported for the year 1912 is 20 cents per square yard. The average price of floor oilcloth in the United States is below 20 cents per square yard.

We wish to correct the figures as given by the importers as to the American production as per census of 1909. Of the \$22,804,000, only \$14,904,000 is under paragraph 347. The balance, \$7,904,000, is under paragraph 321 in Schedule I. The exports of oilcloth are confined almost entirely to table and enameled oilcloths. We are unable to compete with Europe in the world's market on account of the low prices of the foreign manufacturers. The labor and expense on floor oilcloth is about 20 per cent; on linoleum about 30 per cent, and on inlaid linoleum about 40 per cent.

PARAGRAPH 348—COLLARS AND CUFFS.

PARAGRAPH 348.

Shirt collars and cuffs, composed of cotton, forty-five cents per dozen pieces and fifteen per centum ad valorem; composed in whole or in part of linen, forty cents per dozen pieces and twenty per centum ad valorem.

COLLARS AND CUFFS.

TESTIMONY OF E. H. BETTS, REPRESENTING THE COLLAR AND CUFF MANUFACTURING ASSOCIATION OF TROY, N. Y.

The witness was duly sworn by the chairman.

The CHAIRMAN. What paragraph do you desire to speak on?

Mr. BETTS. I wish to speak on paragraph 348 of Schedule J. Mr. Chairman, may I ask that copies of this brief [indicating] be put in the hands of each member of the committee?

The CHAIRMAN. Yes.

Mr. BETTS. Mr. Chairman, I come from Troy, and I suppose when I say that you will recognize that I want to talk about collars and cuffs. I want to talk principally about collars, and you may understand that when I say "collars" I mean collars and cuffs.

I have the good fortune to be the vice president of Earl & Wilson, a New York State corporation, which with its predecessors, a copartnership under the same name, has been in the business of manufacturing collars and cuffs for 45 or 50 years.

But I did not come here to represent my own company. The Collar Manufacturers of Troy, and when I say "Troy," I practically say the collar manufacturers of the United States, have appointed a tariff committee of five members, whose names you will see signed to the brief, and I am only the spokesman of that committee.

As is stated in our brief, in one of the earlier pages, in fact, I think, on the first page—our city, Troy and its outlying community, is dependent in a peculiar way on one industry, namely, the collar and shirt business. I do not wish to talk about shirts to-day, however, as they are not in this schedule. But in our factories they are so interwoven with each other that we are all of us in both the collar and shirt business. I wish, however, to devote my remarks to collars. I think it is fair to say that half the population of our community depends for its livelihood on the pay rolls of the shirt and collar factories, and that the city has no other very apparent means of support. We think our industry, therefore, is entitled to consideration because of its relation to the community as well as for its own sake.

I am afraid that there is a good deal of misunderstanding about collars. I think I can explain the facts very briefly. We may say that the collar business of the United States can be divided into two main groups. There are collars that retail for 25 cents each and more. Then there are collars which retail at two for 25 cents and less. Broadly speaking, the 25-cent collars are linen and the cheaper collars are cotton. When I say "a linen collar" I do not mean a collar that has every thread linen. In speaking of collars, a collar which has one ply of linen is known as a linen collar, and comes under the classification of linen in importations and in trade.

PARAGRAPH 348—COLLARS AND CUFFS.

I wish to talk briefly about the two-for-a-quarter collars, not the linen collars. I should like to say here, if I may, in explanation of the attitude which some of you gentlemen may be familiar with, of the representatives of our industry at previous tariff hearings, that we have always asked that the present high rate of duty be maintained. We come before you to-day and concede that a lower duty would not bring great disaster upon us, and therefore I wish to talk with you not as to whether there shall be a reduction in duty, but how much reduction in duty. We have prepared our brief with that in mind.

Mr. PALMER. You mean how little?

Mr. BETTS. It depends upon whose point of view it is. We prepared our brief, following the instructions of this committee, very carefully, and hope that we put it in a light to show you that we have tried to get your point of view, and we want to give you our point of view.

Our business has undergone a change in recent years, and, as I say, we are able to get along with less protection, if I may use that offensive word, Mr. Chairman, than what we formerly had. But I wish to make this point very plain, sir. I noticed that some of you gentlemen are looking at bulletins probably of importations, and if you will look, I think it is the second page of our brief, you will see that information is transcribed, you might say, in A B C language. You will notice that there are some importations of cotton collars, but that they do not amount to anything. I think it is something like 7,000 dozen a year. If you will look at the average value of those collars you will see that they come in at a value of a little less than 92 cents per dozen. Collars brought into this country at 92 cents a dozen and paying a rate of duty of 45 cents and 15 per cent, as they do, their price would be so raised that it would be impossible to sell them at a popular price. By that I mean two for a quarter. Therefore, those cotton collars must not be considered as the cotton collars that will come in under any competitive rate of duty, whether it is the one which you suggest or the one which I suggest, or something else. I want that to be very clear.

Mr. Chairman, it is a fact, and I will have samples—unfortunately they have been delayed in transit: they are on the water somewhere—which prove the statement I make that collars of a quality that will favorably compete with our two for a quarter collars can be manufactured and sold at a manufacturer's profit, and are to-day being manufactured and sold in Germany and other European countries not at 92 cents a dozen, the present average import price, but at prices ranging from 50 to 60 cents a dozen, a price at which we can not compete because of the great difference in the cost of production due to the difference in the rate of wages.

Mr. HARRISON. How do you account for the unit of value being, as you say, 92 cents a dozen. Is that because only some special kinds come in?

Mr. BETTS. I think it must be so, Mr. Harrison. Those collars are being sold not at a popular price, but at 25 cents apiece, and more, and they compete not with cotton collars, but with linen collars.

Mr. HARRISON. The popular price in Germany being about 45 or 50 cents a dozen?

PARAGRAPH 348—COLLARS AND CUFFS.

Mr. BETTS. The manufacturer's price, yes; at his factory door. I might say, by way of explanation, that you might notice that if you go into a store in Germany you pay practically as much for a collar as you do in America, and yet there is a difference of substantially 30 cents a dozen in the cost of production. But it is a fact that the German and English and other European methods of distribution eat up all that 30 cents which they save in production. That is a difference, which I will explain if you like, but I believe you will not care to hear it.

The CHAIRMAN. That is a rather remarkable condition. Most of the witnesses who come before us contend that even the cost of distribution is higher in this country than abroad.

Mr. BETTS. Their system of distribution is totally different. Twenty-five or 30 years ago in this country we made collars to order for every haberdasher. We carried a stock for all the customers on our books with their brand on them, and when they wanted collars they sent for them, and when they did not want them we kept them, sometimes two or three years, and when they went out of business we could not sell them to anyone else. That was an enormous drain on the cost of manufacture.

In America collars are sold by trade-mark. Aggressive business methods, advertising, have forced that condition on the retail dealer, and any one of you gentlemen has on, I dare say, a well-known trade-marked collar. That is where we make a big saving over the foreign method of distribution.

Mr. HARRISON. At what prices are the American collars sold by the manufacturer with which these German collars selling for from 40 to 50 cents a dozen would come in competition in our market?

Mr. BETTS. Sold by the manufacturer?

Mr. HARRISON. Yes.

Mr. BETTS. If, as some of us are, we are strictly manufacturers, and sell our collars to the jobber, the customary price of these collars is 85 cents a dozen. Most of us, however, act as our own jobbers, and then we sell our collars at \$1.10 a dozen, less 6 per cent. Of course it costs us money to sell them, and we are substantially not much better off than the man who sells to a jobber.

Mr. HAMMOND. Is that custom of distribution maintained in Germany now the custom of which you speak?

Mr. BETTS. Yes.

Mr. HAMMOND. Of manufacturing for individual dealers?

Mr. BETTS. Yes; in Germany and, so far as I know, in all European countries. So, I wish to make it very clear that when you come to sit down and make a rate of duty on collars, if you look at 92 cents a dozen, the present average import price, and you say, "Well, 25 per cent on that ought to be all right," you will be making a mistake. You want to remember—and I can prove to the committee, and I propose, if you will let me, to file samples—that the average price of importation is going to be about 55 cents. I hope that is perfectly clear. It is the most important thing I have to say to this committee, but I have some more to say.

The CHAIRMAN. Will you say it over again, Mr. Betts?

Mr. BETTS. When you proceed to put a rate of duty on cotton collars, and you look at 92 cents as the import price, and you say 25

PARAGRAPH 348—COLLARS AND CUFFS.

per cent is 23 cents per dozen and a fraction, that looks reasonable. But if you look at it with 50 or 55 or 60 cents as the import price, and then say 25 per cent, you are going to give us something between 13 and 14 cents a dozen protection.

Mr. PALMER. You mean under the reduced rate of duty on the cheaper collars that come in?

Mr. BETTS. No; any competitive rate of duty which will allow foreign collars to come in to be sold for popular prices. They are going to come in here at about 55 cents a dozen.

Mr. PALMER. According to the figures I have before me, the unit of imports is about \$1.37.

Mr. BETTS. That is on linen collars. I am not talking about linen collars.

Mr. PALMER. You are talking now about cotton collars?

Mr. BETTS. Yes, sir; about cotton collars, retailing two for a quarter.

Mr. HAMMOND. Where did you get your figure of 92 cents a dozen?

Mr. BETTS. That is the average value of the present importation. That is, the average value of the present importation is 91.7 cents per dozen. There are about 7,000 dozen a year being imported.

The CHAIRMAN. What do you say the cost price is to the manufacturer? Coming from Troy, I suppose most of it is being manufactured in your own city and the cost price ought to be pretty uniform?

Mr. BETTS. Yes.

The CHAIRMAN. What is the cost price for cotton collars in Troy?

Mr. BETTS. Seventy-nine cents is a fair average price.

The CHAIRMAN. Seventy-nine cents?

Mr. BETTS. Yes, sir; that is, without any manufacturer's profit.

The CHAIRMAN. You say on that same class of collars the manufacturer's price in Germany is how much?

Mr. BETTS. I think it is 50 cents, but I am prepared to say that it will run from 50 to 60, and that is the statement I wish to make—an average of 55 cents.

The CHAIRMAN. Then, according to that statement, if it was 60 cents, 20 cents a dozen on cotton collars would absolutely equalize your difference in cost, or, to be exact, if it was 60 cents, 19 cents would equalize the cost? If they cost 50 cents, 29 cents will equalize the difference in cost?

Mr. BETTS. Yes.

The CHAIRMAN. That would be less than 40 per cent ad valorem, would it not?

Mr. BETTS. If you do not mind, Mr. Chairman, I would like to proceed with this, because there are some other factors that make up this matter of competition, and I think I can answer questions as I proceed.

Mr. HAMMOND. I do not understand that 92 cents yet. How does it happen that the import price is 91 cents and a fraction if the collars are actually bought at 55 cents a dozen?

Mr. BETTS. I do not say they are the 55-cent quality; they are higher priced but are classified as cotton.

Mr. HAMMOND. I see. The cheaper goods do not come in now?

Mr. BETTS. No, sir; they are prohibited from coming in by the tariff.

PARAGRAPH 348—COLLARS AND CUFFS.

Mr. HAMMOND. I see.

Mr. JAMES. What would be the effect of the rates you advocate before the committee?

Mr. BETTS. I am coming to that. Can I answer that when I come to it, or shall I answer it now?

Mr. JAMES. You may answer it now, if you prefer.

Mr. BETTS. I would rather answer it a little later on. As we understand the purpose of your committee, it is to draw a bill with a competitive rate of duty, and the Underwood bill carries a rate of 25 per cent. Now, naturally, we tried to find in our own minds why you made it 25 per cent instead of something else, and we looked back over the history of tariff legislation on collars, and we saw that under the Wilson bill, 20 years ago, there was a rate of 40 per cent on cotton collars. Under the Wilson bill a good many collars came into this country, but no cotton collars, even at 40 per cent, and the reason of that is that there were no cotton collars; that is, no great quantity of cotton collars made either at home or abroad in those days. The collar business was a linen-collar business in those days. So that if the Wilson bill rate of 40 per cent were now in force we would see an abundance of cotton collars seeking our market.

Mr. HULL. Have you said what proportion of the cost of production is labor cost?

Mr. BETTS. I think we have stated in there the labor cost, in cents per dozen, and it would be easy to figure it in per cent of total cost—42 cents. The statement in our brief is that the cost of labor is—

Mr. FORDNEY. 42 cents out of a total cost of 79?

Mr. BETTS. Yes, sir. It is a simple matter of arithmetic to work it out. I believe that this rate proposed in the Underwood bill—25 per cent ad valorem or $13\frac{3}{4}$ cents per dozen, would bring a severe misfortune to our community. We could not sell collars of an equal quality in competition with the foreign collars that come in. The importer would have his pick of our market. He would not have it all, of course. He would have his pick and we could take what he did not want.

The CHAIRMAN. Let me ask you there right on this point. You gave 50 cents as the lowest rate, but you said you would guarantee they could be bought at 60 cents?

Mr. BETTS. No; I beg your pardon, Mr. Underwood. At an average of 55 cents I am prepared—

The CHAIRMAN. I am just figuring it at 60 cents. If you can make them at 79 cents a dozen and it cost 60 cents a dozen to make them over there, excluding any cost of transportation and insurance coming in here, 19 cents a dozen would equalize the difference in cost of production at home and abroad, and it is covered absolutely by a 24 per cent ad valorem tariff rate. A 24 per cent tariff rate would exactly cover that difference, would it not?

Mr. BETTS. As I figure it, 25 per cent on an average valuation of 55 cents a dozen would give us $13\frac{3}{4}$ cents a dozen protection.

Mr. PALMER. Let me put it in this way: If the 19 cents would cover the difference in cost of production, why do you ask for a rate which would be equivalent to 38 or 40 cents a dozen, just twice as much?

PARAGRAPH 348—COLLARS AND CUFFS.

Mr. BETTS. I have it here in my argument, but I will answer it now.

Mr. PALMER. It would add to the difference in the cost of production a reasonable profit to the American manufacturer?

Mr. BETTS. Seventy-nine cents includes no profit to the American manufacturer.

Mr. PALMER. But 19 cents covers the difference in cost of production, according to your statement?

Mr. BETTS. No; 24 cents—55 cents average value. I am prepared to see those collars come in at 50 cents. I am sure that they will come in at 55, but I expect them at 50.

Mr. PALMER. If they come in at 55—of course, that is the foreign cost, is it?

Mr. BETTS. The manufacturer's profit is in there.

Mr. PALMER. Can you not give us per dozen the difference in labor cost here and abroad?

Mr. BETTS. I have it in my brief, sir. It is 30 cents.

Mr. PALMER. Thirty cents a dozen?

Mr. BETTS. Yes.

Mr. PALMER. Then, if in fixing your rate at 30 cents a dozen and 15 per cent ad valorem you are equalizing the difference in cost of production with the 30 cents, why are you putting a 15 per cent ad valorem in? Is that to cover your cost?

Mr. BETTS. No, sir. The American public, in my opinion—and I feel sure I am right in saying that the American public—is less prejudiced against purchasing foreign articles than any purchasing public in the world, and a collar stamped "imported" has a call in many stores and by many consumers or wearers of collars.

Mr. PALMER. And that you do not want to come in?

Mr. BETTS. We are willing, sir, under the policy which we suppose is to be followed in framing this bill, to see a reasonable amount of collars come in.

Mr. PALMER. You have said that 30 cents a dozen will cover the difference in cost of production?

Mr. BETTS. Yes.

Mr. PALMER. But you have suggested a rate of 30 cents per dozen and 15 per cent ad valorem?

Mr. BETTS. Yes, sir.

Mr. PALMER. If the 30 cents per dozen covers the difference in cost of production, why do you ask for the 15 per cent—to keep the foreign article out? to make the rate prohibitive?

Mr. BETTS. It is the opinion of the committee which I represent, and we have given it careful thought, that at the rate we recommend there will be importations within a year or so of at least 300,000 dozen collars and that there will be a margin enough of profit in it for the foreign manufacturer and for the retailer to put them in his store alongside of our collars, and they will be sold at two for a quarter.

Mr. PALMER. Why do you not just fairly and frankly answer my question?

Mr. BETTS. I thought you wanted an explanation, sir.

Mr. PALMER. You say the difference in cost of production is 30 cents a dozen?

PARAGRAPH 348—COLLARS AND CUFFS.

Mr. BETTS. Yes.

Mr. PALMER. You have suggested a rate of 30 cents per dozen, plus 15 per cent ad valorem?

Mr. BETTS. Yes, sir.

Mr. PALMER. The 30 cents a dozen is evidently made to cover the difference in cost?

Mr. BETTS. Yes.

Mr. PALMER. What is the 15 per cent ad valorem intended to do?

Mr. BETTS. That is intended to offset somewhat the importer's advantage of us in merchandising his product in this country.

Mr. PALMER. In other words, it is intended to make the rate prohibitive?

Mr. BETTS. No, sir.

Mr. JAMES. I suppose you asked that 15 per cent, following the Bible saying, "Ask much that your joy may be full." Is that right?

Mr. FORDNEY. May I ask you, to see if I understand you right—you say that the import price, which is 55 cents, includes a profit to the foreign manufacturer?

Mr. BETTS. Yes.

Mr. FORDNEY. Your cost is 79 cents?

Mr. BETTS. Yes, sir.

Mr. FORDNEY. The difference in cost here and abroad is 30 cents. Did I get that right? Therefore, their foreign cost is 49 cents a dozen, and when they sell at 55, that gives them 6 cents per dozen for delivery and profit?

Mr. BETTS. That is the way I understand it.

Mr. FORDNEY. Forty per cent on their cost of production would come nowhere near offsetting the difference in cost here and abroad, would it?

Mr. BETTS. Of course, we would regard—

Mr. FORDNEY. That would be practically 20 cents.

Mr. BETTS. We would figure it on their invoice price.

Mr. FORDNEY. Forty per cent ad valorem, or 40 per cent of their cost. If you base it on their cost, 49 cents, or say, 50 cents, 40 per cent of that would be 20, and that would run it up to 70 cents. You are still 9 cents behind them, then?

Mr. BETTS. I am willing to concede that these collars will be invoiced at 55 cents, and to figure on the basis of 55 cents invoice price. Forty per cent on 55 cents—I am not much on mental arithmetic—would be—

Mr. PALMER. Twenty-two and one-half cents.

Mr. FORDNEY. Twenty-two and one-half cents. That would be 77. Then your actual cost being 79, you are still behind them, then, because this 55 cents includes their profit?

Mr. BETTS. Yes.

Mr. FORDNEY. But the 79 cents cost does not include your profit?

Mr. BETTS. That is right.

Mr. FORDNEY. Therefore you have got to have more than 50 per cent to offset the difference in cost and put you on a fair competitive basis with them in our market. Is not that right?

Mr. BETTS. That is why we have asked for the rates we have, to get on a fair competitive basis.

PARAGRAPH 348—COLLARS AND CUFFS.

Mr. HAMMOND. I can not see how you can make it possibly more than 45 per cent. If the goods cost 55 cents a dozen, that is, the invoice price, and you can make them for 80 cents a dozen, the difference is 25 cents.

Mr. BETTS. Yes.

Mr. HAMMOND. And 25 cents is 45 per cent of the 75 cents—the invoice price?

Mr. BETTS. But our German friend has had his profit out of the 55 cents, but we have had nothing out of the 79 cents.

Mr. FORDNEY. That was the point I was trying to make.

Mr. HAMMOND. You mean that the cost of production is below 55 cents?

Mr. BETTS. Yes; I say that is his selling price, not his cost price.

Mr. HAMMOND. And 80 cents is your selling price?

Mr. BETTS. No, 79 cents is our cost price, 85 cents is our selling price.

Mr. HAMMOND. Do you know what his cost price is?

Mr. BETTS. I can not swear to it, sir. I believe that it is about 50 cents.

Mr. PALMER. Mr. Fordney need not be unduly alarmed, because the rate that you suggest, 30 cents a dozen and 15 per cent ad valorem, is 69 per cent on the 55 cents.

Mr. BETTS. I have not figured it out yet.

Mr. FORDNEY. I did not know what rates he had suggested. I was not speaking on that.

Mr. PALMER. I thought you were fearing that the 40 per cent rate would not take care of him.

Mr. FORDNEY. I did not know what rate he had asked for.

Mr. BETTS. If you do not mind, I should rather talk in cents per dozen on account of this difference in the present import price and probable import price.

Mr. JAMES. You want just twice as much as the difference between the import price and the cost of producing the articles?

Mr. BETTS. I did not so figure it.

Mr. JAMES. Thirty-eight and one-fourth per cent. Our friend Fordney figures you out twice as much as you want.

Mr. FORDNEY. No; I have not figured out any more than I should like to see him have.

Mr. KITCHIN. Mr. Betts, to get at this industry, what it means and what it is, I wish to ask you some questions. How much is the annual American output of cotton collars and cuffs, in your best judgment?

Mr. BETTS. In my best judgment it is about \$12,000,000.

Mr. KITCHIN. \$12,000,000. That is just the amount made in Troy, is it not?

Mr. BETTS. Yes, sir; but that is practically all there is.

Mr. KITCHIN. They make about 95 per cent?

Mr. BETTS. They make about all of it.

Mr. KITCHIN. Are there any made in New York City?

Mr. BETTS. There are a few.

Mr. KITCHIN. There are some big establishments in New York City, are there not?

PARAGRAPH 348—COLLARS AND CUFFS.

Mr. BETTS. I do not think there are, making that class of collar, sir.

Mr. KITCHIN. I understood that the production was about \$15,000,000 annually of cotton collars and cuffs. You say it is about \$12,000,000?

Mr. BETTS. I think that is it.

Mr. KITCHIN. It has been running for the past 15 or 20 years between \$8,000,000 and \$12,000,000, has it not?

Mr. BETTS. I have not compiled any figures of the past history, but that sounds reasonable.

Mr. KITCHIN. There has not been at any time within the last 20 years as much as \$25,000 worth of collars and cuffs imported into this country in any one year, has there?

Mr. BETTS. Not cotton collars.

Mr. KITCHIN. I mean the articles we are talking about now. So, actually in the last 25 years the home manufacturer sold out of every \$500 worth about \$499.50, and the foreigner sold in the last 25 years less than 50 cents out of every \$500 worth. That is about right, is it not?

Mr. BETTS. It sounds reasonable. I have not figured it.

Mr. KITCHIN. And last year they imported a little less than \$7,000 worth and your industry made here \$12,000,000 worth?

Mr. BETTS. Yes, sir.

Mr. KITCHIN. So that out of every \$2,000 worth of collars sold to the American people the home manufacturers sold about \$1,999 and the importer sold about \$1? The Troy manufacturers sell to Canada, do they not?

Mr. BETTS. Somewhat.

Mr. KITCHIN. And England and France also compete with your collars, do they not?

Mr. BETTS. In Canada?

Mr. KITCHIN. Yes, sir.

Mr. BETTS. There are English collars in Canada. I do not know of any French collars.

Mr. KITCHIN. England makes collars?

Mr. BETTS. Yes.

Mr. KITCHIN. You sell a pretty good product in Canada, do you not? You sell a great many more in Canada than are imported into this country from all the world?

Mr. BETTS. Of cotton collars.

Mr. KITCHIN. That is what I am talking about. If it costs you so much more to make them here than it does anywhere else, say, in England, how can you compete with England and sell any collars to Canada when England has a 33½ per cent preferential duty in her favor against us?

Mr. FORDNEY. Does that preferential rate apply to collars and cuffs?

Mr. KITCHIN. Everything.

Mr. FORDNEY. No; it is not on everything.

Mr. KITCHIN. Yes; on collars and cuffs, too. We want to know the facts.

PARAGRAPH 348—COLLARS AND CUFFS.

Mr. FORDNEY. But pardon me, my dear friend, if the rate is 33½ per cent—

Mr. KITCHIN. This gentleman should know the facts. I am just asking these questions because he is willing to tell us. You do compete with England. Now then, if England is making cheaper goods than you say it is possible for you to make, how can you compete over in Canada when England has a preferential duty in her favor when you have to pay the whole tariff and she has to pay only two-thirds of it?

Mr. BETTS. I do not think it is fair to say that we compete with England. I do not think the amount of our business in Canada is sufficient to justify that statement.

Mr. KITCHIN. They have a pretty high tariff on goods going into Canada.

Mr. BETTS. Thirty-seven and one-half per cent.

Mr. KITCHIN. And yet you can sell your collars in Canada to the consumers there, you paying 37½ per cent tariff, in competition with all the world?

Mr. BETTS. They pay more for our two-for-a-quarter collars in Canada than they do in America.

Mr. KITCHIN. They pay more for your collars because they are superior to their collars?

Mr. BETTS. I would not say that.

Mr. KITCHIN. Do not our people here buy your collars in preference to the foreign collars because they are superior?

Mr. BETTS. I do not think our business going into Canada is sufficient to talk about. Let me explain. Perhaps this will throw a little light on it. There are many Americans, United States citizens, who move to Canada, and no doubt they take their preference for American goods with them.

Mr. KITCHIN. If they take their preference for American goods with them when they move to Canada, why would not the Americans who live here have a preference for American goods also over foreign goods?

Mr. BETTS. We hope that they will.

Mr. KITCHIN. It looks as though about nine hundred and ninety-nine and nine-tenths out of every one thousand of them have been having a preference for your collars under this tariff.

Now, there is another thing I wish to ask you about: What part of the American output of cotton collars and cuffs is exported?

Mr. BETTS. I do not know it in figures.

Mr. KITCHIN. We do export considerable, do we not?

Mr. BETTS. No considerable quantities.

Mr. KITCHIN. Has not the Troy Association of Collar and Cuff Manufacturers a house in London?

Mr. BETTS. No, sir.

Mr. KITCHIN. Have they not an agency in London?

Mr. BETTS. There is one Troy manufacturer who has an agency in London.

Mr. KITCHIN. But he sends collars to London, and they are distributed from there to the export trade of the world, wherever he can get sales, are they not, and he sells everywhere, does he not?

PARAGRAPH 348—COLLARS AND CUFFS.

Mr. BETTS. He sells everywhere he can.

Mr. KITCHIN. Everywhere he can?

Mr. BETTS. Yes.

Mr. KITCHIN. And so he sells them in London in a free-trade market in competition with German goods, French goods, and goods made in any other country, does he not?

Mr. BETTS. He sells very few.

Mr. KITCHIN. Oh, I know, but he would not have this agency over there if he did not make money out of it, and he would not make money out of it unless he was competing with other nations, would he?

Mr. BETTS. I believe he has figured a profit, but I know his business is very small.

Mr. KITCHIN. Is it not a fact that we export collars into Germany, into France, into England, and other countries every year, and they are sent right from Troy there?

Mr. BETTS. Not that I know of, into Germany or France.

Mr. KITCHIN. But they do in free-trade England, where Germany and France have the same terms of competition that we have. They all go there together and compete with each other. Now, then, if we can compete with them in France, send our collars across the water, pay the freight on them, have a commission house there, pay a commission, and sell there in competition with Germany, France, and other nations, why is it not possible that we can sell right here at our own doors to our own people, in competition with Germany, France, and England, when they have got to come over here and pay the freight across the water, establish their agencies, and pay their commissions? That is a proposition I have never been able to understand in regard to manufacturers. I know there is some reason for it, but how can they do it? If you can compete there and pay the freight, how can they come back here in our home market and compete with you? I understand we are not putting this on the free list, but I want to ask you how they can compete with you even if they were on the free list?

Mr. BETTS. The answer is that we really are not doing it. The amount of our business that we are doing that way amounts to nothing.

Mr. KITCHIN. It amounts to enough to keep an American agency over there, or an American house over there, from Troy. How long has it been established there?

Mr. BETTS. I do not know.

Mr. KITCHIN. For years and years, has it not?

Mr. BETTS. I think not over two years.

Mr. KITCHIN. So, then, our exports are so increasing in the last few years that we have established an agency there, and it is not an old thing?

Mr. BETTS. Not an old thing.

Mr. KITCHIN. So it looks like our powers of competition have been increasing of late.

Mr. BETTS. Mr. Kitchin, I am a manufacturer, and I could never figure out a profit in doing that.

Mr. KITCHIN. Then you all do it as a matter of philanthropy? You do not lose any money on it, do you?

PARAGRAPH 348—COLLARS AND CUFFS.

Mr. BETTS. It is not my establishment there.

Mr. KITCHIN. You do not mean that they lose money on it over there? What is your judgment? I know you do not run the establishment.

Mr. BETTS. I do not think they have made any money on it yet. I doubt if they will for a long time to come.

Mr. KITCHIN. If we keep this tariff up so prohibitive that nobody can have any competition with you here, you will make enough profit here at home after awhile to establish agencies all over the world and give foreigners in other countries cheaper collars and cuffs than to our own people, will you not?

Mr. BETTS. But do not forget that we have competition among ourselves.

Mr. KITCHIN. Suppose we were to reduce this 25 per cent, in your judgment how much would it increase importation?

Mr. BETTS. We have made an estimate in our brief that within one or two years there will be foreign importations of substantially 1,000,000 dozen, and that within a very few years after that it would increase rapidly. I do not know how far it would go.

Mr. KITCHIN. Is Germany your greatest competitor?

Mr. BETTS. I think Germany would be our greatest competitor.

Mr. KITCHIN. I know, but is it your greatest competitor, say, in England, or where you are exporting—to England or Canada?

Mr. BETTS. I am not very familiar with conditions in England, sir.

Mr. KITCHIN. Do you have any idea how many collars and cuffs Germany exports to England?

Mr. BETTS. No, sir.

Mr. KITCHIN. Do you have any idea how much she exports at all?

Mr. BETTS. No, sir.

Mr. KITCHIN. So you do not really know whether Germany is making collars cheaper than anybody else? You do not know whether she is competing with you in England? You do not know whether she is exporting a dollar's worth, do you?

Mr. BETTS. Yes, sir.

Mr. KITCHIN. You say you do not know what her total exports were to France or England?

Mr. BETTS. I do not know how much.

Mr. KITCHIN. Do you know whether she is exporting as much as \$100,000 to all countries of the world?

Mr. BETTS. I believe she is exporting a good deal.

Mr. KITCHIN. Do you believe that Germany is exporting half as much as America is in cotton collars and cuffs?

Mr. BETTS. I think they are exporting much more than America.

Mr. KITCHIN. Where do they go to?

Mr. BETTS. They go to England.

Mr. KITCHIN. They go to England, some of them, and that is where you meet their competition? And you export to other countries?

Mr. BETTS. Some of them go to South America.

Mr. KITCHIN. Does not your Troy factory send some to South America?

Mr. BETTS. Not to amount to anything.

PARAGRAPH 348—COLLARS AND CUFFS.

Mr. KITCHIN. But you do not know whether Germany sends any to amount to anything? Whatever you do send down there meets German competition in South America, does it not?

Mr. BETTS. I would not say so.

Mr. KITCHIN. You send some down there?

Mr. BETTS. Yes.

Mr. KITCHIN. South America does not give you any better terms to get into her country than it does Germany?

Mr. BETTS. I do not believe we sell to anyone but the American tourists there in South America.

Mr. KITCHIN. It looks like we are selling them in Canada in competition with Germany; we are selling them in England in competition with Germany; and we are selling them in South America in competition with Germany. Do you not think you could stand a little bit lower cut than you have suggested in your brief?

Mr. BETTS. It all depends on how much you want to take away from us. I do not come here with any scare story, that we are going to go into a decline, and will have to put up the shutters. But all the foreign collars that come in here are going to take them away from Troy. You have the making of the duty; I have not.

Mr. KITCHIN. Have you ever thought about this: You know you have not had any competition in 25 years—maybe you have not had any in 50 years, but I know that in 25 years you have not had. You have sold \$2,000 worth here to the foreigners \$1. Have you ever thought about this, that if you had a little more competition at home you gentlemen would not have to be looking to gentlemen like my friend Brother Fordney, Brother Payne, and Brother Hill to fix a law to guarantee your profits and keep your profits up, but would have to look to your own industry and your own resources—and competition would make you do that—the prices would fall a little and then more people would buy collars, and your volume of business would be greater because of the competition that would be forced upon you? Although you would be making less per dozen you would make more on the volume of your business, because the cheaper price would make people buy more, and consume more? Have you ever thought about that?

Mr. BETTS. We have competition among ourselves which furnishes all that stimulation.

Mr. KITCHIN. I know; but when you have a tariff law that absolutely prohibits foreign competition and where all the production is by about 30 factories in one town, like Troy—I do not say that you have done it, but you can do it—with the telephonic communication so accessible, if you wanted to take advantage of any tariff rate you could in 24 hours phone to every one of them and have the prices fixed, and thereby hold up the American consumer to the world's market price, plus the tariff. This would be so easy.

Mr. BETTS. In my time, and that is about 15 years, there has been no attempt—

Mr. KITCHIN. I do not say there has.

Mr. BETTS. There has been no attempt of any kind in the collar business to do that, and it has always been regarded unfavorably.

Mr. KITCHIN. But it would be mighty tempting, would it not? It is mighty tempting when you have not any foreign competition, and

PARAGRAPH 348—COLLARS AND CUFFS.

you are all so close together you could do it; and sometimes it has tempted you people to do it, has it not?

Mr. BETTS. Not in my time.

Mr. KITCHIN. I am glad you have not. I believe you have competition there and have given us a cheap collar, and I think you can make your collars so cheap that you need not fear destruction of your industry under the Underwood tariff of 25 per cent ad valorem, but that you will have a little more competition.

Mr. BETTS. That is where you are mistaken. That rate is too low. That does not give us a chance.

Mr. KITCHIN. I am afraid you are unduly alarmed. You have had the markets here for 25 years absolutely, as a monopoly. It does not look to me like you people should worry. You might let \$1 out of every \$200 go to the foreigner. That is all that would probably be done, I think, under this 25 per cent duty; but it will prevent you people from getting together sometimes and piking up the price to the public.

Mr. PAYNE. Mr. Chairman, who is the witness here? The gentleman from North Carolina is talking a great deal, it seems to me.

Mr. KITCHIN. Troy is in your State, is it not? I was just trying to find out about an industry in your State.

Mr. FORDNEY. Since Mr. Kitchin has finished, you and I can get in a word edgewise.

Mr. KITCHIN. I have learned a good deal about the industry. I did not know anything.

Mr. FORDNEY. You have told him a great deal about the industry. He started out to tell you that the differential in the tariff on English goods going into Canada was $33\frac{1}{2}$ per cent lower than yours. It is $12\frac{1}{2}$ per cent. I tried to tell Mr. Kitchin that at that time. I have the English tariff law here, and that is it.

Mr. KITCHIN. How much is it, brother Fordney?

Mr. FORDNEY. Twelve and one-half per cent difference. Twenty-five per cent is their rate, and ours is thirty-seven and one-half per cent.

Mr. KITCHIN. Is not that $33\frac{1}{2}$ per cent difference? Is not that just what I said?

Mr. FORDNEY. That is not what you are talking about.

Mr. KITCHIN. It is. England pays 25 and we pay $37\frac{1}{2}$. That is all.

Mr. FORDNEY. I did not understand. Thirty-three and one-half per cent—

Mr. KITCHIN. Difference.

Mr. FORDNEY (continuing). Of the value of the goods.

Mr. KITCHIN. No; a $33\frac{1}{2}$ per cent differential in her favor. That is, we pay the whole tariff and England pays two-thirds.

Mr. FORDNEY. If that is your contention that is right. But when he speaks about your association I will say there was a gentleman here a little while ago from the South who makes oil cakes.

Mr. KITCHIN. Are you an expert on oil cakes?

The CHAIRMAN. I will ask the gentlemen to confine themselves to the subject matter, the question before us.

Mr. KITCHIN. I wish to see whether it is pertinent or not.

Mr. FORDNEY. The gentleman said nothing to a Southern man who was asking for free trade material going into bags for bagging oil

PARAGRAPH 348—COLLARS AND CUFFS.

eakes or corn meal. He said nothing about that, although that gentleman represented an association. But every time a man comes on the witness stand that belongs to an association that has an annual or semiannual dinner it is said he is having those dinners for the purpose of conspiring to put up prices, when he is asking for protection. He has referred to Mr. Payne and myself as keeping your pockets lined with the silver and the gold and the greenback. I would say to you, and I would say to Mr. Kitchin this: At all times, if it were in my power, I would give adequate protection not only to my industry but to Mr. Kitchin's industry if it were in any business—except in politics. I would give adequate protection to your industry to offset the difference in your cost here and the cost abroad. I would not by my vote turn over to foreign importations the American markets and destroy American industry and rob American labor of its right to work, etc. Is it true, or is it not true, that under existing law the consumers of this country are getting collars cheaper than they ever got them before?

Mr. BETTS. That is an absolute fact, sir.

Mr. FORDNEY. Then, therefore, this robber tariff which Mr. Payne and I advocate, which Mr. Kitchin refers to as having been given to you to keep your pockets lined with gold, etc., has lowered the cost of your product to the consumers of this country?

Mr. BETTS. Yes; and improved it in quality and raised the rate of wages to our employees.

Mr. FORDNEY. And if the old maxim and the old facts and the old precedents were brought here, and if your industry is destroyed, and we are wholly dependent upon foreign production, the chances are that the price would go up to the American consumers?

Mr. BETTS. Certainly.

Mr. KITCHIN. Let us see if this tariff has done that or not. You say that collars are cheaper in this country than they have ever been before? Are they not cheaper in free-trade England than they have ever been before, and are you not shipping there? If the tariff has made them cheap here, free trade must have made them cheap in England. What have you got to say about that?

Mr. BETTS. The tariff is not the only thing that is making them cheaper.

Mr. KITCHIN. That is right; that is not the only thing. That is what we are trying to convince you of.

Mr. BETTS. May I have just a word?

The CHAIRMAN. I will say to the witness that it is not necessary to get yourself mixed up in this discussion. That is hardly fair to you. But I wished to say before you left the stand—you have been on the stand some time and you have been discussing cotton collars. I should like you to go into the linen side of the industry.

Mr. BETTS. I would like one word more on this matter we have been discussing and I want it in the record. That is, that the foreign business, the export business of American collar manufacturers, is what we might call a sentimentality. A haberdasher in free-trade England wants something different, just the same as a haberdasher in Washington, and that is one inducement, and a strong one, whereby we are able to sell our collars in what Mr. Kitchin calls competition with the world.

PARAGRAPH 348—COLLARS AND CUFFS.

The CHAIRMAN. In other words, your trade-mark is a protection in itself, to a certain extent, no matter where you are?

Mr. BETTS. That is not what I said, sir.

The CHAIRMAN. But that is the substance of it?

Mr. BETTS. That was not the thought I meant to convey.

The CHAIRMAN. There is a certain protection that grows out of the trade-mark?

Mr. BETTS. Yes, sir.

Mr. PALMER. What is your price on cotton collars of the same kind that you fear will be imported at 55 cents?

Mr. BETTS. Eighty-five cents a dozen. That is the selling price to the jobber.

Mr. PALMER. That is the manufacturers selling price?

Mr. BETTS. Yes, sir.

Mr. PALMER. That includes, of course, the manufacturer's profit?

Mr. BETTS. Yes, sir.

Mr. PALMER. The cost of production and profits?

Mr. BETTS. Yes, sir.

Mr. PALMER. Now, on that collar you are asking us to write a duty of 30 cents a dozen and 15 per cent ad valorem?

Mr. BETTS. Yes, sir.

Mr. PALMER. That is equivalent to a duty of 38.35 cents?

Mr. BETTS. Yes, sir.

Mr. PALMER. So that with the duty paid the foreign collar would be laid down in New York, say, without considering freight, at 93.25 cents?

Mr. BETTS. Yes, sir.

Mr. PALMER. A collar which you sell for 85 cents?

Mr. BETTS. Yes, sir.

Mr. PALMER. Therefore, you are asking us to write a rate which will cover not alone the difference in cost of production at home and abroad, but your profit?

Mr. BETTS. No, sir.

Mr. PALMER. And 8.25 cents besides?

Mr. BETTS. No, sir.

Mr. PALMER. Well, why are you not? I thought you told me you were?

Mr. BETTS. No; I think you have misunderstood me.

Mr. PALMER. Well, you said you sell the collar for 85 cents?

Mr. BETTS. Yes, sir.

Mr. PALMER. And certainly what you sell it for includes your profit?

Mr. BETTS. Yes, sir.

Mr. PALMER. The import price of the collar is 55 cents?

Mr. BETTS. Yes, sir.

Mr. PALMER. And a duty of 38.25 cents a dozen would make that cost the American purchaser 93.25 cents a dozen, would it not?

Mr. BETTS. Yes, sir.

Mr. PALMER. Which would be a protection of 8.25 cents, plus your selling price?

Mr. BETTS. Let me tell you how it would work out. Every retailer pays \$1.10 a dozen for his collars. The difference between 85 cents and \$1.10 is the wholesaler's cost of doing business and his profit.

PARAGRAPH 348—COLLARS AND CUFFS.

Now, I maintain that the German collars can pay a rate of 38.25 cents per dozen and be sold in this country at two for a quarter, and will be sold in pretty fair quantities.

Mr. PALMER. Well, if the import price is 55 cents, they can not sell them to the American jobber for less than 93.25 cents?

Mr. BETTS. They will not have to sell to the American jobber?

Mr. PALMER. Well, they can not sell to anybody in America for less than 55 cents, plus the duty, can they?

Mr. BETTS. They can get \$1.10 for these collars.

Mr. PALMER. Then you need not have anything to fear, if they get \$1.10, and you are selling them for 85 cents.

Mr. BETTS. We get \$1.10 when we act as our own distributor, less 6 per cent.

Mr. PALMER. For that 85-cent collar, do you get \$1.10?

Mr. BETTS. That is the same collar; yes, sir.

Mr. PALMER. You mean at retail, when you sell it to the retail merchant direct?

Mr. BETTS. Yes.

Mr. PALMER. But your selling price from your factory, what you must get as a manufacturer to get back your cost of production and your profit is 85 cents?

Mr. BETTS. Yes, sir.

Mr. PALMER. And you are asking us to write a rate which will make the foreign product cost $8\frac{1}{4}$ cents more than your selling price?

Mr. BETTS. Yes.

Mr. PALMER. Yes.

Mr. BETTS. Yes.

Mr. PALMER. In other words, you want us to protect not only the difference in the cost of production but your profits, and something more besides?

Mr. BETTS. No, sir; I will not state it that way.

Mr. PALMER. You are certainly asking us to do exactly that thing.

Mr. BETTS. I do not so understand it.

Mr. Chairman, may I give you the rest of my facts?

The CHAIRMAN. Yes.

Mr. BETTS. I want to say a word about linen collars. It is a fact that over 10 per cent of the 25 cent and more expensive collars now being sold in this country are imported. A lowering of that rate of duty would not increase the sale of the 25-cent collars. It would take away some revenue. Collars would in all probability not be retailed at any less. Therefore, we have made no recommendation for a reduction in the tariff on linen collars; but if it is thought best by your committee to name a rate substantially equal to the rate that we have asked for on cotton collars from the point of view of our industry, we will make no protest.

Now, finally, Mr. Chairman, our city depends upon this business. There is bound to be a reasonable doubt in your minds as to what a fair rate of duty is, and I appeal to you not only in behalf of the American collar manufacturers, but in behalf of that city which depends for its livelihood on one industry, to give us the benefit of the doubt.

PARAGRAPH 348—COLLARS AND CUFFS.

If there are any more facts that you want we will be delighted to furnish them.

Mr. PALMER. What does it cost you to produce linen 25-cent collars per dozen?

Mr. BETTS. \$1.25.

Mr. PALMER. \$1.25?

Mr. BETTS. Yes, sir.

Mr. PALMER. What do you sell them for to the jobber?

Mr. BETTS. We do not sell them to the jobber.

Mr. PALMER. That is your selling price?

Mr. BETTS. No; that is our cost price.

Mr. PALMER. Your cost?

Mr. BETTS. Our cost price.

Mr. PALMER. What do you sell them at?

Mr. BETTS. My company is the only company selling 25-cent collars in any quantity.

Mr. PALMER. I know; you refer to the E. & W. Co.

Mr. BETTS. Yes. I did not come to talk about my company. We sell them direct to the retailers and get \$1.88 a dozen.

Mr. PALMER. What is the cost to the foreigner of those collars?

Mr. BETTS. I do not know.

Mr. PALMER. Where do they make these 25-cent collars abroad?

Mr. BETTS. Germany and England.

Mr. PALMER. And do you know how much it costs them to make them?

Mr. BETTS. I have not any figures; no, sir.

Mr. PALMER. What do they sell them for?

Mr. BETTS. \$2 to \$2.25 a dozen in this country. I do not know what they sell them for in the old country.

Mr. PALMER. You do not know?

Mr. BETTS. No, sir.

Mr. PALMER. Then how do you know you need a duty of 40 cents a dozen and 40 per cent if you do not know that?

Mr. BETTS. I just stated that that was more duty than we really needed, but we do not recommend a reduction because we do not see where it is going to do anybody any good.

Mr. PALMER. What do they lay the collars down in New York for?

Mr. BETTS. The average import value is \$1.37.

Mr. PALMER. That is without the duty?

Mr. BETTS. Yes, sir.

Mr. PALMER. Forty cents a dozen added and 40 per cent.

Mr. BETTS. Forty cents and 20 per cent.

Mr. PALMER. Yes; 20 per cent. That is \$2.04 at the present rate, to protect you against a collar that costs you \$1.25 to produce?

Mr. BETTS. Well, there are many of them being sold and advertised for \$2 a dozen.

Mr. PALMER. \$2 a dozen, is it?

Mr. BETTS. Yes; that is our price, \$2 less 6 per cent.

Mr. PALMER. Is the regular price of an imported collar \$1.37?

Mr. BETTS. That is the average of importation in recent years. I think a good many of those collars are sold—I know there are—for more than 25 cents. They are sold for 40 cents. There are lots of 40-cent collars, and there are quite a few of them sold.

PARAGRAPH 348—COLLARS AND CUFFS.

Mr. PALMER. And the average price of imported collars per dozen is \$1.37?

Mr. BETTS. Yes, sir.

Mr. PALMER. That is the same collar that you are putting through your factory, after paying your cost of production and profit to the manufacturing concern, for \$1.25?

Mr. BETTS. No; I do not think so.

Mr. PALMER. Or 12 cents less than the average?

Mr. BETTS. That is not the same collar, because, as I say, many of these collars are gotten up to retail for 40 and 50 cents, and I do not think \$1.37 is the average price of collars that compete with our 25-cent collar.

Mr. PALMER. You just told me that it was the average.

Mr. BETTS. That is the average import value now; yes, sir; but the average selling price is not 25 cents retail.

The CHAIRMAN. Mr. Betts, I want to ask you one other question. Is a collar like the E. & W. collar all linen, both inside and outside?

Mr. BETTS. No, sir.

The CHAIRMAN. It is not all linen?

Mr. BETTS. It is not all linen.

The CHAIRMAN. When you refer to a collar as an all-linen collar, do you mean an all-linen collar?

Mr. BETTS. I do not think I said "all linen," sir, did I? If I did, I did not mean to.

The CHAIRMAN. I understood you that way, but you may not have used those words. Do you make an all-linen collar?

Mr. BETTS. No, sir.

The CHAIRMAN. Does anybody make an all-linen collar?

Mr. BETTS. Not in America.

The CHAIRMAN. Then, when you refer to a linen collar, what do you mean?

Mr. BETTS. I mean a collar that is part linen.

The CHAIRMAN. The outside part is linen?

Mr. BETTS. The outside part is linen, and, in some cases, the inside part, but never the linings.

The CHAIRMAN. Never the linings?

Mr. BETTS. No, sir.

The CHAIRMAN. What kind of a collar were you referring to when you put your cost price at \$1.25? Was that the E. & W. collar?

Mr. BETTS. Such a collar as you and I have on, sir.

The CHAIRMAN. Now, there are other grades of linen collars—collars that are sold as linen collars. Do those have more cotton in them than you put into the E. & W. collar? Is there more cotton cloth put into some linen collars than the amount you put into the E. & W. collar?

Mr. BETTS. No, sir; I would not think so—about the same.

The CHAIRMAN. Now, if we should have to divide this schedule, to follow the usual language of the tariff, and say "Collars of which cotton is the component material, or chief part," that would cover all cotton collars?

Mr. BETTS. Yes.

PARAGRAPH 348—COLLARS AND CUFFS.

The CHAIRMAN. And if we did attempt to differentiate as to linen collars and say, "Linen collars, of which linen is the component material or chief part," will that cover the linen collar?

Mr. BETTS. Not always. You would miss some of them, because in a collar of this shape [indicating] the relative value of the cotton and linen cloth is practically equal, and in some shapes it will be more value of linen, and in some more value of cotton.

The CHAIRMAN. Have you any suggestions to make?

Mr. BETTS. We have suggestions in our brief, and ask that you specify a rate for "collars entirely of cotton," and that you specify another rate for "collars partly or entirely of linen."

May we file a copy of this argument with our brief?

Mr. PAYNE. I want to ask you a question, Mr. Betts. In your brief do you show that the price of collars and cuffs to the consumer has been cut in the last 20 years nearly 30 per cent?

Mr. BETTS. Yes, sir.

Mr. PAYNE. From 14½ down to 11½?

Mr. BETTS. Yes, sir.

Mr. PAYNE. Is there any other necessity of life that you know of in this country that has been cut so much in the price to the consumer?

Mr. BETTS. I think it is quite unusual.

Mr. PAYNE. On the contrary, they have increased in price?

Mr. BETTS. Many things; yes, sir.

Mr. PAYNE. Take your raw material. Has the price of that increased in the last 20 years?

Mr. BETTS. Yes.

Mr. PAYNE. From 30 to 50 per cent?

Mr. BETTS. I could not give you the figures.

Mr. PAYNE. Have the products of cotton seed increased in market price in the last 20 years?

Mr. BETTS. I think they have; but I have no personal knowledge of it.

Mr. PAYNE. Now, has the decrease in the cost of collars and cuffs to the consumer grown mainly out of competition in this country along those lines, or largely out of it?

Mr. BETTS. That is a large factor in it; yes, sir.

Mr. PAYNE. Those large factories have been running full?

Mr. BETTS. Yes, sir.

Mr. PAYNE. And the percentage of overhead charge has been less?

Mr. BETTS. Yes, sir.

Mr. PAYNE. To the unit of production?

Mr. BETTS. Yes, sir.

Mr. PAYNE. Suppose these gentlemen should cut the tariff so as to get what they call competition here from abroad, which seems to be the importation of an equal amount to this market for domestic consumption, get them in here at half—

The CHAIRMAN. One minute.

Mr. PAYNE. Import half of the—

The CHAIRMAN. I will ask the gentleman from New York, for whom I have great respect, please not to put that statement again

PARAGRAPH 348—COLLARS AND CUFFS.

in the mouths of the members of the committee on this side of the table. We have never made it, and I, of course, understand—

Mr. PAYNE. I got that from the gentleman's statement in regard to pottery, where it was proved that over half of it was imported, and the gentleman said it was competitive. If I am wrong about that I will withdraw it.

The CHAIRMAN. I will give the gentleman a chance to withdraw it. Of course, when one-half of the pottery was imported, I said it was competitive.

Mr. PAYNE. I am not going to have any dispute about it, and I will withdraw the question entirely.

The CHAIRMAN. Just a minute. I see in some of the Republican newspapers, especially in this town, that, as coming from that end of the committee, they are trying to give out to the witnesses here the impression that we, in establishing a competitive rate, are disposed to establish a rate that would be ruinous to the business interests of this country. I want to deny that. We have not said at what point we would fix a competitive rate, because it may be a competitive rate on one article at one rate, and on another article at another rate; but the members of this committee have never indicated that they thought one-third was reasonably competitive or that a half was reasonably competitive. As a matter of fact, we know it would be so competitive at that price that it would be ruinous, and I hope the gentlemen will not again allow the country at large to suppose that we are attempting to make a rate that would ruin the business interests of the country. [Applause.]

Mr. PAYNE. In view of the statement of the chairman of the committee, I will let my question stand upon the record in comparison with what was said upon the pottery schedule and some other schedules, and with reference to the gentleman, I will ask this question, whether or not, if they should so reduce the rate as to allow the bringing in of one-half or one-third of the collars and cuffs consumed in this country, that would produce ruinous competition with those large factories by reducing their output one-third or one-half?

Mr. BETTS. It would be a very severe misfortune.

Mr. PAYNE. What is that?

Mr. BETTS. It would be a very severe misfortune.

Mr. PAYNE. That is all.

Mr. BETTS. Am I excused?

Mr. FORDNEY. I notice that the applause came from men who have appeared here as importers asking for a lowering of the duty.

The gentleman from Pennsylvania a little while ago compared the amount of protection that you are asking for as 91 cents as against your selling price of 85 cents, and so on. It is true that if you are asking for a duty that would be 91 cents, with the duty added on account of the import cost, it would be above the difference in cost of production of your article and the article that is imported, but the price that you give, 85 cents, against 55 cents, includes your profit as well as the profit on the imported article, and you gave the difference as being 30 cents a dozen?

Mr. BETTS. Yes, sir.

PARAGRAPH 348—COLLARS AND CUFFS.

Mr. **FORDNEY**. Eighty-five cents would be exactly the difference in cost, but you are consistent with the platform dictated or written by Theodore Roosevelt in 1904, for whom so many people voted for President last fall, wherein he stated that the Republican Party believed in a tariff sufficiently high to offset the difference in cost in this country and abroad, and in addition there should be a reasonable profit. I think that is the most plausible and wisest platform ever written by the Republican Party, and one that I would like to see put into effect and kept in effect.

Mr. **HARRISON**. From that it might be implied that the gentleman from Michigan has voted for Mr. Roosevelt in times past?

Mr. **FORDNEY**. I did not say I was a Roosevelt man. I did not vote for him last fall, and I would not vote for him again, because he does not belong to my party. When he belonged to my party and was the candidate of that party, I voted for him.

All that you are asking for is a competitive rate, and a rate that would permit the foreigner to compete in our markets at the same cost price as your cost price has no protection in it at all. A party that believes in a rate that would make it competitive does not belong to the party of protection. That is all I have to say about that.

Mr. **BETTS**. Am I excused?

The **CHAIRMAN**. That is all.

Mr. **RAINEY**. Mr. Betts, I do not think you gave us the amount of production of collars and cuffs composed in whole or in part of linen, did you?

Mr. **BETTS**. No, sir; I did not.

Mr. **RAINEY**. Is that larger than the production of cotton collars and cuffs?

Mr. **BETTS**. No, sir; it is much smaller.

Mr. **RAINEY**. Do you know how much it is?

Mr. **BETTS**. I can find out and let you know, sir. Would you care to receive that information for file?

Mr. **RAINEY**. If you are going to file a brief, you might include that.

Mr. **BETTS**. I have already filed a brief, but I can write a letter as a supplemental brief, if you wish.

Mr. **RAINEY**. Very well. Thank you.

The brief and argument filed by Mr. Betts are as follows:

To the honorable members of the Committee on Ways and Means of the House of Representatives, Sixty-second Congress.

GENTLEMEN: The undersigned, representing the collar, cuff, and shirt manufacturers of Troy, N. Y., and vicinity, respectfully present the following brief in regard to the tariff rates specified in paragraph 348 of Schedule J of the Payne-Aldrich tariff law.

Linen collars and cuffs, 40 cents per dozen and 20 per cent ad valorem.

Cotton collars and cuffs, 45 cents per dozen and 15 per cent ad valorem.

Cotton collars: Expected import valuation, 55 cents per dozen. Present tariff, 45 cents per dozen and 15 per cent ad valorem equals 53½ cents per dozen. Tariff proposed in Underwood bill, 25 per cent ad valorem equals 13½ cents per dozen. Tariff proposed in our brief, 30 cents per dozen and 15 per cent ad valorem, equals 38½ cents per dozen.

We recommend that no radical changes be made in the above-named rates of duty.

The collar and cuff industry of the United States is centralized in Troy, N. Y., and vicinity. The returns of the last census show that Troy and vicinity produce more than 90 per cent of the total output of collars and cuffs and 15 per cent of the total output of shirts in the United States.

PARAGRAPH 348—COLLARS AND CUFFS.

Collar, cuff, and shirt manufacturing is by far the leading industry of our community. The city of Troy, unlike other municipalities, has no great diversification of industries. More than one-half of its population depends for its livelihood on the pay rolls of the collar and shirt factories.

The extent of this industry in what is known substantially as greater Troy is as follows:

Number of establishments.....	35
Capital invested.....	\$18, 526, 006. 09
Value of annual product.....	\$28, 049, 493. 43
Value of cotton cloth used annually.....	\$8, 361, 368. 55
Average number of wage earners.....	31, 155
Average wage per week.....	\$9. 62
Population of Troy, N. Y.....	76, 813

(The foregoing figures were compiled from reports received from the respective establishments for the year 1912.)

We call the attention of the committee to the fact that allied to the collar and shirt industry in Troy, N. Y., is the industry of manufacturing paper boxes and auxiliary laundries, which give employment to hundreds of hands, but which are dependent entirely on the operation of the collar and shirt factories.

That importations of collars and cuffs would greatly increase under a reduction in duty is shown by a consideration of the importations under the various tariff laws.

(A schedule of the annual importations of linen and cotton collars under the McKinley, Wilson, Dingley, and Payne tariffs is annexed to this brief.)

The fact that the present rate of duty is not prohibitive is conclusively shown by the importation into the United States of linen and cotton collars during the year 1912 of over 50,000 dozen.

Under the proposed reduction of tariff rates to 25 per cent ad valorem, foreign competition would rapidly increase, as shown by the importations under the Wilson tariff of 30 cents per dozen and 30 per cent ad valorem on linen collars and 40 per cent ad valorem on cotton collars.

Consular reports on file in the Department of Commerce and Labor show that collars from Europe and Japan are exported to different countries at prices as low as 43 cents per dozen. That is especially true of importations from Austria to Cuba, Brazil, and other South American markets.

We hope no action will be taken by your honorable committee which would hand over a portion of the home market to the exploitation of the foreigner and deprive our wage earners of employment.

The American manufacturer is unable to compete on equal terms with European and Asiatic manufacturers.

The rate of wages paid in this industry in the United States is the highest in the world. The principal competitors of American collar manufacturers are those of Germany, Austria, England, Italy, and Japan.

The following comparison of rates of wages and cost of manufacture is pertinent:

	Troy.	Germany (Saxony and Wurtem- burg).	England.	Japan.
Weekly rate of wages for this industry.....	\$9. 62	\$2. 14—\$2. 42	\$3. 75—\$4. 00	\$1. 02—\$2. 04
Weekly hours of labor.....	54	Longer.	Longer.	Longer.
Cost of material ¹
Average rate of interest ²
Rentals of buildings.....per cent..	100	65	65	Much less.

¹ Less abroad than in United States.

² About 20 per cent less abroad than in United States.

The committee's attention is also called to the following relative disadvantages of the American manufacturer:

First. The age limit in the Troy factories is fixed by law to persons over 16 years. The limit abroad is 14 years or less.

Second. In foreign countries the apprentice system prevails; in some instances two years' service being given gratuitously, while in Troy factories apprentices receive from \$4 to \$12 per week.

PARAGRAPH 348—COLLARS AND CUFFS.

Third. The Troy manufacturer has also to comply with various laws designed to promote the health, welfare, and safety of the wage earners; laws which are becoming more stringent every year. These requirements, desirable as they are, nevertheless add materially to the cost of our product.

Fourth. The expense of selling his product has been greatly increased to the American producer during recent years, owing to the very keen competition prevailing. The importer is able to sell his product in this country at a less expense than the American producer, because not only the ultimate consumer but many retail dealers prefer to handle an "imported collar," thinking it conveys the idea of exclusiveness.

The "greater efficiency" of American labor can not be urged as an offset to these inequalities, because the same machinery is used abroad as at home in this industry, the laborers in Germany and Japan being especially noted for their skill in this work.

That both the consumer and wage earner have been benefited by the development of the collar business is shown by the following figures:

	1893	1907	1912
Average retail price of collars in United States.....	\$0. 15½	\$0. 11½	\$0. 11½
Average weekly rate of wages in Troy, N. Y.....	7. 50	8. 47	9. 62

We also call to your attention that in spite of the continual fluctuations and gradual increase in the cost of our raw materials and the steady increase in the cost of labor and all other expenses, the average wholesale as well as the average retail price of collars has not advanced, but has shown a gradual decrease from year to year. In this connection it should be remembered that never were collars of so high a grade made as at the present time, and that the collar that is bought to-day at the average retail price of 11½ cents is superior in quality and contains more material than the 15½-cent product of 1893. While the average retail price of collars to-day is 11½ cents, yet hundreds of thousands of dozens of collars are on the market retailing at the rate of three for 25 cents.

We respectfully submit that a reduction of the rate of duty and an increase of importations will not only injure this industry but will not benefit the consumer.

During the life of the Wilson tariff there was no reduction in the retail price of collars to the ultimate consumer.

We also wish to call to your attention the fact that the rates of the present tariff, which we request be changed as moderately as possible, are no greater than those of other countries of the world (except England), which are maintained against the United States; when the difference in the rate of wages is considered.

Present rates of duty: United States, linen collars, 40 cents per dozen and 20 per cent ad valorem; cotton collars, 45 cents per dozen and 15 per cent ad valorem; Germany, 37½ per cent; France, 42 cents per dozen; Canada, 37½ per cent; Japan, 50 cents per dozen; Austria-Hungary, 60 cents per dozen.

In the Payne tariff the average rate of duty for the entire cotton schedule was 47.5 per cent. In the bill passed by the Sixty-second Congress this average was reduced to 27.6 per cent, making a difference of substantially 20 points or an average reduction of 42 per cent in the rate of duty. This general rate of reduction did not, however, hold true in regard to cotton collars which were cut to an ad valorem duty of 25 per cent, which was a reduction of substantially 39 points, amounting to approximately 61 per cent. This is the most radical cut in tariff rates on collars and cuffs which has ever been made by any Congress.

We protest against the imposition of a purely ad valorem duty, as experience has shown that the foreigner invoices his goods for export at a less price than at home. The usual method is to open a branch house or employ an agent in this country and sell his goods directly from the factory to the American trade, invoicing them at cost rather than at foreign wholesale price.

We urge the committee to follow the lines laid down in the Canadian tariff act which requires every importer among other things, "to certify that the invoice contains a true and full statement, showing the price actually paid or to be paid for the goods, the actual quantity thereof, and all charges thereon. That the said invoice also exhibits the fair market value of said goods at the time and place of their direct exportation to Canada, and as when sold at the same time and place in like quantity and condition for home consumption, in the principal markets of the country whence exported directly to Canada without any discount or deduction for cash or on account of any drawback or bounty, or on account of any royalty actually payable thereon or

PARAGRAPH 348—COLLARS AND CUFFS.

payable thereon when sold for home consumption but not payable when exported, or on account of the exportation thereof or for any special consideration whatever."

The profits on medium grades of collars, which constitute the bulk of the business, are not large to the manufacturer, wholesaler, or retailer. Carefully prepared figures show the average cost of a dozen collars of this grade to be 79 cents. The wholesaler pays 85 cents per dozen, less 3 per cent for cash, sells them for \$1.10, less 6 per cent for cash, the retailer sells the same for \$1.50 per dozen. The respective profits on the selling price are—

	Per cent.
Manufacturer, net.....	4
Wholesaler or jobber, gross.....	19 $\frac{1}{10}$
Wholesaler or jobber, net (estimated).....	5 $\frac{1}{2}$
Retailer, gross.....	31 $\frac{1}{2}$
Retailer, net (estimated).....	9

The manufacturer who is also a wholesaler makes about 3 cents per dozen net in addition to the usual maker's profit. The selling expenses of the exclusive collar and shirt jobber are much greater than the general jobber of men's furnishing goods.

On the cheaper grades of collars the profits are less than the above figures. The profit on the finer lines is better than it is on the cheaper lines, but the volume is much smaller. The bulk of the business is on the so-called "2 for 25 cents" collars.

We are convinced that any reduction in the duty on collars and cuffs will at once result in increased importations with a resultant injury to our industry. Nevertheless we recognize the sentiment now prevailing in favor of a general reduction in tariff rates. We believe that the following considerations should be taken into account in fixing the duty in the new tariff law.

The labor cost of an average dozen of American collars is 42 cents. The same amount of labor in foreign competing countries costs 12 cents. This difference of 30 cents should be offset by a specific duty of 30 cents per dozen. In addition thereto the difference in all other expenses of American manufacturers in comparison with foreign competitors is such that an ad valorem duty of 15 per cent should be added to the specific duty above mentioned. Japanese and other foreign collars of a quality that will compete with American 2 for 25 cents collars can be landed in this country for 50 cents per dozen or less.

A tariff of 30 cents per dozen and 15 per cent ad valorem will raise their valuation to 87 $\frac{1}{2}$ cents per dozen. The usual wholesale price of American 2 for 25 cents collars is \$1.10 per dozen.

As to linen collars, we would say that approximately 10 per cent of all the linen collars sold in the United States at present are imported and that the percentage is steadily increasing. Therefore, we urge that no change in the present duty on linen collars be made.

The importations of collars for the year ending June 30, 1912, were as follows: Cotton, 7,585 dozen, producing \$4,445.81 revenue; linen, 45,823 dozen, producing \$30,827.14 revenue; total, 53,408 dozen, producing \$35,272.95 revenue.

Should the duty be fixed as proposed by us the amount of revenue realized would probably be as follows:

Cotton, duty 30 cents and 15 per cent, 300,000 dozen, at 50 cents, producing a revenue of.....	\$112, 500
Linen, duty 40 cents and 20 per cent, 45,823 dozen, at \$1.37, producing a revenue of.....	30, 827

Total revenue..... 143, 327

Should the flat rate of 25 per cent ad valorem be fixed for both cotton and linen collars, the amount of revenue derived from the importation of 1,000,000 dozen, at 50 cents, would be 125, 000

To sum up, we maintain: Any radical reduction in tariff on collars and cuffs will greatly injure an important community with no compensating advantage to the ultimate consumer.

The collar and cuff industry is on a strictly competitive basis, giving the best service both to its wage earners and to the public at large.

The present tariff is not greater than the other countries of the world maintain against us when the difference in the rate of wages is considered.

There is no trust nor combination nor agreement in restraint of trade in this industry. The keenest competition prevails.

PARAGRAPH 348—COLLARS AND CUFFS.

We therefore ask that the duty on cotton collars and cuffs be fixed at 30 cents per dozen and 15 per cent ad valorem, and on linen collars and cuffs be fixed at 40 cents per dozen and 20 per cent ad valorem.

Respectfully submitted.

J. K. P. PINE,
ALBA M. IDE,
F. F. PEABODY,
E. H. BETTS,
JOSEPH MCKAY,
Committee.

Importations.

ARGUMENT OF EDGAR H. BETTS, REPRESENTING THE COLLAR AND SHIRT MANUFACTURERS OF TROY, N. Y.

[To be filed with the Ways and Means Committee as supplementary to the printed brief.]

Let me state in opening that I am the vice president of Earl & Wilson, a New York corporation, which, with its predecessor, the copartnership of Earl & Wilson, has been engaged in manufacturing collars, cuffs, and shirts for 45 years. I am here, however, not to represent my own company, but as spokesman for a committee of five manufacturers, representing the entire collar, cuff, and shirt industry of Troy, N. Y., and vicinity.

As stated in our brief, our city and its vicinity is dependent in a peculiar and vital way for its livelihood on this industry. Over half of its population is directly dependent upon the pay rolls of the collar and shirt factories. I therefore feel, in making this appeal to you on behalf of the industry, that I am also speaking on behalf of the community.

The collar business of the United States may be divided into two well-defined groups, namely, collars made partly of linen and partly of cotton, known as linen collars. The other group is collars made entirely of cotton. Collars retailing at 25 cents each and over are almost invariably of linen; those retailing at two for 25 cents and less are generally of cotton. The great bulk of the collar business of the United States is done on two for 25 cents cotton collars, and that is the part of the industry I wish to emphasize.

In explanation of the fact that at previous hearings on tariff bills our representatives have urged that no reduction be made, whereas now we suggest a moderate reduction. Let me say that the collar manufacturing business has undergone many changes in recent years, due to increased use of machinery, etc. And is now at not so great a disadvantage compared with foreign manufacturers as previously.

PARAGRAPH 348—COLLARS AND CUFFS.

The imposition of any competitive rate of duty on popular-priced collars will open an entirely new condition from anything we have ever seen in this country in this industry. We can not be guided in fixing a tariff by any figures of present imports of collars, for there are no imports of popular-priced collars. I therefore urge you to consider this matter in the light of the facts as I state them, not as you would see them from a study of import figures of quantities and values, which would indicate that the average price of a dozen collars as imported into this country is 92 cents. Whereas it is a fact that collars of a quality that will compete with our 2 for 25 cents collars can be produced and sold with a manufacturer's profit and are being sold to-day in Germany and other countries for from 50 to 60 cents per dozen, at which price they will be imported into this country under any competitive tariff. The collars now being imported at 92 cents per dozen are retailed, not at 2 for 25 cents, but at 25 cents each or more.

As we understand it, it is the purpose of this committee to draw a bill with competitive rates of duty that will admit a reasonable amount of importation and produce a revenue, but which will not unduly injure home industry. When we ask, "What is a just competitive duty on cotton collars and cuffs," we find room for a difference of opinion, depending on how much importation is desired. We notice the Underwood bill names a rate of 25 per cent ad valorem, which is equivalent at the expected import price of 55 cents per dozen to 13½ cents per dozen. When we look back at the history of tariff rates for this commodity, we notice a rate of 40 cents in the Wilson bill. Imports of collars increased rapidly under that law, but the quantity of cotton collars imported was not great and no considerable revenue was produced. This calls for an explanation. At that time cotton collars were not generally made either at home or abroad. There were no cotton collars to seek our market.

Conditions are decidedly different now. Cotton collars are increasing in popularity both in Europe and in America. There is no doubt that if the 40 per cent rate of the Wilson law were now in force German and other foreign collars would be imported in very large quantities.

We believe the rate proposed in the Underwood bill (25 per cent ad valorem, or 13½ cents per dozen) would bring about a severe misfortune to our community. We could not sell collars of an equal quality in competition with the foreign collars that would come in. The importer would have his pick of our market. We could have what he did not want.

Moreover, it is our firm belief that no reduction of the retail price of collars would result, and for these reasons:

First. Haberdashers in America are having their expenses increased every year, consequently they are looking for larger profits where they can get them without loss of volume of business. Generally speaking, then, they would not voluntarily reduce their margin of profit by selling these goods at a retail price less than two for 25 cents, but would increase their profit by selling them at the present popular price of two for 25 cents, even though they had paid less for them than for American-made goods.

Second. There is no strong popular demand for collars any cheaper than two for 25 cents. That is the great popular price fixed by custom. There are many 10-cent, or three for 25 cents, collars sold in this country of a fairly good quality but their popularity is not increasing. Therefore, we argue that the haberdasher would not be compelled to sell these collars any cheaper by popular demand.

We have now shown that a 25 per cent (or 13½ cents per dozen) rate of duty is too low to afford the American manufacturer a fair opportunity and that the ultimate consumer would not benefit by it. We estimate, however, that within a year or two a revenue amounting to about \$125,000 per annum would be derived from import taxation at this rate of duty, based on expected importations of about 1,000,000 dozen per annum within a year or two.

We suggest in our brief a rate which is the equivalent of 38½ cents per dozen. This rate is based on the difference in the cost of production at home and abroad. It happens to be almost exactly halfway between the present rate in the Payne law and the proposed rate in the Underwood bill. We justify this rate as follows:

Suppose collars are imported at 55 cents per dozen; add 38½ cents duty, 5 cents expenses, making a total cost of 98½ cents per dozen. It is our opinion that imported collars under these conditions could be sold in considerable quantities at a wholesale price that would enable the haberdasher to retail them at 2 for 25 cents, and that this rate would allow reasonable competition.

We estimate that there will be 300,000 dozen per annum importations of collars under this rate within a year or two, bringing in substantially the same revenue as the greater quantity estimated to be imported under the 25 per cent (13½ cents per

PARAGRAPH 348—COLLARS AND CUFFS.

dozen) rate of the Underwood bill. This would give the public a chance to choose between American and imported collars at the same retail price and give our industry and community a chance to live.

Let me now tell you what the development of this business has done.

First, for the public. The average retail price of collars in the United States 20 years ago was 15½ cents each; to-day it is practically 11 cents each, a reduction of nearly one-third. Moreover, the collar sold at that reduced price to-day is a better collar and contains more material than the higher priced collar of 20 years ago.

Second, for the wage earners. As shown in our brief, the average rate of wages in our industry has increased nearly one-third, namely, from \$7.50 to \$9.62 per week during the same period.

Considering now for a moment the higher priced or linen collar, it is a fact that more than 10 per cent of all collars retailed at 25 cents each or more in the United States at the present time are imported. We think that that is competition enough. A lower duty would reduce the revenue and would be of absolutely no value to the ultimate consumer. We therefore suggest that no change in the present rate of duty on linen collars be made, but if the rate we recommend for cotton collars is also applied to linen collars, we enter no protest from the point of view of our industry.

We make in our brief a recommendation as to the administrative features of the new tariff law, namely, a clause to prevent undervaluation and the dumping of foreign goods into our market at a less price than they bring in their home market.

We suggest also that the wording of this bill follow the wording of the Payne and other previous tariff bills in this paragraph describing collars as "made entirely or in part of linen," and "collars made entirely of cotton," for under the wording of the Underwood bill which refers to collars "made of cotton or of which cotton is the component material of chief value," a so-called linen collar could sometimes be shown to have linen as its component material of chief value and sometimes to have cotton as its component material of chief value.

Finally, let me say that in view of the fact that there have been no importations of popular priced collars in the past and that therefore the records of importations and values are misleading, and we have no sure method of determining what the average value of imported collars will be, other than the proof which I submit, we urge upon you to give the American manufacturer and the city of Troy and its vicinity which, as has been said, is peculiarly dependent on this industry, the benefit of any doubt that may be in your minds in determining what rate of duty will bring reasonable competition.

SUPPLEMENTAL BRIEF IN REFERENCE TO THE TARIFF ON COLLARS AND CUFFS SPECIFIED IN PARAGRAPH NO. 348 OF SCHEDULE J OF THE PAYNE-ALDRICH TARIFF LAW.

At the hearing in reference to the collar and cuff schedule which was held before the Ways and Means Committee on January 24, 1913, some questions were asked by Mr. Kitchin in reference to the exportation of collars, which seemed to indicate that there was an impression in his mind, if not in the minds of the members of the committee generally, that the exportation of collars was large, and that the collars made in Troy found a ready market in Canada and in England, and fearing that this impression, which is a false one, might tend to prejudice the interests of the collar and cuff manufacturers, the committee of the collar, cuff, and shirt manufacturers of Troy, N. Y., have deemed it advisable to supplement the testimony of Mr. E. H. Betts, which was given before the committee on January 24, 1913, by an affidavit made by F. F. Peabody, verified February 13, 1913, and hereto annexed and marked "Schedule A." Mr. Peabody is the President of Cluett, Peabody & Co., of Troy, N. Y., a corporation which owns and operates a factory in Canada and maintains a distributing office in London, England. Cluett, Peabody & Co. do most of the export business in this industry and theirs is the only concern maintaining a factory or distributing office abroad.

LINEN COLLARS AND CUFFS.

We wish to supplement and clarify the testimony given at the hearing on January 24, 1913, in regard to linen collars and cuffs. So much time was taken in answering questions and in explaining the tariff rate on cotton collars that the duty on linen collars and cuffs was almost entirely ignored. There might have been an impression in the minds of some of your committee that because \$1.25 was stated to be the aver-

PARAGRAPH 348—COLLARS AND CUFFS.

age cost of a dozen 25-cent linen collars in America and \$1.37 was given as the average value of a dozen linen collars as now being imported, that these two prices referred to collars of the same quality and retailing at the same price. Such is not the case. In the first place, \$1.25 is the American cost price, whereas \$1.37 is the foreigners' selling price and includes his profit. In addition to that, it should also be said that the greater part of the collars now being imported are sold, not at 25 cents each, but at 35 cents, 40 cents, and 50 cents each; that the majority of them are not of the same quality nor do they compete with the American 25-cent collars.

Collars of a quality to compete with American 25-cent collars can be made in Germany and other foreign countries for 85 cents per dozen or less, whereas the cost here is \$1.25 per dozen. The difference in the cost of labor alone is 30 cents per dozen and the difference in the cost of linen, due to the American tariff on linen, is 10 cents per dozen additional.

We have recommended that no change in the present rate of duty on linen collars and cuffs be made for these reasons:

1. Approximately 10 per cent of the linen-collar business of the United States is now being done on imported collars, and that percentage is steadily increasing.

2. In addition to the 25 cent each and more expensive linen collars, there are also, both in Europe and America, many popular-priced linen collars made and sold in competition with cotton collars. Placing the duty on linen collars at a lower rate than that for cotton collars would invite the importation of foreign-made cheap linen collars in severe competition with American 2-for-25-cent collars, bringing about the same result as too low a rate of duty on cotton collars.

3. There would be danger of foreign-made cotton collars being invoiced as linen to obtain a lower rate of duty, a form of fraud very difficult to detect.

We respectfully ask that this supplemental brief and affidavit may be considered in connection with the testimony and brief which we have already filed.

J. K. P. PINE,
ALBA M. IDE,
F. F. PEABODY,
E. H. BETTS,
JOS. MCKAY,

Committee.

STATE OF NEW YORK,

Rensselaer County, City of Troy, ss:

F. F. Peabody, being duly sworn, deposes and says that he is the president of Cluett, Peabody & Co., a corporation organized and existing under the laws of the State of New York and having its principal office in Troy, N. Y.

That said Cluett, Peabody & Co. are engaged in the manufacture and sale of collars, cuffs, and shirts; that said company, in the opinion of deponent, does more export business than any other collar, cuff, and shirt manufacturing concern in Troy, N. Y.

That deponent knows the export business and knows the conditions under which American manufacturers have to distribute their products abroad.

That Cluett, Peabody & Co. have until recently exported collars to Canada, but that their exportation of collars to Canada is not large.

Canadian merchants are located so near the United States that they are affected by the advertising done by the Troy manufacturers and that on that account some of the Troy products are sold in Canada. They are not, however, sold at the same prices as the Canadian collars of the same qualities which retail at two for 25 cents, but at three for 50 cents, affording, as can be readily seen, a small profit to the Canadian retailer.

In spite of the fact that our company had been doing export business to Canada for a long period of time, we could not establish a business of large proportions, and we consequently decided to establish a factory in Canada. Our factory opened in October, 1911, but did not get fairly under way until the spring of 1912. The decreased exportation to Canada, due to the opening of this factory, will not be apparent until the records of 1912 are published; then it will be seen that there has been a marked falling off in the exportation to Canada. Cluett, Peabody & Co. opened that factory in Canada because they could not compete with the Canadian manufacturers and pay the Canadian import duty.

Cluett, Peabody & Co. also maintain a distributing point in London, England, and do some business in England, and by means of the shipping facilities from London, which are the best in the world, we are enabled to sell their goods to some extent in Africa, Australia, New Zealand, and the east coast of South America. This business

PARAGRAPH 348—COLLARS AND CUFFS.

is not large in any one place, but in the aggregate it is large enough to enable us to keep this distributing office, but in the opinion of deponent this business never can be large and never can be put upon a competitive basis with the English manufacturers, because of the difference in the labor costs as far as England is concerned, and the high tariff duty imposed by other nations against American made goods.

Our goods in the opinion of deponent are sold in England, not because they compete with the English made goods, but because the materials and the construction of the collars are different. They are sold only to merchants who want something different from the English made article, and the business is therefore small in volume and spreads over a very large territory.

F. F. PEABODY.

Sworn to before me this 13th day of February, 1913.

[SEAL.]

EVERETT M. SNYDER.

Notary Public, Rensselaer County, N. Y.

PROTESTS AGAINST REDUCTION OF TARIFF ON COLLARS AND CUFFS.

THE REECE BUTTON HOLE MACHINE CO.,
Boston, Mass., February 5, 1913.

Hon. JAMES M. CURLEY, M. C.,
House of Representatives, Washington, D. C.

DEAR SIR: We wish to protest against the proposed change in duty on collars and cuffs, and we herewith inclose a list of wages which we have obtained from foreign countries showing the wages of buttonhole makers in these countries. In our country the same operators would make from \$12 to \$15 per week. Now, if the tariff on collars and cuffs is reduced the wages of the operators in Troy, N. Y., will have to be reduced in order to compete with foreign trade. We make the machines for the Troy manufacturers, and therefore our industry would also be affected by any reduction in the tariff on their goods. Also, there are large laundry machinery concerns in your district who would also be affected in like manner.

This also applies to our folding company, as they manufacture folding machines for the Troy manufacturers.

Yours, very truly,

THE REECE BUTTON HOLE MACHINE CO.,
By FRANCIS A. SHEA, *President*.

[Inclosure.]

Average weekly wages paid buttonhole operators in foreign countries: England, \$5; France, \$6.60; Germany, \$3.

CORLISS, COON & Co.,
Baltimore, January 15, 1913.

Hon. J. CHARLES LINTHICUM,
217-219 St. Paul Street, Baltimore, Md.

HONORABLE SIR: I am a resident of your district, residing at Charles and Thirty-first Streets, and being the Baltimore manager of the above firm I am vitally interested in the proposed revision of the tariff on collars and cuffs.

The stability of this business is now seriously threatened by the proposal to materially reduce the tariff on collars and cuffs, thereby placing American and foreign manufacturers upon a basis of competition which must necessarily spell disaster for the domestic manufacturers. The cost of labor abroad is infinitely less than in the United States, and in the face of a materially reduced tariff the domestic manufacturers would be almost helpless. For, as a matter of fact, the foreign manufacturers pay less for materials, supplies, rent, interest, insurance, and furthermore their selling expenses are much less than ours.

There is no hope that this industry can be maintained and prospered unless the tariff is continued at very nearly the present rates. Foreign competition, even under our present schedule, has not been shut out. The imports for several past years are as follows:

PARAGRAPH 348—COLLARS AND CUFFS.

Cotton collars and cuffs:	Dozen.
June 30, 1910.....	2,508
June 30, 1911.....	7,400
June 30, 1912.....	7,564
Linen collars and cuffs:	
June 30, 1910.....	37,969
June 30, 1911.....	39,034
June 30, 1912.....	45,823

Under the Wilson bill of June 30, 1896, the importations were: Cotton collars, 15,889 dozen; linen collars, 107,849 dozen.

I understand that it is now proposed to reduce the tariff on these goods to 25 per cent ad valorem. If this is done, our industries will rapidly decline, because the weekly wage in collar and shirt manufacturing in foreign countries is about one-third of what it is here.

If this threatened reduction in the tariff as regards collars, cuffs, and shirts becomes a fact, the demand for the imported collar will largely increase, and necessarily the domestic output will be very much curtailed. We will meet with greater competition than ever, will undoubtedly use less goods, and will therefore not have employment for as many salesmen and clerks in the selling departments as heretofore.

The tariff on collars and cuffs under the Payne-Aldrich bill has been: Linen collars and cuffs, 40 cents per dozen and 20 per cent ad valorem; cotton collars and cuffs, 45 cents per dozen and 15 per cent ad valorem.

I personally believe that it is necessary that the specific rates should be retained. I am going to ask you to use your influence and cooperation against a serious reduction in the tariff rates on collars, cuffs, and shirts.

Thanking you in anticipation of this favor, I beg to remain,

Your obedient servant,

H. J. CAMPBELL.

(A communication identical with the above, dated St. Louis, Mo., January 16, 1913, and signed by Clarence L. Fidler as salesman for Corliss, Coon & Co., was filed.)

MERCHANTS AND MANUFACTURERS ASSOCIATION,

Baltimore, January 16, 1913.

Hon. DAVID J. LEWIS,

House of Representatives, Washington, D. C.

DEAR SIR: Several of our members have brought to our attention the matter of there being a likelihood of a reduction in the tariff as regards collars, cuffs, and shirts. They state that if this reduction becomes effective the demand for the imported collar, cuff, and shirt will largely increase and, therefore, necessarily, the domestic output will be very much curtailed.

In regard to shirts, the industry might be able to stand a moderate reduction, say not over 10 per cent, but on collars and cuffs it is absolutely necessary, they say, that the specific rates be retained.

Under the Dingley and Payne-Aldrich bills, the outputs of the collar, cuff, and shirt manufacturers have increased. The industry has prospered and the public has been supplied with collars, cuffs, and shirts at as low prices for like qualities in most countries. It is needless to add that the foreign manufacturer pays less for material, supplies, rent, insurance, and his selling expenses are much less than those of our manufacturers.

We would thank you to give this matter your very best consideration.

Yours, very truly,

ROBERT J. BEACHAM, *Secretary.*

Mr. UNDERWOOD,

Chairman House Ways and Means Committee.

DEAR SIR: I understand the collar and shirt manufacturers committee are soon to appear before your committee to try and keep the duty on their goods; and while there may be some justice in their demands, I would like to give you some facts as to how they run things in their shops.

It may be of some use to you or it may not.

PARAGRAPH 348—COLLARS AND CUFFS.

First. Do you know that all the girls who operate sewing and buttonhole machines have to buy their own machines, costing from \$100 to \$200 each. Some machines they can't buy (such as special patented ones), but they have to rent them. They also have to buy all broken parts, and on high-speed machines, such as they use, it amounts to a great deal. They also have to buy their thread and in some shops pay the machinist for repairing any breakdowns, and they have a lot of them when a machine is speeded up to 3,000 revolutions a minute. A new machine won't last long without parts wearing out or breaking, and sometimes there is a new machine got out that has some improvement and the girl has to give up the old one and buy the new one.

I don't believe there is any other industry in the United States of America that the help supply the machinery to such an extent. For instance in one of the largest shops here there must be over 500 machines, which at the lowest price, \$100 each, would be \$50,000, that the company don't have to put up. Don't you think they ought to pay the help a dividend on it?

In the knitting mills here they use about the same machines but the help don't have to put up a cent for them or buy thread.

Another thing, if a girl spoils a collar they charge her 10 cents for it. That is more than they sell it for, and the collar is not finished sometimes.

One large firm had a branch shop on Broadway making nothing but goods for Canada, but last year they started a branch factory in St. Johns, Canada, and there is not much doing in their branch on Broadway now.

How is it they could sell goods to Canada (when the buyer there had to pay 33½ per cent duty) and compete with the cheap help of Europe?

It is safe to say that the help in Canada don't have to buy their machines in the branch factory in St. Johns.

I believe the reason the help has to furnish the machines is years ago (20 or 25) they made good pay, \$18 per week or so piecework, and they could get them to do it, as that was big pay then, but they don't make it now, but the buying the machine has become a part of the business.

I believe they are paying less per dozen now than they did then, but most other trades are paying more now than ever before; \$18 now is not as good as \$9.30 years ago.

They kept cutting the prices and the girls would work a little harder to try and make up and they would get another cut until now they have got them about as low as they can.

They may show where some girls make good pay, but they are few, and they won't show how much the girl has to pay out for repairs and thread, not counting the first cost of the machine.

If you are interested in this you can easily find out if what I am writing is correct by asking a few leading questions, as they can not deny it.

I may not be right about the number of machines in the largest shop, but I think there must be more than I stated. The place is a block long (Cluett, Peabody & Co.). They also started the branch in St. Johns. A high-speed stitching machine costs \$125, I think, and a buttonhole machine about \$200. They also have other ones, but an average of \$100 is low.

Yours, truly,

GEORGE SMITH.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

PARAGRAPH 349.

Laces, lace window curtains, and all other lace articles; handkerchiefs, napkins, wearing apparel, and all other articles made wholly or in part of lace or laces, or in imitation of lace; nets, nettings, veils, veilings, neck ruffings, ruchings, tuckings, flutings, quillings, embroideries, trimmings, braids, featherstitch braids, edgings, insertings, flouncings, galloons, gorings, bands, bandings, belts, beltings, bindings, cords, ornaments, ribbons, tapes, webs, and webbings; wearing apparel, handkerchiefs, and other articles or fabrics embroidered in any manner by hand or machinery, whether with a plain or fancy letter, initial, or monogram, or otherwise, or tamboured, appliquéd, or scalloped, by hand or machinery, for any purpose, or from which threads have been drawn, cut, or punched to produce openwork, ornamented or embroidered in any manner herein described, in any part thereof, however small; hemstitched or tucked flouncings or skirtings; all of the foregoing, composed wholly or in chief value of cotton, flax, or other vegetable fiber, or of cotton, flax, or other vegetable fiber and india rubber, or of cotton, flax, or other vegetable fiber, india rubber, and metal, and not elsewhere specially provided for in this section, sixty per centum ad valorem: Provided, That no article composed wholly or in chief value of one or more of the materials or goods specified in this paragraph, shall pay a less rate of duty than the highest rate imposed by this section upon any of the materials or goods of which the same is composed: And provided further, That no article or fabric of any description, composed of flax or other vegetable fiber, or of which these materials or any of them is the component material of chief value, when embroidered by hand or machinery, or having hand or machinery embroidery thereon, shall pay a less rate of duty than that imposed in this section upon any embroideries of the materials of which such embroidery is composed.

LACES, EMBROIDERIES, ETC.

TESTIMONY OF PETER GOULED, REPRESENTING THE EMBROIDERY AND LACE MANUFACTURERS' ASSOCIATION, UNION HILL, N. J.

Mr. GOULED. I represent the Embroidery and Lace Manufacturers' Association of New Jersey. We have about 100 members, and I myself am interested in the manufacture of embroideries in this country. I have a plant and employ about 200 hands. The total looms we have in this country, taking them on a 10-yard loom unit, is about 1,210, and the production of domestic embroideries made on shuttle looms amounts to about \$14,000,000. The importation of the same class of embroideries from the other side, according to the figures we have, amounts to \$18,000,000, and adding a 60 per cent duty it is \$29,000,000, or the total consumption is \$43,000,000. Out of this \$43,000,000 we actually produce here only one-third.

That goes to show that we can only compete to a certain point, and that when we reach that point we stop; we can not go any further because 66 per cent of the consumption comes in from the other side—between 60 and 66 per cent. The reason for it, of course, is plain. The wages here are three times as high as they are abroad, and any reduction in the duty would detrimentally affect our production and would retard the growth of our industry, reducing our output to insignificance compared to the total consumption, and would spell failure in many instances.

It would to a certain extent affect our production. We would lose about \$2,000,000 worth of goods, that amount in foreign value to about one and one quarter million, which we would not be able to make. We are actually selling \$12,000,000 worth of goods, regardless

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

of the 60 per cent duty, because the amount of labor contained therein is very small as compared with the cost of materials or on account of our quick delivery of risky fashionable materials. If there should be a reduction in the tariff from 60 to 50 per cent, it would only work out to the benefit of the European manufacturer, because our loss would have been about \$2,000,000 in the production. This would result in a decrease of revenue of about \$1,175,000 in loss between now and future importations.

We have here about 400 manufacturers employed in the manufacture of embroideries on shuttle looms. As I said before, the total number of machines on the 10-yard unit basis is about 1,210, and, taking it on the \$14,000,000 worth which we produce, the average would be about \$40,000 a year for individual concerns. If we were to assume that a 10 per cent profit were obtainable, the average manufacturer would earn about \$2,000 a year, as there are mostly two partners to a concern, which would be less than the average income of a progressive farmer.

We, of course, advocate a change in the duty from the present rate of 60 per cent to 70 per cent, but we realize that even in that case we are not going to gain so much, because we approximately figure that if there should be an increase in duty to 70 per cent on domestic embroideries the utmost we could make would be about \$2,000,000 more of embroideries.

The actual boom, as I would say in our industry, would only be if we had an increase much higher, and if we could get a specific duty. The only trouble is that the specific duty implies so many complications. It would be mighty hard and there would be constant conflict. It would be far better because the main item in the value of our goods lies in the labor. The more labor there is in a certain article of course the harder it is for us to compete with the other side. When it comes down to the very cheap articles, where more of it is raw materials than labor we can compete, but when there is more labor than raw material in it we are not in it.

The CHAIRMAN. Your time has expired.

Mr. GOULED. May I just add this? There was a remark made about the automatic machines. The patents on this machine are owned by a concern that has the largest plant in the world. Regardless of the fact that there are 2,000 of those machines in Europe we can not manage to get any of them. There is one concern that tried to get a machine. They established a plant in Europe and bought machines there and erected them, and then took them down and tried to import them to the United States, and they now have a lawsuit about it.

Mr. HILL. Do you know how long the patent has to run?

Mr. GOULED. It has to run still a number of years.

Mr. HILL. Five years.

Mr. GOULED. We can not get them. In 1905 I was over in Saxony to try to buy a machine and I was talking with the inventor, and he told me that he came over here and that after he got back they gave him an awful roast in the press and said he was trying to kill their industry by giving away their tools to the people over here.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Mr. FORDNEY. What proportion of your production cost is your labor cost?

Mr. GOULED. When it comes down to where there is more material used, the cost of labor is smaller, and when there is less material used the cost of labor is enormous.

Mr. FORDNEY. In the higher grades?

Mr. GOULED. There are some kinds of laces that we could never touch because the prices are so high. Last summer I had some stitchers in my plant. That is skilled labor, and I had to pay them \$42 a week.

Mr. FORDNEY. What does that same class of labor get abroad?

Mr. GOULED. Forty-five francs.

Mr. FORDNEY. What is that in American money?

Mr. GOULED. About \$9.

Mr. FORDNEY. As against \$42?

Mr. GOULED. I am taking the extreme case; on an average I would say it was from \$25 to \$30. That was only the summer when I was exceptionally busy.

BRIEF OF THE EMBROIDERY AND LACE MANUFACTURERS' ASSOCIATION OF NEW JERSEY—PARAGRAPH 349, SCHEDULE J, CUSTOM TARIFF LAW 1909.

The COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

Mr. CHAIRMAN AND GENTLEMEN: We consider the present duty of 60 per cent ad valorem on embroideries made on power and hand looms, classified under paragraph 349, Schedule J, custom tariff law 1909, inadequate and disadvantageous to the growth of our domestic industry, and we respectfully recommend an increase in duty to at least 70 per cent ad valorem, which will result in the following advantages to this country: It will increase the manufacture of embroidered specialties approximately \$1,000,000, and the manufacture of domestic staples \$1,000,000, or a total of \$2,000,000, and will result in the increase of the revenue to \$925,000.

The method we rely upon in making those estimates is as follows:

The present importation of embroideries amounts to \$18,000,000, and the duty of 60 per cent amounts to \$10,800,000. An increase to 70 per cent duty will enable our industry to produce \$2,000,000 more of goods, which would equal in foreign value (not including duty) \$1,250,000. The importation would be reduced to \$16,750,000, which would yield the revenue \$11,725,000, being an increase in revenue of about \$925,000.

Incidentally an increase in duty to 70 per cent ad valorem would necessitate the importation of about 200 more machines, on which the duty would amount to about \$150,000.

We manufacture in this country approximately \$14,000,000 worth of shuttle machine made embroideries and we estimate that about the amount of \$8,000,000 represents the output of popular-priced embroideries for the masses, the remaining \$6,000,000 worth of goods represents the value of so-called novelties, or specialties which are subject to fashion and which we are able to produce and sell in this country only because of our quicker deliveries during the season.

A fashion is, however, not always a dependable factor in the existence of an industry of our kind and the manufacturer of specialties can only enlarge his business with safety, when he feels that if there should be, at any time, no demand for fashionable embroidered specialties, he could then keep his machines employed making staple articles. Under the present condition, however, the foreign manufacturer is able to compete with us to such an extent that a reduction of duty, for instance to 50 per cent, would immediately affect the production of domestic embroideries, which fact, we think, would result in the following changes:

Our output of embroideries would shrink about \$2,000,000 a year, and the loss of revenue to this country would amount to about \$1,175,000.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

The method we have applied in obtaining those figures is as follows:

Our present duty of 60 per cent on importations of \$18,000,000 amounts to a revenue of \$10,800,000, 50 per cent duty on increase of importation to \$19,250,000.

\$18,000,000 plus
\$1,250,000 foreign value of
our loss of
\$2,000,000

would amount to \$9,625,000, or, as stated above, it would result in a loss in revenue of \$1,175,000.

Our contention is that no matter how high the duty would be the American consumer would in no case have to pay to the domestic manufacturer any exorbitant prices, for the very reason that our industry is scattered in this country, the machines being owned by men with little capital, who are anxious to progress and thus stimulate keen competition. Our industry is not controlled by a trust which can profit by a higher duty in fixing prices for the American consumer, thereby pocketing enormous profits without giving full value in return. Our machines are owned by 352 individual firms. This gives an average of about \$40,000 production for each individual concern; based on an average of about 10 per cent profit this would mean a yearly income of about \$4,000 for each individual embroidery concern in this country. Considering that most embroidery firms are composed of two partners the average income per member is less than the income of a progressive farmer.

The fact that the embroidery machines in the United States are distributed among 352 small holders, all machines being scattered in different localities in eight States, is in itself a safeguard to the American consumer and a guaranty that the domestic manufacturer can not take unfair advantage of any duty, as existing competition will compel him to sell his merchandise at a figure very slightly above the actual cost of production.

When we urgently recommend an increase in duty to 70 per cent, we do not expect that such an increase would result in a "boom" in our industry. At the present stage of our development a radical and rapid change for the better can only come in the event of the enactment of an 80 per cent duty, ad valorem. We estimate that in such event the production of domestic embroideries would increase about \$6,000,000, or foreign value (not including duty), \$3,750,000.

By following the same method which we applied before the increase in revenue would be—

80 per cent on \$14,250,000.....		\$11,400,000
Present imports.....	\$18,000,000	
Anticipated reduction of imports.....	3,750,000	
	<hr/>	
	14,250,000	
60 per cent on present imports of \$18,000,000.....		<hr/> 10,800,000
Or a total increase of revenue.....		<hr/> 600,000

A duty of 80 per cent would result in about the same gain of revenue as a duty of 70 per cent. The burden of that increased revenue would have to be carried by the richer class who can afford to pay for high-priced luxuries, amounting to about \$14,250,000 (of foreign value), which we estimate we could not produce in this country even under the increased duty of 80 per cent.

We believe that a higher duty is absolutely essential for the proper development of our industry in this country to enable us to compete with the foreign manufacturer, and to raise the standard of our workmanship. The increase in duty to either 70 per cent or 80 per cent, will in both cases result in an increase in revenue of over half a million dollars a year, and the burden of that revenue will fall on the class which buys high-priced luxuries, while at the same time it will enable the domestic manufacturer to increase the output from \$2,000,000 to \$6,000,000 a year, giving employment to hundreds or thousands of families in this country.

The safeguard to the public lays in the fact that the higher the duty the keener the competition in this country. The wages of our skilled labor being about three times as high as those of the same class in Europe, our operators are in a position to save enough money in a year or two to buy machines for themselves and thus increase the number of competitors. We employ mostly skilled operators and designers, who,

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

because of the prevailing high wages, find it possible to establish themselves in business.

Thanking you for your kind consideration, we are, Mr. Chairman and gentlemen,
Most respectfully, yours,

THE EMBROIDERY & LACE MANUFACTURERS' ASSOCIATION
OF NEW JERSEY,

PETER GOULED, *Secretary.*

JANUARY 25, 1913.

Recapitulation.

Effects of changes in tariff.	Loss in production to American manufacturers (domestic value).	Increase in importation from Europe (foreign value).	Gain in production to American manufacturers (domestic value).	Decrease in importation from Europe (foreign value).	Loss to United States of America in revenue on increased importation.	Gain to United States of America in revenue on decreased importation.
Reduction in duty from 60 to 50 per cent.....	\$2,000,000	\$1,250,000	\$1,175,000
Increase in duty from 60 to 70 per cent.....	\$2,000,000	\$1,250,000	\$925,000
Increase in duty from 60 to 80 per cent.....	6,000,000	3,750,000	600,000

Town of Union, N. J., January 25, 1913.

THE EMBROIDERY & LACE MANUFACTURERS'
ASSOCIATION OF NEW JERSEY,
PETER GOULED, *Secretary.*

UNION HILL, N. J., *February 1, 1913.*

SUPPLEMENTARY BRIEF OF THE EMBROIDERY AND LACE MANUFACTURERS ASSOCIATION OF NEW JERSEY.

Paragraph 349, Schedule J, Custom Tariff Law 1909.

The HONORABLE COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

MR. CHAIRMAN AND GENTLEMEN: The statement of Mr. Weingart, representing an importers' association, was that he did not engage in manufacturing in this country under a 60 per cent duty while maintaining it to be a profitable business under a 45 per cent or less rate, because when he would obtain automats the machines that he would erect now would become obsolete.

It seems hardly possible that Mr. Weingart was ignorant of the fact that in his own factories in Switzerland and Germany there are more ordinary machines than automats. Was he ignorant of the fact that automats may be attached to any machine, thus bringing them up to date?

Does he not know that Loeb & Schoenfeld Co., who have owned the patent rights in this country for over five years, have less than one-fifth of their plant here and more than four-fifths in Europe, the product of which practically all is imported to this country?

Does he not know that Loeb & Schoenfeld Co., which can erect automatic embroidering machines at least 33½ per cent cheaper than Mr. Weingart's firm, has not increased its domestic plant more than one-fifth under a 60 per cent duty?

Is it not beyond possibility that Mr. Weingart, paying 33½ per cent more for his machines, would put in many automats under the 45 per cent duty, while the Loeb & Schoenfeld Co., owners of the device, have erected but few under a 60 per cent rate?

Respectfully submitted by

THE EMBROIDERY AND LACE MANUFACTURERS ASSOCIATION,
PETER GOULED, *Secretary.*

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

TESTIMONY OF JAMES A. MARR.

Mr. Marr was duly sworn by the chairman.

Mr. MARR. Mr. Chairman and gentlemen, I represent A. & E. Henkels, of Bridgeport, Conn. I think we come under paragraph 349.

This company has a factory in Langerfeld, Germany, and also has one in Bridgeport, Conn. They use in the Bridgeport factory what is known as a circular lace machine. They were not fortunate enough to know about this Lever-Gothrough bill passed in 1909, although they were just planning to come in at that time. They did not hear about it until it was too late. This circular machine is known as the single-thread lace, which comes nearest to making handmade lace. I do not know just what the importations were last year. They are not classified, but I presume there were several millions imported into the United States.

We have been operating in Bridgeport since 1910. We first started with a few machines, and they have been increasing. Now, we find from running these two factories, one in Germany and one here, that the present duty of 60 per cent is such that there is a very slight advantage so far on the side of the German factory. We have produced here, in the brief, facts to show that.

We have taken the item of factory cost, the cost of the machinery and equipment, and raw materials, and labor, and those are the elements.

The factory construction is exactly the same in the other country as it is in this. Both factories are constructed on the same plan, and are as nearly the same as they can be, which you would naturally expect. The floor space in Germany, I presume, although I do not know, on account of the difference in labor and making bricks, etc., shows a factory cost per square foot in the Langerfeld of \$1.38, and the cost of the factory in Bridgeport is \$2.22 per square foot, or 60 per cent difference. That is our investment.

Now, in regard to the second item, machinery, we make our own machinery in Germany. They do not make any of it in the United States. The circular lace machines have not been made in the United States as yet, and I do not know that anybody contemplates making them. I would say that we are the first or pioneer industry in the circular lace-machine business in the United States. There is nobody else in the United States except us in this business, although there is one firm, which was represented here, which imported a few machines, and we have heard it said that so far they have been used largely for experimental purposes.

On the machinery the rate is 45 per cent duty, and it costs about 5 per cent more for crating and packing and hauling and unloading, so that our machinery here, even making it ourselves, costs us 50 per cent more in the local factory than in the foreign factory.

The CHAIRMAN. Are you in favor of a reduction in the tariff on the machinery?

Mr. MARR. Not if it is going to injure any American industry, because we believe we employ ourselves a part of this consuming public, and if we injure some other part of the consuming public it may ultimately come back on our own heads. The better market we can keep here the better off we will be.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

The CHAIRMAN. That is not the question I asked you. Of course, no one is in favor of reducing the tariff if it is going to injure any American industry; but I asked you if you were in favor of reducing the duty on machinery. In other words, do you think that duty can be reduced without injuring an American industry?

Mr. MARR. As I have stated, Mr. Chairman, there are no American industries, and no sign of any, and if a reduction is made, I do not know of any manufacturer that can be injured.

The CHAIRMAN. Then, you favor a reduction of the duty on this machinery?

Mr. MARR. Well, I have not thought of that, except as I have heard the question asked here. That had not occurred to us. If it had occurred to me, as one of the gentlemen speaking here said, we have paid the Government now over \$70,000 on the machines we brought in, and if the rate on machinery is reduced, and some one else brings in a plant, that will cut the value of our plant in two at once.

The CHAIRMAN. That is the whole proposition I am asking about. We find that a great many of these men come here and argue to this committee that we ought to have a high tariff because they paid a high tariff on the machinery, and when we suggest that it ought to be reduced, and ask that they stand for a reduction, they all hesitate and say they do not want any reduction. That is what I am asking you. Of course, you can not consider this entirely from a selfish standpoint, but is it to the best interest of your industry that we reduce the tariff on these machines?

Mr. MARR. We would not object if the committee thinks it is going to benefit the industry. In that event, we would not object to it.

Now, as to our raw materials, we find that it costs us 10 per cent more for our yarn here than it does abroad. We have to have our yarn spun up at Housatonic, Mass. The southern yarns are not well enough spun for our purposes, so that in our lace we have to use special processes all the way through, and we find that the more labor that is used in anything, the more we have to pay, and that adds to the difference between here and abroad.

In regard to the labor, the last item, the average wages in the Bridgeport factory, of all employees, is \$11.20, and that of the factory employees at Langerfeld, Germany, is \$5.45.

You understand, gentlemen, that this circular single-thread machine is small as compared with these large machines which you have heard described.

The employees are mostly girls and women. There is 106 per cent of difference in the labor in the factory employees here and abroad.

The average wages to the officers, including all clerical help, in the Langerfeld factory is \$13.96, and in the Bridgeport factory, \$26.52, or 90 per cent in excess.

The next thing that I want you to understand is that this company has paid no dividends. It is a firm and is not a corporation, and the owners have never drawn a cent out of it. It is making profits, and they have been importing machines from time to time. We think the business is going to succeed, and we have submitted here a table which will show you that the present rate of duty of 60 per cent is barely sufficient to protect us against our own factory in Germany.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Mr. DIXON. Did you build your German factory at about the same time you constructed the one here?

Mr. MARR. No; the German factory was built a number of years ago.

Mr. DIXON. Did you own that one before you constructed the one here?

Mr. MARR. It is a well-established industry in Langerfeld, Germany.

Mr. DIXON. How are your profits there as compared with your profits here?

Mr. MARR. Well, from reading this table, you will see. I will not take time to read that; but taking the cost of \$1 worth of goods, the cost of production, and selling it in Langerfeld, taking \$1 as the basis, our operations up to date here show that it costs \$1.62 $\frac{1}{4}$. Our selling price, selling to the same customer from both factories, necessarily must be the same. There is a little difference in the cost of the freight. New York is our best market, of course, and there is a little difference in the cost of the freight, but it does not make up for that difference. So you may figure out the difference in profits yourself, from that paper. With a 60 per cent duty we are at a slight disadvantage now, but not very much when you take into consideration the difference of freight.

So we say to you gentlemen that here is a new industry, and if we succeed there will probably be others going into it. It is a very valuable industry, and during all of this time, mind you, that we have been operating in the United States, during the last three years our Langerfeld importations have increased 39 per cent, so that we are in competition with our own factory, and I presume that what is true of our German plant is true of the other German manufacturers, that is, that their importations have been increasing, notwithstanding that we have been here.

There is the situation, and we ask you not to reduce that 60 per cent, because if you do reduce it we will be in the same position as we were once before, when we tried to operate a plant in the United States at Schenectady, and lost our entire investment. We are now trying it again, and have done so with the idea that the duty on that was fixed, and we ask you gentlemen not to reduce it, because if you do, we will simply lose our present investment. This investment is larger than the investment we made before, and we ask you to leave the duty where it is on single-thread laces made on these circular lace machines.

Mr. FORDNEY. Let me ask you one question, please. What proportion of your total cost of manufacture is in the labor cost?

Mr. MARR. I think those two items are on the table. I think they figure up something nearly 35 per cent.

Mr. FORDNEY. Thirty-five per cent higher than—

Mr. MARR. No.

Mr. FORDNEY. Thirty-five per cent of the total cost?

Mr. MARR. Thirty-five per cent of the cost is labor.

Mr. FORDNEY. Both here and abroad?

Mr. MARR. Yes.

Mr. FORDNEY. Here and in Germany?

Mr. MARR. Yes.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Mr. FORDNEY. So that your labor cost, being more than 100 per cent higher than it is over there, the protection that you are asking for is sufficient to offset the difference in your cost here and there, practically?

Mr. MARR. Very nearly.

Mr. FORDNEY. Have you no other items showing the difference in cost? Is labor cost the principal item?

Mr. MARR. That is the principal item. We have to buy our materials and pay the manufacturers of those materials higher prices than we pay for the same materials abroad.

Mr. FORDNEY. If I got your figures correctly, in Germany your labor receives \$5.45 and here it receives \$11.20.

Mr. MARR. Those are the average wages of factory employees.

Mr. FORDNEY. Yes; that is the average wage. Therefore one is 48.6 as against 51.4, so that your labor cost is more than 100 per cent higher than it is in Germany?

Mr. MARR. One hundred and six per cent and 90 per cent.

You will notice, gentlemen, that there are no high salaries for officers in there. We have no officers drawing large salaries.

A. & E. HENKELS, OF BRIDGEPORT, CONN., SUBMIT INFORMATION RELATIVE TO THE LACE INDUSTRY IN RESPECT TO CLUNY AND TORCHON LACES, AS MADE BY THE SINGLE-THREAD LACE MACHINE.

Hon. OSCAR W. UNDERWOOD,

Chairman Committee on Ways and Means, House of Representatives.

DEAR SIR: The firm of A. & E. Henkels has a factory in Bridgeport, Conn., and also in Langerfeld, Germany, for the manufacture of cluny and torchon laces. The Bridgeport factory began operating in 1910 and has been operating ever since that time. This Bridgeport factory was established under the long-existing tariff of 60 per cent ad valorem on these laces and under the firm belief that this duty was to remain.

All laces made in the Bridgeport factory are of cotton. No linen laces can be made there on account of the import duty on linen yarns.

In regard to the cost of production in Germany as compared with Bridgeport we submit the following facts:

Into the cost of these goods there enters the cost of factory, machinery and equipment, raw materials, and labor.

In regard to the first item of factory cost: The cost per square foot of factory buildings in Langerfeld is \$1.38; in Bridgeport, \$2.22, or 60 per cent in excess. Both factories are constructed on exactly the same plans and they are identical in every respect.

In regard to the item of machinery and equipment: The machinery of the local factory for manufacturing these laces is all imported from Germany, none being made in the United States; and the present duty thereon is 45 per cent. To this must be added 5 per cent for freight, packing, insurance, etc., making the machinery in Bridgeport cost 50 per cent more than the machinery in Langerfeld.

In regard to the item of raw materials: As before stated, cotton yarn is the only material used in the Bridgeport factory and costs 10 per cent more than the same quality of cotton yarn in Langerfeld.

This difference in cost arises from the fact that the raw cotton can be purchased in the southern States by the German spinner as cheaply as by the New England spinner, and the difference of the freight is insignificant. The cost of spinning the yarn is higher in the United States than in Germany, we suppose on account of higher wages paid to labor.

We pay for finishing the yarn after it is spun 100 per cent more in the United States than in Germany. This includes bleaching, sizing, dyeing, mercerizing, etc., in accordance with the special processes to which our yarns are subjected.

In addition to the foregoing yarns, auxiliary yarns have to be used which are of higher quality than those used in the laces, and are 10 per cent higher here than in Langerfeld. The dressing and finishing of auxiliary yarns costs 100 per cent more here than in Germany.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

In regard to the item of labor, the average wages of all factory employees per week in Langerfeld is \$5.45. The average wages of all factory employees in Bridgeport per week is \$11.20, or 106 per cent in excess.

The average wages to officers, including all clerical help, in Langerfeld is \$13.96 per week and in Bridgeport \$26.52 per week, or 90 per cent in excess.

Making a more detailed summary of the comparative cost of production and for the sake of clearness, setting forth the comparative cost of goods costing \$1 to manufacture and sell in the Langerfeld factory, as compared with the identical goods made and sold in the Bridgeport factory, we have the following result:

	Langerfeld.	Bridgeport.	Per cent in excess.
Cost of material.....	\$0.28	\$0.36	28½
Wages.....	.25½	.52½	106
Power.....	.02	.04	100
Depreciation and interest on buildings.....	.65	.08	60
Depreciation on machinery.....	.17	.25½	50
Putting up and packing material for market.....	.11	.15½	40
Selling and office expenses.....	.09	.17	90
Sample expenses.....	.02½	.03½	50
	1.60	1.62½

This tabulation makes the exact situation at once apparent, and the actual figures show that it costs 62½ per cent more to produce the same goods in Bridgeport than it does in Langerfeld, and the present duty of 60 per cent is barely sufficient to protect the American manufacturer of these laces as against his European competitor.

In regard to the item of power, not heretofore explained, this difference arises as follows: Nearly all factories in Langerfeld, including our own factory there, purchase their power from electric power companies, and our Langerfeld factory pays for its power three-fourths of a cent per horsepower hour, whereas the Bridgeport factory, which also purchases its power from an electric power company, pays therefor 1½ cents per horsepower hour.

As to the item of depreciation on machinery, this arises from the fact that the machinery costs 50 per cent more, on account of the duty, freight, etc., as previously explained. And this machinery is not made in the United States and must be imported.

In regard to the item of putting up and packing goods ready for market, this difference arises from the additional cost of materials and labor for boxes, crates, printed labels, wrapping paper, and ribbons.

In regard to the item of selling and office expenses, this arises from the difference in salaries, as hereinbefore shown.

In regard to the item of sample expenses, this arises from the fact that sample books have to be furnished by the company to each purchaser, so that goods may be shown from the samples therein contained, without handling and soiling the articles to be sold.

Quite a large investment has been made in the Bridgeport factory upon the faith and belief that if we made this investment there we would continue to receive the same protection as has existed for a long number of years; and the fact that no other firm has established a factory in the United States to the present time, using single-thread lace machines, would seem the best kind of proof that the present rate of duty is hardly sufficient for the protection of this industry. In the next place, since our factory has been established in Bridgeport the sales from our Langerfeld factory to the United States have gone on increasing each year and the imports of our Langerfeld factory to the United States, from 1910 to the present time, have increased about 39 per cent.

This lace industry is at a serious disadvantage as compared with its European competitors, from the fact that these latter manufacturers can make linen laces as well as cotton laces, whereas in the United States it is impossible to manufacture linen laces of this character under existing duties on linen yarns.

Under the present duty it appears that the European single-thread lace manufacturers have a slight advantage partly compensated by the difference of shipping rates to New York, and any reduction from the present 60 per cent duty will, we believe, be fatal to this industry remaining in the United States, as well as render worthless the large investment already made.

A. & F. HENKELS,
By JAMES A. MARR.

PARAGRAPH 349—LACES. EMBROIDERIES. ETC.

TESTIMONY OF GEORGE J. MARTIN, ON BEHALF OF THE
MARTIN MANUFACTURING CO., NEWTON, MASS.

Mr. Martin was duly sworn by the chairman.

Mr. MARTIN. Gentlemen, I speak in relation to paragraph 349, Schedule J.

I am representing the novelty curtain manufacturers, our goods being partly or almost entirely handmade, as opposed to the machine-made curtains, known as Nottingham lace curtains.

Our industry was started about the year 1900. It is an entirely new field in the American manufacture, these goods previous to that time being made entirely in Europe. There are to-day in this country probably between 60 and 70 manufacturers distributed through Massachusetts, New York, Pennsylvania, New Jersey, Illinois, Ohio, and gradually spreading, so that we hear of new concerns starting up from time to time as far west as San Francisco.

There are more than 3,000 people employed in our industry, and the total business to-day will reach from \$5,000,000 to \$6,000,000.

The factory with which the writer is connected is run on piecework basis. We figure our operators on the class of work in which we are particularly interested, at 20 cents an hour. In establishing this price, we take an operator of average speed only, but one who does good work, and base our piecework price on her results, as we have found from long experience that this is an equitable way for all concerned. If an operator makes the average weekly wage on which she is based, namely, 20 cents an hour, we give her a bonus of 10 per cent; this at times brings up the full wages for the week of rapid operators to from \$17 to \$18. Our State law is for 54 hours per week, and at 20 cents per hour an operator of even average speed would make about \$10.80. Working under the conditions, however, that our operators do work, it would appear that the average wage paid for labor on our hand-made curtains in the factory would be about 27 or 28 cents per hour.

In order to compete with the peasant labor of France and Switzerland we were obliged to partly follow their system. In other words, we are obliged to do a large portion of the handwork in the homes of the people living in our vicinity. These people we base on a wage scale of 11 cents an hour, and we employ at times as many as 350. I might mention that in the factory we employ from 175 to 200, which includes men and women and some young girls just out of school.

In order to get the exact figures that the Swiss manufacturers paid for their labor two years ago, we sent one of our designers, a Swiss by birth, to Europe to investigate conditions for us, and he advised us on his return that the labor there at that time was figured from 4 to 6 cents an hour. Allowing a duty of 60 per cent on this labor of 6 cents an hour would bring it up to 9.6 cents per hour. Against this we pay 11 cents in the homes and an average of 27 or 28 cents in the factory for this class of work.

You can see from these figures that we could not afford to have the duty reduced without materially affecting our business. About three or four years ago we started in the manufacture of what is

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

termed "Marie Antoinette" curtains. We spent several thousand dollars to learn how to do this and perfect an organization, and it does take the most perfect organization to accomplish these results against Europe, where the work has been done for generations. We have succeeded, however, and under the present tariff we can make what the writer feels is a fair margin of profit. The competition at times is very keen, but on the general average we would not complain. We are satisfied that if the duty were reduced very much we could not make the class of goods mentioned except at a loss.

The writer would call your attention to the fact that we have tried to make Irish point curtains successfully in competition with Europe, and although we have spent thousands of dollars we find so far that we are completely unable to compete, except on very low-priced numbers into which material enters largely and labor very little. We are, however, going to take up this class of work in the near future once more, if the duty is not disturbed, and send a man to Europe to see if we can learn something to enable us to compete successfully.

There is no necessity of my calling your attention to the large imports of our class of goods and the numberless importers successfully and profitably engaged in it. Furthermore, I would add, competition among the American manufacturers is frightfully keen. Lowering the duty would not make American goods cheaper, as we now price them based on cost, and totally eliminate in consideration the price of the foreign article.

Another thing the writer would call the attention of the committee to and that is the almost insane idea that some people have that a foreign article is better than a domestic one. This is not so in our case, for the foreigners often copy our method of manufacture, although a few years ago we were copying theirs. Furthermore, let me add that operators who earn 27 or 28 cents an hour on an average, use special attachments we devise that do better work by machine than the foreigners do by hand. It is only through methods of this type that we are able to compete, and the business that we have been learning and building up, for the past few years particularly, would be practically wiped out with any marked reduction in the tariff.

We earnestly ask you to leave it where it is, namely, at 60 per cent duty.

I might add that we are large importers of laces and nets, on which we pay a duty of 60 per cent. I also desire to call the attention of the committee to the fact that we are successfully making what are termed "drawn-work" curtains. These are curtains that are made of cotton and have the threads drawn by hand, after the style of what is called Mexican drawn work. They often contain no laces whatsoever. At present these curtains come in under a duty of 60 per cent. I would like to have these curtains carry the same rate of duty as those previously mentioned in my brief.

For the benefit of the committee, I give below a summary of the cost of production, referred to in the making of these better hand-made curtains and on which we come in close competition with

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

foreign makers: Labor, 40 per cent; material, 49.3 per cent; overhead expense, 10.7 per cent.

The CHAIRMAN. If there are no questions, that is all, Mr. Martin.

TESTIMONY OF W. N. PARKES, REPRESENTING THE PARKES MACHINE CO., BROOKLYN, N. Y.

The CHAIRMAN. Mr. Parkes, we are trying to hold the witnesses down to 10 minutes. I want to give them all a chance to be heard. It is Saturday afternoon and we are all anxious to get away. I will ask you to please come to the subject matter of your statement as quickly as possible.

Mr. PARKES. I will make it as brief as possible. I represent the Parkes Machine Co., of Brooklyn, N. Y. We are interested in paragraph 349, Schedule J. The duty on the special line of embroidery we manufacture, which line I will presently explain, is 60 per cent ad valorem. For reasons which I will bring out further on, we are asking you at least not to lower this rate of duty. For reasons which I will give, we are also suggesting that certain changes be made in the phraseology of the paragraph mentioned. We are endeavoring to establish two new industries, namely, the manufacturing of special automatic embroidery machines, and the placing of these machines on the market, and the manufacturing with these machines of a line of embroidered articles and the placing of such articles on the market.

Embroidery or ornamental needlework is used on two classes of articles, first, on fabrics or articles for personal use, such as wearing apparel, and trimming for wearing apparel, handkerchiefs, etc., and second, fabrics or articles for housekeeping use, such as doilies, bureau scarfs, table linens, bed linens, etc.

At the time the Dingley law passed, in 1897, the first class of articles mentioned, namely, those for personal use, were embroidered on the multiple-needle machines, such as the Swiss or Schifflé. In these machines there are a large number of needles, disposed in a row, or in parallel rows, and these needles are all operated simultaneously. The second class of articles, namely, those for housekeeping use, were at the time the Dingley law passed, embroidered by hand. The multiple-needle machines are not adapted to embroider this class of work and they are not adapted to embroider certain parts of articles and certain articles for personal use.

We are making special machines to embroider a large part of this class of work, and our competitors, abroad, are also making special machines for doing this class of work. We have been working 15 years on these special machines, and have invested over \$230,000 in cash, \$200,000 of which we have had invested for 10 years, and as yet we have not earned any dividends, and those who invested the capital have not received any returns in any form.

We have, however, reached a point in the development of our business where we feel that if we are given suitable protection, we will not only succeed in establishing the business of manufacturing these embroidered housekeeping articles and placing them on the market, but we will succeed in establishing the business of manufacturing the

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

special machines and placing them on the market, and I might say it is probable that we may, after we are established in connection with the special machines, take up the business of manufacturing the regular embroidery machines.

It would be of great value to the embroidery industry here, if these machines were made here, and if the duty is high enough to cause the embroidery business to be established here on a large scale, and the duty on embroidery machines is high and it be understood that it will be permanent at least to the extent of the difference in cost to build the machines plus a fair profit on the capital needed, the building of such machines will undoubtedly be established.

I want to say in connection with these special machines that it is practically the only thing left in this line for a new industry. The regular machines, such as the Singer makes, and a large number of other companies, are made abroad and made here; but these special machines—that is, the field for these special machines is still open to American ingenuity and industry, and it should be established. It will be a large business if it is established here.

Now, as to the phraseology of the law. I have cited, in a brief filed with you, two protest cases—the J. R. Simon & Co. and Charles R. Waentig cases—of record, in which the importers defeated the Government, and I believe about a million dollars had to be refunded, and in that brief I have told you that another protest case is pending relative to a type of the embroidered or ornamented needlework goods we are manufacturing or intend to manufacture.

It may be said I have overstated the amount of refund in these cases, which, by the way, went to the importers and lawyers, and not to the consumers. The protest cases had not been finally determined at the time the present tariff law passed.

I was interested in this matter at the time the present law was being made, and at that time I asked the Treasury Department here in Washington how much was involved in these cases, and was informed that in the J. R. Simon & Co. case \$754,000 was involved. The Treasury Department could not give me the figures in the Charles R. Waentig case.

However, some one of the custom officials at New York informed me that it was thought that it would amount to nearly a million dollars. I was informed that in the Waentig case 1,300 protests were involved, and in the Simon case 5,450 protests were involved. The Government lost both of these cases, as I have stated, and consequently the amount involved had to be refunded, and I think that an investigation will show that my statement that a million dollars had to be refunded is not too high.

These gentlemen who are so very solicitous about the dear consumer got the benefit of this refund. The consumers did not get it. These protest cases were carried on over a number of years. I believe one of them started in 1901 and the other one started in 1905, and they ended in 1909. During that period the consumer was charged regular prices for the goods, plus the tariff, plus a profit, undoubtedly; so that when this million dollars or more was refunded it went to the lawyers who make a business of taking up these protests on commission, I am informed, and to the importers who are trying to get the duty on our special line of goods reduced.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

I have recently tried to get the information from the customs officials at New York as to how much was refunded in these two cases, but was informed that they did not have it tabulated and could not give it to me. I wrote the Treasury Department here in Washington for the information and received a reply which included the following:

In reply I have to state, confirming the department's telegram of this date, that the department does not have the information at hand and it is therefore unable to advise you in the matter at present. I will state also that it is contrary to the regulations of the department to furnish information relative to importations to others than those directly interested, and unless you are counsel for the importers and secure their consent that that data be provided, information in the matter can not be furnished you.

That is to say, the Government did not want to give me the information unless I got permission from the importers. Certainly I did not represent the importers, and if I did not represent the importers they did not want to give me this special information.

I mention the foregoing to the end that it may be understood that I have made an effort to furnish definitely the amount of the refund in the two protest cases noted; and I have mentioned these two cases to bring out the importance of the phraseology in the proposed law relative to these embroidered articles.

We are competing with the very cheapest kind of labor abroad. I have not succeeded in getting figures in connection with the wages paid the workers on the special or on the regular embroidery machines, but have secured some figures (from the publication of the Government Daily Consular and Trade Reports) in connection with the wages paid or earned by the handworkers on the special class of work we are doing. Belgium Consul H. Albert Donelson reports hours of the workers from 6.30 to noon, and 1 to 7 o'clock in summer, and in winter 8 a. m. to 10 p. m. They earn from 8 to 10 cents a day, the more expert 14 cents. Bohemia Consul Lorie reports that the wages on this class of work is from 20 to 30 cents per day. Italy, Palermo District, consul reports wages paid for 8 to 9 hours' work, 25 cents, and 30 to 60 cents for the more skilled workers. Consul in Spain reports wages from 30 to 40 cents a day, and from France the report is from \$28 to \$46 per year. In various other countries I am informed that the workers on this class of work get or earn from 6 to 30 cents per day.

Heretofore practically all of the class of work I am talking about which is a very large class, was done by hand, because the regular embroidery machines could not do it good enough, and could not do it at a low enough figure to compete with the handwork. Special embroidery machines, however, have been and are being made abroad which does some of it, and we are making special embroidery machines, as I have stated, which does some of it in competition with the handwork and in competition with the work of the foreign-made machines.

We have been doing work for some time on a lot of 50 of these machines and placing the product on the market, and we have also placed some of the machines in other factories, and work is being done on them and placed on the market. At the present time we are building an additional lot of 100 of these machines, and we are also at the present time negotiating for needed additional capital. I say this to show the basis of my statement, that we are engaged in

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

the business of establishing two new industries here, namely, the manufacturing of special embroidery and ornamental needle work machies, and the placing of the product of such machines on the market.

For the foregoing and other reasons, we ask that the duty on embroidery and ornamental needle work or lace work be not lowered, and we also ask that the duty on special machines for doing this class of work be not lowered. And we note, in conclusion, that as the embroidery and lace making industry is established here, the conditions for establishing the business of manufacturing machines for such work is improved, and primarily we are interested in establishing the business of manufacturing such machines here. And it is further noted in conclusion that certain lacework can be done on our machies, and that conditions being favorable we will undoubtedly adapt them to do such work.

BRIEF OF THE PARKES MACHINE CO.

BROOKLYN, N. Y., *January 21, 1913.*

COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

GENTLEMEN: I represent the Parkes Machine Co., of Brooklyn, N. Y. We are engaged in the manufacture of special machine embroidery or ornamental needlework such as is imported under Schedule J, paragraph 349. As to my qualifications in connection with such work, would say I have had over 27 years' experience with stitching machines and over 15 years with machines for doing special embroidery or ornamental stitching and over 8 years in placing the product of such machines on the market. We do not think the duty should be lowered on the merchandise that is imported under the paragraph mentioned, but it is not our object to take up this question in detail. We are asking for such changes in the law as may be necessary to make it cover all such work. The Dingley and the present law were intended, and do, if rightly interpreted, cover all such work.

But a number of importers succeeded in nullifying the Dingley law in connection with some of this class of work, and these same gentlemen, or at least some of them, are now engaged in an attempt to nullify the present law in connection with some of this class of work. And the collector of the port of New York has nullified the present law in connection with some of this class of work by a ruling he made. It is one of my objects to set forth herein enough facts to bring this nullifying process out so it will be understood and to suggest matter for the proposed new law which it is thought will prevent such nullification in the future.

To show that the question I am raising is of importance from a revenue point of view alone, two of the controversies the Government has had with the importers will be briefly noted. The embroidery or ornamental needlework which the paragraph in question covers is used for two purposes: First, for ornamenting or embellishing material or articles for personal use, such as wearing apparel, handkerchiefs, etc.; and, second, for ornamenting or embellishing material or articles for housekeeping use, such as doilies, centerpieces, table linens, bureau scarfs, upholstery, bed linens, etc. The controversies that are noted have been in connection with this latter type of merchandise.

At the time the Dingley law passed the embroidery or ornamental needlework on these housekeeping articles was done abroad by hand, and the articles thus embellished were imported. And whether or not the work was all located at the edge of the article they were classed under paragraph 339 of the law as embroidered articles, and the work came in without protest. The embroidery was done by hand on this class of work because, for reasons which in the interest of brevity will be omitted here, it could not be done in competition with handwork on the machines which did the embroidery for personal use. And these machines of to-day are not suitable for doing the embroidery on housekeeping articles.

Some time after the Dingley law was passed the embroidering of this kind of merchandise by a machine made for the purpose was begun abroad, and its importation commenced. This embroidery was not as good as handwork, and this made it look a little different. The importers took this difference in appearance as an excuse for

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

a claim that the work is not embroidery, and the Charles R. Waentig protest No. 4146 was commenced. I have been informed that this was in 1901, and that the controversy comprised 1,300 protests.

Notwithstanding the claim of the importers to the contrary, the work was obviously embroidery. It was done on the same kind of articles that were being embroidered by hand and imported as embroidered articles without protest, namely, doilies, centerpieces, towels, etc.; it was located in the same place on these articles as those embroidered by hand, namely, along the edge or border; it was put there for the identical purpose, namely, embellishment; and it was made in exactly the same design, namely, scalloped.

The other case referred to is the J. R. Simons & Co. protest commenced March 17, 1904, decision rendered against the Government; United States Circuit Court of Appeals, second circuit, April 13, 1909, opinion No. 189. In this case I have been informed that there were 5,450 protests. Here the same class of merchandise was involved. It consisted of table covers, bureau covers, doilies, and similar articles used for housekeeping purposes. The work on these articles comprises embroidery or ornamental needlework of a different type from that which is on the articles in the Waentig case. It is known commercially as drawn or open work. In these two cases alone, I was informed when they were pending, about \$1,000,000 was involved, so I presume about this amount has been refunded.

How the importers beat the Government in these two cases, in the face of the facts I have noted, I can not take the time to answer here. It is interesting to note that the merchandise on which the duty was refunded undoubtedly reached the consumers at a price which included the cost of the merchandise plus the duty and the regular profits made on such merchandise. And the refunded cash, amounting to about \$1,000,000, no doubt passed into the pockets of the importers, and the lawyers, whom I have been informed make a business of bringing these protests on a commission basis.

In paragraph 349 of the present law will be found the following:

"Articles or fabric * * * from which threads have been drawn, cut, or punched to produce openwork, ornamented or embroidered in any manner herein described in any part thereof, however small." This matter was inserted to cover all drawn work and properly interpreted it does cover it, and even the plainest kind, which is hemstitched drawn work.

But the collector of the port of New York has ruled otherwise, and consequently no duty is collected on hemstitched drawn work or any drawn work except such as has certain specified kinds of work or figures in it, and this work is not assessed under the above-quoted words but is assessed as articles in "imitation of lace." And even the duty on the specified kind of drawn work which is assessed as "imitation of lace" is now under protest before the Board of Appraisers. And I have been informed that the same importers, or at least practically the same, which were so successful in connection with the two protest cases previously mentioned, are back of the pending protest.

Referring again to the collector's ruling in connection with the words quoted above, I note that he in substance takes the obvious erroneous position that the needlework used along the thread-drawn path in this work is not for ornamental purposes, when as a plain matter of fact this is practically its entire function. It is true that the needlework has the added function of binding the folded part of the material and thereby hemming it, but this does not make it any the less ornamental needlework. All embroidery along the edge or border of material or articles has the added function of binding the edge or border, but this does not make it any the less embroidery. Drawing the threads from fabric or punching holes in it does not ornament the fabric; it is by means of the needlework in connection with the drawn or punched work that the fabric or article is ornamented.

The following is a part of paragraph 349 of the present law with the changes in it we suggest. We recommend that the words in italics be incorporated, and the words in brackets be canceled. These changes we believe will prevent the nullifying of the law in the future in connection with this work, which forms a part of articles which are luxuries.

"349. Laces, lace window curtains, and all other lace articles; handkerchiefs, napkins, wearing apparel, and all other articles made wholly or in part of lace or laces, or in imitation of lace; nets, nettings, veils, veilings, neck ruffings, ruchings, tuckings, flutings, quiltings, embroideries, trimmings, braids, featherstitch braids, edgings, insertings, flouncings, galloons, gorings, bands, handings, belts, beltings, bindings, cords ornaments, ribbons, tapes, webs, and webbings; wearing apparel, handkerchiefs, and *all* other articles or fabrics embroidered in any manner by hand or

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

machinery, whether with a plain or fancy letter, initial, or monogram, or otherwise, or tamboured, appliquéd, or scalloped, by hand or machinery, for any purpose, or from which threads have been drawn, cut, or punched to produce openwork, ornamented or embroidered, or *hemstitched* or *stitched* in any manner [herein described], in any part thereof, however small; hemstitched or tucked flouncings or skirtings * * *.”

In connection with the duty on these housekeeping articles, it is noted that linen is our principal raw material; it must be imported, and it pays a duty of from 35 to 50 per cent. From this it appears that the establishing of the business of manufacturing these articles in the United States, which we are trying to do, will increase the revenue even though it should diminish the importation of the finished articles, for the establishing of this business here will largely increase the use of such articles, and thereby increase the importation of linen.

Our business is essentially different from the general embroidery business. In the general embroidery business the work is manufactured principally on the Schifflé and the Swiss embroidery machines, which machines are not adapted to do the embroidery on the housekeeping articles we manufacture. The embroidery we do is manufactured on special embroidery machines which we make ourselves, and the manufacture of which we are trying to establish here, as well as the business of placing the product of the machines on the market.

In conclusion we respectfully urge that the changes we have suggested be incorporated in paragraph 349 of the present law, that the line of embroidered articles we manufacture be accorded as high a rate of duty as any other kind of embroidered articles, and that if any changes are made in the law care be taken not to limit the rate of duty to work done on any particular type of machine.

Respectfully submitted.

W. N. PARKES,
President of the Parkes Machine Co.

SUPPLEMENTAL BRIEF OF PARKES MACHINE CO.

BROOKLYN, N. Y., February 3, 1913.

To the honorable members of the Committee on Ways and Means,

House of Representatives, Washington, D. C.

GENTLEMEN: In accordance with the request of the writer when he testified before you on the 25th of last month, the following supplemental brief is offered for your consideration. We suggest that the following additional amendment be made in the present tariff law:

Schedule J, paragraph 349, insert after the word “embroidered,” ending at the beginning of line 9, “or scalloped.”

Our reason for suggesting this is the fact that the custom officials omit the word scalloped in connection with handkerchiefs. For example, on page 52 of the record imported merchandise entered for consumption in the United States for the fiscal year ending June 30, 1912, the following will be found:

“Handkerchiefs * * * embroidered in any manner, whether with initial letter, monogram, or otherwise, by hand or machinery, or tamboured, appliquéd, or trimmed wholly or in part with lace tuckings or insertions, 60 per cent.”

A scalloped handkerchief is an embroidered handkerchief. Scallop is the name of the design. However, it was on this point that the importers beat the Government in the contest case, *United States v. Wentig*, which I have previously set forth in my testimony given before your honorable committee. In order to prevent the annulling of the law in connection with this kind of embroidered articles, the words “or scalloped” were entered after the word appliquéd in the present law, paragraph 349, as you will notice. But for some reason these words “or scalloped” are not thought to be applicable in connection with handkerchiefs. It is submitted that, in all fairness, handkerchiefs or any other article or fabric finished with embroidery (which in the opinion of the writer has been called scalloped to evade the law) of any kind should pay the 60 per cent duty.

I suggest further that in paragraph 402, line 4, after the words “embroideries and articles embroidered,” the words “or scalloped” be inserted.

It is submitted that articles or fabrics of any kind that can be stitched, finished with the particular kind of embroidered design called “scalloped,” should be assessed at the same rate as any other kind of embroidery. According to some importers, this work when done on the Parkes special embroidery machine is only scalloped,

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

but when done on the Swiss or Schiffile embroidery machine or by hand it is embroidery, notwithstanding the fact that it is far superior and more ornamental when done on the Parkes machine.

Respectfully submitted.

W. N. PARKES,
President Parkes Machine Co.

TESTIMONY OF CHARLES SHONINGER, OF NEW YORK CITY.

The witness was duly sworn by the chairman.

The CHAIRMAN. You may proceed, Mr. Shoninger.

Mr. SHONINGER. Mr. Chairman and members of the Ways and Means Committee, I represent a group of importers who handle laces and embroideries and kindred articles. These firms have been in business for periods ranging from 28 to 55 years. They have had vast experience in handling the goods about which I wish to speak. I desire to take up the paragraphs covering laces.

Under Schedule J, the paragraphs that would come under consideration would be Nos. 349 and 350, but my remarks touching upon these paragraphs will apply with equal force to paragraphs 402 and 405, embraced in the silk schedule, also paragraph No. 179, embraced in the metal schedule.

Candor compels us to say that there is no monopoly in the lace or embroidery industry and that the domestic manufacturer is therefore entitled to fair consideration, because he is engaged in a relatively new industry.

We also concede that laces and embroideries are luxuries and that the greater part of the laces now consumed are of foreign make. Happily, the conditions now existing are competitive and we desire, as importers, to have that condition continue, with, however, certain changes which we would like to have made in the present tariff act as applied to our merchandise.

The paramount change sought for by us is the unification of the duty upon laces and embroideries and kindred articles, so that a uniform and unvarying ad valorem rate shall be imposed upon every kind and description of the same, irrespective of the material or materials of which they are composed or the manner or method in which they are made or manufactured.

The reverse is now the case in respect to these goods.

In paragraph 349 there is a uniform rate of 60 per cent on practically all laces, with the exception of those provided for under paragraph 350, and those that are covered in paragraphs 405 and 179, where certain discriminatory rates were imposed upon various kinds of laces which took those laces out of the paragraphs under which they were formerly assessed.

Mr. HAMMOND. Is it your suggestion that all laces now covered by silk, jute, cotton, and metal schedules should be consolidated under one classification and given one rate?

Mr. SHONINGER. Yes, sir; that is the statement I wish to make.

Under paragraph 350, which calls for a rate of 70 per cent, all goods made on Lever and Gothrough machines, I wish to say that that is unfair discrimination. Goods that are produced on those machines are of the cheapest kind, while the better class of laces,

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

those that are made by hand or made on other machines, are taxed at 60 per cent.

The goods that are produced on the Lever or Gothrough machines are very largely consumed by the masses, who are taxed at a higher rate for the articles that they use than consumers pay on the higher and better grades of goods made by hand or on other machines.

If there was ever any justification for the introduction of that particular paragraph 350, it no longer exists. The domestic industry which this paragraph possibly intended to foster and develop has grown by leaps and bounds, so that a fair competition now exists between the products of the American manufacturer and the foreign manufacturer.

The amount of importations as shown by the Government figures of 1912 would indicate that there were about \$8,000,000, approximately, of these goods imported, and by the admissions made here at this session by gentlemen representing the domestic manufacturers, it would appear that the amount of business done ranges, according to their statements, from \$3,000,000 to \$10,000,000. It is fair to assume that an average figure between these two may be the correct one. If that is the case, it is self-evident that the amount of business done now on the products of the Lever and Gothrough machines in this country is about equal to, if it does not surpass, the amount of goods imported.

It is fair to assume that the protection that the domestic manufacturers have had under the 70 per cent rate has given them ample opportunity to develop their business and has given them satisfactory protection, for the reason that the business has developed and grown and more machines are constantly being imported and set up here.

The unfair feature of taxing that particular class of merchandise higher than any other is not alone confined to the product itself, but it has its bearing on other articles made in which this article or anything made on a Lever machine is employed in the smallest degree. For example:

In the matter of waists and dresses or underwear or any article in which any part of the product of the Lever machine is at all employed such articles are affected. The rate of duty imposed upon these various articles is no longer the rate that is called for under the various paragraphs where they were formerly assessed, but they are now assessed at the rate of 70 per cent.

In the case of the Government against Stein a decision was handed down by the Commerce Court to the effect that any article in which the smallest part of a Lever machine product was employed such articles shall pay 70 per cent. Since then the Treasury Department has issued orders to levy and assess that rate upon all goods in which any Lever machine products are in any way employed.

The unfairness of this provision is fairly illustrated right here: If a gown worth in a foreign market from 500 to 1,000 francs—that is to say, from \$100 to \$200—were to be imported, and this gown had but a small part of lace, either in the neck or sleeves, and the entire value of that lace did not amount to 10 or 15 francs, which would be the equivalent of \$2 or \$3 in United States money, as com-

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

pared to the total value of 500 or 1,000 francs, instead of the gown paying a rate of duty of 60 per cent under the paragraph covering wearing apparel it is now assessed at 70 per cent. On a \$100 gown the advance of 10 per cent means \$10, while the entire value of the lace would be but \$2 or \$3. In the case of a gown worth 1,000 francs or \$200 the amount of total tax would be \$140 instead of \$120; that is to say, \$20 additional because it is embellished by a small piece of lace which had no material bearing upon the final cost of the finished product.

The CHAIRMAN. Mr. Shoninger, your time has expired.

Mr. SHONINGER. I have hardly begun, Mr. Chairman.

The CHAIRMAN. I appreciate the fact that the time is rather short, but we have a large number of witnesses to-day, so we will have to hasten along as rapidly as we can.

Mr. SHONINGER. May I have just one moment more, Mr. Chairman?

The CHAIRMAN. Certainly.

Mr. SHONINGER. The vital point in connection with laces to be considered by the committee, is that the materials of which they are composed are but as small part of the total cost. The more important features, made up by labor, designing, finishing, bleaching, etc., make up the chief items of the finished cost.

It is therefore a perfectly fair proposition that the rate assessed upon the article be upon an ad valorem basis and not upon the value of any of the materials composing any one of the component parts. If this were done, it would simplify the entire schedule, and would make it exceedingly easy in respect to the administrative features.

I would also call your attention to laces and embroideries as a class. Many of these are made on the same machines and should be considered together under one heading. It is difficult to separate them. The machines which produce embroideries also produce laces, and in many cases combinations of laces and embroideries are made on the same machines. Both are adapted to the same uses and purposes. It is impossible at times to distinguish the point at which a certain fabric ceases to be one and becomes the other.

The thing we desire is to have a uniform rate. We feel that a rate of 60 per cent, as fixed under the McKinley Act, would be an absolutely fair one. It would be fair to the importers, fair to the consumers, fair to the domestic manufacturers, and fair to the Government. It would not reduce the revenue materially and the entire loss to the Government, if the rate were made uniform at 60 per cent, based upon the importations of laces and embroideries last year, would be less than \$1,000,000 out of a total revenue collected on these articles of upward of \$27,000,000.

The CHAIRMAN. What you want is a 60 per cent rate. You do not care anything about the classification outside of that, do you?

Mr. SHONINGER. We want to have them so classified that there can be no mistake as to what class they belong to, and a 60 per cent rate is perfectly acceptable to us.

The CHAIRMAN. There is some advantage in keeping this particular classification, because we can in the future watch it more carefully and see what it is doing.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Mr. SHONINGER. It is perfectly agreeable if the paragraphs were retained, and I therefore would suggest that paragraph 350 be stricken out altogether.

That paragraph 349 be kept in its entirety.

That paragraph 405 be amended so as to strike out the part which imposes 45 cents per pound upon all artificial silk, and

That paragraph 179 be amended striking out the specific rate of 15 cents per pound.

That would eliminate all the discriminatory additional taxes on the entire range of laces and embroideries.

I believe it would be most advantageous to have separate paragraphs and it would be better for the purpose of the Government to know what amounts are collected under these various paragraphs, and how the business may be rising or falling with reference to the various classes of goods.

We do not suggest that the silk paragraph nor the metal paragraph or other paragraphs be eliminated, but that they be retained and made uniform in regard to the rate to be assessed. If the paragraphs covering these goods were allowed to remain they would show whether the consumption in the articles was increasing or decreasing proportionately with the American business. It would be a fair test as to whether or not ample protection is given to the domestic manufacturer, or whether he is overprotected.

The CHAIRMAN. We will give careful consideration to your brief, Mr. Shoninger.

Mr. SHONINGER. I have prepared a brief, Mr. Chairman, which I desire to hand in, and I will be glad to have it put in the record.

The CHAIRMAN. The stenographer will see that it is printed in the record, Mr. Shoninger.

The brief above mentioned follows:

The COMMITTEE ON WAYS AND MEANS:

The undersigned firms submit the following considerations for re-forming the present tariff act covering laces, embroideries, and kindred articles, as affected by paragraphs 179, 349, 350, 402, 405, and 421.

The houses joining in these recommendations have been engaged in the importation of laces, embroideries, and allied fabrics for periods ranging from 30 to 55 years. We were pioneers in the business and for many years have occupied positions of the highest importance and prominence in the industry. Our long experience under and careful study of the various tariffs which have affected us enable us to speak with authority and knowledge of what is most beneficial to all the interests concerned in re-forming the tariff upon our merchandise at the present time.

Although importers, in order to be candid with the committee, we wish at the outset to make the following statements:

That there is no monopoly or trust in laces or embroideries and that the domestic manufacturer is entitled to some consideration as being engaged in a relatively new industry.

That laces and embroideries are luxuries, for the most part, which must expect to bear in consequence a fair share of the burden of taxation.

That the greater part of the laces and embroideries consumed in this country are of foreign manufacture and that in most particulars the present tariff permits of competitive conditions between the products of domestic and foreign manufacture.

Giving these admissions their full weight, and conceding that a strong case will no doubt be made out by the domestic manufacturer for the protection of his product, still it is submitted that justice demands that certain changes be made in the present tariff act as applied to our merchandise.

The paramount change sought is the unification of the duty upon laces, embroideries, and kindred articles, so that a uniform and unvarying ad valorem rate shall be imposed upon every kind and description of the same, irrespective of the material or

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

materials of which they are composed or the manner or method in which they are made or manufactured.

At present the reverse is the case, and the result is a law which is inconsistent, illogical, and confusing.

Paragraph 349, covering the importation of laces and embroideries composed chiefly or wholly of cotton, flax, or other vegetable fiber, and paragraph 402, covering the importation of the same fabrics of which silk is a component part, are the principal ones under which laces and embroideries are imported. These paragraphs fix the rate at 60 per cent ad valorem. Paragraph 421 relates to laces, embroideries, etc., made chiefly of beads or spangles, and likewise fixes the rate at 60 per cent ad valorem.

Paragraph 350 provides that laces and embroideries made on the Lever or Gothrough machine shall pay a rate of 70 per cent ad valorem. This rate applies to any article having any fractional part thereof made on the machine in question, even though the part made on this machine is only a trifling proportion to the whole.

Paragraph 405 provides that laces, embroideries, etc., made wholly or in chief value of artificial or imitation silk shall pay 45 cents per pound, and in addition thereto 60 per cent ad valorem.

Paragraph 179 provides that laces, embroideries, etc., made wholly or in chief value of tinsel wire or metal threads, shall pay 15 cents per pound and 60 per cent ad valorem.

What we earnestly seek as the first and fundamental step in any tariff reform and what the welfare of all parties concerned in this industry demands is the elimination of the different rates imposed under paragraphs 350, 405, and 179, and the establishment of a uniform rate for all laces, embroideries, and kindred articles.

The discrimination under paragraph 350 in favor of the product of the Lever or Gothrough machine is indefensible. This machine-made product is the poorer grade of lace, and yet it is taxed more heavily than the most expensive hand-made laces. The increase of the duty on this product in the present act to 70 per cent is the highest rate ever imposed upon laces in the history of our tariff legislation, and if it ever had any justification this is now absolutely gone. Laces made on the circular machine may not be distinguishable from those made on the Lever or Gothrough machine, but these two absolutely similar products are obliged to pay in one case 60 per cent duty and in the other case 70 per cent duty.

The imposition of a different and higher rate on laces, embroideries, kindred articles, and fabrics composed wholly or in chief value of artificial or imitation silk, as provided in paragraph 405, is as illogical and unjust as the discrimination made in favor of the product of the Lever or Gothrough machine. The same applies to the discrimination made under paragraph 179 in favor of lace and embroidered fabrics made wholly or in chief value of tinsel wire or metal threads.

The lace or embroidery made of real silk is, if there be any difference, more costly than that made of artificial silk, and still the cheaper quality pays the higher duty.

As importers of many years, we can conceive of no reason why such discrimination should be made.

This is equally applicable to the discrimination in favor of metal goods under paragraph 179.

The strong desire of the importer is that the discriminations found in paragraphs 350, 405, and 179 should be eliminated, and that all laces and embroideries should be placed upon the same basis for the purposes of taxation.

A vitally important fact to be pointed out in this connection is that the value of laces and embroideries is derived only in a small measure from the materials of which they are composed. The difference in value between the silk, cotton, artificial silk, or other material making a piece of lace or embroidery is relatively small as compared with the difference in value between the other elements which constitute the total value of the finished product, as designing, drafting, labor, finishing, clipping, bleaching, etc. Accordingly, if a uniform assessment is made upon the basis of the total value of the product and in disregard of the material composing it, the Government in each case will be levying a tax wholly in proportion to value, and consequently in proportion to the ability of the consumer to pay. This is fair to the Government, fair to the importer, and fair to the consumer.

There will be the further great advantage of simplicity and certainty in the application of the administrative features which are conspicuously lacking from the complicated and mixed provisions of the present law.

We pass now to a consideration of the amount at which this uniform ad valorem rate should be fixed.

It should be stated preliminarily that laces and embroideries should be classified together and taxed at the same rate. The same material, labor, and mode of manufacture are used in both. The machine which produces embroideries also produces

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

laces, and in many cases combinations of laces and embroideries are made on the same machine. Both are luxuries adapted to the same uses and purposes, and it is impossible in practice at times to distinguish the point at which a certain fabric ceases to be one and become the other. Therefore, whatever is said in this brief applies equally to laces and embroideries, as well as the other articles enumerated in paragraphs 349 and 402.

It is our judgment that this uniform rate should be established at 60 per cent ad valorem.

If a uniform rate of 60 per cent ad valorem is fixed absolutely upon laces and embroideries of every kind and description instead of the present rate, which ranges up to 70 per cent, the interests of the Government, the importer, the domestic manufacturer, and the consumer will be best conserved.

The following tables show the value of goods imported under each of the paragraphs under consideration for the years ending June 30, 1910, 1911, and 1912, the duty collected, and the excess of this duty over the proposed uniform rate of 60 per cent. Importations for 1909 are also included:

	Value.	60 per cent duties.

Silk, artificial.....		514,152.38	764,434.38	665,699.18
Metal.....	210,671.70	507,743.99	512,000.00	543,848.35
Total.....	25,393,136.12	29,285,016.52	28,074,989.63	27,122,951.17

Under the proposed reform the revenues of the Government will be disturbed only in a slight measure. Had the law as proposed been in operation the past three years the difference in duty collected would have been \$890,313.20 for 1910, \$905,169.36 for 1911, and \$947,760.12 for 1912.

With this reasonable change the importers will not suffer heavy losses on their stocks and a speedier readjustment of business conditions will follow, while the stagnation in business and destruction of property that would follow a radical change will be largely avoided. This should appeal to practically every importer of this merchandise, except that special class who carry no stock but import their goods only after they have received orders for the same. It must be remembered, however, that this class of merchant takes no business risks and operates without the safeguards, obligations, or conservatism which mark the merchant who imports and maintains a large stock with the attendant risks and expenses.

The domestic manufacturer will find it easier to adapt himself to a moderate change which will at the same time give him all the necessary protection.

The consumer will enjoy the advantages that flow from the competitive conditions which the proposed reform will amply permit.

We represent the class of importing merchants who desire to see a reform in the tariff, but at the same time believe that it should be made with prudence and wisdom,

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

as promised by the leaders of the new administration, in order that all interests may be safeguarded.

This can best be done in the manner outlined in this brief.

CONCLUSION.

Paragraph 179 should be amended by striking from the last two lines the words "15c. per pound and," and should retain the present rate of 60 per cent ad valorem.

Paragraph 350 should be completely stricken from the act.

Paragraph 405 should be amended by striking from next to last line thereof the words "45c. per pound and in addition thereto," and should retain the present rate of 60 per cent ad valorem.

Paragraphs 349, 402, and 421 should retain the present rate of 60 per cent ad valorem.

Dated January 23, 1913.

Respectfully submitted.

MEMORANDUM OF IMPORTERS WHO ADVOCATE A UNIFORM AD VALOREM RATE OF 60 PER CENT ON ALL LACES, EMBROIDERIES, AND SIMILAR ARTICLES.

THE ADVOCATES OF A UNIFORM 60 PER CENT RATE.

The merchants who ask for a uniform rate of duty of 60 per cent upon all laces, embroideries, and similar articles are American importers whose interest lies in obtaining foreign-made merchandise upon the best terms. They seek to establish the rate of duty at a level which will enable them to conduct their business upon the basis of the greatest advantage to themselves. This coincides with the greatest advantage to the consumer and to the Government. They are the old established houses who have been engaged in the importing business from 30 to 50 years, and who, at the hearing before the Committee on Ways and Means on January 25, 1913, were represented by Mr. Charles Shoninger as spokesman, and submitted a brief signed by such representative firms as Voss & Stern, Goldenberg Bros. & Co., Einstein, Wolff & Co., G. Sidenberg & Co., J. K. Stiefel & Co., and Shoninger Bros.

These importers do not advocate a 60 per cent rate because of any desire, primarily, to protect capital invested in American manufacture. They are not concerned with the loss that may be suffered by the American industry as such, by a reduction in the duty, but only as it affects them as importers. They seek to encourage the American industry in order to create a check and curb to the foreigner who would otherwise be left in exclusive possession of the domestic market. This is a point worthy of the greatest emphasis. Whatever is said in this memorandum in behalf of the American manufacturer is not for his sake or benefit fundamentally, but in the interest of merchants who are importers.

The fact that the leading importers ask for a 60 per cent rate shows their sincerity and fair-mindedness, and their claim should carry the weight and influence which such an attitude deserves.

THE ADVOCATES OF A 45 PER CENT RATE.

A group of men calling themselves the association of importers of laces, embroideries, veilings, nettings, and kindred articles, of New York, represented by Mr. Isaac Weingart as spokesman at the hearing before the committee on January 25, 1913, requested a reduction of the rate to 45 per cent.

This is a mushroom organization created within the past few weeks for the special purpose of influencing tariff legislation. This association represents largely the interests of foreign manufacturers, some of whom carry stocks of merchandise here, and in addition dealers calling themselves importers, who in fact carry no stocks of merchandise. Among their number are Swiss corporations and a large percentage of foreign citizens. For instance, Mr. Leumann and Mr. Boesch, the two partners of Mr. Weingart, are Swiss citizens permanently residing abroad, where the firm operates

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

a large factory. The interests of this group are entirely different from those of the American importers who ask for a uniform 60 per cent rate. The foreign manufacturers in this group own and operate probably twice as many machines in Europe as exist in the entire United States.

The real object on the part of this group of manufacturers and their associates in asking a radical reduction in the rate is to benefit foreign factories and plants. As pointed out in their brief, they are willing to suffer a loss of \$2,500,000 on their stocks of merchandise here to accomplish this.

They are playing for high stakes—the destruction of the American manufacturer as a competitor, and then a monopoly of the market.

The issue is between a group of foreign manufacturers who seek domination here and American importers and citizens paying municipal, State, and Federal taxes who have sufficient foresight and wisdom to desire to create conditions which will be of permanent and general benefit.

THE CONDITIONS SOUGHT TO BE ATTAINED.

The importers asking a 60 per cent rate desire to maintain the highest possible competitive conditions between the foreign and domestic manufacturers in order that neither class may have control of the market. If the duty on laces and embroideries is lower than 60 per cent the domestic manufacturer will lose his place as an important factor; the foreigners will be left in control of the market and will be free to dictate prices. There will be no domestic competition with which they will have to cope, and the consumer will have to pay the penalty because he will have no opportunity to buy his goods at prices which are determined by competitive conditions.

On the other hand, these importers ask that certain inequalities and discriminatory provisions of the present act be eliminated and that a uniform ad valorem rate of 60 per cent be fixed. This results in a considerable reduction of the rate at certain points, but the whole effect of such a course will be fair to the manufacturers both at home and abroad and will give a law which is simple to administer—a condition sadly lacking at the present time. This can be accomplished by eliminating the specific rates of 15 cents per pound in paragraph 179, of 50 cents per pound in paragraph 383, of 45 cents per pound in paragraph 405 as affecting laces, embroideries, and allied articles, and by striking out completely paragraph 350, which gives a 70 per cent rate to the products of the Lever or Gothrough machines.

The interests of the importers asking for a uniform 60 per cent rate are identical with those of the consumer and the Government. By maintaining competitive conditions at the maximum point, the consumer will obtain the best prices which the industry on both sides of the Atlantic will permit, while the Government will in the long run have the most profitable results in revenue in consequence of the same conditions.

As importers, their interests, like those of the Government and consumer, lie in having the domestic and foreign producers in a state most nearly approaching equality in order to obtain the best competitive results.

Experience and knowledge of conditions convince these importers that a 60 per cent rate is most likely to accomplish this.

LOSS OF VALUE IN STOCKS OF MERCHANDISE.

The foreign manufacturers and their associates admit in their brief that they will have a loss of \$2,500,000 in the value of their stocks of merchandise if the rate is reduced to 45 per cent, as requested by them. It is clear that they are willing to take this large loss because they are to receive their compensation in some other form, and that it will be offset by the increased profit they hope to make from their foreign factories under the reduced rate. This is the secret and the reason for their willingness to undergo such a great loss and sacrifice.

The real American importers who carry huge stocks of merchandise will suffer a loss probably twice as large in the diminution of the value of their stocks, and they will receive no compensating advantages for it. The tremendous loss in stocks falling upon the American importers will be a blow to the importing business in this country whose effects will be far reaching and disastrous. The accumulated profits of years will be swept away.

These 45 per cent advocates really seek at one stroke to destroy the American importers and the American manufacturers, and then to have a clear and uncontested market to themselves.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

EFFECTS ON REVENUE.

The precise results of any reduction in duty upon the revenue can not be predicted. It is certain, however, that a 45 per cent rate will result in a great falling off of the revenue received from laces and embroideries, since it will require the importation of many millions more of this merchandise than has ever yet been imported into the country to equal the present return from this source.

If, as claimed in the brief of the 45 per cent advocates, this reduction in the rate does not diminish the domestic output, then of course the large revenues obtained from this line of importations will be vastly cut down.

The truth is that with the growth of American production during the past few years in the output of the Lever machine, and in spite of the increase of the rate to 70 per cent, there has been no falling off in the revenue from this source. The revenue under paragraph 350 was larger in 1912 than in either of the two preceding years during which the records were kept.

The imports of all laces and embroideries in 1912 were larger than in 1909, when there was little domestic competition, but not so large as in 1910 and 1911, when the American competition had become effective. These results emphasize the fact that the use of laces and embroideries is controlled in a very appreciable measure by fashion, and that as luxuries they are not subject to the rules governing the consumption of articles of other classes. The falling off in the importation of embroidered handkerchiefs from St. Gaul pointed out in the brief of the 45 per cent advocates is due to the fact that handkerchiefs of that type (those made on frames) passed out of style. The foreigner with his conceded superiority as a designer and creator of fashion and style in laces and embroideries has an advantage which the American can not overcome, and which will tend to offset and equalize the effect of the rate of duty proposed.

Comparing the years 1911 and 1912, the total reduction in importations shows a difference of less than 4 per cent, which proves that the domestic industry has not seriously interfered with importations, or that the rate of duty has affected the amount of the same. This difference can be accounted for by the fact that there was a reduced consumption, particularly in embroideries, because styles were opposed to their use, and by the reduction in the general consumption of laces and embroideries because of business conditions and the need of economy in the use of luxuries arising from the increased cost of necessities.

With substantial reductions about to be made in so many other schedules covering necessities and trust-controlled products and the resulting uncertainty as to effects upon revenue, the Government can not afford seriously to disturb so important and profitable class of revenue producers as luxuries like laces and embroideries.

RESULTS TO AMERICAN INDUSTRY OF RATE BELOW 60 PER CENT.

The domestic manufacturer is not so well established that he can stand a radical reduction of the tariff. Prior to the McKinley tariff, the rate was 40 per cent, and there was practically no domestic production. From the McKinley tariff to the present act the duty has been 60 per cent, excepting under the Wilson Act, which gave a 50 per cent rate. This 60 per cent rate did not encourage manufacturing here. According to the brief submitted by the alleged Association of Importers, etc., the total American production prior to 1908 was between 10 per cent and 20 per cent of the domestic consumption. Under the impetus given to the trade by the favorable provisions of the act of 1909, the domestic production has increased until, according to the same brief, it now amounts to about 30 per cent of the total home consumption.

The history of the domestic industry under our several tariffs proves that the American manufacturers can not compete with the foreigner with a rate lower than 60 per cent.

With the progress and headway that has been made in the American industry, however, it will be safe to establish a uniform 60 per cent rate and eliminate the inequalities of the present act. The domestic manufacturers having had the advantage of the free importation of both lace and embroidery machinery and the rate of 70 per cent under paragraph 350 upon the products of the lever or go through machines for a period during which they have been able to become a real factor in the situation, can now stand without this extra 10 per cent and the other factors in the act which cause a rate above 60 per cent.

The hardship which the domestic manufacturer will suffer in consequence of having the rate put back to 60 per cent will be offset by their ability to get their raw material cheaper under the reduction to be made in other parts of the tariff act and by the use

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

of labor-saving machinery to which they are sure to have greater access in the near future. The disadvantages which the American manufacturers can not overcome are the greater artistic and designing ability of the foreigner, the large preponderance of machines abroad, and the cheapness of labor there.

There are upward of 15,000 embroidery machines in Switzerland and Germany and only about 1,490 in this country. This formidable disparity in capacity of production will always leave the American as the less important factor.

The following tables, which have been accurately compiled, show the difference in labor cost:

	In Europe.	In United States of America.
10-yard Schifflli machine costs, erected.....	¹ \$2,000	\$3,300
Stitcher..... per week.....	8.00	30.00
Watcher..... do.....	4.00	9.50
Shuttler..... do.....	2.75	5.50
Mender..... do.....	4.00	12.00
	18.75	57.00
10-yard Schifflli machines with the automatic attachment costs, erected.....	² 3,000	5,500
Stitcher (eliminated).....		
Watcher..... per week.....	5.00	12.00
Shuttler..... do.....	3.00	7.00
Mender..... do.....	4.00	12.00
	12.00	31.00

¹ 10,000 francs.

² 15,000 francs.

It will be seen that our labor cost even on the machines with the automat attachment is more than two and one-half times that abroad.

In the brief of the advocates of a 45 per cent rate much importance was laid upon the relatively few automat machines now in this country and the resulting advantages that the home manufacturers would have when these machines come into common use here. The fact is that these machines constitute only a small percentage of the machines used abroad. Out of 7,845 machines in Switzerland, for instance, only 1,363 have the automat attachment. In the foreign factory of Mr. Weingart, spokesman of the 45 per cent advocates, there are 59 machines with and 73 machines without the automat attachment.

Accordingly it will be seen that in the matter of the kinds of machinery in use, the domestic manufacturer is substantially on equal terms with the foreigner.

If conditions in this country had been unduly favorable, a large transplanting of foreign factories to the United States would have taken place, particularly since 1909, when both lace and embroidery machines were admitted free of duty for a limited period and the rates in a number of particulars have been above 60 per cent. The fact is that practically no foreign manufacturers began to operate here, but on the contrary during this same period the foreign manufacturers largely increased their own plants and the machine builders in Europe were kept busy night and day to fill the orders from factories. The foreigners knew they could more than hold their own against the American when the rate was above 60 per cent. If they can induce this Congress to place the rate below 60 per cent, they know that they will have the American market completely within their grasp and the American manufacturers eliminated as a competitor. It is against the creation of this condition that these importers desire to interpose their strongest opposition.

While the importers asking for a 60 per cent rate do not seek the conservation of the American industry on account of any capital invested therein, it can not be an unimportant consideration to the committee to know that if the rate is reduced to 45 per cent the industry will be grievously damaged, the investments in machinery will be injured, thousands of employees will be thrown out of positions, and a branch of manufacture which is entering upon a stage of healthy growth will receive a setback from which it may never be able to recover.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

THE RESULTS OF THE ESTABLISHMENT OF A RATE BELOW 60 PER CENT.

A large reduction in revenue.

Tremendous loss on stocks of American importers.

The curtailment and possibly the elimination of the American manufacturer as a competitor in an industry where he has less than one-third of the market under the present favorable conditions.

Injury to and perhaps destruction of investments in the manufacture of laces and embroideries here and the loss of employment to thousands of American workmen.

The creation of practically a monopoly in laces and embroideries for the benefit of foreign manufacturers.

No benefit to the consumer, and probably a detriment, as the cost of laces and embroideries at home has been reduced since the American manufacturers became a factor in the market.

CONCLUSION.

The whole situation is one which requires great delicacy of treatment to bring about an adjustment most beneficial to all interests. The long and intimate experience of the pioneer and prominent importing firms under our various tariff acts teaches them that the best results will come from a revision as follows:

The specific rates of 15 cents per pound in paragraph 179, of 50 cents per pound in paragraph 383, and of 45 cents per pound in paragraph 405, as affecting laces, embroideries, and allied articles, should be stricken out and a duty of 60 per cent ad valorem should be retained.

Paragraph 350 should be stricken from the act, so that the duty of 70 per cent in favor of the Lever or Gothrough machine product may be eliminated and this product caused to pay the same rate as other laces.

Paragraphs 349, 402, and 421 should retain the present rate of 60 per cent ad valorem.

TESTIMONY OF ISAAC WEINGART, OF NEW YORK CITY.

The witness was duly sworn by the chairman.

The CHAIRMAN. You may proceed, Mr. Weingart.

Mr. WEINGART. Mr. Chairman and gentlemen, I should like to preface my remarks with the statement that I represent over 50 importing concerns, doing an annual business of over \$50,000,000 in the line of an article that last year paid a revenue to the Government of \$24,411,000, and in speaking of the article as a whole I should like to state it embraces goods made by different classes of machinery. Of the \$39,500,000 imported last year, \$26,000,000 were made on embroidery machines, \$7,500,000 on the Lever or Gothrough machines, \$1,000,000 were real hand-made laces, and \$5,000,000 represented laces made on different kinds of machines, and included some \$1,000,000 of handkerchiefs made in Belfast.

This presentation is submitted on behalf of the Association of Importers of Laces, Embroideries, Veilings, Nettings, and Kindred Articles of New York, a trade organization embracing in its membership over 50 firms and companies engaged in the lace and embroidery business, and including concerns which have both importing and domestic manufacturing interests. The firms and companies belonging to this association have an aggregate average stock on hand of \$25,000,000 of embroideries and laces in this country, but conditions in their business have become such that they strongly urge a reduction of the tariff on embroideries and laces to 45 per cent, notwithstanding the fact that it would mean a loss of approximately \$2,500,000 on their stock on hand, which they are ready to bear, by reason of the urgent necessity of making the reduction in the tariff

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

that they urge. The object of the submission of this memorandum is twofold:

First. To urge the reduction of the duties imposed at present on embroideries and laces to 45 per cent ad valorem.

Second. To point out the desirability of placing in a separate schedule, and if possible in a single paragraph, with a fixed and uniform ad valorem rate, the several provisions imposing tariff duties on laces and embroideries, which, in the tariff act of 1909, are scattered through four different schedules, to wit (a) paragraphs 349 and 350 of Schedule J, flax, hemp and jute, and manufactures of, levying a duty of 60 per cent and 70 per cent respectively; (b) paragraph 179 of Schedule C, metals, levying a duty of 15 cents per pound and 60 per cent ad valorem; (c) paragraph 383 of Schedule K, wool, levying a duty of 50 cents per pound and 60 per cent ad valorem; and (d) paragraphs 402 and 405 of Schedule L, silks, levying a duty of, respectively, 60 per cent ad valorem and 45 cents to 60 cents per pound, plus 60 per cent ad valorem in some instances. The great majority of importations of embroideries and laces are embraced by paragraphs 349 and 350, first cited, being made of cotton. The total foreign value of importations of all kinds of laces and embroideries falling under these two paragraphs for the year 1912 was \$32,664,243, of which \$7,620,749 paid 70 per cent duty under paragraph 350. The total importations of laces and embroideries for the year 1912, falling under all the paragraphs specified, aggregated \$39,309,229 foreign value, and paid about \$24,411,689 duties to the United States, exclusive of artificial silk laces and wearing apparel.

This association recommends that a new schedule be adopted, to read substantially as follows, the language of paragraph 349 being substantially retained, except that certain articles hereinafter referred to, which do not belong in the class of embroideries and laces, are taken out of the same—

The CHAIRMAN. Which paragraph is that?

Mr. WEINGART. Paragraphs 349 and 350. The new proposed paragraph should read substantially as follows:

Lace window curtains, and all other lace articles, handkerchiefs and all other articles made wholly or partly of lace or laces, or in imitation of lace; nets, nettings, veils, veilings, quillings, trimmings, ornaments, handkerchiefs, and other articles or fabrics embroidered in any manner by hand or machinery, whether in a plain or fancy letter, initial, or monogram, or otherwise, or tamboured, appliqued, or scalloped, by hand or machinery for any purpose, or from which threads have been drawn, cut, or punched to produce open work, ornamented or embroidered in any manner herein described, in any part thereof, however small: hemstitched, tuckcd, flouncings or skirting; laces and embroideries in all widths, edgings, insertions, galloons, flouncings, bands, bandings, or in any other form, 45 per cent ad valorem, provided that all said articles shall be thus dutiable, whether composed of cotton, silk, artificial silk, tinsel, or metal thread, Indian rubber, vegetable fiber, or any material or materials whatsoever, for whatsoever purpose used and by whatever process manufactured, or on whatever machine, if any, made.

This would require separate treatment for articles with which this association has no particular concern, but which now figure in paragraph 349 in the tariff act as follows:

Napkins and wearing apparel made wholly or in part of lace or laces, or in imitation of laces; neck ruffings, ruchings, tuckings, flutings, braids, featherstitch braids, gorings, bands, bandings, belts, beltings, bindings, cords, ribbons, tapes, webs, and webbings and wearing apparel embroidered in any manner by hand or machinery.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

This would then supersede paragraph 350 of the present law (besides the other sections cited), as far as applicable to laces and embroideries, which reads:

Laces, embroideries, edgings, insertings, galloons, flouncings, nets, nettings, trimmings, and veils, composed of cotton, silk, artificial silk, or other material (except wool), made on the Lever or Gothrough machine, 70 per cent ad valorem: *Provided*, That no wearing apparel, handkerchiefs, or articles of any description, composed wholly or in chief value of any of the foregoing, shall pay a less rate of duty than that imposed upon the articles or the materials of which the same are composed.

The CHAIRMAN. On these latter articles which you seek to eliminate, you say they pay a large amount of duty?

Mr. WEINGART. The articles we want to eliminate we have no interest in, and we do not know what duty they do pay, but the articles for which we want a separate schedule made have paid a duty last year of \$24,411,000. The articles which we want placed in a separate schedule and which are really articles of embroideries and laces, nets, and nettings, veils and veilings, we want you to consider. I believe if they are placed in a separate schedule, it will take away from them the fact that they should be placed in any way with ribbons or bands or tapes.

Mr. PALMER. Are you taking embroideries out of the metal schedule, too?

Mr. WEINGART. Yes, sir.

Mr. PALMER. Out of Schedules C, J, and K?

Mr. WEINGART. Yes, sir.

Mr. PALMER. What is the fourth schedule under which laces come now besides the metal and cotton schedules?

Mr. WEINGART. They come under flax and hemp, they come under metals, they come under wool, and they come under silk. The wool laces are very insignificant. In fact, in the proposed provisions of the wool schedule we were put at 35 per cent. We have not any particular interest and do not really recommend that they be retained at 35 per cent. I think they should pay an equal duty with the rest of the articles, because they are the same article used for the same purpose. If it is a matter of fashion, and there may come a time when wool laces will be largely imported, and at that time we think they should pay the same rate of duty as silk and the others; so we ask that no exception be made as regards what the article is made of.

Referring again to the object of this statement which I am submitting:

I.

It is respectfully submitted that the fair and adequate rate of duty to be imposed on laces and embroideries in the proposed revision of the tariff act—and to be stated in the separate paragraph dealing with laces and embroideries as proposed by us—should be not over 45 per cent ad valorem. That rate will yield adequate revenue to the Government, and materially more than the maintenance of the present provisions would, and will be fair also to the domestic industry. The present rates of duty, if continued, will in most cases prove prohibitory, thus resulting in a greatly diminished revenue, the very thing to be avoided. As we shall show, the present rates are in actual effect considerably higher even than they appear to be in terms. The domestic article, in the field that is now being exploited in this country, can be and is made for less than it costs to land the imported article in the United States at present rates. And the conditions which we shall point out will continue to favor the domestic industry, even if the duty be made 45 per cent or less.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

These articles are staples, not luxuries, are used by all classes of the population, and should be kept fairly in reach of all.

(1) The matter of revenue.

We are within the facts in saying that if the present rates of duty are continued, the revenue from imports of laces and embroideries will very soon diminish very greatly and before long will be practically extinguished entirely, and any fair-minded person acquainted with the conditions in the trade will substantiate this statement. This is due to the heavy and ever-growing increase in the domestic manufacturing of these articles during the past few years, resulting largely from the introduction of labor-saving machinery, and the very great and uncalled-for and unnecessary protection now enjoyed by the domestic manufacturer. There has been a large and increasing diminution of importations of laces and embroideries during the past few years, and particularly since the tariff act of 1909 has been in force, despite the large increase in our population and, on the other hand, a large absolute and relative increase in the manufacture and consumption of domestic laces and embroideries. While the aggregate value of laces and embroideries of all kinds imported in 1907 into the United States was \$46,403,404 (including wearing apparel and other articles covered by the paragraph enumerated), in 1912 the aggregate of such importations was only \$44,949,058, instead of a normal increase of at least 10 per cent in accord with the increase of population since 1907. We import from England and France chiefly Lever goods, so called because made on machines of that name, yet our importations from those countries of laces and embroideries shrank from \$19,344,824 in 1907 to \$13,230,234 in 1911, the intermediate years 1908, 1909, and 1910 showing an intermediate decline, as witness the figures \$15,204,000, \$15,950,000, and \$14,645,597. The decrease of importations from St. Gall to the United States during the year 1912 was over 9,000,000 francs, though production there has increased, the United States to-day taking only 32 per cent of St. Gall's output as against 45 per cent in 1907. Importations of embroidered handkerchiefs from St. Gall to the United States have fallen from \$900,000 in 1910 to \$600,000 in 1912. At the end of 1908, when the present tariff bill was being drafted, there were only 700 embroidery machines in the United States; to-day there are double that number, the official records showing that there were 1,390 in October, 1912. The "embroidery machines," so called, set up in the United States to-day have a capacity for manufacturing \$16,000,000 of goods per annum, more than three times that of the fiscal year 1908, while the total importations of goods made on such machines during the fiscal year 1912 were only about \$37,000,000, duty paid. The Lever machines in the United States have a capacity for manufacturing about \$10,000,000 worth of goods to-day, there being about 500 such machines to-day in the United States, of which about 400 were imported duty free since 1909, compared with a capacity in 1908 of less than one-third, as against about twelve and a half million dollars of such goods now imported, duty paid. Accordingly, while the American manufactured laces and embroideries amounted to only about 10 to 20 per cent of the total consumption of laces and embroideries in 1908, they now amount to about 30 per cent. Impetus was given to American manufacture by the provision of the present act under which such machinery could be imported free of duty for about 16 months after the new tariff act went into effect, instead of paying 45 per cent duty, but this home manufacturing business has become so profitable that the importation of such machinery continues, despite the reestablishment of the duty on the machinery. The threatened introduction of patented automatic embroidery machines in the industry in this country, hereafter referred to, which two concerns in this country use here already, would still further revolutionize the industry here, by eliminating the difference of cost of labor almost entirely, without regard even to the duty.

The rates of duty on these articles in late years have been abnormally high, beginning with the McKinley Act, the purpose having been to stimulate an infant industry which, through the protection of the tariff and the introduction of labor-saving machinery, no longer needs such protection. Laces and embroideries in all the history of the country never paid a higher duty than 40 per cent until the McKinley tariff. They have paid 60 per cent duty under the McKinley tariff and under the Dingley tariff. They paid 50 per cent under the Wilson tariff, and thereafter the duty of 60 per cent was restored, and was even raised to 70 per cent on certain articles. To wit, those made on the Lever or Gotherough machine, by paragraph 350 of the act of 1909. Only about \$1,000,000 worth of real laces (handmade laces), as distinguished from machine-made laces and embroideries, were imported in 1912, and as to these there is no competition in this country, and they alone are true articles of luxury; yet the duty on these handmade laces was not raised by the act of 1909, while paragraph 350, as seen, raised the rate to 70 per cent even. The history of section 350 is as

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

recent as to be within the memory of all who took any interest in the enactment of the act of 1909. The act ostensibly lowered duties, but here heavily raised them on the very class of goods which included laces of the cheapest grade, and this paragraph was notoriously framed to favor special interests. Though the real laces are luxuries, their volume is comparatively insignificant, and for convenience of classification and in order to avoid the danger of their being smuggled into the United States, we favor including them in the proposed new general schedule of laces and embroideries instead of segregating them. On the other hand, artificial silk laces and embroideries, under paragraph 405, now pay a duty of 45 cents per pound, in addition to the 60 per cent ad valorem rate, the total of \$972,000 worth imported in 1912 having paid an ad valorem duty of as high a rate as 68.85 per cent on the average.

The present duties, if continued, will soon prove to be practically prohibitory in many branches of the business, particularly in the grades of the articles which are made in this country. There is no possibility of the continuance of fairly competitive conditions between the domestic and foreign manufacturers under the existing rates; indeed, in certain grades, competition is practically nearing an end already. The revenue will naturally feel the effect unless conditions are changed, and we are convinced that otherwise instead of being one of the most important producers of revenue to the Government this class of articles will soon substantially disappear as a revenue producer.

The fate that is likely to be encountered by the industry of importing embroideries and laces generally is well illustrated by the experience had with Nottingham lace curtains. These were very extensively imported into the United States formerly, but have fallen off so much that, as was noted by Mills & Gibb, of New York, the importations of Nottingham lace curtains and curtain nets fell off according to the figures collated by the American consul at Nottingham to a total of \$236,171 in value in 1903 and to \$78,104 in 1907 and \$46,887 during the first 11 months of 1908. To-day there are practically no importations whatever of Nottingham lace curtains, because the tariff has for years been absolutely prohibitory, and home industries were built up which made importation impossible.

The new proposed duties would not decrease the volume of importations of laces and embroideries into the United States over the aggregate of the past year, but the more serious problem is to meet the necessity of doing something to meet the large and still greater impending falling off of importations in order to enable the Government to continue to realize substantial revenue from its collections of customs duties on these articles, and permit the importing business to continue and in order to prevent a deterioration in the quality and character of the articles used in the United States. The proposed new provisions would tend greatly to protect the United States Government in continuing to realize revenue from this important class of articles.

In connection with the probable effect of the proposed reductions upon the volume of importations, it should be remembered that the reduction is likely to permit of bringing in grades of imported goods at prices at which they can be sold here, which are at present not imported at all. Moreover, lace and embroideries are bought by the consumer of the completed article largely in accordance with the pecuniary condition of the women purchasing the same, and only in part in accordance with the design. Under the proposed reduction the consumer will get better value for his money and a better class of goods is likely to be imported for our own market.

(2) The existing rates of duty, while apparently running from 60 per cent up, are really much higher.

The present rates hereinbefore pointed out are, respectively, 60 per cent, 70 per cent, 15 cents a pound and 60 per cent, and 45 cents a pound and 60 per cent, according to the constituent materials, etc. But in actual effect they run much higher and for the following reason: The duty is imposed not on the basis of foreign cost of production, but on the basis of foreign market price. In other words, the ad valorem duty is applied on the foreign manufacturer's profits as well as on the foreign cost of production. An example will show what this means. Suppose a manufacturer's profit on an article made on the lever machine, costing \$1 to produce, is 20 per cent on his selling price, then the foreign market price is \$1.25; 70 per cent of this \$1.25 is 87½ cents, which is 87½ per cent of the foreign cost of production. Add to this the duty on boxes and coverings, the ocean freight, marine insurance, totaling at least another 3¼ per cent, and we have a total of 91-cent protection enjoyed by the domestic manufacturer over the imported article. That is to say, measuring the actual cost of production abroad against the actual cost of production in the United States, the ad valorem rates now imposed are considerably more than they appear to be in the words of

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

the tariff act. Taking the same illustration used above, a 45 per cent rate, which is the maximum we suggest, would really amount to 60 per cent protection, if the foreign cost of production be compared with domestic cost of production—the only fair comparison. And 60 per cent protection is ample for every fair and suitable consideration to the domestic industry.

(3) The conditions will continue to favor the domestic industry with a 45 per cent duty or less.

This industry is now more than ever on a machinery basis. Indeed, with the most recent inventions and improvements the item of labor in the total cost of production is comparatively negligible. Therefore in so far as labor is concerned the domestic industry is not at a disadvantage that amounts to anything in the fields which it is exploiting and will continue to exploit. Nor is there any great disadvantage to it in the other items going to make up cost of production. Hence a duty of 45 per cent (which in effect really amounts to 60 per cent protection and more, as we have shown) will still leave the domestic manufacturing industry a considerable advantage—what we should call a fairly competitive one, that will grow greater as time goes on.

During the last few years there have developed here and abroad a number of auxiliary improvements in connection with embroidery machines which tended to require appreciably less manual labor, and thereby proportionately decreased the cost of production. The most important of these is the automat attachment to the embroidery machine. This invention has revolutionized the manufacturing of embroideries and laces abroad, and if extensively made use of in this country will eventually enable the cheaper and medium grades of these articles to be made in this country to the total exclusion of the imported article irrespective of the fact whether or not the rate of duty of 45 per cent be granted or not. The automat greatly reduces the amount of skilled labor necessary, and thereby enormously decreases the cost of production of the article. The reduction in the cost of production, however, is not the only thing accomplished by the automat. By its use the workmanship of a skilled stitcher (called a puncher) can be duplicated without limit. One puncher can keep 15 automatic machines supplied with work, and inasmuch as one of these machines can produce \$15,000 worth of merchandise in a year's time one puncher can make sufficient cards to produce \$225,000 per year, every dollar of which will be of equal quality of workmanship, while without the automatic attachment machines now in general use in this country would require 25 skilled men to produce a like amount.

Aside from this there would be nothing which would prevent the punching of these cards abroad and importing them for use in this country, in this way doing away in a large measure with the need of any skilled punchers over here.

There are to-day over 2,000 of these automats in use in Europe, and although this machine has been in use for two years there, there are but 180 in use in this country to-day, which are being operated, however, only by two firms.

The reason that these machines have not been put to greater use in this country is because these machines are patented and because at present there is a deadlock between the various interests controlling them. There is nothing, however, to prevent these interests from getting together, and when they do they will be in possession through their control of the automat of a weapon that will enable them to control in the United States the manufacturing of embroideries and laces of this class so effectually as to establish for themselves an absolute monopoly.

Yet to-day, in spite of the fact that Europe is making use of this wonderful cost-saving invention and that the industry in this country is not making great use of the same, the American manufacturers were able to successfully drive the total consumption in the United States of imported laces and embroideries down from 90 per cent (value of the imported article against the domestic in 1908) to 70 per cent of the value of the entire consumption of the laces and embroideries in the United States for 1912.

What then will be the result when the great saving in cost is brought about by the general introduction in this country of the automat?

Certainly conditions under which the domestic article can be sold at a profit for less than the foreign article costs to land before any profit is made on it at all are neither fairly competitive nor equitable to the great mass of consumers of all classes within whose reach on fair terms these articles ought to be kept.

It is wrong to class these articles as luxuries. They are used by all classes of people. While not necessities—in the sense that articles of food and some other things are—they are certainly not luxuries under present standards of life in this country, the only difference being that the richer persons use finer goods, and the poorer persons use cheaper goods, and it is unfair to make them luxuries, by placing them out of the reach of those in moderate circumstances, who would otherwise use them. There

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

is practically no woman in this country whose station is so low that she does not wear some kind of lace and embroidery. Therefore, they should not, in our opinion, be treated as luxuries and placed in the same class that diamonds and precious stones are.

It is also important to remember that laces and embroideries are used very largely as raw material for the manufacture of a vast variety and number of completed articles of manufacture made and sold here, and they should, therefore, be regarded as raw material, which should be supplied at reasonable prices to the manufacturers of such completed articles, in order to enable them to turn out completed manufactured articles at lower prices.

(4) There will be an additional argument for the reduction asked for, if the duties on cotton yarns and on other raw material—which are used in making these articles—are also to be reduced.

The cotton yarn used both in the United States and abroad, in making most of these articles, is of Egyptian cotton. If any reduction in the yarns is to be made, an additional reason exists for the reduction on the articles in question. So also as to other articles which are raw material in the manufacture of embroideries and laces here.

II.

Under this head we respectfully submit that the tariff duties imposed on laces and embroideries should be at a fixed and uniform ad valorem rate, irrespective of the particular machines on which they were made, and no matter what the constituent materials are. A single separate schedule should be made to cover them.

In the tariff act of 1909 laces and embroideries are included in Schedule C, metals, paragraph 179; Schedule J, flax, hemp, and jute, paragraphs 349 and 350; Schedule K, wool, paragraph 383; Schedule L, silks, paragraphs 402 and 405.

(b) There is no reason or justification for making differences, in the rates of duty imposed, between laces and embroideries made on a particular kind of machine and those made on other machines.

We scarcely think any argument is necessary on this point. Paragraph 350 of the present law, which imposes a higher rate of duty if the articles are made on the Lever or Gothrough machine than if on any other machine, is in our judgment indefensible on any theory of tariff framing.

It should be remembered that the method of fixing duties in accordance with the particular machine upon which the article was made, was first inserted in the tariff of 1909, and is unprecedented, unjust, and most confusing. It raises all sorts of troublesome questions as to the character of the machine involved, and discriminates for or against particular machines without the slightest justification. Moreover, it opens the door to colorable changes in the names and characters of the machines, in order to bring the product under more favorable paragraphs of the law than contemplated by the lawmakers. On whatever machine the article is made, the product remains lace or embroidery, and they are used for essentially the same purposes. We respectfully submit that this discriminatory provision should be eliminated.
